And of course, once that redevelopment around Dodger Stadium happens, I don't see those folks even spending that much money or time in Chinatown. When we talk to members in the community, nobody says the thing that we need most is a gondola. Folks need affordable housing, but they also need like local level traffic solutions, like a traffic light to get from William Meade Public housing community to the historic state park, for instance.

We need to invest in what folks actually need and do bottom-up planning. This is a misuse of the public process. Thank you.

PH314-4

Jessica: Thank you.

And next, we'll go to Diane Weiss.

Comment – PH315

Diane Weiss: Hi. Can you hear me? Okay. Hi. I am 100% opposed to this project. PH315-1

In the last 50 years, which is barely a blip of time, we have lost two-thirds of our worldwide wildlife. Two-thirds in 50 years. Recently, it was documented, also that documentation can be found through the World Wildlife Fund. It's also been documented that currently there are over 150,000 species that are threatened or extinction currently due to man-made endeavors such as this kind of short-sighted one,

We are the stewards of the environment and we just forget about that every time some billionaire wants to have a seasonal vanity project that they will benefit from. PH315-2

I know the wildlife doesn't buy Dodger tickets. Wildlife doesn't buy amusement park tickets.

And it doesn't want a tourist trap. We already have enough of all of those things. At some point we have to realize that we have to preserve our environment because even if you're a billionaire developer, you have to understand that when we kill the environment, we kill ourselves.

And even the highly skilled greenwasher, like this whole plan has been presented as, it's pretty dubious.

We need to get our priorities straight and quit thinking so short term in our city.

Jessica: Thank you. And next, we'll go to Drew Miller.

Comment – PH316

Drew Miller: Hi, my name is Drew Miller, and I am calling to voice my full support for the gondola. The proposed Los Angeles Aerial Rapid Transit Project presents PH316-1

an important opportunity to advance zero emissions transportation and slash carbon emissions at a crucial time in human history. It would be the first permanent rapid transit connection from the region's transportation hub, Union Station, to Dodger Stadium, as well as a region park.

This will remove thousands of vehicles from the road, reducing congestion and pollution while providing a unique and safe experience for the community. As rising temperatures from human-caused greenhouse gases threaten the city of Los Angeles and the world as we know it, the time for action is now. Thank you.

cont'd PH316-1

Jessica: Thank you very much. Next comment will be [inaudible].

Comment – PH317

Dawn Huang: Hi. Can you hear me? My name is Dawn Huang and while I agree that Los Angeles is much more in need of public transportation, a gondola going to a sports stadium is a bizarre choice. Have any of you ridden a gondola? How many people does a gondola move and how quickly? I know taking gondolas in my life, including the Roosevelt Island gondola, known as the aerial tramway, they're very slow and they're huge expense that will be funded by our city for a slow moving mile that doesn't take that many people.

PH317-1

I lived in New York City for years and saw the aerial tramway overhead and underneath.

PH317-2

Few people felt like walking underneath it.

Apparently only two properties in the world, according to Roosevelt Island's aerial tramway, can make these systems. So it's a French company that built the

PH317-3

Roosevelt Island one that was only used temporarily and meant to be used temporarily. cont'd PH317-3

It's currently privately run and pays New York City a franchise free, while subways and cars are much more often used by residents due to speed. I never went to Roosevelt Island in those 20 years on the tramway while I did drive and take the subway. Not all people are comfortable with aerial travel. PH317-4

There's a large percentage of the population who are afraid of heights. The tram often wasn't used by the residents because of its slowness and was used often by tourists or in a Spider-Man movie. Although the tramway was opened in 1976 in July it was intended to be just temporary transportation while the subway was getting connected. And then the subway fell behind schedule and it became a permanent fixture. PH317-5

But in the 50 years it was in existence, it was only moved 26 million people while the subway moved millions a day, billions of people since. And then when the subway was completed in 1989, ridership drastically went down. So as a historian and documentary filmmaker, I've studied the impacts of public policy and transport policies on community [inaudible]. PH317-6

Chinatown's historically suffered from being moved already, past harassment and a past massacre perpetrated by non-Chinese. In the past, China and the US. California looks like. PH317-7

Jessica: Looks like we're at the two-minute mark. I need to move to the next comments.

Dawn Huang: Well, racism is a part here. You chose a community that can't speak enough for itself and is in depression. So I believe that I should be able to speak and to use fund public funding to fund a private enterprise for a specific group of people, baseball fans, which is not the whole population. You could funnel your money into actual metro service for the entire city. Thank you very much.

cont'd PH317-7

Jessica: Thank you very much. Okay. Next, we'll go to the phone number ending in 4080. Go ahead.

Comment – PH318

Carlos: Hi, my name is Carlos [inaudible] Senior. [inaudible] I support the project, the gondola. We are taking people out of town, so I'm fine with [inaudible] and it's really a pain in the neck trying to get parking [inaudible]. Now [inaudible] much benefit for the community. It will be [inaudible] the gondolas going to go through [inaudible] support the project is also [inaudible] going to Dodger Stadium and it's good for people who don't [inaudible] parking lot [inaudible] and they like to take their kids and their families for, you know, [inaudible] and bottom line 100%, hopefully that this project can get approval. Thank you for listening.

PH318-1

Jessica: Thank you.

Okay. Next, we will go to Ron. Ron, if you're able to provide your comment. Ron, can you provide your comment please? Looks like Ron is unmuted. Ron, are you there? Okay. Maybe we will come back to Ron. Next, we will go to Eric.

Comment – PH319

Eric: Yeah. Hello. My name is, my name is Eric. I've lived in Echo Park within a gondola ride of Dodger Stadium for about 13 years, but on the other side of the stadium. On game nights when I'm leaving my house, it often means waiting like ten minutes just to exit my driveway. So I totally understand how important it is to find new ways to bring visitors to Dodger Stadium.

PH319-1

But this project won't bring enough people fast enough to justify the intrusion into the community's backyards. It's not the answer to our problems. It will divert cars to Chinatown in Union Station if anything. If you don't get rid of the parking, you'll never get rid of the cars. Let's call this gondola project what it is. It's silly. It's a novelty and it's a [inaudible].

This [inaudible] achievement will enrich Frank McCourt and be a shiny new thing to show up at the Olympics. The community doesn't want this. Stop wasting time and money talking about it.

PH319-2

Please just run more buses and dedicated lanes to run even when there is no game. There's a beautiful park up there that's more or less inaccessible by transit. We don't want novelty tourist transit. We want robust systems to access our green spaces. This project ain't it. Thank you.

PH319-3

Jessica: Thank you. The next commenter will be phone number ending in 8635. If you're able to press star six on your phone to unmute. Just give us one moment here. Perhaps that person is not on anymore. Okay. Next, we will go to Monica Cruz.

Comment – PH320

Monica Cruz: Hi everyone. I am Monica and I support the [inaudible] congestion wants to find a solution

that will enhance our communications [inaudible] as a zero emission transit. So in this case, [inaudible] we support this project as we know that aerial rapid transit through this road, through extraordinary innovation [inaudible].

PH320-1

Jessica: Thank you. And next, we'll go to Michael [inaudible]. Let's go ahead, Michael [inaudible]. Please go ahead. Michael, if you're able to unmute.

Comment – PH321

Michael Berg: Hello.

Jessica: Yes, go ahead.

Michael Berg: I'm so sorry. I started talking without even [inaudible]. Anyway, thank you. My name is Michael Berg and I am a Los Angeles Union Station Historical Society board member, also the founder of the Aliso Street Manufacturer [inaudible] Society, and also a member of the Chinese Historical Society that's along the route. This is nothing more than a carnival ride.

PH321-1

Los Angeles private transport projects historically have proven to be financially and viable for carrying [inaudible] passengers, i.e. [inaudible]. And I agree with the California Endowment's position that the ruining of the view scape of their building severely degrades the quality of their company, and that by doing the same, [inaudible] damage in front of Union Station by that enormous terminal on Alameda Street blocks a world class architectural wonder, one of the most iconic and culturally significant architectural masterpieces in all of Los Angeles.

PH321-2

PH321-3

We would like to, I would like to say that I believe this project is not viable for anything, and the

damage to these [inaudible] is completely irresponsible and unacceptable. And it's amazing to me to think that all of this could be changed if they just put in a subway to Dodger Stadium would solve all of the issues you're talking about. PH321-4

And I did a little calculation. You have to unload 80 people every minute, to 5,000 people an hour. And I'd like to know how you plan to load and unload 80 people a minute to meet that 5,000 number. I believe that traffic stats that you gave a flood of. PH321-5

Jessica: Thank you, Michael. We've reached the end of your time here.

Michael Berg: Thank you.

Jessica: Thank you very much. Okay, next, we'll take Alex Alvarez.

Comment – PH322

Alex Alvarez: Oh, sorry about that. Good evening. My name is Alex Alvarez. We all have to deal with the traffic around Dodger Stadium on game days.

The gondolas could take 3,000 cars off the road, making it easier to get around and reducing our pollution from cars.

I support the gondola, [inaudible] because it would be great for Los Angeles, for the Dodgers and their fans. PH322-1

And you for taking the opportunity to take my comment and have a good night.

Jessica: Thank you. And next, we have the phone number ending in 0616.

Comment – PH323

Speaker 58: Hello?

Jessica: Yes.

Speaker 58: Yes, my name is [inaudible] for the community and I am [inaudible] and I would like to thank you for your time. PH323-1

Jessica: Thank you.

Next, we have the phone number ending in 0569.

Let's see if they are still available here. Actually, my team could help me out here. I don't think they're on the line any longer.

Going to [Crystal] at this point. Okay. Yes, Crystal, go ahead.

Comment – PH324

Crystal: Hi. My name is [Crystal]. [inaudible]. Thank you. PH324-1

Jessica: Thank you.

And Laura, I think we've made it through all the folks that had their hands raised at 7 that are still on the line. I know we did get a note from Ron Frank that he was having some trouble with his computer. So let's take a quick look and see if he's on. Otherwise, I think we'll do one last double check and wrap up the public comment.

Laura Adelman: Thank you Jessica.

Spanish Interpreter: Ron, are you on and able to unmute yourself?

Comment – PH325

Jessica: Looks like Ron is on.

Ron: Hello. PH325-1

Spanish Interpreter: Yeah, there we go. We can hear you.

Ron: Right. Thank you. I can't stress enough how opposed I am for this project.

There's not enough time really to address the countless reasons that this is a bad idea. Even if I didn't live in the neighborhood, I'd still be against this project. I'm all for environmental protection and for business people to do well and to be successful. But this whole project is built on a lie. It's not about saving the environment, but about increasing the fortunes of a billionaire.

There's no way that this project will be paid for by proponents or pay for itself, and taxpayers do not need to be put on the hook for this. There are other ways to reduce emissions. California's already on track to have automobiles become environmentally safer. If you live in the neighborhood, there's nothing environmentally friendly about this project. Rather, it's environmentally ruinous to everything it touches or is in its vicinity.

It offers nothing but [inaudible]. Generally impacts would not be significant until they are, and they will be. If whatever benefits to the business community there could possibly be would already be provided by the Metro rail. This will not add to anything. If anybody thinks Chinatown is dead, maybe they could encourage businesses to paint their buildings so that the buildings looked alive.

Jessica: Thank you very much, Ron.

cont'd PH325-1

PH325-2

PH325-3

PH325-4

Ron: But actually I have one more comment. The scheme just screams the old saying about preferring to ask for forgiveness instead of permission. And surely things are going to go wrong and there'll be no way to forgive those things from happening. Thank you. PH325-5

Jessica: Thank you.

Spanish Interpreter: Jessica. I think we just have one more that that commenter that perhaps could not unmute earlier. We'll just give them one more try five nine excuse me, 9509. Would you be able to try again? 9509 if you're able. Okay. Looks like we're having trouble there.

Jessica: Okay. I think I'll go ahead and move us into wrapping up the meeting and providing an overview of all the additional ways that the public can provide comment through January 17th, 2023. So we do have an additional public hearing in addition to the one that we held tonight and also on Saturday, December 10th. There's one more public hearing on Thursday, January 12th, from 5 to 7 p.m. at Cathedral High School.

And you can also provide comment via email or mail through January 17th, 2023. And again, you can access all of this information as well as the draft EIR at metro.dot/aerialrapidtransit.

It looks like I'm getting a note that we have one more commenter with a hand up. Okay. It looks like Katy. Let's see if we can get you unmuted and then we'll move into wrapping up the meeting once you conclude your comment.

Katie: Hey, can you hear me? Yes, thank you. My name is Katie. I live right by Dodger Stadium. I do agree that we need better public transit on game days. It's very difficult to leave my house and go anywhere, but the gondola is the opposite of that. The gondola won't make it easier to take public transit to Dodger Stadium. It won't help our neighbors access effective and affordable public transit. PH326-1

And frankly, it won't help anyone get anywhere that they need to go. It's going to disrupt our neighborhood. And it's, as other people have said, an entirely unrealistic plan. The numbers that are, that it says it will bring of people is just like, that's a wish. That's not reality. And as a taxpayer, I do not agree with the city paying hundreds of millions of dollars, of dollars of our own money for something that none of us want or need. PH326-2

We need affordable housing. We need streets where we can ride our bikes and use accessible public transportation. We need to be able to have public transportation that goes to places that we actually need to go in a way that gets us there.

And that's not what the gondola does. So we really do not need the gondola and we are opposed to it in our neighborhood. Thank you. PH326-3

Jessica: Thank you for that final public comment. We'll move back to the overview of all the ways that the community can provide comment during the public review period. So we'll move on to the next slide here.

Jessica: Okay. So we were reviewing all of the various ways that you can provide public comment. So again, we do have the additional public hearing on January 12th and you can provide public comment via email, phone and mail through January 17th, 2023. We had a very good turnout tonight, and I want to thank everyone for their participation this evening and for staying on the line a little bit longer to allow more of our community members to provide public comment.

So we appreciate your time this evening and we'll go ahead and conclude the meeting. So moving on, just a final thank you. And we will now conclude this virtual public hearing.

Comment - PH171

MR. LAU: All right. I just wanted to express concern about the gondola in Chinatown. There are a lot of questions I don't think have been like really answered.

Economically, I'll ask, like how much will the project cost? How much will riders be charged? Will they be charged each way? I know top parking usually is $40 to $50 regularly over at Dodger Stadium. PH171-1

Will the gondola be open during non-event days? Who would use it and why? Do they plan on holding other events up in the parking lot?

I'm concerned for the businesses in Chinatown and Olvera Street that I think will be negatively affected by having less of a friction from Union Station up to the Dodger Stadium. PH171-2

I don't want it to be just something like Angels Flight, some sort of like something stupid that's there. PH171-3

Will air rights be negotiated for property owners that have the gondola over them? PH171-4

Environmental impact. I'm concerned about the positive, what they're saying about the traffic reduction. Because if they're just taking passengers from Union Station who would normally take the Dodger Express, are you really reducing any traffic? All right. What are the carbon emissions that will be used to build the gondola system? All right. How many passengers have to use the gondola in order to offset the carbon produced in order to build the gondola? PH171-5 PH171-6

Safety. Definitely, especially with the past week with the amount of rain we had, there's a lot of soil instability. PH171-7

And then, let's see. I don't see any, I haven't seen any third-party independent data that states if it supports this is a good idea. Are there any? Can that be provided? All right? PH171-8

Is there any data about Dodger fans or people in Chinatown that want this?

I think we need to focus more on PH171-9

affordable housing or getting a supermarket.

Let's see. I don't think I have enough time for anything else. It's like two seconds. I just wanted to make a closing. Oh, okay.

So, a lot of my research says that the '84 LA Games of the Olympics was one of the most successful Olympics ever, and a lot of that was because it did not lose any money. But, more importantly, it revitalized the urban core of the cities, but not at the expense of its residents. And I feel as if this is just a plan that's being pushed without actually taking into account the actual people affected by this being built in our community.

And I just want these -- I want these answers, as a resident.

Thank you.

(Whereupon, the above-entitled matter briefly went off the record.)

MS. JOHNSON: My name is Kathleen Johnson, K-A-T-H-L-E-E-N J-O-H-N-S-O-N. My name

cont'd PH171-9

PH171-10

Comment - PH172

PH172-1

is Kathleen Johnson, Executive Director of the nonprofit LA River State Park Partners, the support organization for LA State Historic Park.

A gondola through LA State Historic Park would significantly alter the park's southern and middle sections and their mature native landscapes and compromise users' experience of the peaceful, quiet, open land and skies of the entire park. cont'd PH172-1

Taking public parkland for a looming station building and 98-foot tower, the route would convey cars just 26 feet overhead on six massive cables. The gondola would destroy 81 mature trees, permanently alter the park's thoughtfully-designed vistas, jeopardize event revenues and vital maintenance, and threaten historic features. PH172-2

These major park impacts, grossly underexamined in the Draft EIR, represent an environmental injustice. The park was born from community activism that transformed a former rail yard brownfield into an urban green oasis -- with PH172-3

all of the related health and community benefits. After this long struggle, residents deserve to have their original designs and uses for the park respected and their land protected.

I'm not here to comment on the wisdom of the gondola enterprise, but simply to insist that taxpayer-funded public parkland not be commandeered for its use.

Thank you.

(Whereupon, the above-entitled matter briefly went off the record.)

Comment - PH173

MS. VIERA: Hi. My name is Olivia Viera, spelled O-L-I-V-I-A V-I-E-R-A.

I'm a resident of Solano Canyon, which is east, adjacent to Dodger Stadium. So, I've been affected by the traffic for the last 22 years.

I'm also the founder of a community arts organization called Indigenous Wellness Collective, which serves hundreds of BIPOC folks in the area.

There is a lot of trauma in this area

cont'd PH172-3

PH172-4

PH173-1

PH173-2

going back to the era of my great uncle, Tony Montez, who was displaced when the Dodgers moved from Brooklyn to Los Angeles. His family was robbed of housing.

So, I'm distinctly aware of the trauma in the area regarding government or big corporations coming in and making decisions for the community that directly affect the community.

One of the best things that has happened so far is the Metro non-gas buses coming in and bringing hundreds of people to the stadium. This has relieved traffic immensely, although I realize there are some improvements that need to be made there.

The gondola is offensive to the neighborhood of Chinatown, Solano Canyon, Echo Park, and Lincoln Heights. It is blatant capitalist greed.

If the gondola were a free ticket, I would reconsider my position. But, as of now, I stand 100 percent against the construction of this gondola in this part of the city. I would

cont'd PH173-2

PH173-3

PH173-4

like to see it overlooking the marina instead.

Thank you.

(Whereupon, the above-entitled matter briefly went off the record.)

Comment - PH174

MS. ARECHIGA: Melissa Arechiga, M-E-L-I-S-S-A Arechiga, A-R-E-C-H-I-G-A.

Okay. My name is Melissa Arechiga. I stand here before you as a representative of surviving families that were vitally evicted from Palo Verde, La Loma, and Bishop, three Mexican indigenous communities that were destroyed to build Dodger Stadium.

I am here today opposing the gondola project from Union Station to Dodger Stadium. While this may be exciting to some, it is a sign of change, and change that is not inclusive to all, specifically people of color.

The Dodgers Corporation and the City of Los Angeles have a long partnership together working to destroy and exploit communities of color. The gondola represents gentrification, the destruction of not only our communities, but

cont'd PH173-4

PH174-1

PH174-2

environment and our beloved wildlife.

The gondola project is no different than the deal that was made to take away our families' generational wealth by destroying our three communities to build Dodger Stadium. The Dodgers and the Los Angeles City Council set to build the gondola in the middle of our communities, and this would only benefit the Los Angeles Dodgers. Our residents and small business owners will suffer. And with the so-called Revitalization Project, this is code word in our communities of color as gentrification, a long term that leaves our most vulnerable community members displaced with no benefits.

cont'd
PH174-2

The history between the Los Angeles Dodgers and the Los Angeles City Council has left our city in worst conditions from the deal in the 1950s, when our homes in our three communities were destroyed, and the lies that were told to the public of building public housing today leave us with the current issues of our houseless, our unhoused and affordability crisis that affects us

all today.

It is a win-win for the Dodgers and has been since Black Friday, May 8th, 1959, when our three communities were bulldozed and our families dragged out.

It is time to put a stop to Dodgers Corporation on exploiting the people of Los Angeles. I am strongly urging that everyone in the public and all elected officials oppose this project, as it will have damaging effects for generations to generations.

cont'd PH174-2

(Pause.)

It is time to put a stop to the Dodgers Corporation of exploiting the people of Los Angeles. I strongly urge that everyone in the public and elected officials oppose this project, as it will have damaging effects that will last for generations to generations.

(Whereupon, the above-entitled matter briefly went off the record.)

Comment - PH175

MS. XU: (Speaking through a translator): My name is Xiangtian Xu. I have

PH175-1

been a resident in the Chinatown area for more than 28 years.

I came here today to -- I want to say that I am very happy and I welcome and express support to the project, the LA ART Project by Metro.

Chinatown has had a lot of problems in the past, and I think this project is going to bring a great solution to those problems because it's going to alleviate the traffic issues. It's going to bring great businesses to this area. It's going to bring extra tourists. It's going to revitalize the Chinatown area, and it's also going to make the air quality much, much better.

cont'd
PH175-1

In the past, we don't have a supermarket; we don't have a hospital; we don't have a library. People don't come to our area because the traffic is too bad.

But the LA ART Project is going to change all of that. It's going to make our community more prosperous and it's going to bring a lot of benefits for its residents. It's going

to make our area more lively, and this project brings great effect on the aesthetics. I really like it.

In the apartment community that I live in, there are more than 500 residents just like me. Because of the weather, because they're old age, they are not able to come here today, but they have told me to must tell you that they also express support and welcome to this project. And they also wish for this project to finish rapidly, so we can start enjoying the benefits that it brings to us.

I want to express my sincere thanks and gratitude to the project and the company behind it.

(Whereupon, the above-entitled matter briefly went off the record.)

cont'd PH175-1

Comment - PH176

MR. GIBSON: Hello. My name is Chris Gibson, G-I-B-S-O-N, and I'm here to say that we do not want the gondola, for a variety of reasons, one being that there's no guarantee that the city won't be paying for this and the

PH176-1

benefits of it will be privatized.

Another issue is that the UCLA Mobility Lab has shown that it won't reduce traffic, and it certainly won't help with emissions because it's not an actual public transit. It's a novelty.

And then, the third is that it will be a disaster for the people who live in this area and who are already being burdened by increasing rents, and will only be further pushed out by the gentrification as a result of the gondola.

And that's it. Thank you.

(Whereupon, the above-entitled matter briefly went off the record.)

Comment - PH177

MR. OWENS-FLORES: Hey, my name is Gabriel Owens-Flores. That's Gabriel Owens, O-W-E-N-S, dash, F-L-O-R-E-S.

As a member of this community, I've lived here all my life. We're vehemently opposed to this. Every single one of my neighbors that I talk to on my street is opposed to this.

There has truly been no period of

cont'd PH176-1
PH176-2
PH176-3
PH176-4
PH177-1
PH177-2

public comment where we felt that we've been listened to. Every single part of this process has felt very -- has not felt transparent at all.

COURT REPORTER: Give me one second.

(Pause.)

Whenever you're ready.

MR. OWENS-FLORES: Okay, cool.

It has not felt transparent in the slightest.

What we need, instead of a very expensive gondola, is more sidewalks. We need buses. We need all of these other resources that we've been systematically denied all this time.

I remember, like from my house, I have to walk about 30 minutes to get to a bus. There's no reason the buses can't go through every single one of the major arteries in and out of Dodger Stadium, and a single gondola is both something static that cannot be reused in other days and it is also way more expensive. Buses can be recommissioned and can be put on any different route on any different day; whereas,

cont'd PH177-2

PH177-3

with the gondola, 283 days of the year, it supposedly will have no service.

The other thing is I'm afraid of the gentrification that will occur. Like I said, 283 days of the year, this won't be used for game-day transit, which means it will just not be used at all. Instead, I suggest that it will be used, and what it will be used for is for building up of, basically, like a mall at Dodger Stadium and the continued gentrification of Chinatown, where people come, drive in, park at Dodger Stadium, and then, shop around there, and then, go to Chinatown to get food, or whatever, or go to any of the new, like any of the new buildings, then all of the commercial properties there and do retail there as well.

So, I'm entirely against this. I think that it is a very, very wild and disrespectful use of public funding.

And I just want buses. I just want more buses. Just like have a bus at every single artery in and out, on Scott, on Academy, every

cont'd PH177-3

PH177-4

PH177-5

PH177-6

single one. Just have them run through and just like create a network of buses instead.

Thank you.

(Whereupon, the above-entitled matter briefly went off the record.)

cont'd PH177-6

Comment - PH178

MS. CHEN (Speaking through a translator): She wants to stop the gondola in Chinatown. We waste a lot of tax money. I hope the tax money can be spent on the hospitals and the low-income housing. We want the tax money to spend on senior housing and housing for the homeless.

So, we want the tax money spent on building a hospital, 24-hour urgent care, a hospital, so the seniors, then, have a place to go to when they need it.

Also, we would like our tax money spent on building more -- a grocery store, shopping more, public restrooms. Also, the bridge across the street to help the people with disability.

Thank you so much.

PH178-1

(Whereupon, the above-entitled matter briefly went off the record.)

Comment - PH179

MR. LI: All right. My name is Edwin Li. I am a Chinatown resident. My name is spelled E-D-W-I-N L-I.

And I am against the gondola. I don't believe that it will benefit Chinatown or its residents. Most of the business that the gondola people claim will benefit Chinatown, those people will fly over Chinatown. The gondola will not help. PH179-1

I also believe it's such an invasion of privacy. PH179-2

(Pause.)

I am definitely against this gondola, and I believe this whole meeting is a farce. Everything here is promoting the gondola with these big-time billboards. I don't think the people with the gondola have the community's best interests. Most of the people who are pro-gondola don't live in the neighborhood, and I think it will displace a lot of elderly. PH179-3 PH179-4

Before, I never knew what a gondola was. It never even came into my vernacular. I think a more reasonable and practical form of transportation, if that is their goal, which I do not believe so, is to use the Dodger Express which we already have. It will be a lot less money and it would actually transport people in and out of Dodger Stadium.

PH179-5

Thanks. Yes, that's it.

(Whereupon, the above-entitled matter briefly went off the record.)

Comment - PH180

COURT REPORTER: Whenever you're ready, sir.

MR. HANNAN: Hello. My name is Chris Hannan, C-H-R-I-S, separate word Hannan, H-A-N-N-A-N.

Again, my name is Chris Hannan. I represent the Los Angeles/Orange Counties Building and Construction Trades Council. We represent 48 affiliates with over 140,000 members. We're located at 1626 Beverly Boulevard, Los Angeles 90026.

PH180-1

Our members are going to build the project which is going to take cars off the streets. It's going to reduce traffic. It's going to reduce pollution. We're going to do it all union with local hire, giving an entry point into our apprenticeship programs and our local unions for local community.

We 100 percent support the project and believe it will be good for the City of Los Angeles. It will be good for workers and it would be good for the environment.

Thank you.

Comment - PH181

(Whereupon, the above-entitled matter briefly went off the record.)

MR. AMSTER: Okay. My name is Howard Amster, A-M, as in Mary; S, as in Sam; T, as in Tom; E-R. I live in the San Fernando Valley.

I am very much for the gondola. However, I posted the LA Daily News article from a couple of days ago. I posted that on Facebook and I got back a bunch of replies, one of which said, from a fellow named David Swartz, "I don't

cont'd PH180-1

PH181-1

PH181-2

know, Howard. I used to ride the red line to work every day and I stopped because it got so unpleasant." I have since spoken with him. He is referring to the homeless problem.

I would be riding the red line to get to the gondola at Union Station. I often ride the gondola to the Ahmanson and the Dorothy Chandler. And I'm embarrassed to take a date there because it is so unpleasant because of the homeless problem.

My concern is affecting ridership on the gondola and just I have to drive down there now to the Ahmanson, but I would prefer to take the red line to get there, and to the gondola, when it's running. But something needs to be done to make this red line -- and I am also told the blue line is an even bigger problem -- to make it a more pleasant ride.

cont'd
PH181-2

Another friend of mine said, "I'm not going to bring my 8-year-old son on a homeless train like this. This is like a billion-dollar mobile homeless shelter, is what the subway has

become."

Those are my concerns. Thank you very much.

(Whereupon, the above-entitled matter briefly went off the record.)

COURT REPORTER: Whenever you're ready.

MR. AMSTER: Wait. I forgot my -- don't start again because now I forgot what I was going to say.

COURT REPORTER: Okay. That's fine.

(Whereupon, the above-entitled matter went off the record.)

Comment - PH182

REPORTER: Hi, your name?

MR. JAMES: My name is Kevin James, K-E-V-I-N J-A-M-E-S. Okay, I'm here representing almost 19,000 members of the International Union of Operating Engineers, Local Number 12, the majority of which reside here in Southern California.

Our members are the people who survey, inspect, build, and repair roads, bridges, and other critical infrastructure such as water systems, sewers, and storm drain systems, along with high-rise buildings and rail systems. PH182-1

I'm here today to communicate the International Union of Operating Engineers' unconditional support for the proposed project labor agreement.

Please consider the benefits of project labor agreements such as providing contractors with a reliable and uninterrupted supply of qualified workers, ensuring the project

will be completed on time and on budget due to the consistent supply of skilled and trained labor and creating an avenue to implement provisions to require contractors to participate in the improvement of local residents, and providing access to Union employment apprenticeship and training programs for women, minorities, veterans, and other under-represented groups.

I encourage you to join our membership in support of this important project labor agreement. Thank you for your time and consideration.

(Whereupon, the above-entitled matter went off the record at 5:05 p.m. and resumed at 5:09 p.m.)

REPORTER: And your name?

MR. WILSON: My name is Chris Wilson, spelled C-H-R-I-S. Last name is W-I-L-S-O-N.

REPORTER: Okay, please proceed.

MR. WILSON: Good evening, and thank you. My name is Chris Wilson, representing the

cont'd PH182-1

Comment - PH183

PH183-1

Los Angeles County Business Federation, known as BizFed. We are a grass roots alliance of 213 diverse business groups mobilizing 410 employers with five million employees in LA County.

We continue to be in support of the proposed aerial gondola for several reasons. For one, this project will have the capacity to move approximately 5,000 people per hour out of the cars and into a zero admissions transit, thus reducing traffic congestion, pollutants, and greenhouse gas emissions that contribute to climate change. In other words, you will be able to get to a Dodger game without having to get into a car.

cont'd
PH183-1

And secondly, the LA aerial rapid transit will operate daily to connect communities of El Pueblo, Chinatown, Mission Junction, Solana Canyon, and William Mead Homes to Union Station while creating a pedestrian link between the Chinatown goal line and LA's State Historic Park.

This is a win/win for LA, its local economy, and Angelenos everywhere, to get there

by air. Thank you so much.

REPORTER: Thank you.

Comment - PH184

(Whereupon, the above-entitled matter went off the record at 5:09 p.m. and resumed at 5:11 p.m.)

MR. VOUGHT: My name is Andrew Vought, V-O-U-G-H-T. I'm a resident of Los Angeles. I'd like to state my opposition to the proposed gondola which goes over Los Angeles State Historic Park.

The project would defile an historic state park for the private profit of a real estate developer, and none of the economics add up.

This costly solution will be an environmental disaster, lots of un-needed investment in concrete while, according to UCLA research, it would be many times worse for the environment than that current free, commissions-free shuttle solution for electric vehicles.

The project will gentrify our community, but the whole point here will vastly

cont'd PH183-1

PH184-1

PH184-2

PH184-3

PH184-4

enrich the real estate developers. The idea of gifting the gondola to a non-profit merely means that the developer will wash his hands of any responsibility for operation and maintenance. That will be paid for either by your tax dollars or by philanthropy which, instead, should be going to support our community and our open space.

People say LA should get on the program because countries like Bolivia, Chile, and Germany use gondolas. I say we don't need to imitate these other countries. We need to do what is right for Los Angeles. Shame on Metro for promoting this sham project which will destroy our community. Thank you.

(Whereupon, the above-entitled matter went off the record at 5:14 p.m. and resumed at 5:17 p.m.)

Comment - PH185

REPORTER: Thank you.

MS. BRAY: My name is Eleanor. It's spelled E-L-E-A-N-O-R, last name, Bray, B as in boy, R-A-Y. So Los Angeles has been my home for

cont'd PH184-4

PH184-5

PH184-6

PH185-1

the past seven years. I am deeply concerned about the Los Angeles aerial rapid transit project.

I'm currently pursuing my Master's in Social Work at Cal State LA, and social work is a profession where the foundation of it is to solve problems, but solving problems with the understanding that those closest to the problem are closest to the solution.

So what problems does the gondola solve, and who determined that billionaire Frank McCourt is the right person to be providing a solution to these problems.

Problem number one is the claim that the gondola will have a traffic. However, based on the research done by the UCLA Mobility Lab, it only reduces traffic around the stadium by one percent on game nights, but it does significantly increase traffic in other areas.

Problem number two is the claim that the gondola will help reduce greenhouse emissions. However, the likelihood that people

cont'd PH185-1

PH185-2

PH185-3

will simply just drive to the gondola station instead of driving to the stadium means that emissions won't be reduced at all. The traffic will just be displaced.

cont'd PH185-3

Problem number three is the claim that the gondola provides much needed public transportation to Dodger Stadium, but we already literally have a shuttle bus that runs from Union Station on game night. And it's free, and people like using it.

PH185-4

So why are we asking those in the communities this will affect what their actual problems are and going to them for actual solutions. What about problems like investing in real public transit in needed areas of LA, affordable housing, community services, services for unhoused. No one asked for this gondola, and we shouldn't allow billionaires to use low income areas of Los Angeles as their play place. Thank you.

PH185-5

(Whereupon, the above-entitled matter went off the record at 5:19 p.m. and resumed at

5:33 p.m.)

Comment - PH186

MR. CHAN: My name is Kenneth Chan, K-E-N-N-E-T-H, last name, C-H-A-N. I'm a resident of the neighborhood. I am against this project. I think that the process has been undemocratic. I think that the fact that we've had these fake pubic hearings where they shuttered everyone out in the back to make public comment without actually being public comment, that's no definition of public. PH186-1

And I'm also against this project because it's a bad use of public lands and it's a bad use of public funds. There's no transparency around the financing and what any of that looks like. PH186-2

It's so obvious that McCourt funneled this project through a non-profit to get this through and has plans to develop the outlying area. This neighborhood needs more grocery stores, needs more affordable housing, needs an actual laundromat. And we are barely, you know, we're fighting for crumbs. PH186-3

And yet whenever people come into this neighborhood, developers, et cetera, people like LAR, they just see it as a playground where they can throw up the gondola under the guise of public transportation, which we know is BS.

They haven't given us any indication on what the pricing will be. They haven't given us any indication on, like, how efficient it will be as use of public transit. There's the UCLA study out that actually shows that it won't improve traffic.

This is just another luxury type development that they're trying to push into this neighborhood just like every luxury apartment that they build in this neighborhood that they say will be good for us. Yeah, and I'll yield the rest of my time.

REPORTER: Thank you.

(Whereupon, the above-entitled matter went off the record at 5:35 p.m. and resumed at 5:41 p.m.)

Comment - PH187

REPORTER: And your name, please?

cont'd PH186-3

PH186-4

PH186-5

PH186-6

MR. ZALDIVAR: Yeah, it's Richard Zaldivar, R-I-C-H-A-R-D , Zaldivar, Z-A-L-D-I-V-A-R. I am a community leader and I own, run a non-profit here in Los Angeles in downtown. PH187-1

I oppose this project. One, it is not environmental friendly. It will create a lot more noise in the community. Our civic leaders fought many years to develop a state park, not to have something that's not natural to fly over their heads. PH187-2 It's not going to alleviate traffic going to cause called more traffic and new access points. PH187-3

And finally, I don't think that it makes sense, when the Dodgers have such a big problem with alcohol abuse, and fights, and stabbings, to entice Dodger fans to ride over a park. PH187-4

And lastly, in any kind of business, when you apply for a license, when you apply for funding, or any kind of permit, you are also looked upon in your past history. The current owners or the leaders of this, the McCourts, have PH187-5

had a poor record of bankrupting the Dodgers and bringing in embarrassment to the City of Los Angeles. I don't think we want to do this again with a gondola project.

cont'd PH187-5

REPORTER: Thank you.

(Whereupon, the above-entitled matter went off the record at 5:43 p.m. and resumed at 5:50 p.m.)

Comment - PH188

(Simultaneous Speaking.)

MR. LEE: Okay, my name --

(Simultaneous Speaking.)

REPORTER: Go ahead, you're next.

MR. LEE: My name is Lee Suan, L-E-E S-U-A-N. I live in Chinatown. My zip code is 90012. I am living here almost, like, in Chinatown, on this area, around this area 30 years. I grew up here, almost a traffic jam every night when the games started. And after the game, it would get worse until people complained.

PH188-1

People from outside parking on, I mean, like, housing area, you know, public area,

and not convenient for tenants to come back to park their car. So I agree that they want to build, they call it a train, so what, like ---

REPORTER: The gondola.

MR. LEE: The gondola, yes. I agree they build the gondola. It's the best thing that -- even other countries are doing that. And why can't our area do it?

And people need for Chinatown, people moving around easy, you know, that area. And then from that side, I mean, from, I mean, area town that even every, what do you call, Medicenter, Civic Center, and here they have, I mean, how do you say. And even they have a traffic jam and then for three hours for people to get in the parking lot.

And we come back to that, on that side of any concert, you know, for an area that they are not, I mean, inconvenient for us to pass through any traffic lights, and even a lot of people moving around the area looking for parking.

cont'd
PH188-1

My comment is I agree with them to build, I mean, the location is okay. It's not big deal, and we'll get dollars for it too.

And convenient for people from outside who are taking the line, red line, blue lines, any line from Union Station so that is easy for them to go to Dodger Stadium. And even at night, you know, there's more traffic. I mean, for this, I mean, what do you call, is a thing --

cont'd PH188-1

REPORTER: The gondola.

MR. LEE: Okay. And then at least no, I mean, after the season is over people can go and see Chinatown and go downtown. That area people, I mean, the people from other counties can visit, get down from Union Station.

REPORTER: Is that your comment?

MR. LEE: Yes.

REPORTER: Thank you very much.

(Whereupon, the above-entitled matter went off the record at 5:54 p.m. and resumed at 5:55 p.m.)

REPORTER: And we're recording.

MS. FREIERMUTH: Thanks. My name is Anne Freiermuth, F as in Frank, R-E-I-E-R-M, as in Mary, U-T-H. I live in West Los Angeles, and I am opposed to the gondola project.

I really troubled at the idea that the city would spend billions if dollars for a tourist trap that has nothing to do with public transit. I would love to spend billions of dollars improving our public transit system. PH189-1

And I don't think the gondola, which covers a very small amount of land, is going to get people out of their cars, it's not going to improve any part of going to Dodger Stadium. PH189-2

It just seems so insanely, just such a insanely bad way to spend money and does not, I think, accomplish any of the goals that as they're stated.

This proposal was put forth earlier. The community defeated it. It has now been moved to Metro, given brand new branding, but the base problem is still there. This doesn't help transportation, it's very much opposed by the PH189-3

people who live nearby. It's a poor use of resources and makes no sense. cont'd PH189-3

REPORTER: Thank you so much.

(Whereupon, the above-entitled matter went off the record at 5:57 p.m. and resumed at 6:04 p.m.)

Comment - PH190

REPORTER: We are on the record for William Wong.

MR. WONG: I oppose the gondola being built here in Chinatown.

(Simultaneous Speaking.)

MR. WONG: The reason being the gondola is very detrimental to the interests of Chinatown. The airspace above Chinatown should not have any gondola going through it. PH190-1

The developer had the freedom and liberty to develop the gondola all the way over by the hilltop but definitely not in the airspace above Chinatown, because it has no advantage or benefits to Chinatown.

I am just wondering what's the reason behind centering the project here in Chinatown. PH190-2

What was the reason behind all this? I suppose its motivation is to stop Chinatown from ever developing again.

Currently, Chinatown is not doing well economically. The gondola is not going to bring any kind of benefit to Chinatown. Instead it will be all detriment. cont'd PH190-2

Chinatown is ours, for the Chinese community, the general Asian population. It's the home to this group of people. I don't know how long -- it's about 200 years of U.S. history with Chinatown here.

There are more and more illegal structures, which goes against the planning for the land, a lot of buildings whose purpose are against the interest of the park, the skyscrapers or tall buildings where low income foreigners will never be able to afford, those with limited resources, or the low income earners find some way to improve our living conditions. PH190-3

You know what I'm saying? Do you agree with me? I'm just talking practically.

Again whatever defines the facility they're setting up, who will be there? How many people are visiting that stadium?

I've been here about 30 years. I never visited there even one time, no money, no talk. They're not going to be happy. That's why. I'm 75 years of age. So we fight for our interest. Thank you.

PH190-4

(Whereupon, the above-entitled matter went off the record at 6:08 p.m. and resumed at 6:09 p.m.)

Comment - PH191

REPORTER: Ready when you are.

MS. CHOW: First of all, I really oppose the construction if the gondola. Chinatown should have more hospitals, more markets, so that we get more prosperous.

PH191-1

Immediately stop the construction of the gondola. Whatever they're doing is not respecting the citizens and residents of Chinatown. If they want better public transportation, do some subway building, whatever, but never a gondola, never.

PH191-2

Also implication in terms of air quality will obviously get even worse. Construction should immediately cease and never again. I recommend build some more bus stations, more metro subway stations, probably that.

That's all, thank you.

(Whereupon, the above-entitled matter went off the record at 6:11 p.m. and resumed at 6:13 p.m.)

PH191-3

Comment - PH192

REPORTER: And we are recording.

MS. YANEZ: My name is Elva Yanez. I'm a resident of El Sereno. I'm also active in environmental and environmental justice issues.

(Simultaneous Speaking.)

MS. YANEZ: And I am here today to basically say that I'm a former California State Park and Recreation Commissioner. I served from 2011 to 2019 during the time when LA State Historic Park was finishing up the interim use and moving into construction.

That entire time there was never a mention of a gondola. There was never a mention

PH192-1

of the gondola during the environmental impacts report process. There was never a mention of gondola to public members who attended 65 public meetings about what they wanted to see in the start park when it was constructed.

And very simply, this is a violation of CEQA. The idea that the EIR indicates no major impacts on the park and it's users is ludicrous.

So I fully expect a law suit. And really, at the end of the day, I believe that is where this issue will be resolved and justice for the communities who fought so hard to stop the warehouses on this land and to put a state park to provide rest, respite, for the people who have no park, who had no park before this park built in this region. So thank you.

REPORTER: Thank you.

(Whereupon, the above-entitled matter went off the record at 6:15 p.m. and resumed at 6:17 p.m.)

Comment - PH193

REPORTER: We are recording.

cont'd PH192-1

PH192-2

MS. RODRIGUEZ: My name is Jennifer Rodriguez, J-E-N-N-I-F-E-R, Rodriguez, R-O-D-R-I-G-U-I-E-Z.

REPORTER: Thank you.

MS. RODRIGUEZ: And my public comment is to not build this project, the gondola project, on our land. Because it is not something that the community wants or needs at this time.

We need more public infrastructure of not in this manner. We also need more park space, more open space. And this project would take that away. And we also need the Metro to listen to the community that clearly does not want this project as well.

And this will not help with traffic, or congestion, or whatever the project is claiming to help with. I know this because I live in Cypress Park, so I'm a nearby resident and I ride my bike though here all the time.

And Dodger Scandium just makes the traffic awful when they have games. And I am

cont'd PH193-1

PH193-2

PH193-3

pretty certain that adding an, like, an attraction is only going to increase that traffic, not decrease it as is proposed or thought to happen.

(Simultaneous Speaking.)

(Whereupon, the above-entitled matter went off the record at 6:19 p.m. and resumed at 6:20 p.m.)

Comment - PH194

REPORTER: We are recording. Your name, please?

MS. BAR-ZEMER: Miriam Bar-Zemer.

REPORTER: And could you spell that for me, please?

MS. BAR-ZEMER: M-I-R-I-A-M, last name, Bar-zemer, B-A-R - Z-E-M-E-R.

REPORTER: Great, and please proceed.

MS. BAR-ZEMER: So I have been opposed to the gondola project since I first learned about it, that it hadn't gone through a proper bidding process. And there didn't seem to be an honest review of various transportation modes that could potentially serve the Dodger Stadium

cont'd PH193-3

PH194-1

PH194-2

if that was the initial intention.

LA transportation is notoriously horrible. And I don't think the proposal really reveals the continuity of the cost that will be basically revealed for this -- sorry, I'm not expressing myself.

REPORTER. No, that's okay. If it gets a little loud, we'll give you some extra.

MS. BAR-ZEMER: Okay. And I started the draft environmental report. I have lived in downtown for basically 30 years at this point. I was raised here. And I am really saddened to know that the path -- I'm not anti-gondola in principle, but the path that it's taken is directly over our beloved state park which will, honestly, just ruin the view shed.

And all the concerns that this community is raising in terms of gentrification I find very valid. It's been a long battle for Chinatown to maintain its status here. And reportability is obviously one of the biggest concerns. And this is just not a asset to the

cont'd PH194-2

PH194-3

PH194-4

PH194-5

people who live here.

It really feels like a vanity project. Yeah, it's really more about the transparency of the process that feels really lost. So thank you.

cont'd PH194-5

PH194-6

REPORTER: Thank you.

(Whereupon, the above-entitled matter went off the record at 6:23 p.m. and resumed at 6:25 p.m.)

Comment - PH195

REPORTER: We are recording.

MR. FRANK: Okay, I'm Ron Frank, R-O-N F-R-A-N-K.

REPORTER: And please proceed, Ron.

MR. FRANK: I do live in this neighborhood, but if I didn't I would still be against this project. It's very much obviously a scam, and this should not be happening just to enrich one person.

PH195-1

Ostensibly, this is about saving the environment. Actually, it's a moving goal post, a moving horizon. They have so many different reasons for saying they want this gondola project

to go through, and none of them will solve any problem with our -- the gondola is not a solution to any environmental or neighborhood problems.

It's a solution for Frank McCourt's problem with what to do with his half of the Dodger Stadium parking lot. And nobody talks about all the environmental damage that will happen when he does end up developing his half of the parking lot. And that's down the line, and that's something that's not at all addressed in any way.

cont'd PH195-1

And I'm certain that whatever project he comes up with will create environmental damage in the building of it and in the people patronizing it afterwards. It'll increase the attendance at Dodger Stadium when there's not a game.

As well, and this is just a personal thing, I have come to really love the wildlife in my neighborhood. And this would greatly affect that. I realize that's seen as a lesser thing in these matters, but the wildlife is important in

PH195-2

the neighborhood. And it's great that it's here.

REPORTER: That concludes your comment?

MR. FRANK: I'm sure I have much more to say, if I was a little more organized, but that's it off the top of my head.

cont'd PH195-2

REPORTER: Okay, thank you.

(Whereupon, the above-entitled matter went off the record at 6:27 p.m. and resumed at 6:34 p.m.)

Comment - PH196

REPORTER: We're recording. If I could have you say and spell your name, please.

MS. MANZANILLA: Yes, my name is Xochitl Manzanilla.

REPORTER: And could you spell that for me?

MS. MANZANILLA: I spell it, like, X-O-C-H-I-T-L.

PH196-1

REPORTER: Yes.

MS. MANZANILLA: And my last name is Manzanilla, M-A-N-Z, as in zebra, A-N-I-L-L-A.

REPORTER; Okay, and your comments,

please?

MS. MANZANILLA: My comments is that I oppose the gondola project very strongly for many reasons. We do not need it, the first -- number one. We do not need it. We already have free transportation to Dodger Stadium.

cont'd PH196-1

And it will be a big mistake doing it on areas where only low income families live. These are communities, the people work hard to put the bread on the table. And this will be a big mistake for that reason, because they are poor people. And having to pay $40 to ride the gondola, I think it will be not fair.

PH196-2

And it will affect terribly all the programs that we have at LA State Historic Park, Los Angeles State Historic Park. Like, flying the kites is a program, the farmers market that we have in the park, CiBiC Bike, Art in the Park, Tai Chi class, Yoga class, baseball, and all concerts in the park, and more programs that I cannot mention.

PH196-3

The real estate will be affected very

PH196-4

badly with this gondola. People fought very hard so this land will be the beautiful park that it is today. And it's our beautiful LA State Historic Park. We don't want nothing to mess or destroy, come and destroy our beautiful park that we enjoy so wonderfully. Thank you.

cont'd PH196-4

REPORTER: Thank you.

(Whereupon, the above-entitled matter went off the record at 6:37 p.m. and resumed at 6:40 p.m.)

Comment - PH197

REPORTER: We're recording. If you could please state and spell your name?

MS. MURAI: Am I being recorded? Oh, can I start?

(Simultaneous Speaking.)

REPORTER: So you can state your name and spell it now for the record, please.

MS. MURAI: Okay. Miho Murai, M-I-H-O, last name is M-U-R-A-I.

REPORTER: And then now you can begin your comments.

MS. MURAI: Hi, my name is Miho Murai.

PH197-1

And I am a Chinatown resident. And I am here because I want to show my opposition to the gondola project. I do not believe there's enough transparency regarding the funding for the project from Metro and Frank McCourt.

The construction costs could go up to $300 million. And the question that I have is who will be paying for this? Will taxpayers' dollars be used to fund this project? And if so, how much of our public funds are estimated to be used? And when will we find out about this? Also, who will pay for the maintenance and daily operations of the gondola?

cont'd PH197-1

Another major issue is, as a resident of Chinatown, there is no need for a gondola, because the transportation from Union Station to Dodger Stadium already exists as a free shuttle system.

PH197-2

People that are going to use the gondola are tourists that are going to come in because they want to have the view. But the reality is the people that live in the community

PH197-3

will be the ones affected by the transportation, by the traffic.

And we do not have -- and we don't even know how much the gondola is going to cost. Most likely, it's going to not even be affordable to the residents. Chinatown is one of the most lowest income and cities within the LA County.

And then finally, I want to -- the gondola project will impact historic and culture resources such as the LA State Historic Park, the Union Station, and the Pueblo de Los Historic Monument. The towers that are going to be built are not suitable to the locations at where they're at. And more importantly, a gondola, it's just going to look weird. I'm sorry.

And then finally, this project will lead to displacement and increase the cost of rent in the area. And that's already happening all the time, gentrification.

Where I live currently, there's an apartment building right across from me. For a two-bedroom apartment, it's $5,000. And as a

cont'd PH197-3
PH197-4
PH197-5
PH197-6
PH197-7

result of that, they raised our rent in December. And so projects like this are not for the community.

And what it's going to lead to is the gentrification of our community. And it's going to lead to tourists coming into our community that can enjoy the gondola. But then they can go home and leave.

cont'd PH197-7

And then who is going to be impacted by the air, who's going to be impacted by the traffic? It's us, the community. So we ask you to first ask the community what we want.

PH197-8

What we want is we want more affordable housing. We want markets, we want public transportation, we need to address the unhoused. And these are the things that we need right now as we're fighting the COVID pandemic.

PH197-9

We do not need a gondola project that's going to ruin our community and not at all support our community. Thank you.

REPORTER: Thank you.

(Whereupon, the above-entitled matter

went off the record at 6:43 p.m. and resumed at 6:49 p.m.)

Comment PH195 (cont'd)

REPORTER: And we are on record.

MR. FRANK: My name is Ron Frank, R-O-N F-R-A-N-K. And another concerning thing about this whole process is that it's very much that they don't -- there's no transparency in so many aspects of this, from even this here today. Who are all these people manning these booths? I imagine they're employees.

And it seems like a lot of people here are against the gondola, and a lot of people here who are for it are employed to be for it. PH195-3

As well, there are so many changing names of who's trying to make this happen. It started out with Frank McCourt, then Climate Resolve, then Zero Emissions, then Metro, and who knows who else.

And another big secret has to do with -- involves the budget. If somehow this project does get jammed through, what provisions are there for this to be paid for when they go over PH195-4

schedule and over budget? And how are they going to prevent the tax payers from having to rescue this boondoggle?

REPORTER: Does that conclude your comment? Please continue.

MR. FRANK: It offers nothing but blight and ruin. And it must be stopped before it gets to a point where it's gone too far, and it's just going to be a big bus wreck. Okay, thank you.

REPORTER: Thank you very much, appreciate you.

(Whereupon, the above-entitled matter went off the record at 6:50 p.m.)

P-R-O-C-E-E-D-I-N-G-S

(5:03 p.m.)

MS. SISCO: So I would like to welcome you to this continued public hearing for the Los Angeles Aerial Rapid Transit Project Draft Environmental Impact Report.

This project is proposed by Los Angeles Aerial Rapid Transit Technologies, LLC. Thank you for taking time out of your day to participate in this continued hearing.

So, now we'll get into the interpretation logistics. I'll provide this information in English, and then I'll ask our Spanish, Cantonese, Mandarin, and Taishanese interpreters to repeat it.

I want to note that even if you're listening to this meeting in English, you're going to want to follow these instructions so that you can hear any comments that come through in another language interpreted back into English.

So, in just a moment, we'll enable the

interpretation and you'll be able to click on the interpretation button in your Zoom screen. That button looks like a globe, and it's usually at the bottom of your screen, but the location will depend on the device you're using. You're going to want to select your preferred language, so even if you're listening to the meeting in English, you'll want to select English.

And, finally, note that if you are calling in via phone, unfortunately, the interpretation feature is not available in Zoom for phone-only participants. So, please log into Zoom to access interpretation, if you can.

I'll ask the Spanish interpreter to repeat these instructions now.

(Foreign language spoken.)

MS. SISCO: Thank you, Madeline.

I will now ask the Cantonese interpreter to repeat those instructions.

(Foreign language spoken.)

MS. SISCO: Thank you very much.

Could the Mandarin interpreter please

repeat those instructions now?

(Foreign language spoken.)

MS. SISCO: Thank you.

And, finally, could the Taishanese interpreter please repeat the instructions?

Looks like maybe the Taishanese interpreter is having trouble coming off mute.

(Foreign language spoken.)

MS. SISCO: Thank you very much.

So, now, give us just a moment. We're going to enable the audio interpretation feature so that you can access it. You should be able to see the globe icon, and you're going to want to select your language of choice for the meeting.

And give us just a moment here. We're going to start recording in all five languages, so you may hear just a short break in the audio as we activate the recording.

And these recordings will be available on Metro's project webpage as well.

(Pause.)

MS. SISCO: If you need assistance

during the public hearing, please send us a message in the chat.

And we're just going to give it a moment here to confirm the team is all set with the recordings in the various audio channels, and then we'll move on.

(Pause.)

MS. SISCO: Okay. So, hopefully, everyone has had a chance to select their language, so we'll go ahead and move on.

Now that we have the interpretation enabled, I'd like to welcome everyone to tonight's continued public hearing. My name is Jessica Sisco, and I will be serving as the moderator for tonight's public hearing.

I would like to introduce Anthony Crump, Interim Executive Officer for Community Relations at L.A. County Metro.

MR. CRUMP: Good evening, everyone, and thank you for joining us.

The purpose of tonight's hearing is a continued public hearing provided in recognition

that interested members of the public may have been unable to provide testimony at the January 12th, 2023 in-person public hearing due to certain disruptions from some attendees.

This continued public hearing is for the sole purpose of receiving verbal public testimony on the Draft Environmental Impact Report for the proposed project. The verbal comments received at this continued public hearing will be deemed timely received for the purposes of the Draft Environmental Impact Report comment period, which officially concluded on January 17th, 2023.

Next, I'd like to talk a little bit about some of the ground rules for tonight's meeting.

Metro is committed to ensuring that all participants can fairly and clearly share ideas, comments, and concerns about the Draft Environmental Impact Report. To provide a safe and equitable process, we're asking for your help.

During this meeting, please respect the format of the meeting and allow everyone an opportunity to comment.

Please turn off cell phones and background noise when speaking.

Please treat your fellow community members, agency representatives, Metro staff, and others with respect.

Please address all comments to Metro staff and our consultants.

And, most importantly, please maintain a conversational tone.

And with that, I'll turn it back over to Jessica.

MS. SISCO: Thank you, Anthony.

Metro hosted two informational workshops and three public hearings during the Draft Environmental Impact Report public review period. To review materials that were presented during these meetings, such as presentations and exhibit boards, you can go to metro.net/aerialrapidtransit. And we will put

this link in the chat for you as well.

Okay. So, before we get started with public comment, we need to address a few housekeeping items.

And just as reminder in case anyone joined late, you do need to select a language tonight. Even if you're listening to the meeting in English, that will allow you to hear the interpretation comments that come through in languages other than English, so you'll want to click on the globe icon and select your language of choice.

Since we are focused on accepting public comment this evening, we won't be responding to questions. If you would like to make a verbal comment, you can raise your hand using the Zoom icon or by dialing star-9 if you're calling in on the phone.

We will call on you by name or the last four digits of your phone number, and it may take just a moment to get you unmuted.

There will be a 2-minute time limit

for comments. We ask that you please state and spell your first and last name as you begin your comments. Once you have identified yourself, we will start the 2-minute clock and you can provide your comment.

If you are using interpretation, the interpreter will repeat your comment in English once you conclude, and we will allow extra time for your comment to be interpreted.

If you exceed your 2 minutes, we will move on to the next commenter. It's important that we keep to the 2-minute time limit, as we want to be fair and give everyone who is providing comments in this meeting the same amount of time.

We also want to take a moment, as Anthony mentioned, to remind everyone to be respectful to others and to use appropriate language when making comments.

I should also note that communications that are typed into the Zoom chat will not be considered a formal public comment, so please

raise your hand if you would like to make a formal public comment.

Okay. So, let's go ahead and get started with the public comment session. I see that we have some hands raised, and we'll go ahead and start calling on people. We'll call on you to unmute yourself and provide your public comment.

So, Marta Woodhull. We'll get you unmuted so you can provide your comment.

Comment-PH198 Woodhull

MS. WOODHULL: Hello.

MS. SISCO: Hi. We can hear you.

MS. WOODHULL: Yes, good. Don't start the clock yet. I want to turn mine on real quick so I can parallel yours. And I can do that whenever you're ready, and I can begin.

Shall I start my clock?

PH198-1

MS. SISCO: Sure. Please go ahead.

MS. WOODHULL: Thank you very much. My name is Martha Woodhull. My professional name is Marta. I'm a resident of the Metro Chinatown Senior Lofts. Forgive the slurring sound in my

speech. I have a Invisalign in, yes? At the age of 68, I'm getting Invisalign, finally.

The reason I'm commenting is due to health issues. I had COVID and long COVID. I was unable to attend any meetings, but I have followed all of the documents.

Early on, when you first proposed this project, there was a representative actually at our building at Metro Chinatown, and I asked her to walk into my apartment to observe the impact of the Alpine Tower. I don't know that anyone has ever actually come inside any of our homes to experience what it will be like as a resident of the Metro Chinatown.

We have one window. We are a loft, narrow loft type of building, and our only window faces the Alameda Quarter. I am literally directly opposite the Alpine Tower, and I'm at about 100, 125 feet in the air. So, I'm very glad to see, looking at the EID today -- EIR, I mean, that you are going to be above my head.

So, so I was quite concerned about

cont'd PH198-1

PH198-2

that. You're going to be 175 feet. By the way, that drawing is very not to scale.

But I'm the daughter of a civil engineer. My father was a mayor. I understand the difficulty of a massive project of this nature, minimally, but it's very distressing to me that no one has experienced, to my knowledge, the boots on the ground reality of the people living in extreme proximity to these structures. I think the tower will be about 50, 75 feet in front of my face, and it will probably occupy half of my window.

That isn't worrying me. I was mostly worrying about gondolas passing in front of my window. I see by the plans that they won't.

So, my time is up. I wanted to just give you that inform --

MS. SISCO: Thank you, Martha.

Next, we will go to Liliana Cortez.

Liliana?

Liliana, are you able to provide your comments?

cont'd PH198-2

We may need to come back to Liliana, so we'll return and see if we can get Liliana's comment.

For now, we'll go to Chris Hannan. Chris Hannan, we'll get you unmuted so you can provide your comments.

Comment-PH199 Hannan

MR. HANNAN: Hello?

MS. SISCO: Yes.

MR. HANNAN: Hi. This is Chris Hannan with the Los Angeles-Orange Counties Building and Construction Trades Council, 1626 Beverly Boulevard, Los Angeles, California, here to speak in support of the project on behalf of 48 affiliate local unions and district councils representing over 140,000 members. PH199-1

This project is not only going to create good jobs, but it's going to have a tremendous benefit to the Los Angeles Community by getting thousands of cars off the road and encouraging public transportation.

This is the second largest city in the country, and we need to have more access to

public transportation, the last mile when we complete the trip on public transportation, and the Gondola Project is a fantastic project. It's going to get people off the roads and onto public transportation. It's going to be safe, and it's going to minimize the impact to the local community.

We've been in Los Angeles for over 119 years and strongly support the project. The project will be constructed with local community and the highest skilled membership in the world to make sure it's done as safe as possible.

Thank you very much.

MS. SISCO: Thank you for your comment.

We'll go to phone number ending in 7780. We'll get you unmuted here so you can provide your comment.

Comment-PH200 Kwan

MR. KWAN: Hi.

MS. SISCO: There we go.

MR. KWAN: Hi. Can you -- hi. Can you hear me?

cont'd PH199-1

PH200-1

MS. SISCO: Yes. Thank you.

MR. KWAN: All right, thank you.

This is Peter Kwan (phonetic). I am a born and raised Chinatown kid -- actually, born in Sacramento, but moved here when I was one. I am now 60. My family's been here for well over 59 years with our businesses in Chinatown, and I am calling in support of the project.

One of the things that we are lacking right now in Chinatown is commercial activity. We have no supermarkets. We have no stores, and I just took a walk around Chinatown today, and a lot of them were already closed by 3:00 p.m.

Chinatown is dying a slow death. You'll notice that commercial property owners are -- when they pass away, their heirs sell all their properties. Well, that's because there's no commercial activity. If the commercial activity was healthy, the buildings would be worth more than the land. Right now, it's the opposite. The land is worth more than the building, so they're all moving on. The old

cont'd
PH200-1

generations are dying, and the young generation won't come back.

I'm probably one of five businesses in Chinatown that has stayed, and we're making it work.

The other issue I'd like to address that people are concerned with is rising rents. Rents don't rise because of a gondola. The reason why rents rise because there's a lack of housing. And the reason some areas have more demand than others, people are moving in for the quality of schools, for the sick --

cont'd PH200-1

MS. SISCO: Thank you for your comment.

Next, we'll go to Gay Yuen.

So, Gay Yuen, you should be unmuted now and able to provide your comments.

Comment-PH201 G Yuen

MS. YUEN: Hello. You can hear me now, right?

MS. SISCO: Yes.

MS. YUEN: Thank you. My name's Gay Yuen. I was raised in Chinatown, taught in

PH201-1

Chinatown, and still very active with the community there. On top of that, I'm the chair of the Chinese-American Museum, which is located at El Pueblo Historical Monument across from Union Station.

So, I'm intimately connected with the gondola in terms of the present design and proposal, and I've spoken several times in favor of the gondola because to me, it's a win-win, both for the El Pueblo Monument and also for Chinatown in terms of visitors coming in, visiting our vendors, eating in our restaurants, and visiting our public places.

cont'd PH201-1

So, I won't go into that as much as saying that my direct comment on the EIR is that I'm hoping, when we get to the point of community benefits, that there will be a concerted effort to include participants from Chinatown and from El Pueblo so that we can talk specifically about what the residents, what the merchants, and what all the others who are directly impacted by the gondola will be able to tell you what we want and

PH201-2

what our community needs.

I think that I agree with Peter Kwan, that Chinatown can only survive if we infuse it with visitors who will come to our places of business. And, therefore, I urge that we continue to look at how to build the gondola with respect to what the needs of our communities are.

Thank you very much.

MS. SISCO: Thank you.

Next, we will go to Kris with a K. And if you could please state your full name before your comment.

Comment-PH202
K Chan

MS. CHAN: Hi. I don't know why you need my full name, but fine. My name is Kris Chan. I am a member of the Chinatown community, and frankly, I am so frustrated that we continue to have these hearings without any public transparency.

This is clearly a cosmetic project of Frank McCourt, and this will do nothing to benefit actually community members of Chinatown.

We -- you literally said it yourself.

cont'd PH201-2

PH202-1

PH202-2

We need a market. We need a hospital, and yet, you think building a gondola will save Chinatown?

Chinatown is not dying because we lack visitors. We need real community needs. We need things to benefit the older generation of Chinatown. We need actual affordable housing, and we're trying to spend millions of taxpayer dollars on these fucking stupid fucks.

I am respectfully asking you all to think about what low income community needs. You all are just doing this garbage work that doesn't actually amount to anything.

How much of the construction will decrease the air quality? None of this makes any sense. How many years will it take to build the goddamn gondola?

We -- there's so many things going on right now. We're in a pandemic. Rents are increasing because of this lack of affordable housing, and yet, we're all here sitting here listening to this as if Chinatown needs to be revitalized.

cont'd PH202-2

PH202-3

PH202-4

No. Chinatown community -- you all are just ignoring members who actually live there. They have been surviving, and they don't need a gondola. They need real community access, health care, hospital, market.

I don't know how many times we have to stress this: we don't need a gondola, and we're demanding that you get out.

PH202-3

MS. SISCO: We're going to move on to the next commenter, Eric Adams.

Comment-PH203
E Adams

MR. ADAMS: Hello. Can you hear me?

MS. SISCO: Yes.

MR. ADAMS: Thank you.

This project is a master class in deception and defrauding of the people. Everyone getting paid to work on this boondoggle should feel a deep sense of shame.

PH203-1

Do you want to know more about this project? You're going to find dead ends and feel-good fantasies.

You want to know who's paying for it? Good luck. Because no one knows.

Want to know who's designing it? It's very vague, but we do know for sure it's not a gondola manufacturer. The reputable ones want nothing to do with this project. PH203-2

Want to know who's operating it? A non-profit climate change parasite group with zero experience operating an attraction or anything relating to the public. In fact, all they claim to do is partner with other orgs that are actually doing the work. PH203-3

But, hey, public-private partnerships yield paychecks. Right?

Who's asking for this? That, we know concretely. Not the people of Los Angeles, not the residents of Chinatown and nearby communities, only the owners of the Chavez Ravine parking lots, so they can build the Dodgers Americana Grove Live. This is not public transit. It is an attraction. PH203-4

So, let's start the push on what we really need to do. Eminent domain, bringing the Chavez Ravine back to the people. Let's right a PH203-5

wrong decades in the making.

We will not go kicking and screaming this time, but we are keeping notes, and taking receipts and names. Shame on you all.

MS. SISCO: Thank you for your comment.

I'm going to try to give people a heads-up in terms of the next few comments that I'm going to so that you all can be ready to get unmuted, because I do see we have a number of hands up.

So, we'll go to Jon Christensen next, and following that we'll go to Maria Flores, and then phone number 4821.

So, Jon Christensen is the click. You're unmuted.

Comment-PH204
J Christensen

MR. CHRISTENSEN: Okay.

MS. SISCO: Yes.

MR. CHRISTENSEN: Great.

My name is Jon Christensen. I teach and do research on environmental policy with a focus on equity and environmental justice in the Institute of the Environment and Sustainability,

cont'd
PH203-5

PH204-1

the Luskin Center for Innovation, and the Luskin Center for History and Policy at UCLA.

I'm deeply concerned about the lack of environmental justice and equity in this proposed project, as well as in the Draft Environmental Impact Report itself.

Environmental justice is defined by four important concepts: recognition justice, participatory or procedural justice, capabilities or capacity justice, and distribution justice.

This project fails on all four fronts, and the DEIR itself fails on three of the four.

First, the DEIR and the project have failed to adequately recognize the neighbors of this project who will bear the greatest brunt of its impact.

Second, the DEIR process has been flawed from beginning to end. It has been designed and carried out as a dog and pony show promoting the project and gaslighting neighbors about its true impacts. Neighbors have not been given adequate opportunities to participate, to

cont'd PH204-1

PH204-2

PH204-3

be heard and listened to.

No wonder they made their voices heard at your last meeting. That is a tried and true method of environmental justice when authorities refused to enable authentic participation in the process.

cont'd PH204-3

Third, Frank McCourt and the other proponents of this project have done nothing to support the capacity and capability of disadvantaged neighbors to participate in this DEIR process or the planning that preceded it.

PH204-4

Fourth, this project is a classic case study of distribution injustice. The burden of the project would fall on disadvantaged neighbors, who would enjoy none of the supposed benefits of the project which, by the way, will not significantly reduce traffic and pollution around Dodger Stadium, and will be used by very, very few people locally to get around the neighborhood and visit El Pueblo, Chinatown, Los Angeles State Historic Park, and Elysian Park.

PH204-5

I urge you to analyze and respond to

PH204-6

these environmental justice concerns in this environmental impact review.

Thank you.

MS. SISCO: Thank you for your comment.

Next, we'll go to Maria Flores.

MS. FLORES: Hello. Hello, good evening. Can you hear me?

Comment-PH205
M Flores

MS. SISCO: Yes.

MS. FLORES: Yes. Thank you.

Good evening. My name is Maria Flores. I am here in solidarity with the Chinatown Community for Equitable Development, an organization that builds grassroots community power that is based on the L.A. Chinatown area. They are all volunteer-run, and I am here because I am actually a resident of the South Central L.A. neighborhood.

And something that we have in common is that our neighborhoods are both working class and immigrant family based, primarily. And we understand the struggles that happen in our neighborhoods when gentrification happens.

cont'd PH204-6

PH205-1

PH205-2

And I would just like for it to be clear to Metro and anybody supporting this project that we know, people in our community, the families, the students, the workers, know that all the projects coming into our primarily working class neighborhoods should be housing focused.

So, nothing comes into a neighborhood that is not directly benefitting a community, especially one that is primarily made up of Chinese immigrant families that have nowhere else to go.

We also have nowhere else to go, so I'm just here to make -- to let people know that we will stand with you, and that projects like these will stop happening because we will become united.

And, you know, it's really unfortunate to see why Metro decides to prioritize a project that they know clearly will displace families. So, know that if it comes need to be, we will be there physically to prevent these kinds of

cont'd PH205-2

PH205-3

projects happening in our neighborhoods.

We're tired. We have nowhere else to go, and we're going to take a stand. So, prepare to be disappointed.

Thank you.

MS. SISCO: Thank you for your comment.

We'll go next to the phone number ending in 4821, and following that, we'll go to Sarah Harris.

Comment-PH206
P Suzak

MR. SUZAK: Hi. Good evening. Pat Suzak (phonetic) with CREED LA here.

First, I want to say that although there have been some people on the call that are opposed to the project, there are a lot of people that are excited about the project. And I think that you can look online and you can read a lot of the reviews, maybe a lot of the people that aren't on the call tonight, but most of what I'm seeing and understanding is there's a ton of people that are extremely excited about the project.

It does have a big environmental

cont'd PH205-3

PH206-1

PH206-2

benefit for the people that are going to be riding the gondola, for the reduction of cars on the road, and the huge traffic benefit, and I think we'll see. We're going to see the difference, especially for Dodgers fans and congestion that sometimes takes place in the Dodger Stadium parking lots. So, you're going to see a noticeable benefit there.

There's a tourism benefit. We always want to make sure that we're continuing to promote Los Angeles as a city that's welcoming technological innovation and all of the things that benefit a city when it comes to how we present ourself. So, we want to continue to be right there on the bleeding edge of those kinds of innovations.

cont'd PH206-2

And continuing the benefit, the upgrade to Chinatown. There's some features and attractions that, obviously, once we get the gondola system going then there are going to be some other things that people are going to want to suggest, and there's going to be an additional

attraction to that area.

There are people that are also seeing the vision of this project and thinking, you know, where else could it go? Crypto Arena, L.A. River Bike Path, Echo Park. So, people are becoming invested in this vision and deciding that they want to look at where that could expand to.

And so, all of that being said, CREED is absolutely in favor of this project. We think it's great, and we are in total support.

So, thank you for your time. Have a good evening. And God bless you.

MS. SISCO: Thank you for your comment.

We'll go to Sarah Harris next, and following Sarah, we'll go to the attendee that's logged in as Mark McCrea/Chris Janowski.

Comment - PH207
S Harris

MS. HARRIS: Yes. Hello. Thank you.

My name is Sarah Harris. I am calling on behalf of the Black Business Association in support of L.A. ART, the zero-emissions gondola

cont'd PH206-2

PH206-3

PH207-1

for Union Station, from Union Station to Dodger Stadium.

Most importantly, the BBA supports the gondola and the 35 percent goal for local, and small, and diverse businesses.

So, we look forward to seeing that happen, and thank you very much.

MS. SISCO: Thank you for your comment.

Next we'll go to Mark McCrea/Chris Janowski.

Comment - PH208
M McCrea

MR. McCREA: Hello there. My name is Mark McCrea, and my comments are twofold.

One, as a private citizen, I am totally against this project. It is an eyesore and would be a disruption to so much of the community. Everything Frank McCourt does is as a profiteer. He only wants money. I think it would be a very unfortunate thing for anyone around.

I do fear that there is going to be more drunkenness of the Dodger attendees, and

cont'd PH207-1

PH208-1

PH208-2

when they get in the gondola, I am sure there is going to be violence. Would you want to be one of the two San Francisco fans in the gondola full of Dodgers? No.

cont'd PH208-2

Secondly, I'm on the board of Friends of Elysian Park, which is an organization that has been protecting Elysian Park since 1965 from development.

We, as an organization, are completely opposed to this development. It is a destruction of viewscapes from Elysian Park, from the State Historic Park, from people in Chinatown, even Cathedral High School's athletic field. This will be disruptive to everything and visually horrible.

PH208-3

There are obviously abilities to have more electric shuttles going up to the stadium and transport many more people than the gondola would. If you've ever gone to Mammoth Mountain, can you imagine how long it takes to get 500 people on the gondola? The lines would be immense.

PH208-4

And this is also the development, you know, the first foray into a commercialization of the parking lot areas. It would bring more people and destruction into the pristine area of Elysian Park. Elysian Park means paradise, and we don't want to violate that with a Frank McCourt project that is a totally useless, ugly eyesore, and not good for us. PH208-5

Thank you very much.

MS. SISCO: Thank you for your comment.

Next, we're going to go to Ted Green, followed by the phone number ending in 0973, and then the phone number ending in 9153.

Comment-PH209
T Green

MR. GREEN: Thank you very much. I unmuted on my end. Can you hear me?

MS. SISCO: Yes, we can hear you.

MR. GREEN: Excellent. Thank you. PH209-1

My name is Ted Green. I'm the legislative consultant for the Los Angeles LGBTQ Chamber of Commerce. The Los Angeles LGBTQ Chamber of Commerce strongly supports this

project, and there are really three reasons why.

One, for what this project would mean for the utilization of Union Station and transportation coming into and out of Union Station. Union Station happens to be my favorite building in Los Angeles, and this would be terrific for its future.

cont'd PH209-1

Number two, what this project would mean for tourism. Tourism underpins the Southern California economy and it's really important. A gondola would attract tourists to our area.

I've ridden the gondola in Spokane, Washington. It's wonderful. All due respect to Spokane, there aren't a whole lot of reasons to visit there, but the gondola is one, and that would be the case in Los Angeles as well.

PH209-2

And probably number three, it's because of the project developer's significant commitment to spend 35 percent of its money with diverse businesses, minority-owned, veteran-owned, LGBTQ-owned businesses.

PH209-3

You know, how do you remedy historic

PH209-4

and current discrimination, marginalization against certain communities? It's by projects like this spending good money with vendors from those communities. That funding lifts all boats and is worthy of our support.

MTA has said it's open to extraordinary innovation and private part -- private-public partnerships. This project absolutely delivers that on a plate and is well deserving of our support and the MTA board's support.

cont'd PH209-4

Thank you very much.

MS. SISCO: Thank you for your comment.

We'll go to phone number ending in 0973 next.

Comment-PH210 O Galindo

MR. GALINDO: Good evening. My name is Omar Galindo on behalf of UA Plumbers No. 78 and our 2,000 members. I'm proud to be here in support of this project.

PH210-1

This project will reduce greenhouse gas emissions by reducing traffic around Dodger Stadium, as well as making the city more

attractive to residents and tourists alike.

The developer has agreed to use responsible contractors, local hire, and livable wages, and that's a development that, in Los Angeles, most of us like.

Our local is encouraged by this project and eager to see it begin construction.

Thank you.

MS. SISCO: Thank you for your comment.

We will go to the phone number ending in 9153 next, followed by MG, and then the phone number ending in 5137.

Comment-PH211
G Torres

MR. TORRES: Good evening, everybody. Can you hear me?

MS. SISCO: Yes, we can.

MR. TORRES: Yeah. My name is Gus Torres (phonetic), and I represent UA Local 255 Pipefitters, Welders, and Apprentices.

We're glad for the opportunity to speak tonight to support this project. Nearly 5,000 people per hour per direction will be

cont'd PH210-1

PH210-2

PH211-1

PH211-2

shuttled through these gondola routes, and the time between Union Station and Dodger Station will become approximately 7 minutes. This means a huge impact on our local traffic in that area.

I also support and applaud the gondola project's commitment to work with the building trades. We need more examples of projects like this which involve the building trades and their skilled and dedicated local workforce of eager men and women.

Thank you very much for your time, and God bless.

MS. SISCO: Thank you for your comment.

Next, we're going to go to MG, and then we'll go to phone number ending in 5137 and 4959.

And I'd like to ask that you state your name before you begin your comment, please.

Comment-PH212
M Gatto

MS. GATTO: Yes. Good evening, everyone. My name is Marianna Gatto. I am the director of the Italian American Museum of Los

cont'd PH211-2

PH211-3

PH212-1

Angeles, which is located across from Union Station overlooking Olvera Street. I am also a native Angelena whose family settled in Lincoln Heights back in 1947 when the neighborhood was one of the city's Little Italys.

I've been the Director of the Italian American Museum of Los Angeles since 2010, and have worked at El Pueblo since 2005.

We support this project and feel that this investment of private dollars will contribute to the vibrancy of the neighborhood and increase awareness of the city's birthplace, its history, and promote visitation to its various museums, businesses, and cultural sites, as well as their preservation.

We also feel that this project will prove to enhance security in the neighborhood, which is sorely needed.

Thank you for your taking the time to listen.

MS. SISCO: Thank you for your comment.

cont'd PH212-1

PH212-2

Comment-PH213
E Garcia

We'll go to the phone number ending in 5137 next.

MS. GARCIA: Hi. My name is Erica Garcia (phonetic), and I am very excited to support the gondola project.

I was recently in Mexico City, and I was fortunate enough to ride the gondola. And I hope it comes to Los Angeles. It's a fantastic experience that I had in Mexico, and I would like to have the same transportation system here in Los Angeles. PH213-1

But I'm very upset at the protestors from the last meeting on January 12th. How dare they try to silence us and the supporters with their opinions? The protestors took the meeting and yelled profanities all night long, and Metro, you should be ashamed for allowing this to take place. PH213-2

So, thank you for allowing me to share, and I hope the gondola project comes to life. It's a great project.

Thank you very much. Have a good

night.

MS. SISCO: Thank you for your comment.

We'll go to phone number ending in 4959, followed by Alex Alvarez, and then phone number ending in 1242.

So, phone number ending in 4959.

If not, we can come back to this participant.

Okay. Let's go to Alex Alvarez.

Comment-PH214
A Alvarez

MR. ALVAREZ: Good afternoon. Can you hear me?

MS. SISCO: Yes.

MR. ALVAREZ: Okay. Good afternoon. My name is Alex Alvarez. I'm a lifetime Dodger fan, and we have to deal every single time with traffic around Dodger Stadium on game days, especially myself, that I have been going to Dodger games all my life. This gondola project could take 3,000 cars off the road, making it easier to get around, and reduce air pollution from cars.

cont'd
PH213-2

PH214-1

In my case, and I believe most Dodger fans will agree, I support the gondola project because it will be great for Los Angeles, for the surrounding areas, for Dodger fans and, of course, for Dodger Stadium. And it will reduce the traffic, especially when we leave at game time at the end of the game.

So, please, consider this project. And I yield back, and thank you for the time.

MS. SISCO: Thank you for your comment.

We'll go now to the phone number ending in 1242, and after that we'll go to Casa, and then Katie Norian.

Comment-PH215
R Frank

MR. FRANK: Hello.

MS. SISCO: Hello.

MR. FRANK: Hi. This is Ron Frank, and I'm calling because I'm very, very, very much opposed to the gondola.

Anyone who pays attention to how this is all proceeding can't help but notice how deceptive this all is. It's a scam to benefit

cont'd
PH214-1

PH215-1

just one person. And before this, what did Frank McCourt ever do to protect the environment? Here, he's only protecting his bank account, I believe.

As well, the lack of transparency and ever-shifting aspects of the project are incredibly concerning. It's bad whack-a-mole. This will not take cars off the road; it will just shift the traffic. It will not diminish pollution; in fact, the building of the gondola will only create more pollution, and there will be more pollution after Frank McCourt develops his half of the Dodger Stadium parking lot.

So, the things that they're putting forth are all lies, and it really is just bad whack-a-mole: the changing budget, the shifting developers under whose auspices this is proceeding under keeps changing, and even the reasons for building the gondola change all the time.

Unclear how much will it cost. Not $125 million anymore. Last they said was $300

cont'd PH215-1

PH215-2

PH215-3

million, and that was long ago, so I'm wondering what the cost is now. Must be getting close to half a billion dollars by now, I would think.

cont'd PH215-3

Let the taxpayers vote on whether or not this should go forward. That's why the public meetings are doing all they can possible to keep the public participants separate from each other at Union Station and at the high school. To have people give their comments to a stenographer behind the curtain makes you wonder, why hide us from each other?

It's clear the proponents have much to hide.

Stop the gondola, please.

PH215-4

MS. SISCO: Thank you for your comment.

We'll go to Casa, and then Katie Norian, and then Sunjana Supekar.

Comment-PH216
C Wilson

MS. WILSON: Hello. Can you hear me?

MS. SISCO: Yes.

MS. WILSON: Okay. My name is Casa, C--A-S-A. My last name is Wilson. I live in the

PH216-1

neighborhood.

I attended the last hearing at the high school. I had no problem leaving a public comment, despite the protests, and I talked to people who work on this project at length, and I'm even more against it now after that.

Let me run down the list:

Light pollution. This thing's going to run until midnight every single day. Dodgers fans ruin our lives half the year. Now they're going to ruin it every day of the year.

No parking. I guess we can't park on our streets anymore. One of the consultants told me that's not their problem.

No transparency. Who's behind this? How much will the taxpayer have to pay for this? How much will these tickets cost? They couldn't even tell me.

They're ripping up the park to put this hideous thing in, which is honestly just a tourist trap and gimmick.

Part of the Angeles National Park is

cont'd PH216-1

PH216-2

PH216-3

PH216-4

PH216-5

going to be ripped up where the farmer's market is, where people picnic, where they fly kites, to put in a private company's product to make money.

I find it curious not a single person has spoken up in favor of this project who isn't going to make money off of it -- or is a Dodgers fan, of course. But these aren't people who live here and have to live with this every single day.

Also, one of the consultants for the project told me, when I asked him what the point of it is since there aren't Dodgers fans every day, said that they're going to put a transit hub up at Dodger Stadium and provide shuttles and electric scooters all over Elysian Park. And I haven't really heard much about that, so I wonder if it's even true.

This is not a project for people that live here. This is not a project for people in Los Angeles.

You know, I guess we're all in our own echo chambers. I don't know a single person in favor of this. I haven't heard a single peep

cont'd PH216-5

PH216-6

PH216-7

PH216-8

about someone who wants this and doesn't think it's an absurd waste of money, except Dodgers fans commenting on it on Instagram.

cont'd PH216-8

And it's really nothing that adding more electric buses couldn't also do. This is a waste of money, and I hope you'll stop this ridiculous project.

PH216-9

Thank you.

We'll go to Katie Norian, followed by Sunjana Supekar, and then Jason Fujimoto.

Comment-PH217 K Norian

MS. NORIAN: Can you hear me?

MS. SISCO: Yes.

MS. NORIAN: My name is Katherine Norian. I represent Chinatown Station Owner, which opposes the project.

PH217-1

Our client's December 16th letter identified the Draft EIR's many fundamental defects, including a project description that shifts from section to section and omits information critical to the impact analyses,

PH217-2

impact analyses that are incomplete and rely on speculation, and significant conclusions based on defective mitigation measures.

But most critically, the Draft EIR analyzes only part of the true project. That true project is a two-phased project, all of which must be analyzed in the Draft EIR.

This project, Phase 1, provides transit to Dodger Stadium to reduce vehicle travel and thus the need for the parking lot, and therefore clears the way for the Phase 2 project to redevelop the parking lot with the offices, shops, and entertainment uses planned for only the Dodgers' parking lot lease.

The Draft EIR evidences the need for this Phase 1 project to both enable and support the Phase 2 redevelopment. For example, several sections narrow the focus of their analyses on how the project would reduce Dodger Stadium vehicle traffic.

The project relies primarily on tourism, not game day and neighborhood ridership,

cont'd PH217-2

PH217-3

PH217-4

for its projected 18-hour a day operation. So, why assume so many tourists would be drawn to an empty stadium and an unimpressive view unless a shopping and entertainment venue is planned at the redevelopment parking?

The Draft EIR also discredits any need for the project other than to serve Dodger Stadium: that is, to serve the underserved neighborhoods. Chinatown and Mission Junction are already served by the Gold Line and don't need the disruption of another stadium -- or another station.

And the project can't serve neighborhoods near Dodger Stadium because it doesn't have a first mile/last mile hub at the Stadium to serve the projected ridership from these neighborhoods.

Metro must reside --

MS. SISCO: Thank you for your comment.

We're going to try to move between commenters as quickly as we can because we do

cont'd PH217-4

PH217-5

PH217-6

have a number of hands up.

Next commenter is Sunjana Supekar, followed by Jason Fujimoto, and then Phyllis Ling, and Sophat Phea.

Comment-PH218
S SUPEKAR

MS. SUPEKAR: Can you hear me?

MS. SISCO: Yes.

MS. SUPEKAR: Thank you. I'm Sunjana Supekar of Chatten-Brown, Carstens & Minteer, and on behalf of the California Endowment, we wish to express our strong opposition to this unsolicited, private tourist attraction representing itself as public transportation. PH218-1

We oppose this project because the community did not ask for it and does not want it. They want real public transportation solutions.

The project will not reduce but actually displace traffic noise and pollution from Dodger Stadium to already impacted communities in and around Chinatown, disrupting businesses and services and accelerating gentrification. PH218-2

This private project will require the use of public land, airspace, and likely public resources to be able to operate. PH218-3

Finally, a superior, low emission public transportation option already exists by using electric buses to expand the already effective free Dodger Express Bus. PH218-4

The Draft EIR presents misleading and incomplete analysis to the detriment of the public who, instead of getting information, are given an infomercial. PH218-5

We submitted two letters detailing the DEIR's deficiencies. Please carefully consider the points raised in those letters.

We are also concerned because the proposed Alameda and Alpine towers are located in an earthquake liquefaction zone. PH218-6

We close by highlighting the numerous other public comment letters expressing concern about the project or opposition to it. These letters are from groups including Homeboy Industries; Gabriele¤o/Tongva San Gabriel Band of PH218-7

Mission Indians; Playbold Park Association; Los Angeles Parks Alliance; California State Park Rangers Association; Natural Resources Defense Council; Sierra Club, Los Angeles Union Station Circle Society; SOCA Gondola, including but not limited to Phyllis Ling; L.A. River State Park Partners; Coalition for a Beautiful Los Angeles; State of California Natural Resources Agency, Department of Parks and Recreation, and the Department of Fish and Wildlife; City of L.A. City Administrative Officer; Los Angeles Conservancy; Land Protection Partners; S&R Partners, LLC, a revolving family company; Trust for Public Land; and Latino Outdoors.

cont'd PH218-7

There are better solutions for Metro and the City of L.A.'s actual public transportation needs. We ask that you please stop this gondola project now.

MS. SISCO: Thank you for your comment.

We'll go to Jason Fujimoto.

Comment-PH219 J FUJIMOTO

MR. FUJIMOTO: Thank you. My name is

PH219-1

Jason Fujimoto. I'm calling on behalf of the Los Angeles Chinatown Corporation. We are the founding organization of Chinatown when it was displaced.

Our family has been in Chinatown for well over 80 years. Most of our family and friends have owned businesses and currently still own businesses. A lot of our family members still live in Chinatown, and we support the gondola project general concept. cont'd PH219-1

We definitely have concerns, as some of the others do, in terms of some of the environmental issues and impacts, but in general, we do support it. PH219-2

So, we don't oppose it, and the reason we do is that we, as I think one speaker has mentioned, is that we need activity in Chinatown. Chinatown is dying, despite some of the other comments. PH219-3

Speaking to the businesses, merchants, even family members, there is no tourism. There is no activity. There is no foot traffic in

Chinatown, and with the concept of the gondola, it might help bring in people into the Chinatown community to help revitalize some of the businesses.

And so, some of those mom and pop businesses that we're trying to protect, hopefully, if we can bring in the tourism, we will help support and bring business to these mom and pop stores. And if we don't, then those mom and pop stores will close up, close down.

cont'd PH219-3

So, we, as a family, as an organization, we support, again, in concept. We don't oppose it, and we hope that all the different sides can come together to make it happen.

Thank you.

MS. SISCO: Thank you for your comment.

We'll go to Phyllis Ling next, followed by Sofat Sia, and then Ernest Lee.

MS. LING: Hi. I have five seniors here.

MS. SISCO: Oh, hold on.

MS. LING: I have five seniors here who would like to speak, and I hope that they can each be given 2 minutes. It's hard for them to join the meeting. That's why I'm here helping them with my computer.

So, is that okay?

MS. SISCO: Do you have a comment, Phyllis? Or is it the five seniors that are there with you?

PH220-1

MS. LING: I have a comment, but I'm also on another device listening in English. And I'm on this device, and they're with me, but we're listening in Cantonese on here.

So, I would make the comment I'm sharing another device with my sister. So, I'm logged in on another and have my hand raised on another.

MS. SISCO: Okay. Yeah, thank you.

So, let's take one comment for now and let me think about the logistics of taking five people, because we've generally been going in the order that the hands are raised.

So, let's do one comment now, and then we'll think about how to take the five additional comments. So, is there one of the individuals that are with you, Phyllis, that's prepared to provide a comment?

(Foreign language spoken.) cont'd PH220-1

MS. SISCO: Phyllis.

MS. LING: Uh-huh?

MS. SISCO: I want to give the interpreter a chance to relay the comments. I'm not sure if that was two speakers or one.

MS. LING: It was two speakers.

MS. SISCO: Okay, so the interpreters are providing consecutive interpretation, so I want to give them a chance to relay the comments that were made, and then we can go to the other three individuals that wanted to provide comment.

So, I'm going to ask the interpreters to repeat the two comments that were just provided.

cont'd PH220-1

Comment-PH221
P LING SPEAKER 1

INTERPRETER: I oppose the Chinatown gondola project because Chinatown already has a lot of cars and the Go Line runs through Chinatown as well. I live in the Chinatown senior building, and that's for speaker one.

PH221-1

MS. SISCO: Thank you.

Comment-PH222
P LING TAN #2

INTERPRETER: For speaker two, I also live in Chinatown. My last name is Tan. I am over 80 years old. I live near the railway station, and if we have the gondola in the future, this is going to affect our life because building a gondola will produce a lot of dust, noise, and it's going to be a safety issue as well, so I oppose this gondola project.

PH222-1

If we really need to develop Chinatown, we need to make sure to add more parking for cars that are coming in. This project is for wealthy individuals, and for the benefit of Chinatown, we need to make sure we

PH222-2

cont'd PH222-2

have enough parking for the public. Thank you.

MS. SISCO: Thank you for interpreting those comments. So, Phyllis, I'd like to go back to you and we can have the three other individuals provide their comments. If you could please ask them to pause when they're done so that the interpreters can relay their comments in English?

And I see a couple of notes coming through that folks aren't hearing the comments interpreted into English. You want to make sure to click on the globe icon if you're participating in the meeting in English and select English so that you can hear the interpreter's interpretation of the comments that are coming in in other languages.

Okay, so Phyllis, we're going to unmute you and we'll go to the next speaker. We'll get the timer set and then we'll pause when the next speaker is done so that the interpreter can relay that comment.

(Foreign language spoken.)

MS. SISCO: Okay, we need to pause now to allow the interpreter to interpret that comment and then we'll come back to the final two commenters there.

MS. SISCO: So, let's -- Phyllis, we're going to mute your line for just a moment just to make sure that we can hear the interpreter relay that comment back in English.

Comment-PH223
P LING-SPEAKER 3

INTERPRETER: I live in the senior apartment near the Metro station. The address is 808 Spring Street and I personally live in apartment 909.

I have lived here for approximately ten years. A lot has changed over the past ten years. Over time in Chinatown, gradually we lost a hospital and some supermarket.

PH223-1

A lot of visitor going to Chinatown, they are just here to do the shopping, but a lot of them have gone currently, and Chinatown desperately needs the hospital to come back and more stores in Chinatown, and the government

needs to think about the need of their people.

Even though I live here, I do most of my shopping, grocery shopping in Rosemead and San Gabriel because it's cheaper there and it's more convenient. I can do all of my shopping there all at once. There are a lot of street vendors in the streets in Chinatown. It's like a third world.

cont'd PH223-1

And Chinatown currently already has an electric bus that is running through Chinatown from the bus terminal, so we don't need the gondola anymore. Thank you.

PH223-2

MS. SISCO: Thank you. So, we're going to move to the fourth commenter that is waiting to provide comment with Phyllis.

(Foreign language spoken.)

MS. SISCO: Okay, we're going to allow the interpreter to interpret that comment and then we'll come back for the final participant in this group.

Comment-PH224
P LING

INTERPRETER: Thank you. My name is Ling Lee. I also live at 808 Spring Street and I

PH224-1

have lived here for --

(Simultaneous speaking.)

MS. SISCO: Oh, you know what? I'm going to pause the -- I think we have two interpreters that are interpreting right now, so it's hard to hear. I'm going to ask that one of you provide the interpretation, please.

INTERPRETER: Okay, my colleague can go ahead.

MS. SISCO: Thank you.

INTERPRETER: So sorry about that. My name is Ling Lee and I'm a senior citizen living in the senior apartments too. The address is 808 Spring Street and I have been living there for ten years and I'm 75 years old.

And every time I open my window in my apartment, so the bus line was running through outside, so it generates a lot of like noise and vibrations. It caused me like a headache and I couldn't sleep at night.

So, you want another gondola outside of my building. That's going to basically kill

cont'd PH224-1

PH224-2

PH224-3

me. So, you mentioned that it would bring more business. You can just invest on more shops in Chinatown.

And so, also the gondola is not, you know, would bring a lot of benefit to us as senior citizens, so, because it's hard for us to like go into the gondola or take the gondola.

And also, it also would cause us some like safety issues, some safety issue in our neighborhoods, so I'm strongly opposed to the gondola project. Thank you.

MS. SISCO: Okay, so I'm going to ask that that final comment in that group of five be interpreted and then we'll move to Sophat Phea and then Ernest Lee.

Comment-PH225
P LING-SPEAKER 4

INTERPRETER: I am very much in

cont'd PH224-3
PH224-4
PH224-5
PH225-1

opposition of this gondola project. You are talking about this gondola is going to reduce pollution and noise. That is not true. I am in so much opposition of it. A gondola is only used in not-so-developed countries and cities.

Look around us. Look at the world. Only very backwards cities and cities that are not so developed are still using gondola. Look at Beijing. Are they using gondolas? Look at all the very developed countries.

If you want to build a gondola here in Los Angeles, that means Los Angeles is a not-so-developed country. Is that what LA is?

Such way of transportation is obsolete. It's definitely going to bring a lot of negative impact to people. It's going to bring more pollution. It's bad for seniors' health.

And also, if you put a gondola right there above our window, above our building, the moment we open up our windows, they're able to see everything we're doing inside.

cont'd PH225-1

PH225-2

We are sacrificing or you are actually putting our privacy on the line. We would not have any more privacy. I firmly oppose the gondola project.

cont'd PH225-2

MS. SISCO: Thank you. Okay, so now we'll move to Sophat Phea, followed by Ernest Lee and Tany Ling.

Comment-PH226 S PHEA

MR. PHEA: Hi, my name is Sophat Phea and I have lived in Chinatown for over 30 years and still live in Chinatown today. As there's been a rise of developments and gentrification in Chinatown, I fear this project will contribute to it and put my home more at risk.

PH226-1

Parking has been a huge barrier to the small businesses in Chinatown in thriving, including for my mom and her shop. They were told that it would bring businesses to Chinatown, but tell me how.

It is no doubt going to take up a lot of parking spaces in Chinatown where people are already having trouble finding. Even tenants living in Chinatown have trouble finding parking.

PH226-2

I personally don't see myself using the gondola and would love the money and effort go toward what the community would actually use instead, such as our current public transportation. How much does it cost to ride the gondola? Tell me why no one was able to answer. PH226-3 PH226-4

Money and effort could have been put into improving the parking situation and improving our public transportation instead. At the end of the day, who does it really benefit and who is being harmed? Thank you. PH226-5

MS. SISCO: Thank you for your comment. We'll go to Ernest Lee next.

Comment-PH227 E LEE

MR. LEE: Can you hear me?

MS. SISCO: Yes.

MR. LEE: Okay, my name is Ernest Lee. I'm the President of the Chinese Consolidated Benevolent Association in Chinatown. We're the oldest Chinese association in Chinatown, with over 130 years of history. We have 27 family associations affiliated with us and we have over PH227-1

2,000 membership.

We strongly support of this gondola project because definitely it will bring benefit, commercial benefit to Chinatown and the small merchants. Chinatown, like the people said earlier, Chinatown is dying. We need the revitalization, so definitely, please bring on the gondola project. We need it. Thank you.

cont'd PH227-1

MS. SISCO: Thank you for your comment. We'll move to Tany Ling, followed by S.K., and then the phone number ending in 2658.

Comment CONT. PH220 - P LING

MS. P. LING: This is actually Phyllis Ling.

MS. SISCO: Okay.

MS. P. LING: I'm sharing the phone with my sister. Can I go first?

MS. SISCO: Yes.

PH220-2

MS. P. LING: Okay, could you please restart my time? Okay, thank you. Yes, so this is Phyllis Ling. I'm a resident under the route of the gondola directly across from the massive Broadway junction.

First of all, the draft EIR is deficient and deceptive. It needs to be redone or, better yet, stop this project. If you must continue, I have these comments. PH220-3

The smart glass for privacy sounds like a lot of lip service to us residents. There's no explanation as to how it would be implemented. We need to know where it would be activated.

There are a lot of residents along the route, so if the windows are fogged up 50 percent of the time, that doesn't sound like a good experience for tourists who are supposedly funding this project, and there's maintenance. PH220-4

If the smart glass is malfunctioning, will the cabin be taken out of service? How would the operator know? Would they just be relying on residents to report malfunctions?

We don't think the measures to protect our privacy should be treated lightly or like a courtesy. This is an essential part of the system.

The maps on the alignment profiles don't show enough detail. How are the additional buffers treated legally? How low is it? You want to go over my property, would I have to cut back my avocado tree for the gondola? Would I be required to allow McCourt's people access to cut back my tree whenever they want? These are little details, but they matter. PH220-5

Most of the route is on an earthquake liquefaction zone. The mitigation in EIR is to do mitigants or whatever that says. Well, if the mitigation is to drill deeper, that's more noise, vibration, more possibility of groundwater contamination, more damage to our homes and (audio interference) historic El Pueblo. PH220-6

Why isn't -- oh, okay, so you know what? This project would be like a cable car freeway over a neighborhood which is already sliced and diced by Hill Street and Broadway. I'm sorry, but the people who are supporting this aren't looking beyond the marketing hype. PH220-7

This project is as sustainable as an PH220-8

EV Hummer, which is also zero emissions by their standards. It's bloated and completely wrong for the supposed purpose. Go back to the drawing board with this EIR or just stop the gondola. Thank you.

cont'd PH220-8

MS. SISCO: Okay, I believe that there was another commenter on the same phone line, Tany, so if we could unmute that line real quick and see if there's another commenter? If not, we'll move onto S.K.

Comment-PH228 T LING

MS. T. LING: Hey, Metro. My name is Tany and I'm a Chinatown resident who is against this project. Hey, Metro, if you are serious about making life better for Angelenos, you'd also be against this touristy sweetheart money grab for Frank McCourt.

PH228-1

Metro, if you're serious about reducing traffic and pollution on game days, you would choose practical, cost-effective measures like providing safe pedestrian access to Dodger Stadium and expanding the Dodger Stadium Express by adding more electric buses and dedicated bus

PH228-2

lanes, and creating new boarding hubs in other parts of the city like Griffith Park, the Valley, and the West Side.

Metro, I support and actively use public transportation, but this gondola proposal is a scam masquerading as a free public service project. You all forgot to include the residents and stakeholders when you and LA ART met behind closed doors during what was supposed to be the initial public planning period.

Then, you held in-person hearings where we could make so-called public comments, but only if we were secreted away in the corner behind a curtain talking only to a stenographer. Metro, I think you have a lot of explaining to do.

MS. SISCO: Thank you for your comment. We'll now move onto S.K., followed by the phone number ending in 2658, and then the phone number ending in 2170.

Comment-PH229
S KOYAMA

MS. KOYAMA: Hi, can you hear me?

MS. SISCO: Yes.

cont'd PH228-2

PH228-3

PH228-4

PH228-5

PH229-1

MS. KOYAMA: Thank you. Hi, my name is Sakae Koyama, a born and raise lifelong Angeleno, and have lived in Echo Park/Elysian Park since 1975.

I'm also a board member of Friends of Elysian Park, who have helped protect and preserve Elysian Park from predatory developers since 1965. We have taken a firm stance of no on this project. cont'd PH229-1

We remember our history, Chavez Ravine. We know what gentrification and displacement does to neighborhoods. This will not bring revitalization to Chinatown. They need supermarkets, hospitals, infrastructure. Elysian Park is not for sale. PH229-2

There's a reason that Frank McCourt kept the parking lot after he sold the Dodgers. He had dollar signs in his eyes. As he has steadily raised the parking rates, it has negatively affected the surrounding neighborhoods. PH229-3

This is not public transit. To where? PH229-4

The parking lot when Dodgers are there seven to eight months of the year when a perfectly good bus system exists? This is only the first phase of McCourt's Disney-fication of Elysian Park, turning it into an amusement shopping center like Universal Citywalk.

It will ruin the natural beauty of the historic state park and the oldest city park since 1865, Elysian Park, and will ruin the scenic view of downtown. We adamantly oppose this project and it has no place in our community. Thank you.

cont'd PH229-4

PH229-5

MS. SISCO: Thank you for your comment. We'll now go to the phone number ending in 2658.

Comment-PH230 ANDY

PARTICIPANT: Hi, can you hear me?

MS. SISCO: Yes, we can.

PARTICIPANT: Hi, my name is Andy. I've been part of Chinatown for 20 years and I'm speaking against the gondola project.

PH230-1

Respectfully, everyone involved is fucking kidding themselves if you actually think

this project does a community good. It's insulting and disrespectful to us if you think anybody living here actually believes this would help Chinatown without first being lied to. cont'd PH230-1

Chinatown is not dying. Chinatown is being killed by you people. Projects and corporate greed just like this are steamrolling over our homes just like Union Station in Old Chinatown, just like Dodger Stadium with La Loma, Bishop, and Palo Verde. Trickle-down economics didn't work then, why would it work now? Metro and McCourt clearly have no respect for us.

Your own presentations say that the most you should get out of this project is a merely 20 percent by 2040 in two decades. You won't be able to make a graph that shows how more foot traffic and congestion translates over to a better standard of living, housing, food, and health access. PH230-2

I hope you all sleep terribly tonight. If your conscience isn't haunting you in your nightmares, it will surely haunt your careers

because everybody can see this project is a fucking joke. Thank you.

MS. SISCO: Okay, thank you for your comment. We'll move onto the phone number ending in 2170, and we'd appreciate it if everyone could keep their language civil for other attendees, so 2170.

cont'd PH230-2

Comment-PH231 R GARCIA

MR. GARCIA: Good evening. Can you hear me?

MR. GARCIA: Okay, thank you. My name is Rick Garcia. I'm a sheet metal worker by trade and union organization with SMART Local 105 representing the sheet metal trades in Southern California.

All right, I'm here to support the LA ART gondola project and I'm not ashamed to say that. This project has been open for consideration since 2018 when it was first proposed to Metro's Office of Extraordinary Innovations, and since then, a great deal of traffic and pollution have plagued the area

PH231-1

around Dodger Stadium.

LA ART and Metro's gondola project offers significant potential benefits by increasing access to public transit and reducing traffic congestion on local roads.

We are pleased with the changes coming to our city transit via the project and happy for the future of the area around Dodger Stadium. Thank you for your time.

cont'd PH231-1

MS. SISCO: Thank you for your comment. We'll go to the phone number ending in 0523, followed by phone number ending in 9717. Following that, we'll go to Juniper Wong and Patrick Chen.

So, phone number ending in 0523? Okay, we'll come back if needed. Let's go to phone number ending in 9717. Okay, let's move onto Juniper Wong and then we'll go to Patrick Chen, followed by Larry Jung.

Comment-PH232 J WONG

PH232-1

Equitable Development, and I oppose this project.

This is supposed to relieve traffic and have zero emissions, but this gondola doesn't take anybody off the road, it just adds. By being a tourism destination, it will just redirect traffic and automobile emissions from Dodger Stadium to Chinatown and the downtown area.

You also say this will improve connectivity for the city of LA. I fail to see that when the transit being proposed is just a mile and a half long. Fans come from all over the city. There's traffic in all directions.

There's traffic in LA all day, every day, but you choose to run this directly through and over one of the poorest areas of Los Angeles, making Chinatown residents suffer for your tragic idea.

Every parcel of land this project is slated for is on public land. That land should be used for public good. Chinatown has been deprived of services with no supermarket. You've

cont'd PH232-1

PH232-2

PH232-3

PH232-4

already heard seniors say that they have to go to San Gabriel Valley to access our cultural goods and foods where there was just a devastating shooting.

The people of Chinatown are dangerously under-resourced. The median income is less than $20,000, and like the rest of LA, is in an absolutely crisis for fair housing. Do you really think that when the right to live in one's home and stay off of the street, that the neighborhood's main concern is how flamboyantly they can get to a baseball game?

Compare the less than $20,000 a year median income with the cost of this project. After donating it to Climate Resolve, they disclosed that the budget will be even more than $300 million. Who will be paying for that? Will it be taxpayer money?

You're telling us you have access to more than $300 million to come into Chinatown and build whatever you want and you won't choose housing? You won't choose life-affirming

cont'd PH232-4

PH232-5

PH232-6

PH232-7

services, direct stimulus to small businesses? You won't choose the people?

In this draft EIR, you've also addressed alternatives to the gondola. You ruled out buses. There already exists a free shuttle for game days that could be expanded, but your reasoning for not doing that is that in order for buses to fulfill the 5,000 people an hour per direction the gondola would do, you need buses to run every 47 seconds, therefore, that's not an option.

Nobody is asking for buses that run every 47 seconds. We're asking for just some amount of additional buses. You're LA Metro. Why do you suddenly think buses will not work? Stop this project. Thanks.

MS. SISCO: Thank you for your comment. We'll move to Patrick Chen, followed by Larry Jung, Amy Ho, and King Cheung.

Comment-PH233 P CHEN

MR. CHEN: Hello, can you hear me?

MS. SISCO: Yes.

MR. CHEN: Hello, my name is Patrick

cont'd PH232-7

PH232-8

PH233-1

Chen. I'm a resident of Chinatown and I am opposed to this project, and I believe that this draft EIR process has been a total sham.

You have been doing the bare minimum to, quote-unquote, engage the community, which has actually been sunny fantasies of revitalization to suffering Chinatown residents and small businesses, when in actuality, this is nothing more than a cash grab for Frank McCourt and, I guess, the consultants who are working on this project. cont'd PH233-1

Poor and working class tenants, the taxpayers of LA, including the constituents of many of these nonprofits that they claim to represent, will be left with the bill. PH233-2

And some Chinatown legacy groups have claimed for over a decade that Chinatown is dying and needs big, flashy tourism to save it, when they could have been spending their political capital to build up community strength that can sustain itself instead of begging for billionaires like Frank McCourt to leave them PH233-3

some spare change. This project is not good for Chinatown and I oppose it. Thank you. Thank you.

cont'd PH223-3

MS. SISCO: Thank you for your comment. We'll move to Amy Ho and then King Cheung. And for those of you that are on the phone, just a reminder that you'll want to press *6 if you need to --

Comment-PH234 A HO

MS. HO: Hello?

MS. SISCO: Yes?

MS. HO: Yes, can you hear me now?

MS. SISCO: Yes, we can. Go ahead.

MS. HO: Yes, hi, my name is Amy Ho. I'm a resident of Chinatown for 42 years. Okay, the reason that I live here is because I love the freedom of this country they gave me. I'm one of the boat people who left Vietnam, went to a communist camp. I don't like that. That's why. I didn't like that. That's why I came to, you know, America.

PH234-1

And I thought that, you know, if I work hard, I can have the right to enjoy my life

here, but I can't believe the rich. They're trying to, you know, take away the right of me to live at peace.

Okay, now those people who support this gondola, please, please think. Your enjoyment is built on the suffering of the resident people living here.

You know what? I worked hard when I was young. I'm 70, okay. I used to work hard, okay. I worked a full job with two part-time jobs just to get my feet on the ground, to start my life here, and I did that. I'm proud of that, but to think some of the rich people now are trying to take away from that for me.

cont'd PH234-1

Okay, I will support this program only if Dodger Stadium stops selling food or beverage in Dodger Stadium. You know what? It will not benefit Chinatown at all. Those fans will go to Dodger Stadium.

They go there, they watch the game, and they eat, they drink. So, why, would they go to Chinatown to drink and eat? No, I mean, they

want just to, you know, see how it is, but I know exactly.

So, this is to the benefit of, you know, Dodger Stadium, not for us, and besides, don't forget that they have only 82 games per year and only a few hours per day. How are they going to, you know (audio interference).

MS. SISCO: Okay, thank you for your comment. I appreciate that. Larry Jung, I think I accidentally skipped over you. You were supposed to go next, so we'll go to you next and then we'll go to King Cheung.

And just as a reminder, if you are calling in on the phone, you'll unmute yourself by pressing *6.

Comment-PH235
L JUNG

MR. JUNG: Good evening. My name is Larry Jung. I've been involved with Chinatown since, and our family has been involved since, for the last 80 years. My great-grandfather was one of the original founders of New Chinatown, and I also represent the Chinese-American Museum in El Pueblo.

cont'd PH234-1

PH234-2

PH235-1

I support the project and I believe that the main idea and concept is valid. I believe that it will bring tourism into the El Pueblo and also into Chinatown.

I've ridden several gondolas in Pittsburgh, in Telluride, and Rio, and it is quite a tourist attraction. I believe that it will stimulate businesses, traffic for the small businesses around Chinatown and the Gold Line, so I am in support of the project. Thank you.

cont'd PH235-1

MS. SISCO: Thank you for your comment. Next, we'll go to King Cheung, followed by the phone number ending in 0709, and then Charly Ligety.

(Foreign language spoken.)

MS. SISCO: Okay, thank you for your comment. We'll wait a moment to allow for interpretation of that comment.

Comment-PH236 K CHEUNG

MR. CHEUNG: My name is King Cheung and I oppose this gondola project because I believe it's not going to help small business and residents in Chinatown. If the gondola keeps

PH236-1

running every day during the hour, it's going to disturb residents' sleep. cont'd PH236-1

And also, we need to be careful because when the gondola is running in the air, people in the gondola may be able to see residents who are taking a shower or using the restroom, so in that case, we don't need the gondola. PH236-2

And I also agree with some of the people who call this gondola project as a scam, because if the Dodger Stadium has hotels, restaurants, Dodger fans will just go there and eat, watch the game, and go home. Why would they bother to go up to the slope and go to Chinatown? They won't. PH236-3

And if Dodger fans wants the traffic congestion to be improved, I suggest them to use the bus because there is a shuttle going from Union Station to the Dodger Stadium, but actually currently, not many people are using this bus and there are only two buses. PH236-4

If they are not using this free

shuttle, why would they bother to pay and use the gondola? So, I believe we don't need this gondola.

cont'd PH236-4

MS. SISCO: Thank you for interpreting that comment. We'll now move to the phone ending in 0709. So, you'll want to press *6 to unmute yourself.

Comment-PH237 D MARTINEZ

MS. MARTINEZ: Hi, can you hear me?

MS. SISCO: Yes.

MS. MARTINEZ: Hi, good evening, everyone. My name is Dana Martinez (phonetic). And I wanted to say that when we talk about multimodal transit, we probably just think of a few clicks outside a bus, or a train, or a streetcar, maybe even a bicycle, but honestly, a gondola starts to get us in the air.

PH237-1

And, well, when I think of the future or other people think of the future, we might call it sci-fi, but the reality is that we need clean air, zero emission projects to be the first to break the in-city sky barrier.

And when other ideas become

realizable, this measure will benefit the community, the traffic, the environment, while also taking into consideration specific populations and their transportation needs.

So, I wanted to say that I'm extremely encouraged by this and ready for the next step for the future of the Los Angeles transportation journey. Thank you.

cont'd PH237-1

MS. SISCO: Thank you for your comment. In case we had anyone join late, if you -- you'll want to select a language by using the globe icon even if you're listening to the meeting in English. That will allow you to hear comments that are made interpreted back into English.

So, next we'll go to Charly Ligety and then we'll go to the phone number ending in 5684, followed by Melanie Bellomo and Alejandro Campillo.

Comment-PH238
C LIGETY

MR. LIGETY: All right, great, thank you for hosting this dialogue. I am Charly Ligety. I am a resident of Echo Park, pretty

PH238-1

adjacent to the stadium, and I own a home nearby, raising a family.

And, you know, I'm kind of thinking of this from the perspective of respecting all of the people that have come before me in this neighborhood and me only being here for, you know, a few years, but also thinking kind of long term of just where I want LA to grow and be more visionary about how to bring people together and move around this community or move in and out of this community. cont'd PH238-1

I think the gondola is a great first step in that kind of vision. I support it because it reduces traffic. You know, with baseball, there's too many games, 80-plus games a year, and the most unfortunate thing is all of the cars.

Beyond games, you know, I think the access the gondola will provide for park access to Elysian to millions of people just based on streamlining access between Union Station and the park will be a huge kind of component that we're PH238-2

not even thinking about as a benefit beyond just Dodger access.

And, you know, it really elevates our medium of coming together and bringing a new class of people into the public transit world, especially here in Los Angeles. Gondolas are sexy. Buses are not. cont'd PH238-2

You know, I come from ski town where many gondolas are located. They're quiet, they're comfortable, they're exciting. They cost $10 million to $15 million a mile, so they're not expensive. Hopefully, we'll probably inflate that a lot with all of the costs being in Los Angeles. PH238-3

But the couple of suggestions, I think there should be an affordable housing requirement with this either around the station or somewhere nearby to create sort of a gondola-oriented development incentive. PH238-4

And then better renderings, at least a satellite imagery, a shape file, and a Google Earth file would be great just to like sort of show this better of how it works, and then also PH238-5

pairing the gondola with street closures along Scott and other places so there's sort of a carrot and stick approach to getting people out of their cars and into the gondola so it actually guarantees reduced traffic. Thank you.

PH238-6

MS. SISCO: Thank you. I'm sorry, we had a little glitch with the timer there and accidentally reset it. Okay, all right, so the next speaker is 5684.

Comment-PH239
J RINCON

MR. RINCON: Hello and good evening, everyone. My name is Joe Rincon (phonetic). I want to talk a little bit about Chinatown.

Chinatown has a population of over 30,000 people, and considering the actual size, that's pretty dense, and whether people walk, take bikes, carpool, Uber, take trains, buses, subways, or cars, that's 37,000 people moving around at or below ground level, so it should be no problem for us to imagine transportation that gets everybody off the ground.

PH239-1

And realistically, it's not just Chinatown. This project will impact the traffic

PH239-2

and daily commute of Angelenos from the areas near Dodger Stadium, Mission Junction, Elysian Park, Solano Canyon, and the LA State Historic Park, not to mention traffic in and around Union Station itself.

We are sick and tired of super congested cities, and the people of not only Chinatown, but all over LA believe in the future of aboveground transit. LA, it's time to set our minds on things above. Thank you very much.

cont'd PH239-2

MS. SISCO: Thank you for your comment. We'll move to Melanie Bellomo, and then Alejandro Campillo, and then Julie Rico.

Comment-PH240 M BELLOMO

MS. BELLOMO: Hi, thank you. My name is Melanie Bellomo. I am a resident of Lincoln Heights. I am here to say that we stand with the residents of Chinatown voicing strong opposition to this project. I echo the sentiments shared so bravely tonight.

PH240-1

I also want to point out that this furthers the harm on the descendants of La Loma, Palo Verde, and Bishop, otherwise known as Chavez

PH240-2

Ravine. To further commercialize this area where there has been no moves toward reparations for these people who were forcibly removed from their homes and had their communities destroyed is wrong.

I also ask for a public apology for the false narrative being pushed regarding the initial meeting for so-called public comment. It was nothing of the sort, and the disruptions you referred to were people of this community taking their power back and making the public comment time they were promised.

This meeting is inequitable considering the advanced age and lack of access for comments from the majority of Chinatown residents.

Lastly, I want to point out that the man at the helm of this disaster, Frank McCourt, as we all know, everything he touches turns to shit while he makes a fortune. This project will be no exception.

MS. SISCO: Thank you for your

cont'd PH240-2

PH240-3

PH240-4

Comment-PH241
A CAMPILLO

comment. We'll move to Alejandro Campillo.

MR. CAMPILLO: Hello, my name is Alejandro Campillo and I'm talking in opposition of the gondola.

I'm going to be reiterating some points, but they're important, one of which is that this is not going to reduce the amount of pollution because there's still going to be people driving to Dodger Stadium, to Chinatown, and I think that this project is just a way to keep money in the hands of the rich and keep money outside of the hands of Chinatown residents. PH241-1

I also think that this is a waste of taxpayer dollars. If we're going to be using public land, it should be used for public good, right? And Chinatown needs so many other amenities such as a grocery store, a hospital, perhaps even better parking. PH241-2

There's a long list and a gondola is definitely not something that is at the top of that list. In fact, it shouldn't even be on the

list, so I stand against the gondola.

And I just wanted to say about the previous meeting with public comment, the public comment was being held not as public comment, but there was literally -- it was in the corner of the gymnasium. There was a curtain. It was the antithesis of public comment.

So, I just wanted to say that I'm very disappointed in you guys for not allowing that, and I'm happy you had one today, but there should be more in the future so that people can actually voice their comments. I yield the rest of my time. Thank you.

MS. SISCO: Thank you very much for your comment. We'll move to Julie Rico, followed by Iran Carranza.

Comment-PH242
J RICO

MS. RICO: Hello, can you hear me?

MS. SISCO: Yes.

MS. RICO: Hi, my name is Julie Rico. I'm a real art person and an active resident in Chinatown. I'm vehemently opposed to the gondola project. The people that have spoken today in

cont'd PH241-2

PH241-3

PH242-1

favor of this project do not live in Chinatown. I live here.

I know that the 3,000 cars that will be displaced from McCourt's parking lots will be sent down here to Chinatown where they'll be roaming around looking for parking spaces, trouncing around on our neighborhoods, spreading disease to our senior community, launching garbage all over the place, trouncing on our neighbors, disturbing the historic state park and the animals and the birds that are trying to live there.

Yes, there are people excited about this project. They are talking with dollars in their eyes. We, in the community, are looking for elements to shore up our community with low-income housing, creative services, health and human services, a grocery store, and other benefits that will definitely benefit us.

I know a lot about business. This is what's going to happen. McCourt will build them all at the top of the hill, and the lots where

cont'd PH242-1

PH242-2

PH242-3

he's displaced the 3,000 cars that will come down into Chinatown, and people will spend their disposable income not in Chinatown, but in McCourt's parking lot.

Chinatown will be devastated both socially and financially. It is a crying shame that anybody believes the lies coming from LA ART or anybody that wants to support this project. Thank you.

cont'd PH242-3

MS. SISCO: Thank you for your comment. We'll move to Iran Carranza, followed by the phone number ending in 6623. Iran, we should be able to get you unmuted so you can provide your comment.

Comment-PH243 I CARRANZA

MS. CARRANZA: There I am. Can you hear me?

MS. SISCO: Yes.

MS. CARRANZA: Okay, so for context, I grew up in Lincoln Heights in the '80s and '90s when LA State Historic Park was an ugly, empty field, and so I was so happy when I was able to buy my home in Boyle Heights in 2020 and I saw

PH243-1

that now it's this beautiful public space.

And I absolutely love LA. I'm an Angeleno through and through. And I thought how wonderful that people have this with their families to enjoy, to exercise, to go to concerts, and it's right in our very own backyard.

I feel like we don't have enough beautiful green space like this and I would hate to see it ruined by an eyesore like this proposed gondola, so I am against the project. I feel like can we just have something nice and not allow private interests to ruin it for us?

I want to address some of the points that other commenters made. Gondolas as cutting edge, so aerial gondolas first appeared in the 1900s. There's nothing cutting edge about gondolas. It's not new technology. It's nothing, you know, cutting edge about it.

Gondolas as tourist attractions, LA has awe-inspiring tourist attractions already. Like, a gondola does not hold a candle to what we

cont'd PH243-1

PH243-2

already have. Gondolas are for Disney World in Florida. It's tacky.

I can see why a place like Spokane might need gimmicks like gondolas to give people something to do, but LA has a lot more to offer. We have culture. We have history. We have a lot of attractions.

The idea of the gondola as a public transportation solution and traffic congestion relief on game days, surprise, I'm a Dodger fan. I had season tickets last year and I took the Dodger bus. We're not all bad. So, I can tell you the people who are in cars now are going to stay in cars. A gondola is not going to change that.

The people who figured out how to get to Union Station and are already taking the Dodger shuttle are going to continue --

MS. SISCO: Thank you for your comment. Next, we'll go to 6623 and then Erik Van Breene.

I want to make a quick note. We are

cont'd PH243-2

PH243-3

coming up upon 7:00, which is the scheduled end time for this public hearing. We're going to ask that you please raise your hand by 7:00 p.m. if you would like to speak this evening so that we can get a final list of commenters at 7:00. 6623?

MR. HOLM: Hi, can you hear me?

MS. SISCO: Yes.

Comment-PH244
A HOLM

MR. HOLM: Hi, this is Albert Holm, a born and raised Angeleno. I strongly oppose this project.

At its core, it is a personal pet project proposed by a white billionaire, Frank McCourt, who has a history of being scumbag, and it is a project that will negatively impact and has absolutely no benefits for the low-income, working class communities in and around Chinatown. PH244-1

The very well-respected and objective UCLA Mobility Research Team recently published a report that concluded that a gondola would have virtually no impact on traffic on Dodger game PH244-2

days.

So, in return for destroying the lives and dignity of working class communities in and around Chinatown, in return for taking away green space from the LA Historic State Park that's currently used and enjoyed by many every day, in return for building an ugly project that will ruin everyone's view of the skyline when they look up, you get a gondola that will have virtually no impact on traffic or carbon emissions.

con't'd PH244-2

And you get to enrich the scumbag, Frank McCourt's, pocket, because we all know the point of the gondola is to spur development of retail and entertainment complexes on the Dodger Stadium parking lots that are owned by Frank McCourt.

PH244-3

If that happens, then Dodger Stadium will become a year-round destination which will just increase the amount of traffic and carbon emissions overall throughout the year, so instead of traffic for 82 days a year when the Dodgers

are playing, you get traffic every day of the year, which will increase carbon emissions and increase pollution.

Anybody who believes otherwise is either being very disingenuous, very dishonest, very ignorant, or they don't live here, because they don't care what happens to other people.

cont'd PH244-3

MS. SISCO: Thank you for your comment. So, I do want to ask those of you that have not had a chance to provide comment and would like to provide comment, if you could please raise your hands so we can get a log of all of the raised hands?

We are going to extend the meeting to allow participants who have not yet had a chance to comment to provide comment. If you have already provided a comment this evening, we will not call on you a second time for your planning purposes.

And, let's see, so I had said we would go to Erik Van Breene, and then we'll go back and try Liliana Cortez again, and then Jennifer Wong.

Comment-PH279
E VAN BREENE

MR. VAN BREENE: Good evening, Erik Van Breene from the Los Angeles Conservancy. The Conservancy submitted written comments prior to the January 17 deadline.

PH279-1

We have real concerns about the project in its current form and its impacts to Chinatown, Union Station, El Pueblo, and Los Angeles State Historic Park. Additionally, we have concerns about the proposed transfer of public lands to private hands.

PH279-2

We don't believe the draft EIR fully demonstrates the purpose and need when an environmentally superior alternative has been identified that would expand the already existing Dodger express bus line.

PH279-3

With the project's encroachment into Union Station's parking lots, it's foreseeable that this project will tap federal funding and therefore require additional environmental reviews that typically coincide with the CEQA process, which is not happening here.

PH279-4

Thank you for hearing my comments and

we encourage you to take these concerns seriously.

MS. SISCO: Thank you for your comment. We'll go to Liliana Cortez and then Jennifer Wong.

cont'd PH279-4

Comment-PH245 L CORTEZ

MS. CORTEZ: Yes, hi. Thank you for calling. The irony of when you called on me earlier is that I was on the bus and couldn't answer due to how crowded and noisy the bus was because it was running late.

I find it really funny to hear many of you talk about how this gondola project will bring public transportation to Chinatown and reduce traffic in the area, but really, how many of you are really willing to get out of your cars and ride public transportation and deal with the late schedules, overcrowding, rude bus drivers, and dirty buses and trains due to lack of cleaning and sanitation on a daily basis?

PH245-1

I ask because I'm also a cyclist and many of my friends and I ride our bicycles not just for fun like many of you might think, but as

actual daily commuters who use these roads and streets to get from point A to point B, from home to work, to school, to running errands, always under the risk and threat of whether we'll make it home alive.

How many of you are willing to get out of your cars and deal with traffic noise, toxic exhaust fumes from vehicles, and traffic violence, or have you missed the news of continuous assaults that have led to hospitalization and death for us cyclists?

Of course, you're not. You're sitting here being hypocrites about the benefits of this project for public transportation and traffic. I call balderdash.

The quiet streets that my friends and I used to ride our bicycles to enjoy the beautiful views of the Elysian Valley, Angel's Point, and the LA Historic State Park would be filled with entitled tourists and drivers who already use violence to push us off the streets with the racism and death machines.

cont'd PH245-1

PH245-2

But obviously, some of you here feel we are not entitled to this as residents and patrons of these green spaces, and this is why we are against this project. Metro can start by improving the existing transportation system because this gondola project is not even part of the solution. PH245-3

The gondola in Mexico City was built for the white American colonizers invading the city because of how cheap it is, while outpricing locals with exorbitant rents. For the caller who was gushing over this, this is called gentrification and this is exactly what this project will bring to Chinatown and the surrounding communities. PH245-4

Chinatown is not dying. It's lacking real community investments and this gondola project is not one of them.

Long-term residents of Chinatown are mostly monolingual elders, seniors, and families with young children. They are immigrant, low-income, and facing continuous harassment and PH245-5

threats of eviction --

MS. SISCO: Thank you for your comment. We'll move to Jennifer Wong, followed by Bill Chin.

Comment-PH246
J WONG

MS. WONG: Hi, my name is Jennifer Wong. I am a resident of Chinatown and I oppose this project.

I actually find it to be kind of racially traumatic that this is going on, that you are ignoring marginalized communities, the Asian-American community, thinking that we would just kind of take this without comment and sitting down, so I really hope you take that into consideration the next time that you propose ridiculous projects.

I don't feel like this will help with our traffic issues. I liked that idea where you need to have shuttles, not just going from Union Station, but other parts of the city. That makes sense to me.

In terms of it bringing business into our community, I don't believe that's true. It

cont'd PH245-5

PH246-1

PH246-2

PH246-3

would just bring businesses that are expensive and would not be affordable to the residents here.

What we need are things like a laundromat, a grocery store, and I don't believe tourists or people who would ride the gondola are going to be using any of those types of things, so it doesn't make any sense at all.

I also really enjoy the state historic park and I don't want to see a gondola as I'm trying to experience nature, take walks, and enjoy my community. So, I really do hope you just do not go along with this project. Thank you.

MS. SISCO: Thank you for your comment. We'll move to Bill Chin and then Ned T., followed by Fernanda Sanchez and Cheng Yang. Bill Chin? Okay, it looks like Bill might be having some technical issues. We'll come back to Bill. I don't think I see Ned T. at the moment. Fernanda Sanchez?

Comment-PH247
F SANCHEZ

MS. SANCHEZ: Hello, my name is

cont'd PH246-3

PH246-4

PH247-1

Fernanda Sanchez and I am a long-time community member of Lincoln Heights. I'm here in solidarity with the residents of Chinatown and I strongly oppose this disgraceful project.

The lack of transparency from these predatory projects will continue to be faced with opposition from all of our community members here. It is the residents of Chinatown that need to be heard because they are the ones that will be directly impacted.

I can list a million other things our communities need and a gondola is not one of them. I want to also highlight the violent gentrification that is happening to our communities directly caused by USC and the Dodgers.

They have taken our parks, our neighborhoods, our homes, our lives. Gentrification is death. Our community continues to be targeted and it's time that we take our city back from the greedy hands of the top one percent who treat our communities like they're

cont'd PH247-1

PH247-2

PH247-3

profitable playgrounds.

I also want to mention that for those that are speaking in favor of this project, if you really believe that this gondola will improve traffic and reduce emissions, you are seriously confused for believing such a blatant lie and logical fallacy, or you are being paid to speak in favor. If you have a contract riding on this gondola and you're speaking in favor, you need to be transparent about that.

Lastly, I want to comment on the community advocates and activists who spoke up during the last gondola hearing where there really wasn't any public comment because the developer did not want to listen to us.

I want to thank all of the brave voices and their efforts for giving us the opportunity for public comment and for the meeting today.

I urge you to stop this project. Stop the gondola. Nobody here in these communities supports this project, and we will not accept

cont'd PH247-3

PH247-4

PH247-5

PH247-6

developers to further exploit, destroy, and displace our communities. Thank you.

cont'd PH247-6

MS. SISCO: Thank you for your comment.

We'll go to Cheng Yang and then Edwin Li, followed by Luis Guerrero and Miguel.

Comment-PH248 YU HANG TANG

MR. YANG: Hello.

MS. SISCO: Hi.

MR. YANG: Hi, this is Cheng Yang. I'm here at Cassia Manor. I have the President of Cassia Manor, Mr. Tyru Hung. He will be speaking on behalf of several residents.

MS. SISCO: Okay. Could you please ask him to move closer to the speaker, and we'll restart the clock?

PH248-1

MR. TANG: (Foreign language spoken.)

MR. YANG: Thank you.

MS. SISCO: Okay. We'll provide a moment for the interpretation of that comment.

INTERPRETER: Hi. My name is Yu Hang Tang (phonetic), and I am speaking here on behalf of ten other residents who are with me right now.

I live at 917 Cafe Manor. I have lived here for over 22 years. Besides me, there is also residents from Unit 402, Unit 604, Unit 610, Unit 112, as well as Unit 508.

We all believe we don't need this gondola. I live on the ninth floor. If the gondola is going to fly over our home, the people on the gondola will be able to see us change, and for this reason, I oppose the gondola.

We don't need the gondola. What we need is hospital, supermarket, and affordable housing.

Our community will not benefit from this gondola project. It will only bring harm.

So, I urge this project to be withdrawn. Please remove this gondola project.

Thank you.

MS. SISCO: Thank you for that interpretation.

We'll go to Edwin Li, followed by Luis Guerrero, Miguel, and then we'll try Bill Chin again.

cont'd PH248-1

PH248-2

PH248-3

Comment-PH249
E LI

MR. LI: Hello. My name is Edwin Li. Can you guys hear me?

MS. SISCO: Yes.

MR. LI: All right, thank you.

My name is Edwin Li, and I'm a local resident of Chinatown. And I live near the proposed pivot point of the gondola, and I oppose this project. PH249-1

I don't believe the gondola will help Chinatown businesses because the tourists would be flying over Chinatown, right into Frank McCourt's parking lots.

I believe the Dodger Express, which is actually more practical and less invasive, will be a better solution. It also economically more responsible and doesn't destroy the neighborhood. PH249-2

I think it's wrong to use public funds to help a private company, especially Frank McCourt, and I don't think it's safe to build objects that are flying over people in earthquake zone areas. PH249-3

And I think that's it for me. Thank PH249-4

you.

MS. SISCO: Thank you for your comment.

We'll go to Luis Guerrero, followed by Miguel, and then Bill Chin.

Comment-PH250 L GUERRERO

MR. GUERRERO: Hello, can you hear me?

MS. SISCO: Yes.

MR. GUERRERO: Hello, my name is Luis Guerrero. My family is from the Williams Mead Projects, and we are calling support of the gondola.

We've seen that this is going to help alleviate the traffic in the neighborhoods, but I was actually calling as well because the last meeting I tried to go to to give a public comment, I got stopped by protestors, and I had, like, my family with me. I had little kids with me. They were cussing and, like, literally got in my face.

I didn't know if Metro had security there or what, but that was extremely disgraceful, especially considering that was at a

cont'd PH249-4

PH250-1

PH250-2

school, and there was high schoolers and other kids just everywhere. That was just -- I was so ashamed of Metro and the city right there. That was awful, but thank you, guys.

MR. CASTELLON: All right, good evening. My name is Miguel Castellon and I am with the Ironworkers Local 433.

I love this project and appreciate that it will be built with partnership with labor. That means good paying jobs for our community and new, modern transportation for everyone.

We need more zero emissions and infrastructure in Los Angeles.

Comment-PH252
R ROJAS

MR. ROJAS: Good evening. My name is Richard Rojas. I currently serve on the Advisory Board for Latino Outdoors.

We're a national organization that connects youth and families with the outdoor space, including Los Angeles State Historic Park. Our organization vehemently opposes the project as we see it another environmental injustice in this community. PH252-1

As currently proposed, the project is viewed by our community as an availed attempt to degrade the land that was hard fought and PH252-2

promised to be the Central Park of Los Angeles.

For seven generations of Californians and beyond, recognizing the need for green space in LAs urban area, three great environmental warriors dedicated their lives to finding a way to create this open space in the industrial-commercial wasteland of Northeast Los Angeles.

The work of the late Robert Garcia from the city project, Ted Jackson from California State Parks Operations, Ron Schaefer from the LA Parks District, now all deceased but not to be forgotten, but cherished, protected, and preserved.

We want LA State Park for the viewshed and the experience for the community it provides. It took 20 years to be envisioned and developed, not to rely on the Draft Environmental Impact Report that the state park should change the general plan to accommodate this private venture.

This is not public transportation. It seeks to get people to Dodger Stadium for a private interest, for a private profit.

cont'd PH252-2

PH252-3

PH252-4

On behalf of the Latino community and current future park users, we urge you to instruct the project proponent to properly identify, analyze, and mitigate all park impacts required by law and not usurp the legal responsibility to provide a clear, thorough, and complete, defendable project in the Draft Environmental Impact Report.

PH252-5

Thank you.

MS. SISCO: Thank you for your comment.

We'll go to Jennifer Martinez, and then Dahma Cho, and then the number ending in 6371, followed by Camarillo.

Jennifer, please provide your comment.

Okay, we can come back to Jennifer.

Dahma Cho?

Comment-PH253
D CHO

MS. CHO: Hi. Can you hear me?

MS. SISCO: Yes.

MS. CHO: Okay. My name is Dahma Cho. I'm a resident of LA. I'm calling in solidarity with the Chinatown community in opposition to

PH253-1

this gondola project.

This project is another case of profits being prioritized over the people, of private interests, of those more privileged being prioritized over the well-being of marginalized communities.

Also, this project is an extension of the harm that Dodgers and Frank McCourt inflicted on the local communities, including the people of the Palo Verde, La Loma, and Bishop communities that the Dodgers corporation forcefully displaced.

This project just serves Dodgers fans and other parties who have some kind of profit to gain from this project, not the actual communities that this project would be impacting.

Previous speakers have mentioned the importance of tourism for the health of the economy, but I think the well-being of the actual community members is more important.

The aging, low income Chinatown community does not need Dodger fans and tourists

cont'd PH253-1

PH253-2

PH253-3

PH253-4

coming into their communities. They need actual resources like affordable, accessible grocery stores, green spaces, safe, affordable housing, and this project would only contribute to ongoing gentrification of Chinatown. cont'd PH253-4

The people and their needs have been neglected by Metro in this process.

Regarding the environmental impact, it just seems to be moving traffic and air pollution from one place to another, not really -- and in that regard, Climate Resolve and LA Art Metro all seem to be greenwashing this project, making it seem like it would be environmentally beneficial when it doesn't actually, it won't actually be. PH253-5 PH253-6

Metro, you all are not being transparent, and you're being very deceptive throughout this process. I think Metro should focus on getting rid of their fares, considering it also costs more for them to keep it running, than moving forward with a project like this that just isn't public transit. It does not meet the transportation needs of the Chinatown community. PH253-7

Thank you.

MS. SISCO: Thank you for your comment.

We'll go to 6371, then Camarillo, then 6343, followed by 6162, and then 4460, and then Annie Shaw. So, 6371?

Comment-PH254 B YATES

MR. YATES: Hi, this is Billy Yates (phonetic). I am the former bilingual Mandarin and English civics instructor at the Chinatown Library, and I maintain a close relationship with a lot of my students who live and work in Chinatown.

I'm also a transit rider because I don't have a car. Everything is bike, bus, or Metro for me, and that's why I feel that this scam of a gondola is really deceptive.

And we want to talk about, oh, we should be respectful. Oh, we should do all these things. But public transit riders are disrespected every single day in this city. We are not thought of as actual people, and we know that because of the head wait times, and how

cont'd PH253-7

PH254-1

dirty it is, and the lack of service, including, if we just get, you know -- taking on like a project like this when we already have so many existing problems with public transit in this city. It's like a glittery band-aid that we want to put on for all these little things, and it's just not a real solution.

What people need are frequent times to be able to move around in LA with public transit. People need free transit so that more people can use it because it takes more time, when the bus is already late, to go and add another person who's looking for change.

You know, there's so many problems that we could be focusing on with all this money, and the fact that we're thinking about a toy gondola is just -- it really is not the best of us. And I want LA Metro to do so much better because I know we can be a much better city if we really just prioritize the least among us and made it a public transit.

Not some dude over here from Colorado

cont'd PH254-1

PH254-2

PH254-3

or whatever talking about buses are sexy and he comes from a ski town. That's not the community. Please, please, please let's focus on helping people as much as we can, and that starts with real public transit, and getting rid of this gondola, and focusing on what people need.

cont'd PH254-3

Thank you very much. There's a lot of other concerns with transparency and environmental pollution, but we don't even need to go there. Let's just start with the basics.

PH254-4

Thank you, and I know we can do better.

MS. SISCO: Thank you for your comment.

We'll go to Camarillo, followed by phone number ending in 6343, and then 6162.

Comment-PH255 CAMARILLO

MR. CAMARILLO: Hi. Thank you so much.

I just wanted to express my opinion and say that this gondola project is completely unnecessary and shameful. It's a luxury project designed by the privileged for tourists and

PH255-1

outdated, parlor, aging Dodger fans.

We can hear the desperate concerns of the local generations of the people who live in Chinatown. Listen to the seniors, listen to the families, and make their concerns valid. Provide value to the opinions of people who will be most affected by this money grab project. cont'd PH255-1

And also, don't be foolish. Chinatown has had lowered foot traffic from tourists over the years, but this gondola project is just not the way to acquire more foot traffic. It's truly a scam. Invest in existing shops, invest in Chinatown's business, and invest in Chinatown itself. PH255-2

By the way, how can Metro fully focus on the success of this gondola project when Metro cannot even clean their buses properly? PH255-3

This gondola project will not eliminate traffic, instead provide one of various existing ways for fans to see a baseball game. PH255-4

Stop valuing money and tourism over long-time Los Angelenos and our well-being. This PH255-5

gondola project is completely disingenuous and unnecessary.

cont'd PH255-5

Thank you so much.

MS. SISCO: Thank you for your comment.

We'll go to phone number 6343, followed by 6162, and then 4460, and then Annie Shaw.

Comment-PH256 MONICA

PARTICIPANT: Yes, hi. My name is Monica, and on January 12, I attended the meeting at the Cathedral High School in LA and supported the gondola project.

And there were some protesters there, and they took over the meeting. I was so disappointed in how the meeting turned out. The protesters were shouting profanity and using bad language in front of the children attending the meeting, and most of all, it was in a Catholic school.

PH256-1

Protesters had no respect for the community nor the people attending the meeting. They were so loud and obnoxious that we were not

able to provide public comments on the day of January the 12th. I felt scared and threatened by these -- by the way these protesters were acting.

Me and the community, we approve the gondola project. I believe it's a very perfect and new, exciting way to Chinatown -- to come, allow meaning. There's going to be more jobs, more profit for the community as well.

And like I said, I approve this project. Please, please approve it.

Thank you.

cont'd PH257-1

Comment-PH258 ANGELICA

PARTICIPANT: Hello. My name is Angelica, and I support the gondola.

I also want to add that I'm really upset that the meeting on January 12 was so disrespectful to the community. We have no place in the community for profanity, threats, shouting at people, and disrespecting.

I protest something myself, but I didn't like that and I found it scary enough to attend another meeting because, just because a lady said that she was supporting the gondola,

PH258-1

PH258-2

there was this man chasing her around with his hand raised up like he was going to slap her, just because she said that she supports the gondola. He told her, why are you supporting it? You can't be doing that.

I got scared. I wanted to get away from there. We can't let this happen again. I don't know if Metro -- why they allowed the protesters to take over the community meeting and create a terrible environment for other people that were there with their families. Also, I don't understand why they were jumping around the gym and, you know, trying to create panic to the people.

Like I said, I'm here to support the gondola, and thank you for listening.

cont'd
PH258-2

MS. SISCO: Thank you for your comment.

We'll go to Annie Shaw, followed by phone number ending in 2605, then 4620, followed by Lynn, Valerie M., and the phone number ending in 1242.

Comment-PH259
A SHAW

MS. SHAW: Hi. Can you hear me?

MS. SISCO: Yes.

MS. SHAW: Okay. You know what is scary? The violence of gentrification, when a white developer can come in and unleash an entire project on a poor community that is in need of the most basic, essential living.

This is a shameful project that will kill the remaining of Chinatown. It is truly shameful that in 2023, we still have organizations, unions, and museums who are willing to sacrifice poor peoples' survival in exchange for their own community benefits.

Let's be real: if this gondola was proposed in a wealthy, white neighborhood like Beverly Hills or Malibu, it would have ended yesterday. This is a racist, white elephant project that takes advantage of disenfranchised poor people who are fighting for their last survival.

Let me be clear. The gondola will not save Chinatown. Tourism has not saved Chinatown.

cont'd
PH259-1

PH259-2

New businesses that do not serve working class community will not save Chinatown. cont'd PH259-2

The gondola is a white elephant project that wastes valuable resources, gentrify community, increase pollution, and make parking and food and housing even more expensive. Stop imposing this project on the community when the community have said it again and again that we don't want this. PH259-3

Entire community of seniors protested your recent hearing. And how dare you? You raised their concerns by calling it a disruption when you are actually disrupting their homes and ignoring their voice of concern. PH259-4

Right now, everyone is facing evictions and horrifying living conditions in Chinatown. This money can be used so much more constructively for peoples' lives in Chinatown, for their survival, instead of creating a project that a community can't even afford to participate. PH259-5

Once again, residents of Chinatown do PH259-6

not need these boxes above their heads and they do not need their neighborhood to be --

MS. SISCO: Thank you for your comment.

We'll move to phone number ending in 2605.

cont'd PH259-6

Comment-PH260 M CERVANTES7

MS. CERVANTES: Hi, my name is Maria Cervantes (phonetic). Can you guys hear me?

MS. CERVANTES: My neighborhood has some of the worst traffic and pollution in the LA County. We want to -- we're deserving, we want cleaner air, less traffic, and more zero emission transportation opportunities.

PH260-1

This project is about less cars, less pollution, and safe and healthy -- safety and health of the neighborhood. I support the project stated gondola.

Thank you.

MS. SISCO: Thank you for your comment.

We're going to go to Lynn, followed by Valerie M., and then phone number ending in 1242, followed by Paul Des Marais, Viva Palo Verde, and Melissa Arechiga.

PARTICIPANT: Can you hear me?

MS. SISCO: Yes, I think we were -- yes, we can.

EDGAR

PARTICIPANT: Okay. Hi, my name is Edgar. I'm a local resident, and I just wanted to say that I support the gondola project.

I think, like some others have said, it is definitely one of the ways we go into the future with transportation, just provide different modes of transportation to different areas of the city.

PH261-1

This will connect the local parks and hopefully relieve some of the traffic to get into Dodger Stadium.

It's zero emission, no electricity. So, I think it'd be, you know, a nice way to get up to that area. I support the gondola project and ask the council to do the same.

Thank you.

MS. SISCO: Thank you for your comment.

We'll move to Lynn, and then Valerie M., phone number ending in 1242, Paul Des Marais, and then Viva Palo Verde and Melissa Arechiga.

Lynn, are you able to get yourself unmuted so you can provide your comment?

Comment-PH262 L DWYER

MS. DWYER: Okay, I think I'm here now.

MS. SISCO: Yes, you are.

MS. DWYER: My name is Lynn Dwyer (phonetic). I would like to document my concerns that the project will have long-term, negative environmental impacts to parks, historic sites, and residents.

The gondola system will have a negative impact on some of Los Angeles' most iconic views, including streetscapes, historic sites like Union Station in El Pueblo, and parks, including the Legion Park and LA Historic Park.

The project will negatively impact the

Cont'd PH261-1

PH262-1

environment during construction with air pollution, traffic, and noise.

The ongoing operation of the gondola will disrupt park users and residents with noise, trash, and visual distractions.

There will be an invasion of privacy.

I believe a better solution would be safe pedestrian access to Dodger Stadium.

Thank you.

MS. SISCO: Thank you for your comment.

So, we'll go to Valerie M., followed by phone number ending in 1242.

Comment-PH263
V MORISHIGE

MS. MORISHIGE: Hello. My name is Valerie Morishige (phonetic), and I just want to say thank you to everyone that's been providing public comment here. It's been very illuminating, since what's been going on in the press about this has been green washing and kind of astroturfing at best.

So, when I first heard about this project, I thought it was dumb, and now that I'm

cont'd PH262-1

PH262-2

PH263-1

hearing from community members, I realize how heinous it actually is.

So, they're trying to sow class division to shove this through, and we're just supposed to stand by and not listen to the community? It's absolutely ludicrous.

Tourism is not going to save us, and we see how up and down that tourism can be, especially since the COVID-19 pandemic. So, that -- I don't think we should be trying to rely on that as a stable source of income for folks.

And regarding the quality of life issues, I think that takes precedence over trying to build, like, another LA Live that -- or, like, a super-mall that's on top of a hill that only out-of-towners are going to go to. And it's not going to help any of our community members at all.

So, I say, down with the gondola. It's dumb, and thank you very much for everyone that's here and providing comment.

MS. SISCO: Thank you for your

cont'd PH263-1

comment.

We'll go to 1242, followed by Paul Des Marais, Viva Palo Verde, Melissa Arechiga, and Rafael.

PARTICIPANT: I have another quick comment in opposition.

MS. SISCO: I'm sorry, excuse me. Did you already speak? I might have -- did you already provide a comment this evening?

PARTICIPANT: I did, but I forgot something, and this is quick. Please.

MS. SISCO: You know what, I'm going to have to ask you to hold because we have many people who still have their hands up that haven't provided a comment yet.

So, let's go to Paul Des Marais.

Comment-PH264
P DES MARAIS

MR. DES MARAIS: Hello, can you hear me?

MS. SISCO: Yes.

MR. DES MARAIS: Hi. My name is Paul Des Marais, and I'm a resident of Lincoln Heights and a former resident of Solana Canyon, and I'm

PH264-1

speaking today in opposition of the gondola.

It is a horrible idea, and as someone who is primarily a pedestrian, transit rider, and cyclist, getting to Elysian Park, LA State Historic Park, and around the Chinatown area is very difficult.

There are barely any bicycle lanes in Elysian Park, there are barely any bicycle lanes to get to LA State Historic Park, and like previous speakers have said, bus waiting times and Metro waiting times are insane.

This project does not prioritize the residents of Chinatown. It does not prioritize the residents of surrounding neighborhoods. It's just a cash grab, and I believe that Metro should be spending their time, resources, and dollars on improving existing public transportation networks.

There needs to be more Dodger Express buses to the park, to Elysian Park, and if you look at any game day, or any day, really, in Elysian Park, it is a playground for cars. It is

cont'd PH264-1

PH264-2

PH264-3

PH264-4

not a playground for people.

It's difficult to walk around Elysian Park without having cars speeding past you, speeding to get to the games, and there are barely any bike lanes. And just recently, the main road to get into the stadium was repaved. Not a single bike lane was added to that road. It's disgraceful.

cont'd PH264-4

Thank you very much, and I stand in solidarity with previous commenters.

PH264-5

We'll go next to Viva Palo Verde, followed by Melissa Arechiga, Rafael, and then the phone number ending in 4331, and Yvonne Savio.

Comment-PH265
V MONTAGO

MR. MONTAGO: Hello, can you hear me?

MS. SISCO: Yes, we can.

MR. MONTAGO: Hi. My name is Vincent Montago (phonetic). I am the son of Adele Montago (phonetic) and the grandson of Adele and

PH265-1

John Denava (phonetic), former residents of the three communities of Palo Verde, La Loma, and Bishop that were violently destroyed by the Dodgers and the City of Los Angeles. I come before you today in full support of the Chinatown residents opposing the gondola.

For far too long, corporations and city entities have taken advantage of poor, brown, and black communities to benefit their own good. And the deal with the taking of our homes, the land was supposed to be taken away for housing, and instead was given to the Dodgers to build their empire that they have today on the backs of the poor people of Los Angeles. This must stop. PH265-1

This led me into my position of today, which is an elected office, as I stand also from that point of view in opposition of it as Chinatown is being killed. It is not a dying industry.

The plans were put into place 20 years ago for most of our communities to be attacked,

and they're being implemented today. And this is a tragedy, that public agencies like Metro would participate in the destructions of our communities when they are supposed to be here to uplift and support local community businesses and residents.

There has never been, in all the years of our families' trauma history, looking at over a 100 years of history with the city and public entities, no good has ever come between the deal between the Dodgers and the City of LA.

In fact, we find that these are backdoor corrupt deals that don't benefit the public but benefit people like Frank McCourt, who has owned the parking lot and the stadium at one point in time. And that's their invested interest. So we strongly support the Chinatown residents and all the local --

MS. SISCO: Thank you for your comment.

We'll move to Melissa Arechiga, and that will be followed by Rafael, phone number

cont'd PH265-1

PH265-2

ending in 4331, Yvonne Savio, and then Lisa Duardo, and Michael.

M ARECHIGA

MS. ARECHIGA: Hello?

MS. SISCO: Hi. We can hear you.

MS. ARECHIGA: Okay. All right, here we go.

My name is Melissa Arechiga, and I am here today before you as a representative of the surviving families that were violently evicted from Palo Verde, La Loma, and Bishop, three Mexican indigenous communities that were destroyed to build the Dodgers Stadium. PH266-1

I am here today to oppose the gondola project from Union Station to Dodger Stadium. While this may be exciting to film, it is a sign of change and change that is not inclusive to all, specifically people of color.

The Dodgers Corporation and the City of Los Angeles have a long partnership together working to destroy and exploit communities of color. The gondola represents gentrification, the destruction of not only our communities, but PH266-2

the environment and our beloved wildlife.

The gondola project is no different than the deal that was made to take away our families' generational wealth by destroying the three communities to build Dodgers Stadium.

The Dodgers and the Los Angeles City Council set to build the gondola in the middle of our communities, and this would only benefit the Los Angeles Dodgers. Our residents and small business owners will suffer with this so-called revitalization project that is gentrification and a long-term that leaves our most valuable community members displaced with no benefits.

The history between the Los Angeles Dodgers and the Los Angeles City Council has left our communities in worse condition from the deals of the 1950s, when our homes and the three communities were destroyed. And the lies that were told to the public of building public housing today leave us with the current conditions of our unhoused and affordability crisis that affect us all today.

cont'd PH266-2

PH266-3

PH266-4

PH266-5

It is a win-win for the Dodgers, and that has been since Black Friday, May 8, 1959, when our families were dragged out. It's time to put a stop the Dodgers Corporation of exploiting the people of Los Angeles.

I strongly urge that everyone in the public and elected officials oppose this project, as it will damage -- have damaging effects that will last for generations on generations.

cont'd PH266-5

MS. SISCO: Thank you for your comment.

We'll move to Rafael, followed by phone number ending in 4331, 4959, Yvonne Savio, and then Lisa Duardo.

Comment-PH267 RAFAEL

PARTICIPANT: Can you hear me?

MS. SISCO: Yes, we can.

PARTICIPANT: Hi. I'm Rafael. I'm bred and born Los Angeles and long-time Dodger fan.

PH267-1

Like, I would love to get to Dodger Stadium, like, fast and, you know, not deal with traffic, and it be environmentally friendly, and

I've taken the Metro Express. However, I don't think that this gondola is the best way of going about it.

Number one, you know, besides all the comments that have already been said by people of the community, the one thing for me is this is a pet project and, you know, a way for Frank McCourt to make money off Dodger fans after he, you know, badly, you know, managed the Dodger organization.

Number two, I don't think this is going to be safe at all, and I'm not talking about earthquakes or anything like that. I mean, those who have been to Dodger games, especially if you sit in the, you know, right and left of the pavilion, you know people get drunk. There's been fights after games.

You put them in a gondola, that one fight in a gondola, I mean, how is that going to get broken up, you know, when you're stuck in midair for, what, seven minutes? Or maybe three and a half, if you go from Dodger Stadium to

cont'd PH267-1

PH267-2

PH267-3

Chinatown and -- or Union Station? That's a long time to wait for security.

I oppose this, and I think Metro can look into other resources of getting people into Dodger Stadium.

That's all I have.

MS. SISCO: Thank you for your comment.

We'll move to phone number ending in 4331.

You'll want to press *6 to allow yourself to unmute on your phone. There we go.

Comment-PH268 RAY

PARTICIPANT: Good evening, everyone. My name is Ray, and I'm with Anchor Church of DTLA.

First, I just want to say, go Dodgers. We have the best baseball franchise in LA history, and now that we've settled that, I want to be clear on something else.

A lot of people are under the impression that the churches as a whole aren't concerned with climate change. However, any

cont'd PH267-3

PH267-4

PH268-1

Bible based church knows that God cares deeply about our climate.

For instance, Revelation, Chapter 11, verse 18 reads, the nations are very angry and your wrath has come. And the time of the dead, they should be judged, and you should reward your servants, the prophets and the saints and those who fear your name, small and great, and should destroy those who destroy who destroy the earth.

cont'd PH268-1

We want to see development at the civic level that endorses positive climate change and zero emission. Public transit shows people at this city not only have the -- not only have great baseball, by the way, and the greatest sports franchise in all of baseball, great people and a great God, but genuine care for this earth. Because after all, this is His earth, too.

Thank you and God bless you.

MS. SISCO: Thank you for your comment.

We'll move to phone number ending in 4959, then we'll be going to Yvonne Savio, Lisa

Comment-PH269
C GOMEZ

Duardo, Michael, and phone number ending in 3925.

MR. GOMEZ: Hello, hi. My name is Carlos Gomez. Thank you for taking my call.

So, I've thought about this long and hard. I am a Dodgers season ticket holder, but, you know, I am a consumer of Chinatown and surrounding areas, and, you know, I've got a chance to talk to locals and some friends about this.

But the reality is, LA's a city of champions. It's, you know, filled with championship in every single major sport. You know, we're going to be the home to the 2026 World Cup, the 2028 Olympics. You know, let that sink in. We're not your typical city.

We're LA. We deserve the absolute best. Most stadiums have some form of train or some form of trams or some, you know, for transportation to the stadium.

We have two buses that leave from Union Station that depart every 15 minutes. Dodger Stadium is iconic, right? It's a rich

cont'd
PH269-1

PH269-2

culture that's bigger than just Chinatown. It represents us as a whole. Right?

We, you know, we owe it to Dodger fans and even visiting guests to provide them with, you know, best possible game experience which, you know, obviously, includes less traffic. This gondola project will set us apart from basically the rest and makes us that much better.

cont'd PH269-2

On another note, you know, Dodger Stadium is no longer just a baseball stadium. You know, we've had the Fluffy Show, the concert, Elton John.

You know, I am a Chinatown consumer, and the reality is that outside of a few breweries and a few restaurants in the neighborhood, it's sad, but Chinatown's a ghost town. You know, it's filled with small shops that come and go.

PH269-3

I really believe this project would rejuvenate the city, eliminate traffic, and really, you know, keep LA at the very top of the sports industry.

You know, like it, love it, it's coming. You know, I support this gondola project 1,000 percent. Go Dodgers. PH269-4

MS. SISCO: Okay. Thank you for your comment.

We'll go to Yvonne Savio and then Lisa Duardo, Michael, phone number ending in 3925, Brenda Miramontes, and Maria Manzanilla.

Yvonne Savio, are you able to unmute to provide your comment?

Comment-PH270
T SAVIO

MR. SAVIO: Okay, can you hear me?

MS. SISCO: Yes, we can.

MR. SAVIO: Okay. I'm Tom Savio, Executive Director of the Los Angeles Union Station Historical Society. This is our opinion.

We oppose billionaire Frank McCourt's racist gondola real estate scheme because it's obviously a Metro sweetheart deal after McCourt paid millions of dollars to Metro's political campaigns, this according to state records. PH270-1

Metro's Cory Zelmer and company falsified the gondola's Draft Environmental PH270-2

Report by not mentioning that the world's busiest helicopter airport is just a half a mile from the gondola's Union Station terminal, which is -- should the 13-story towers and cable be struck by a helicopter, many of Union Station's historical architecture and its trains and passengers could be harmed. cont'd PH270-2

PH270-3

Union Station architecture will also be negatively impacted by the gondola's modernistic carnival ride architecture that's in front of Union Station. PH270-4

We believe the real purpose of the gondola is to allow McCourt to build a high-end real estate development on Dodger Stadium's parking lots that he still controls, thus putting the local, low income minority community out of their homes by raising rents through gentrification. PH270-5

Part and parcel of the gondola project is Metro's plan to use $20 million in federal funds to build a water fountain next to the gondola's Union Station terminal to cool riders

while they wait for their gondola rides in the hot season. It's crazy for a new water fountain to be built when LA is experiencing its worst drought in history, which probably will go on for decades.

cont'd PH270-5

Furthermore, McCourt's gondola will trample Los Angeles State Historic Park.

PH270-6

MS. SISCO: Thank you for your comment.

We'll move to Lisa Duardo, and after that, we'll go to Michael.

Comment-PH271 L DUARDO

MS. DUARDO: Hi. My name is Lisa Duardo, and I'm born in raised in Los Angeles.

I responded to the Draft EIR earlier via letter back on January the 17th, and I would like to add on to the public record these other points that the Draft EIR either dismisses or omitted.

PH271-1

The Rim of the Valley Corridor Preservation Act was passed by Congress, the 117th Congress. Adam Schiff introduced the bill, and he just spoke about it at P22's Celebration

PH271-2

Life at the Greek theater this past weekend.

What the Rim of the Valley Corridor Preservation Act does is it preserves open space for people and for wildlife from the Santa Monica mountains, which include Griffith Park and Elysian Valley Park, to the foothills of the San Gabriel Mountains, which are the Repetto Hills around Highland Park through South Pasadena, Pasadena, connects to the San Gabriel Mountains and the National Angeles Mountains, the Verdugo Mountains, which then connect to the Pacific Rim, which go to Canada and Mexico.

It creates a green wildlife corridor for animals so that they can coexist in our LA environment, and one of the lines on the points of this Congressional Act is that the Rim of the Valley unit would include habitat for iconic wildlife such as the mountain lion, the bobcat, the fox badger, the coyote, and the deer, as well as some endangered species of our area.

The LA Rim --

MS. SISCO: Thank you for your

cont'd
PH271-2

comment.

We've got about a handful of hands we need to get to, and then we'll wrap the meeting up. So, we anticipate about another 10 or 15 minutes until we wrap up.

We'll go to Michael next, phone number 3925, Brenda Miramontes, Maria Manzanilla, and then Jennifer Martinez.

Comment-PH272
M CALAREZA

MR. CALAREZA: Hello?

MS. SISCO: Hi.

MR. CALAREZA: Hi, yes. My name is Michael Calareza (phonetic). I'm a resident of Lincoln Heights, a stakeholder in this project.

I frequent the state park often. I go to Dodger games, and North Broadway is continually impacted by traffic on Dodger days. However, if Metro wanted to be pedestrian friendly, it would do more.

PH272-1

Metro is not pedestrian friendly. It placates to the political powers or, in this case, the money, pro quid pro -- quid pro quo, I guess, is what's going on from McCourt and his

political contributions.

So, this is the fast track for him to take advantage of public funds for his commercial interests at the expense of public transportation needs.

There should be a sidewalk and stairs that gets people from North Broadway up into Dodger Stadium. Simple, common sense things for pedestrians, like safe sidewalks.

Transportation should be 21st Century transportation. Gondolas? What's the capacity of a gondola ride? How long is it going to take? How many dozens of people are you expecting to stand in line to take a gondola ride? Drunk after a Dodger game? Before a Dodger game? Come on, where's the common sense? This lacks it.

It's political. It stinks of corruption. There should be no public funds for this. Shame on Metro for even putting this in front of people and trying to fast track it.

MS. SISCO: Thank you for your comment.

Cont'd PH272-1
PH272-2
PH272-3
PH272-4
PH272-5

I think our -- one of our computers is getting a little tired. The timer is jumping around just a little bit, so I apologize for that technical glitch, but we're almost done here.

We're going to move to phone number ending in 3925, and then we'll go to Brenda Miramontes, Maria Manzanilla, Jennifer Martinez -- let's see, phone number ending in 3925. Okay. We'll come back if needed.

Brenda Miramontes?

MS. MIRAMONTES: Hi, good afternoon. Can anyone hear me?

B MIRAMONTES

MS. SISCO: Yes.

MS. MIRAMONTES: Okay, hi.

I am in today to support the gondola project. I am a resident of the community, and I am also a big Dodger fan.

I believe that we're all talking about everything but the pollution. And I believe that that is the most important thing because right now, we have buses and, you know, cars, and all that, and that's just affecting our pollution

PH273-1

PH273-2

even more, so why not try anything new?

We are already a city of tourism, so it's not going to affect other -- make any, like, anything worse. I think it's just going to make it better for the Chinatown community. Also, like, we're going to get more tourists, you know, to come in and shop more for them, and it's going to benefit them at the end. So, I'm all in for it.

Thank you. Good night.

MS. SISCO: Thank you for your comment.

We'll go to Maria Manzanilla.

Comment-PH274
M SANCHEZ MANZANILLA

MS. MANZANILLA: Hello? Hello, can you hear me?

MS. SISCO: Hi, yes.

MS. MANZANILLA: Yes? This is Maria Sanchez Manzanilla, and I'm calling just to say that I oppose this gondola very, very strongly.

And I am talking for my community, William Mead, and all the community surrounding the park, LA State Historic Park. And all the

cont'd PH273-2

PH273-3

PH274-1

communities, William Mead, Chinatown, Solana Canyon, Lincoln Heights, Highland Park, and all of us oppose this horrible gondola. This project is not good for our communities.

And we know that billionaire Frank McCourt is going to get his money back when, after he raise $300,000 -- $300 million and leases that there because he didn't even ask the communities for doing this horrible gondola.

And I think this community, this serves them some kind of, you know -- they just deserve some respect because he didn't ask us for, you know, for anything. He just said he was going to start this project, and we oppose it.

We are opposed to this gondola because it's not good for us. It will destroy our park, LA State Historic Park, and a lot of very bad things will happen to our communities in downtown LA.

And all this is only lies because what happens if one of these gondolas falls on top of the head of people who is running in the park?

cont'd PH274-1

PH274-2

PH274-3

PH274-4

Comment-PH275
J MARTINEZ

MS. SISCO: Thank you for your comment.

We'll go to Jennifer Martinez.

MS. MARTINEZ: Hi. Can you hear me?

MS. SISCO: Yes.

MS. MARTINEZ: Okay. Thank you for giving me a second chance because I was left off last time. My name is Jennifer Martinez. I'm a resident of Echo Park,and I oppose the gondola project. PH275-1

And I am grateful for this session because I have learned a lot, and I also work providing sessions like this, so I appreciate the effort. But I have some common sense concerns about the project, and what strikes me from this discussion is, and what has bothered me about the project is the process. This is a missed opportunity for a wealthy member of Los Angeles to come into a community and create opportunities, perhaps, for that community. PH275-2

So, my biggest problem is that the public sessions, which I know are part of the

process, have not been made easily accessible to all in the community.

And we're hearing this evening about concerns about businesses in Chinatown. So, how many restaurants and halls and public spaces are there where LA Art and Frank McCourt could have held sessions to create actual -- to just good faith, you know, action? And I mean, not like -- I mean, two things about that.

One is, I don't understand why Frank McCourt and LA Art are not courting the business owners and the residents of Chinatown. They have the capacity. They have --

MS. SISCO: Thank you for your comment.

Let's see. It looks like we have three commenters remaining that had their hands up at 7:00 p.m., so we'll give them a chance to provide their comment, and then we'll conclude the meeting.

Let's see. Phone number ending in 7680, could you please press *6 to unmute

cont'd PH275-2

PH275-3

Comment-PH276
MARY

yourself?

PARTICIPANT: Hello.

MS. SISCO: Hi. We can hear you.

PARTICIPANT: My name is Mary, and I'm a senior, and I want to make a comment about the last meeting that Metro had.

I believe Metro should have had taken better control of the meeting since the protesters had all the control with the disruption, the profanity, making people feel threatened, scared of the situation happening in front of them.

We should all feel safe no matter where we are, as well as be able to speak and share our support for the gondola.

Thank you so much.

PH276-1

MS. SISCO: Thank you for your comment.

We have someone that's logged in as Samsung. It looks like it is Samsung SM-A526U, and then, after that, we'll go to Ali Rubinfeld, and we'll just double check that we captured all

the hands that were up at 7:00. And if so, we'll move to concluding the meeting.

Comment-PH277
M CERVANTES

MR. M. CERVANTES: Hello?

MS. SISCO: Hi, we can hear you.

MR. M. CERVANTES: Yes. My name is Marlow Cervantes (phonetic), and I am a LA citizen born and raised, and I support the Dodger Stadium gondola.

PH277-1

My neighborhood deserves less traffic, less pollution for clean air with more transportation options. I hope that this is a better and for our future for us and our nation to come. Thank you.

MS. SISCO: Thank you for your comment.

Let's see. We'll go to Ali Rubinfeld.

Comment-PH278
A RUBINFELD

MS. RUBINFELD: Hi. My name is Ali Rubinfeld. I'm a resident of Solana Canyon. I don't think there are people in Los Angeles who want to alleviate traffic to Dodger Stadium more than the residents of Solana Canyon, but this is just not the way.

PH278-1

This is a transparent power grab with the long-term goal of creating a high end development and shopping center at Dodger Stadium that does not meet the needs of a community currently living in the area.

There are so many ways to make Dodger Stadium more accessible that will not cause more harm to communities still healing from the violent taking of Chavez Ravine.

This gondola will completely change the socioeconomic landscape of Chinatown, which is one of the last affordable neighborhoods left in Los Angeles, and people have been fighting to keep their homes there.

This gondola will make Los Angeles a less affordable and less livable city and is completely ignoring the true needs of the community. It's here for a profit motive.

We need a grocery store. We don't need a gondola. Thank you.

MS. SISCO: Thank you for your comment.

I think Robert may have had his hand

cont'd PH278-1

PH278-2

PH278-3

up, so we'll go to Robert. Can you please provide your comment?

Let's see. Robert, you should be unmuted now.

Looks like we may have lost Robert.

Let's see. Give him just a minute to see if he logs back in. Otherwise, that was the last raised hand that we had, and we'll move to concluding the meeting.

Thank you all for staying with us an extra hour here to allow additional attendees to provide their comments.

Okay. We'll just give Robert maybe another little bit to see if he gets logged back in.

Okay. I do see Robert is logged in, so let's see if we can get him unmuted so he can provide his comment.

Robert, it looks like you're unmuted if you'd like to provide your comment.

Okay. Well, we're working on the technical difficulties there.

I did want to just let you know that there are links to the Metro webpage, which provides project information and information about the SECWA process, that we've just placed into the chat again.

Robert, are you able to unmute to provide your comment?

Okay. It looks like we're having some technical difficulties there. All right, he's -- it looks like, Robert, you're unmuted but we can't hear you.

So, we're going to go ahead and move to wrap up, but the -- as I mentioned, the project webpage is in the chat if anyone would like more information on the SECWA process of the project.

And with that, I'll go ahead and thank you for your time this evening and we'll go ahead and conclude this virtual public hearing.

Have a good evening.

Subject: Technical Data Request: Proposed Los Angeles Aerial Rapid Transit Project

Dear Cory Zelmer,

South Coast AQMD staff received the Draft Environmental Impact Report (Draft EIR) for the Proposed Los Angeles Aerial Rapid Transit Project (South Coast AQMD Control Number: LAC221018-05). Staff is currently in the process of reviewing the Draft EIR. The public commenting period is from 10/17/2022 – 12/16/2022.

L1-1

Upon review of the files provided as part of the public review period, I was able to access the Draft EIR and associated Appendices on METRO's website.

Please provide an electronic copy of any live modeling and emission calculation files (complete files, not summaries) that were used to quantify the air quality impacts from construction and/or operation of the Proposed Project as applicable, including the following:

1. CalEEMod Input Files (.csv files);
1. Live EMFAC output files;
1. Any emission calculation file(s) (live version of excel file(s); no PDF) used to calculate the Project's emission sources;
1. AERMOD Input and Output files, including AERMOD View file(s) (.isc);
1. HARP Input and Output files and/or cancer risk calculation files (live version of excel file(s); no PDF) used to calculate cancer risk, and chronic and acute hazards from the Project;
1. Any other files related to post-processing done outside of AERMOD to calculate pollutant-specific concentrations (if applicable).

L1-2

You may send the above-mentioned files via a Dropbox link in which they may be accessed and downloaded by South Coast AQMD staff by **10/27/22**. Without all files and supporting documentation, South Coast AQMD staff will be unable to complete a review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.

RE: Aerial Rapid Transit Project DEIR Comment

Dear Mr. Zelmer:

I am writing to comment on the Draft Environmental Impact Report (DEIR) that Metro released on the Aerial Rapid Transit Project. Specially, I am informing Metro that the properties at 901 and 903 North Main Street, Los Angeles, California, 90012 (Assessor's Parcel Number [APN] 5408-008-909) are owned by the City of Los Angeles (City) and were approved for mixed use development -- affordable housing and services -- by the Mayor and City Council in August 2019 (Council File Number: 18-0930). L2-1

The Los Angeles Housing Department currently has an Exclusive Negotiation Agreement (ENA) with Friends of Homeboy, LLC, for these properties and expects to execute the Development and Disposition Agreement no later than June 2023. The plan for these sites includes, transitional housing and affordable housing with supportive services, and a community center. Because of these facts, the City does not intend to divest itself of these parcels for any use besides providing affordable housing. L2-2

Thank you for your immediate attention to this matter. If you require additional information, please contact Assistant City Administrative Officer, Yolanda Chavez, at 213-473-7522 or Yolanda.Chavez@Lacity.org. L2-3

Sincerely,

MATTHEW W. SZABO
City Administrative Officer

?
Hello Mr. Zelmer,

The California Department of Fish and Wildlife (CDFW) has completed review of the Draft Environmental Impact report for the Los Angeles Aerial Rapid Transit Project for the Los Angeles County Metropolitan Transportation Authority. Please find CDFW's comment letter attached. If you have any questions or concerns regarding these comments, please feel free to contact CDFW at your convenience.

Best,

Subject: Draft Environmental Impact Report for the Los Angeles Aerial Rapid Transit Project, SCH #2020100007, Los Angeles County Metropolitan Transportation Authority, Los Angeles County

Dear Mr. Zelmer:

The California Department of Fish and Wildlife (CDFW) has reviewed the Los Angeles Aerial Rapid Transit Project (Project) Draft Environmental Impact Report (DEIR) from the Los Angeles County Metropolitan Transportation Authority (Metro). Supporting documentation for the Project includes a *Biological Resource Assessment* (BRA) dated October 2022. CDFW appreciates the opportunity to provide comments and recommendations regarding aspects of the Project that could affect fish and wildlife resources and be subject to CDFW's regulatory authority under the Fish and Game Code. S1-1

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & Game Code, §§ 711.7, subdivision (a) & 1802; Public Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect State fish and wildlife resources. S1-2

CDFW is also submitting comments as a Responsible Agency under CEQA (Public Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & Game Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in "take", as defined by State law, of any species protected under the California Endangered Species Act (CESA) (Fish & Game Code, § 2050 et seq.), or CESA-listed rare plant pursuant to the Native Plant Protection Act (NPPA; Fish & Game Code, §1900 et seq.) authorization as provided by the applicable Fish and Game Code will be required.

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

Project Description and Summary

Objective: The Project would connect Los Angeles Union Station (LAUS) to the Dodger Stadium property via an aerial gondola system in downtown Los Angeles. The proposed 1.2-mile route would travel generally along Alameda Street, Spring Street, and Bishops Road from LAUS to Dodger Stadium, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed aerial gondola system would include aerial cables, passenger stations, a non-passenger junction, towers to support the aerial cables between the stations/junction, and gondola cabins for the passengers.

Location: The proposed Project would be located in the County of Los Angeles, within or adjacent to the communities of El Pueblo, Union Station, Chinatown, Mission Junction, Solano Canyon, and Elysian Park.

S1-3

Comments and Recommendations

CDFW offers the comments and recommendations below to assist Metro in adequately identifying, avoiding, and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources.

Comment #1: Operational Impacts to Birds

Issue: Project operation may impact resident and migratory bird species that move through the alignment area.

Specific impacts: The BRA states, "Potential direct impacts could include bird collisions with the proposed stations, junction, towers, cabins, and ropeway cables, or electrocution if they come in contact with an energized component of the system." The BRA also states, "Significant impacts can occur when towers or wires are constructed in migratory corridors and obstruct the flight paths of migrant birds. This is particularly true for structures equipped with constant (rather than flashing) lighting or reflective surfaces like glass, which tend to attract nocturnal migrants during flight and increase the probability of collision."

S1-4

Why impacts would occur: The BRA defends that Project operation will not be significant because, "The proposed Project alignment is located on a broad urbanized coastal plain, midway between the coast and the mountains, and lacks significant wetlands or similar habitats that might attract large numbers of migrants as stopover habitat. Given the lack of habitat and topographic features that would promote concentrated avian migratory activity, impacts to migrants, including nocturnal species, are not expected to be significant." While the Project alignment may not be a large stopover habitat for migrant birds, there are numerous accounts, according to eBird, of many birds that utilize the alignment area as habitat. In particular, the Los Angeles State Historic Park has a wide variety of bird species that have been accounted for, including a number of special status species such as the loggerhead shrike (*Lanius ludovicianus*) and Peregrine falcon (*Falco peregrinus*) (eBird 2022). Loggerhead shrike are designated California Species of Special Concern and Peregrine falcon is a species classified as fully protected under CDFW. Even if avian activity is not "concentrated" in this area, the DEIR does not acknowledge the numerous avian species that use the alignment area and its vicinity as habitat. Moreover, there are several locations in the surrounding alignment vicinity with a

S1-5

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

wide variety of avian species accounts, including Elysian Park, Los Angeles River, Grand Park, Echo Park, and the Silver Lake Reservoir.

cont'd S1-5

In addition, page 48 of the BRA provides reasoning why collisions with cables will not be significant since the diameter and grouping of the cables would make them more visible. However, there is no evidence to support the claim that the diameter and grouping of the cables would prevent bird collisions to a level that is less than significant. More importantly, take is not permitted for fully protected species, so collisions must be completely prevented for these species. Additionally, there is still potential for lighting and reflective surfaces on the gondolas, stations, and towers that may attract birds and cause collisions, especially if birds are flying during low light hours. Artificial light may attract or disorient migrating birds by disrupting navigation. Resident birds and migrants are also known to collide with windows year-round, not only during migration (Ogden 1996).

Impacts to any sensitive, special status species, and/or migratory bird species should be considered significant under CEQA unless they are clearly mitigated below a level of significance. The DEIR does not provide any avoidance, minimization, or mitigation measures to prevent impacts to special status species. Inadequate avoidance, minimization, and mitigation measures for impacts to sensitive or special status species will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species by CDFW.

Evidence impacts would be significant: CEQA provides protection not only for ESA and CESA-listed species, but for any species including but not limited to SSC, which can be shown to meet the criteria for State listing. These SSC meet the CEQA definition of rare, threatened, or endangered species (CEQA Guidelines, § 15380). In addition, fully protected status precludes CDFW from authorizing any amount of incidental take or intentional take (including collisions and/or electrocutions associated with operational impacts) to meet any project mitigation requirement (Fish & G Code, § 3511). When projects show the potential to cause take of fully protected species, CDFW advises on appropriate measures to avoid take. Given the legal status of fully protected animals, take avoidance measures should meet very high standards of effectiveness, substantially greater than the measures to minimize take required under Incidental Take Permits. Lastly, migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) of 1918 (Code of Federal Regulations, Title 50, § 10.13). Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory nongame birds (as listed under the Federal MBTA). It is unlawful to take, possess, or needlessly destroy the nest or eggs of any raptor.

S1-6

The Project's operational impacts have yet to be mitigated below a significant level. Accordingly, the Project continues to have a substantial adverse effect, either directly or through habitat modifications, on avian species identified as a candidate, sensitive, or special-status species by CDFW.

Recommended Potentially Feasible Mitigation Measure(s):

Mitigation Measure #1: CDFW recommends the DEIR include measures to mitigate for collision impacts with the cables, gondola cars, stations, and towers. CDFW recommends Metro

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

develop an Avian Collision Mitigation, Monitoring, and Adaptive Management Plan to address any bird collisions that may occur. This Plan should prescribe the following:

1. Measures to allow birds to see structures during low light hours. Artificial lighting should be eliminated where unnecessary as to prevent attracting birds or shielded down where possible. The DEIR should investigate different types of lights and lighting regimes with reference to their effect on the safety of migrating birds;
2. Measurable goals and success criteria that eliminates or reduces collisions to the maximum extent feasible. Measurable success criteria should be based on site/habitat conditions prior to Project operations. Collisions should be eliminated for fully protected species as no take can occur for these species;
3. Contingency measures if the success criteria is not met;
4. Long-term monitoring for at least 10 years;
5. Adaptive management techniques.; and
6. Annual reporting criteria and requirements.

cont'd S1-6

Mitigation Measure #2: Any windows in stations, towers, or gondolas should be made visible to birds in flight. This may be achieved by using non-reflective tint or window film. Reflective surfaces should be reduced as much as possible with opaque or translucent surfaces.

Comment #2: Impacts on Burrowing Owls

Issue: The Project may have a significant impact on burrowing owl (*Athene cunicularia*), a designated Species of Special Concern (SSC).

Specific impacts: Burrowing owls have been recorded at the Los Angeles State Historic Park. Project construction and activities may result in injury or mortality of burrowing owls and disrupt natural burrowing owl breeding behavior.

Why impacts would occur: Nest and roost burrows of the burrowing owl are commonly dug by ground squirrels (*Citellus beecheyi)*. According to iNaturalist (2023), there have been accounts of California ground squirrel within Los Angeles State Historic Park, which can provide potential cover sites for burrowing owls. There were no surveys for burrowing owl conducted for the BRA despite the Project alignment transecting through the Los Angeles State Historic Park. The DEIR, therefore, does not provide compensatory mitigation for potential impacts to habitat for burrowing owl. In California, threat factors affecting burrowing owl populations include habitat loss, degradation, and modification. Project activities could result in potential habitat loss or disturbance for burrowing owl .which would subsequently result in local extirpation of the species and contribute to local, regional, and State-wide declines of the species. S1-7

According to the DEIR, construction will take approximately 25 months. The Project may therefore temporarily impact habitat supporting burrowing owls for this length of time. However, the DEIR does not disclose how long these temporary impacts may last. Impacts to any sensitive or special status species should be considered significant under CEQA unless they are clearly mitigated below a level of significance. The DEIR does not provide mitigation for potential loss of habitat supporting burrowing owls. Inadequate avoidance, minimization, and mitigation measures for impacts to sensitive or special status species will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect, either directly or

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

through habitat modifications, on any species identified as a candidate, sensitive, or special-status species by CDFW.

Evidence impacts would be significant: The burrowing owl is a designated SSC. An SSC is a species, subspecies, or distinct population of an animal native to California that currently satisfies one or more of the following (not necessarily mutually exclusive) criteria:

- is extirpated from the State or, in the case of birds, is extirpated in its primary season or breeding role;
- is listed as ESA-, but not CESA-, threatened, or endangered; meets the State definition of threatened or endangered but has not formally been listed;
- is experiencing, or formerly experienced, serious (noncyclical) population declines or range retractions (not reversed) that, if continued or resumed, could qualify it for State threatened or endangered status; and/or,
- has naturally small populations exhibiting high susceptibility to risk from any factor(s), that if realized, could lead to declines that would qualify it for CESA threatened or endangered status (CDFW 2023a).

CEQA provides protection not only for CESA-listed species, but for any species including but not limited to SSC which can be shown to meet the criteria for State listing. These SSC meet the CEQA definition of rare, threatened, or endangered species (CEQA Guidelines, § 15380). Therefore, take of SSC could require a mandatory finding of significance (CEQA Guidelines, § 15065).

Recommended Potentially Feasible Mitigation Measure(s):

cont'd
S1-7

Mitigation Measure #3: CDFW recommends burrowing owl protocol surveys be conducted by a qualified biologist on the Project site and within 100 feet (minimum) of the Project site where there is suitable habitat. Surveys for burrowing owls should adhere to survey methods described in CDFW's March 7, 2012, Staff Report on Burrowing Owl Mitigation prior to issuing construction permits (CDFW 2012). In California, the burrowing owl breeding season extends from February 1 to August 31 with some variances by geographic location and climatic conditions. Survey protocol for breeding season owl surveys states to conduct 4 survey visits: 1) at least one site visit between February 15 to April 15, and 2) a minimum of three survey visits, at least three weeks apart, between April 15 and July 15, with at least one visit after 15 June.

If burrowing owls are identified utilizing the Project site during the surveys,-Metro should prepare an Impact Assessment in accordance with the 2012 Staff Report on Burrowing Owl Mitigation. Then, Metro should develop a Burrowing Owl Mitigation Plan in accordance with the 2012 Staff Report on Burrowing Owl Mitigation. Metro should contact CDFW to develop appropriate mitigation/management procedures.

Mitigation Measure #4: CDFW recommends that Metro disclose the length of time for temporary impacts to burrowing owl habitat. Based on those temporary impacts, CDFW recommends Metro mitigate for temporary and direct impacts to burrowing owl. There should be no net loss of burrowing owl habitat. Metro should set aside replacement habitat offsite for acreage of impact and number of burrows. Replacement habitat should be protected in perpetuity under a conservation easement dedicated to a local land conservancy or other appropriate entity, which should include an appropriate endowment to provide for the long-term

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

management of mitigation lands.

cont'd S1-7

Mitigation Measure #5: CDFW recommends that Metro avoid using any rodenticides and second-generation anticoagulant rodenticides during Project activities.

Comment #3: Tree Removal

Issue: The Project proposes to remove 250 trees along the Project alignment.

Specific impact: The DEIR lists that one protected tree (Mexican elderberry) would require a replacement ratio of 4:1; 82 trees that are non-protected but are significant would require a replacement of 1:1; 34 street trees would be removed and would be replaced "at a ratio agreed upon during consultation with the Urban Forestry Division"; and 75 trees located on State Park Property would be replaced "on California Department of Parks and Recreation State property and private property at a 1:1 ratio". Project activities that result in the removal of trees may cause temporary or permanent impacts to wildlife that utilize the trees as habitat.

In addition, Project activities that involve removal of trees or parts of trees have the potential to result in the spread of tree insect pests and disease into areas not currently exposed to these stressors.

Why impacts would occur: The total replacement ratio of all 250 trees to be removed along the Project alignment is currently unknown. CDFW is therefore unable to determine if these replacement ratios are sufficient in mitigating for impacts to trees removed. The lack of complete mitigation ratios for tree removal in the DEIR may result in an ultimate total net loss of trees associated with the Project activities. S1-8

Moreover, all trees on site may provide habitat for wildlife within the Project vicinity. These trees may provide adequate habitat for nesting birds and small mammals. Removal of trees on site may temporarily or permanently impact available habitat for wildlife in the area. The loss of trees should be included in the mitigation efforts.

Lastly, there is no proposed investigation and plan for managing tree pests or pathogens at the time of removal. This may result in the introduction of pests, pathogens, or diseases to areas where they previously have not been found.

Evidence impacts would be significant: The greater Los Angeles area is home to a wide variety of migratory and non-migratory species of birds that utilize the urban ecosystem. Studies have shown that street trees provide necessary foraging habitat to birds and are a critical resource to promote avian biodiversity. Feeding bird density has been shown to be positively associated with increases in density and size of street trees. In addition, there is evidence that avian species generally prefer native street-tree species and only a few nonnative tree species for foraging (Wood & Esaian 2020). CDFW is concerned that without sufficient mitigation for the loss of trees, there will be a negative impact of wildlife species, such as birds, in the alignment area that would use these trees for potential nesting and foraging habitat.

Lastly, without a proper investigation and management plan, the Project may also result in an adverse effect, either directly or through habitat modifications, by exposing other habitats to insect and/or disease pathogens. Exposure to insect and/or disease pathogens may have a

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

substantial adverse effect on any sensitive natural community identified in local or regional plans, policies, and regulations or by the CDFW or United States Fish and Wildlife Service (USFWS).

Recommended Potentially Feasible Mitigation Measure(s):

Mitigation Measure #6: An infectious tree disease management plan should be developed and implemented prior to initiating Project activities. All trees scheduled for removal should be inspected prior to start of those activities for contagious tree diseases including but not limited to: thousand canker fungus (*Geosmithia morbida*), Polyphagous Shot Hole Borer (*Euwallacea spp.*), and goldspotted oak borer (*Agrilus auroguttatus*) (TCD 2022; UCANR 2022; UCIPM 2013). To avoid the spread of infectious tree diseases, diseased trees, or any parts thereof, should not be transported from the Project site without first being treated using best available management practices relevant for each tree disease observed.

Mitigation Measure #7: Given that the DEIR does not provide justification for how the mitigation ratios presented would adequately reduce Project impacts to below a level of significance while considering temporal loss, native trees, size of trees, potential mitigation failure, or other factors, CDFW recommends replacing native trees with at least a 3:1 ratio. CDFW also recommends replacing non-native trees with at least a 1:1 ratio with native trees. CDFW concurs with the replacement ratio for the Mexican elderberry.

cont'd
S1-8

Recommendation #1 Phased Tree Removal: CDFW recommends Metro consider phased removal of trees (i.e., phased Project approach) in order to minimize impacts resulting from the temporal loss of trees and to provide structurally diverse tree replacement habitat while mitigation for impacts to tree removal occurs. CDFW recommends providing nesting perch structures in the interim of replacement trees being installed so as no nesting habitat is lost during construction. Perches should be installed at an appropriate distance from the work area to reduce impacts to nesting birds.

Additional Recommendations

Recommendation #2 Nesting Birds: CDFW concurs with the nesting bird mitigation measure BIO-B as proposed in the DEIR. However, it should be noted that the temporary halt of Project activities within nesting buffers during nesting season does not constitute effective mitigation for the purposes of offsetting Project impacts associated with habitat loss. Additional mitigation would be necessary to compensate for the removal of nesting habitat within the Project site based on acreage of impact and vegetation composition. CDFW should be consulted to determine proper mitigation for impacts to occupied habitat depending on the status of the bird species. Mitigation ratios would increase with the occurrence a California Species of Special Concern and would further increase with the occurrence of a CESA-listed species.

Recommendation #3 Construction Fencing: CDFW recommends that any fencing used during and after the Project be constructed with materials that are not harmful to wildlife. Prohibited materials should include, but are not limited to, spikes, glass, razor, or barbed wire. Use of chain link and steel stake fence should be avoided or minimized as this type of fencing can injure wildlife or create barriers to wildlife dispersal. All hollow posts and pipes should be capped to prevent wildlife entrapment and mortality. These structures mimic the natural cavities preferred by various bird species and other wildlife for shelter, nesting, and roosting. Raptor's

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

talons can become entrapped within the bolt holes of metal fence stakes resulting in mortality. Metal fence stakes used on the Project site should be plugged with bolts or other plugging materials to avoid this hazard. Fences should be installed in a manner that excludes any wildlife from entering the work zone (i.e., embedded fence such that wildlife cannot enter from under the fence). Fences should not have any slack that may cause wildlife entanglement.

Recommendation #4 Data: CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database [i.e., California Natural Diversity Database (CNDDB)] which may be used to make subsequent or supplemental environmental determinations [Pub. Resources Code, § 21003, subd. (e)]. Accordingly, please report any special status species detected by completing and submitting CNDDB Field Survey Forms (CDFW 2023b). The County should ensure the data has been properly submitted, with all data fields applicable filled out, prior to finalizing/adopting the environmental document. The data entry should also list pending development as a threat and then update this occurrence after impacts have occurred. The County should provide CDFW with confirmation of data submittal.

cont'd S1-8

Recommendation #5 MMRP: CDFW recommends the County update the Project's proposed Biological Resources Mitigation Measures and condition the environmental document to include mitigation measures recommended in this letter. CDFW provides comments to assist the County in developing mitigation measures that are specific, detailed (i.e., responsible party, timing, specific actions, location), and clear for a measure to be fully enforceable and implemented successfully via a mitigation monitoring and/or reporting program (CEQA Guidelines, § 15097; Pub. Resources Code, § 21081.6). The County is welcome to coordinate with CDFW to further review and refine the Project's mitigation measures. Per Public Resources Code section 21081.6(a)(1), CDFW has provided the County with a summary of our suggested mitigation measures and recommendations in the form of an attached Draft Mitigation and Monitoring Reporting Plan (MMRP; Attachment A).

Filing Fees

The Project, as proposed, could have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final (Cal. Code Regs, tit. 14, § 753.5; Fish & Game Code, § 711.4; Pub. Resources Code, § 21089).

S1-9

Conclusion

We appreciate the opportunity to comment on the Project to assist Metro in adequately analyzing and minimizing/mitigating impacts to biological resources. CDFW requests an opportunity to review and comment on any response that Metro has to our comments and to receive notification of any forthcoming hearing date(s) for the Project. If you have any questions or comments regarding this letter, please contact Felicia Silva, Environmental Scientist, at (562) 292-8105 or Felicia.Silva@wildlife.ca.gov.

GAVIN NEWSOM, Governor
CHARLTON H. BONHAM, Director

CDFW recommends the following language to be incorporated into a future environmental document for the Project.

Biological Resources			
	Mitigation Measure	**Timing**	**Responsible Party**
MM-BIO-1-Operational Impacts	The DEIR shall include measures to mitigate for collision impacts with the cables, gondola cars, stations, and towers. Metro will develop an Avian Collision Mitigation, Monitoring, and Adaptive Management Plan to address any bird collisions that may occur. This Plan shall prescribe the following: 1. Measures to allow birds to see structures during low light hours. Artificial lighting should be eliminated where unnecessary as to prevent attracting birds or shielded down where possible. The DEIR will investigate different types of lights and lighting regimes with reference to their effect on the safety of migrating birds; 2. Measurable goals and success criteria that eliminates or reduces collisions to the maximum extent feasible. Measurable success criteria shall be based on site/habitat conditions prior to Project operations. Collisions shall be eliminated for fully protected species as no take can occur for these species; 3. Contingency measures if the success criteria is not met; 4. Long-term monitoring for at least 10 years; 5. Adaptive management techniques.; and 6. Annual reporting criteria and requirements.	Prior to Construction and/or ground disturbing activities	Metro

S1-11

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

MM-BIO-2-Operational Impacts	Any windows in station, tower, or gondolas will be made visible to birds in flight. This may be achieved by using non-reflective tint or window film. Reflective surfaces shall be reduced as much as possible with opaque or translucent surfaces.	Prior to Construction and/or ground disturbing activities	Metro
MM-BIO-3-Burrowing Owl	Burrowing owl protocol surveys shall be conducted by a qualified biologist on the Project site and within 100 feet (minimum) of the Project site where there is suitable habitat. Surveys for burrowing owls shall adhere to survey methods described in CDFW's March 7, 2012, Staff Report on Burrowing Owl Mitigation prior to issuing construction permits (CDFW 2012). In California, the burrowing owl breeding season extends from February 1 to August 31 with some variances by geographic location and climatic conditions. Survey protocol for breeding season owl surveys states to conduct 4 survey visits: 1) at least one site visit between February 15 to April 15, and 2) a minimum of three survey visits, at least three weeks apart, between April 15 and July 15, with at least one visit after 15 June. If burrowing owls are identified utilizing the Project site during the surveys,-Metro shall prepare an Impact Assessment in accordance with the 2012 Staff Report on Burrowing Owl Mitigation. Then, Metro shall develop a Burrowing Owl Mitigation Plan in accordance with the 2012 Staff Report on Burrowing Owl Mitigation. Metro shall contact CDFW to develop appropriate mitigation/management procedures. Metro shall submit a final Burrowing Owl Mitigation Plan to Metro prior to the issuing of construction permits.	Prior to Construction and/or ground disturbing activities	Metro

cont'd
S1-11

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

MM-BIO-4-Burrowing Owl	Metro shall disclose the length of time for temporary impacts to burrowing owl habitat. Based on those temporary impacts, Metro will mitigate for temporary and direct impacts to burrowing owl. There should be no net loss of burrowing owl habitat. Metro should set aside replacement habitat offsite for acreage of impact and number of burrows. Replacement habitat should be protected in perpetuity under a conservation easement dedicated to a local land conservancy or other appropriate entity, which should include an appropriate endowment to provide for the long-term management of mitigation lands	Prior to Construction and/or ground disturbing activities	Metro
MM-BIO-5-Burrowing Owl	Metro shall avoid using any rodenticides and second-generation anticoagulant rodenticides during Project activities.	Prior to Construction and/or ground disturbing activities	Metro
MM-BIO-6-Tree Disease Management Plan	An infectious tree disease management plan shall be developed and implemented prior to initiating Project activities. All trees scheduled for removal shall be identified and counted to provide total numbers and species type. In addition, trees scheduled for removal resulting from the Project shall be inspected for contagious tree diseases including but not limited to: thousand canker fungus (*Geosmithia morbida*), Polyphagous Shot Hole Borer (*Euwallacea spp.*), and goldspotted oak borer (*Agrilus auroguttatus*) (TCD 2020; UCANR 2020; UCIPM 2013). To avoid the spread of infectious tree diseases, diseased trees shall not be transported from the Project site without first being treated using best available management practices relevant for each tree disease observed.	Prior to Construction and/or ground disturbing activities	Metro
MM-BIO-7-Tree Replacement	Given that the DEIR does not provide justification for how the mitigation ratios presented would adequately	Prior to Construction	Metro

cont'd
S1-11

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

	reduce Project impacts to below a level of significance while considering temporal loss, native trees, size of trees, potential mitigation failure, or other factors, CDFW recommends replacing native trees with at least a 3:1 ratio. CDFW also recommends replacing non-native trees with at least a 1:1 ratio with native trees. CDFW concurs with the replacement ratio for the Mexican elderberry	and/or ground disturbing activities	
REC-1- Phased Tree Removal	CDFW recommends Metro consider phased removal of trees (i.e., phased Project approach) in order to minimize impacts resulting from the temporal loss of trees and to provide structurally diverse tree replacement habitat while mitigation for impacts to tree removal occurs. CDFW recommends providing nesting perch structures in the interim of replacement trees being installed so as no nesting habitat is lost during construction. Perches must be installed at an appropriate distance from the work area to reduce impacts to nesting birds.	Prior to Construction and/or ground disturbing activities	Metro
REC-2-Nesting Birds	It should be noted that the temporary halt of Project activities within nesting buffers during nesting season does not constitute effective mitigation for the purposes of offsetting Project impacts associated with habitat loss. Additional mitigation would be necessary to compensate for the removal of nesting habitat within the Project site based on acreage of impact and vegetation composition. CDFW shall be consulted to determine proper mitigation for impacts to occupied habitat depending on the status of the bird species. Mitigation ratios would increase with the occurrence a California Species of Special Concern and would further increase with the occurrence of a CESA-listed species.	Prior to Construction and/or ground disturbing activities	Metro
REC-3-Fencing	CDFW recommends that any fencing used during and after the Project be constructed with materials that are not harmful to wildlife. Prohibited materials should	Prior to Construction and/or ground	Metro

cont'd
S1-11

DocuSign Envelope ID: 3CD7AE7A-66ED-415C-B323-882C4EE0CC94

	include, but are not limited to, spikes, glass, razor, or barbed wire. Use of chain link and steel stake fence should be avoided or minimized as this type of fencing can injure wildlife or create barriers to wildlife dispersal. All hollow posts and pipes should be capped to prevent wildlife entrapment and mortality. These structures mimic the natural cavities preferred by various bird species and other wildlife for shelter, nesting, and roosting. Raptor's talons can become entrapped within the bolt holes of metal fence stakes resulting in mortality. Metal fence stakes used on the Project site should be plugged with bolts or other plugging materials to avoid this hazard. Fences should be installed in a manner that excludes any wildlife from entering the work zone (i.e., embedded fence such that wildlife cannot enter from under the fence). Fences should not have any slack that may cause wildlife entanglement.	disturbing activities	
REC-4-Data	CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database [i.e., California Natural Diversity Database (CNDDB)] which may be used to make subsequent or supplemental environmental determinations [Pub. Resources Code, § 21003, subd. (e)]. Accordingly, please report any special status species detected by completing and submitting CNDDB Field Survey Forms (CDFW 2023b). The County should ensure the data has been properly submitted, with all data fields applicable filled out, prior to finalizing/adopting the environmental document. The data entry should also list pending development as a threat and then update this occurrence after impacts have occurred. The County should provide CDFW with confirmation of data submittal.	Prior to Construction and/or ground disturbing activities	Metro

Comment Letter - S2

January 17, 2023

Mr. Cory Zelmer
Deputy Executive Officer, Metro
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Re: Draft Environmental Impact Report for Los Angeles Aerial Rapid Transit Project

Dear Mr. Zelmer,

The California Department of Parks and Recreation (State Parks) welcomes the opportunity to comment on the Draft Environmental Impact Report (DEIR) for the Los Angeles Aerial Rapid Transit Project (Project). State Parks is a State Agency as defined by the California Environmental Quality Act (CEQA) and our mission is to provide for the health, inspiration, and education of the people of California by helping preserve the state's extraordinary biodiversity, protecting its most valued natural and cultural resources, and creating opportunities for high quality outdoor recreation.

State Parks and its partners spent more than 20 years planning, developing, and protecting the Los Angeles State Historic Park (LASHP). This park provides the city and surrounding communities with much-needed public open space and iconic views of downtown, opportunities for civic engagement and public programming on the cultural significance and diversity of greater Los Angeles, all while also protecting valuable historic resources within the urban core of Los Angeles. S2-1

The LASHP has also become a popular venue for special events, large and small, drawing visitors from all over the world. While State Parks recognizes that the Project is expected to result in numerous public benefits, including traffic reduction, better air quality, and improved transportation connectivity for the surrounding communities, all of which are consistent with the state's broad environmental goals and supported by State Parks, it will also impact LASHP operations in significant ways, as described in more detail below.

The proposed project, with respect to the LASHP, includes a station for loading and unloading passengers at the southern entrance of the park, with ropeways and cabins traversing the southwestern edge of the park, connecting the LASHP station with a junction tower just outside of the park on the other side of Broadway. In total, the Project would require permanently taking approximately 0.21 acres for the physical transit station, and up to 1.87 acres of the 32-acre park (6%) that would be restricted not only by the station, but by the overhead development and operational rights for the aerial infrastructure, including the cable ropeway, which would be suspended at just 26 feet over the park at its lowest spot. If constructed, the Project would require the demolition of park improvements in the project area, with additional areas to be impacted in the event these improvements, such as the Cargo Snack Shack concession S2-2

DocuSign Envelope ID: B40441F8-6922-4002-9DE2-722511DECF9A

and restrooms, are relocated to other areas of the park. Furthermore, a number of trees will need to be removed and the areas under the ropeway will need to be kept clear of vegetation and structures over a certain height, thus reducing the available park space for event organizers and public park users, potentially limiting the size and scope of future events.

cont'd S2-2

As noted in the DEIR, the Project is not consistent with the LASHP General Plan, which would need to be amended prior to State Parks granting any administrative approvals. Authority for approving such state park general plan amendments rests solely with the State Park and Recreation Commission (SPRC). While the project applicant would be responsible for submitting a general plan amendment document that meets State Parks' requirements and policies for such proposals, State Parks would also be responsible for analyzing and making recommendations to the SPRC. State Parks understands that the thresholds under CEQA and the required record and analysis for a general plan amendment are different. However, State Parks recommends that the project applicant further analyze the following impacts in the DEIR: (1) the substantial loss of property within LASHP; (2) the impairment of scenic viewsheds and high-value open space; and (3) project impacts that will constrain and reduce the ability to utilize the LASHP for special events. Other impacts such as, but not limited to, hours of operation, design and materials of facilities, and access during construction, are also meaningful issues that will need to be discussed further during the general plan amendment process before the SPRC.

S2-3

S2-4

S2-5

S2-6

S2-7

Should the General Plan be successfully amended to include the Project, State Parks looks forward to working collaboratively with the Project team to identify appropriate operational agreements, transactional terms, and other measures needed to ensure the benefits of the Project outweigh the impacts, direct and indirect costs, and specifically, ensure that LASHP visitors' overall experiences will be improved as a result.

RE: SCH #2020100007

To whom it may concern:

I was recently requested to perform an Environmental Impact Review for a project involving the Los Angeles Aerial Rapid Transit system. Specifically, a gondola aerial system that would transport pedestrian traffic from Los Angeles Union Station to Dodger Stadium. The California Highway Patrol's interest in commenting surrounds our concern for vehicular traffic traveling on the State Route (SR) 110 freeway. Our concerns include increased traffic congestion in the area due to the visual hazard of gondola cabins, the possibility of projectiles being thrown onto the freeway from pedestrian's traveling within gondola cabins, and increased calls for service in the area of the gondola to remove objects being thrown from gondola cabins. Due to the aforementioned concerns, we feel this project, if approved, would adversely affect the Central Los Angeles Area and vehicular traffic within the area.

Project Description: *(please use a separate page if necessary)*

The Los Angeles Aerial Rapid Transit Project would connect Los Angeles Union Station (LAUS) to the Dodger Stadium property via an aerial gondola system in downtown Los Angeles. The proposed 1.2-mile route would travel generally along Alameda Street, Spring Street, and Bishops Road from LAUS to Dodger Stadium, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed aerial gondola system would include aerial cables, passenger stations, a non-passenger junction, towers to support the aerial cables between the stations/junction, and gondola cabins for the passengers. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

Vic. LA-110 PM 24.755L
LA-110 PM 24.755R

Dear Cory Zelmer:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The proposed Project would connect LA Union Station to the Dodger Stadium property via an aerial gondola system with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The Project would provide an aerial rapid transit (ART) option for visitors to Dodger Stadium, while connecting surrounding communities, including Chinatown, Mission Junction, Elysian Park, and Solano Canyon, and the Los Angeles State Historic Park, to the regional transit system accessible at LAUS. The aerial gondola system would be approximately 1.2 miles and consist of cables, three passenger stations, a non-passenger junction, three towers, and gondola cabins. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately 7 minutes. The proposed Project would provide pedestrian improvements, including hardscape and landscape improvements, as well as amenities at the Los Angeles State Historic Park. The ART system has the ability to overcome grade and elevation issues between LAUS and Dodger Stadium and provide safe, zero emission, environmentally friendly, and high-capacity transit connectivity in the Project area that would reduce greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways. The proposed Project would operate daily to serve existing residents, workers, park users, and visitors to Los Angeles.

S4-1

The nearest State facility to the proposed project is SR-110. After reviewing the DEIR, Caltrans has the following comments:

S4-2

Based on the information provided, Caltrans supports Design and Use option E, as it provides a much-needed bike and pedestrian bridge connecting North Broadway to the Los Angeles Historic Park. This connection is critical to the project's success, as it will allow the residents, employees, and students north of the Metro L line tracks to access the park and its new station. This not only improves the potential ridership for the proposed project but provides a greatly enhanced active transportation network for all Californians who will ever visit, live, or work in the area. For these reasons Caltrans would also discourage the selection of Use Option D, which would substitute the proposed Chinatown/State Park Station for a non-passenger junction. This option greatly reduces the project's effectiveness, and needlessly limits accessibility to an additional mode of travel to and from a valuable green space.

cont'd S4-2

Finally, due to the Stadium Tower's proximity to Caltrans right-of-way and the direct aerial crossing of SR-110, the project will require extensive collaboration with Caltrans staff for various permits and design approvals. These reviews, approvals, and encroachment permits will be conducted at the time of permit application so that all concerns can be adequately addressed.

S4-3

If you have any questions, please contact project coordinator Anthony Higgins, at anthony.higgins@dot.ca.gov and refer to GTS# 07-LA-2020-04095.

Sincerely,

Miya Edmonson

Re: Los Angeles Gondola

January 30, 2023

Dear Mr. Zelmer:

We are writing this letter out of extreme concern for the proposed LA Gondola Project. The building of the Gondola will greatly impact current open space, disturb wildlife and cause disruption at LA Historic Park. Our tribal council and local Gabrieleno Tongva Community are against this project. S5-1

As a tribe, we have very little space within Los Angeles County to gather as community and to enjoy outdoor space. Unfortunately, the capitalistic opportunity will cause more than disruption, but it will also further damage to Mother Earth and our natural world environment. S5-2

We ask you to please stop the project. The traffic, and unnecessary construction that will further the damage to our planet will not improve our lives, traffic conditions or lives as Angelino's. This proposal is just another poorly short-sighted business venture that will leave our city and county in a worse situation than what we are currently experiencing. S5-3

Sincerely,

Kimberly M. Johnson
Tribal Secretary.

Subject: Toll Free Number for the LA ART DEIR Public Hearing via Zoom on 12/13/2022

Hello,

A resident who only has a landline asked me to find out if he can call into the LA ART DEIR public hearing tomorrow using one of Zoom's toll free numbers. The phone number provided is the San Jose phone number, which would cost him over 20 cents per minute for the call.

Will the toll free phone numbers work for joining the Zoom meeting?

Los Angeles, CA 90012

RE: Los Angeles Aerial Rapid Transit Project (LA ART)

Dear Mr. Zelmer,

CCA represents over 300 businesses, non-profits and trade organizations with a shared commitment to Downtown's vibrancy and increasing opportunity in the region. We are writing in support of the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART) that would connect Union Station to Dodger Stadium. The concept offers significant potential benefits to the City of Los Angeles and the broader communities of Los Angeles County by removing cars off the road, increasing access to public transit and improving air quality. It is also a key example of next generation transportation systems that will be critically important for LA's clean air future, which will require revolutionizing transportation on a scale not seen since the introduction of automobiles. LA ART has the potential to substantially improve traffic safety and facilitate mobility, while reducing traffic congestion and fuel consumption. GO2-1

The emissions reductions from this permanent transit link, with its game-day capacity of 10,000 to 12,000 Dodger Stadium visitors, could benefit local communities by replacing up to 3,000 existing car trips before and after each Dodger game and Stadium event. In addition, the project's year-round operation opportunities can increase transit access for underserved communities and increase access to parks. GO2-2

Projects like these are important in addressing climate change and as an opportunity to create local jobs and economic opportunities for our communities, which is critically important as we look to move into the pandemic recovery phase and toward the future, including planning for the 2028 Olympics in Los Angeles.

We are pleased to support the LA ART project, recognizing the significant benefits potential from a successful project, and hope the approvals can be completed to realize the LA ART project's benefits in time for the 2028 Olympics. GO2-3

Sincerely,

Jessica Lall

Ref: Comments Opposing LA ART "Gondola" Draft EIR

Dear Mr. Zelmer,

The Board of Directors (The Board) of the Los Angeles Union Station Historical Society (LAUSHS), a non-profit, Section 106 designated historic preservation consultant for Los Angeles Union Station (Union Station), a world recognized National Historic Landmark owned by Los Angeles County Metropolitan Transit Authority (LA Metro), has voted to formally comment against Los Angeles Aerial Rapid Transit's (LA ART) private, for-profit "gondola" (cable car system) and public land and air rights development scheme that proposes to link Union Station and LA Metro's supporting "Esplanade" project with Dodger Stadium that The Board believes is an unfair and illegal (pending a Superior Court decision) "accommodation" for LA ART. The Board believes that LA ART's proposed "futuristic-style" Union Station Terminal on Alameda Street and LA Metro's supporting "Esplanade" project will blight the historic and architecturally significant west facade of Union Station, and that Union Station, its passenger trains and patrons could be physically harmed if aircraft from the nearby Los Angeles Police Department's "Hooper Memorial Heliport" airport become entangled in LA ART's overhead cables and towers. Furthermore, The Board opposes LA Metro's planned removal of all "Disabled Parking" spaces from the "Esplanade" area, without public hearings or reasonable alternatives, to accommodate a new so-called "water feature" (aka a fogging-type water fountain) which is intended to cool LA ART riders cued-up for their rides to Dodger Stadium. Moreover, the water feature would be contrary to the state's water conservation policy. (Even if the water feature recirculates, at least 10% of its water will be lost to evaporation day after day, year after year.)

GO4-1

Until now, The Board has steadfastly refused to take sides in the above major, multi-million-dollar development scheme. However, in The Board's opinion LA Metro and its staff have obviously taken a pro-active role supporting LA ART, a potential competitor of LA Metro's efficient "Dodger Express" motor coach service, as well as planning to "gild the lily" of Union Station with its "Esplanade" project, all "backstage," using public land and airspace without public discussion and participation as required by LA Metro policy and law.

cont'd GO4-1

Among the reasons for The Board's opposition are, but not limited to:

A) LA Metro Board member Mayor Eric Garcetti, who introduced the motion to assist LA ART without public discussion or participation and to enlist LA Metro staff to "carry LA ART's water," i.e., facilitate it, did receive, according to public records, millions of dollars in both "behest payments" and political cash contributions from real estate and LA ART "gondola" developer Frank McCourt and/or his various entities and associates, which in The Board's opinion, is an apparent conflict of interest. Consequently, LA Metro is being sued by the non-profit California Endowment for willfully preventing public discussion and participation in the decision to partner with LA ART.

GO4-2

B) In The Board's opinion, LA Metro Deputy Executive Officer Cory Zelmer falsified an official document--LA ART's Draft Environmental Impact Report--by ticking-off the DEIR box that states there is no airport within two miles (or 3520 yards) of LA ART's proposed LA ART Union Station Terminal, when he had been informed repeatedly to the contrary by The Board. The Board presented proof to Zelmer and his superior, LA Metro CEO Stephanie Wiggins, that the Los Angeles Police Department's "Hooper Memorial Heliport"--variously described as the country's or the world's busiest airport for rotary-winged aircraft (aka helicopters) --is only 880 yards from LA ART's proposed Union Station Terminal. Furthermore, The Board reminded Zelmer and Wiggins that according to the Los Angeles Police Department, the California Department of Transportation, the California Public Utilities Commission, the Federal Aviation Administration, and the 8th U.S. Circuit Court of Appeals, all heliports are airports, i.e., a location where any type of flying machine is serviced. The fact that some airports serve only rotary-wing aircraft while others serve both rotary-wing aircraft and fixed-wing aircraft (airplanes) does not change the fact that all "heliports" are "airports" in the eyes of the governing agencies and the Federal Courts.

GO4-3

Furthermore, the argument that Hooper Memorial is a police airport, not a civilian airport, and therefore not an airport as far LA ART's DEIR is concerned, is fallacious and spurious. Any aircraft that becomes entangled in LA ART's cables and 13-story towers and thus crashes into Union Station, its trains and patrons would cause catastrophic harm regardless had that aircraft launched from a police airport or a public airport. Simply put, LA ART's proposed location is *not safe* for Union Station and Hooper Memorial Heliport airport.

"General Notice A. Safety is of the first importance in the discharge of duty."
–Los Angeles Union Passenger Terminal Rules and Regulations

C) Contrary to the promises made to The Board by Stephanie Wiggins, Cory Zelmer and LA ART, no meeting has ever been organized between them and The Board to discuss the difference of opinions concerning the nature of LAPD's Hooper Memorial Heliport airport and the proposed location for LA ART's Union Station Terminal. GO4-4

D) LA Metro has forbidden The Board's examination of the only known 3-D scale model of Union Station's location because, in The Board's opinion, of a deliberate subterfuge that the model dating from former Union Station owner--the Santa Fe Railway--is too old to be accurate today, and furthermore the sharing of the model with The Board would somehow be a "conflict of interest" even though The Board previously had access to the model in years past. However, The Board's use of the model does not depend on the model's age, but only the juxtaposition of Union Station with Alameda Street which has not changed appreciably since the station was opened in 1939. Consequently, at a loss for options, The Board asked LA ART to produce a 3-D scale model given its apparent resources, but LA ART has never responded. This "shadow play," in The Board's opinion, is being performed by LA Metro and LA ART to obfuscate the issues and delay public criticism of LA ART and contrary to the public weal which LA Metro is obliged to serve. Furthermore, since the model is public property, The Board's use should be permitted so it can be compared to LA ART's distorted, wide-angle, artist's renderings of its proposed Union Station Terminal with Union Station's Hispanic-Art Deco architectural style. Simply put, it is The Board's opinion that cable car rides belong in San Francisco and Disneyland, not in front of Los Angeles' world famous "Cathedral of Transportation." GO4-5

E) In The Board's opinion, LA ART is designed to, among other things, compete with LA Metro's "Dodger Express," a highly efficient service that could be improved if LA Metro switched to modern, environmentally friendly motor coaches that it might fund by the savings from not building its Esplanade project. GO4-6

F) Given the seasonal nature of baseball, it is also The Board's opinion that LA ART is a "Trojan Horse" proposal to facilitate year-around for-profit real estate development in Dodger Stadium's vicinity using public land and resources. GO4-7

G) LA Metro's proposed Esplanade project, according to LA Metro employees--who wish to remain anonymous for the sake of their careers--will be funded by so-called "overlap money" that was "peeled-off" from LA Metro's defunct LINK-US project that itself was rejected because of The Board's and the public's opposition. Moreover, LA Metro has stated to The Board's Executive Director via telephone that it plans to accomplish the Esplanade project by eliminating all public parking including all "disabled parking" from the front of Union Station without public discussion or participation in violation of the Americans with Disabilities Act (ADA). Furthermore, according to a retired LA Metro staff person, the Esplanade's so-called "water feature" (a fogging-type water fountain) will likely attract "homeless" citizens seeking showers, contrary to LA Metro's stated policy--according to former LA Metro Union Station supervisor the late Ken Pratt--of not catering to the needs of the "homeless." In The Board's opinion, The Esplanade's is designed to cool future LA ART and "Olvera Street" customers as they walk between Union Station, LA ART's terminal and the "Hispanic-style" Olvera Street tourist attraction. GO4-8

(While Olvera Street's right-of-way and some of its structures and art works are historic, the "Olvera Street Tourist Attraction" per se was developed in the 1930s by a husband-and-wife real estate development team who went on to develop Los Angeles' "New Chinatown Tourist Attraction." Alas, historic Chinatown was demolished in a racist bid to rid Los Angeles of the Chinese who settled there after building the railroad to Los Angeles. Union Station was then built on top of old Chinatown's rubble.)

cont'd GO4-8

Moreover, erecting the Esplanade water feature, whilst semi-desert Los Angeles is experiencing one of its worst droughts in history, flies in the face of the State of California's policy to lessen environmental harm. One only needs to recall the classic Los Angeles-based movie "Chinatown" to understand what The Board believes is driving the related LA ART and Esplanade schemes. To paraphrase the immortal Yogi Berra: "It's 'Chinatown' (*the movie*) all over again."

GO4-9

For the above reasons, but not necessarily only because of them, the Board of Directors of the Los Angeles Union Station Historical Society opposes construction of LA ART and LA Metro's related Esplanade project in the interests of honest government, Union Station preservation, the environment and above all **safety.**

GO4-10

Respectfully,

Thomas R. Savio
Executive Director
Los Angeles Union Station Historical Society

RE: Los Angeles Aerial Rapid Transit Project (LA ART)

Dear Ms. Wiggins and Honorable Metro Board Chair, Ara Najarian:

On behalf of the Firecracker Board of Directors, I am writing to express our support for the proposed zero-emission Los Angeles Aerial Rapid Transit Project (LA ART), connecting Union Station to Chinatown to Dodger Stadium. LA ART offers significant potential benefits to the City of Los Angeles and specifically the community of Chinatown by increasing access to public transit, improving air quality by removing cars off the road, and highlighting the businesses and culture in the area. GO5-1

This project will improve mobility and increase access to opportunity for the local community. The LA ART represents a zero-emission permanent transit link that would provide game-day capacity of 10,000 to 12,000, replacing up to 3,000 trips before and after each Dodger game and Stadium event. It would also provide year-round operation opportunities to increase transit access for underserved communities and parks. GO5-2

In addition, by connecting Union Station to Chinatown, LA ART would create a cultural landmark that will enhance the visibility of Chinatown and increase visitors to the business corridor. The project represents an opportunity for businesses along Broadway and across Chinatown to create partnerships with LA ART to highlight and learn more about the attractions, culture, history, and events in Chinatown. GO5-3

I appreciate LA ART's diligence in working with Metro and the community to bring to life a vision for a safe, accessible transit option for the community and urge you to support this important investment for Chinatown. GO5-4

Sincerely,

Raymond Su

Please accept this as my comment on the Draft Environmental Impact Report for the LA Aerial Rapid Transit.

Dear Mr. Cory Zelmer:
As an office tenant of Chinatown for over 5 years, we like to see our community develop and advance. Having the Aerial Rapid Transit will bring more foot traffic which will help with economic development. Chinatown is very tourist friendly and walkable. We also like to see increased security and funding from this new transit to support Chinatown shops.

On behalf of our board of directors and 1200+ members, we are in full support of the LA Aerial Rapid Transit.

Subject: LAART DEIR Comment (SCH 2020100007) - Objection to Metro as Lead Agency

Dear Mr. Zelmer -

Attached please find a comment letter on behalf of LA Parks Alliance with respect to the above-captioned LA Aerial Rapid Transit project Draft EIR. Please ensure that the comment is included in the public record for the project.

The attached letter is focused on Metro's improper decision to act as Lead Agency for the project pursuant to Public Resources Code section 21067 and CEQA Guidelines section 15051. LA Parks Alliance will follow up with an additional comment letter with respect to the Draft EIR before the comment deadline in January.

I would appreciate your confirmation of receipt, and I thank you in advance for this courtesy.

Sincerely,

John Given

RE: Los Angeles Aerial Rapid Transit Project
SCH 2020100007
Objection to Metro as Lead Agency

Dear Mr. Zelmer:

This letter is submitted on behalf of LA Parks Alliance[1] with respect to the above-captioned Los Angeles Aerial Rapid Transit Project (the "Project") in response to the release of the Project's Draft Environmental Impact Report ("Draft EIR" or "DEIR"). This letter focuses on LA Parks Alliance's strong objection to Los Angeles County Metropolitan Transportation Authority ("Metro") acting as lead agency for the Project's environmental review instead of the proper lead agency, the City of Los Angeles. LA Parks Alliance will submit a more thorough comment letter regarding the Project's inadequate environmental review before the current comment deadline in January 2023. GO8-1

The City of Los Angeles Must be the Lead Agency for the Project, not Metro

Metro asserts it is the appropriate lead agency — "the public agency with the greatest responsibility for supervising or approving the project as a whole."[2] Metro fails to offer an explanation as to how or why it should (or even can) be considered the public agency with the greatest responsibility for supervising or approving the project. Review of the relevant statutes shows Metro cannot be the lead agency because it has insufficient authority to authorize or supervise the Project. The City of Los Angeles must be the lead agency for the Project. GO8-2

FN GO8-1 [1] LA Parks Alliance was formed in 2019 as a response to land use threats to LA State Historic Park. Its members are park and public space advocates. See https://www.laparksalliance.org.

FN GO8-2 [2] DEIR, p. ES-1, quoting but not specifically citing Cal. Code Regs. Tit. 14 (hereinafter CEQA Guidelines), § 15051(b).

A. CEQA Requires the City of Los Angeles to be the Lead Agency for the Project

Public Resources Code section 21067 defines "lead agency" as "the public agency which has the principal responsibility for carrying out or approving a project which may have a significant effect upon the environment." (See also CEQA Guidelines, § 15367.)

CEQA Guidelines section 15051 explains the *mandatory* process by which a lead agency is chosen:

> Where two or more public agencies will be involved with a project, the determination of which agency will be the lead agency shall be governed by the following criteria:
>
> (a) If the project will be carried out by a public agency, that agency shall be the lead agency even if the project would be located within the jurisdiction of another public agency.
>
> (b) If the project is to be carried out by a nongovernmental person or entity, the lead agency shall be the public agency with the greatest responsibility for supervising or approving the project as a whole.
>
> (1) The lead agency will normally be the agency with general governmental powers, such as a city or county, rather than an agency with a single or limited purpose such as an air pollution control district or a district which will provide a public service or public utility to the project.
>
> (2) Where a city prezones an area, the city will be the appropriate lead agency for any subsequent annexation of the area and should prepare the appropriate environmental document at the time of the prezoning. The local agency formation commission shall act as a responsible agency.
>
> (c) Where more than one public agency equally meet the criteria in subdivision (b), the agency which will act first on the project in question will normally be the lead agency.
>
> (d) Where the provisions of subdivisions (a), (b), and (c) leave two or more public agencies with a substantial claim to be the lead agency, the public agencies may by agreement designate an agency as the lead agency. An agreement may also provide for cooperative efforts by two or more agencies by contract, joint exercise of powers, or similar devices.

GO8-3

Here, there are numerous public agencies that will be involved with the project. As the DEIR acknowledges, permits and other approvals will be required from the California Department of Transportation (CalTrans), California State Parks, Cal/OSHA, the City of Los

Angeles, and Metro. (DEIR, pp. 2-57, 2-61 to 62.) Guidelines section 15051 therefore applies.

There is no doubt the Project will not be "carried out" by Metro. Metro tacitly admits as much by quoting CEQA Guidelines section 15051 subdivision (b) in the DEIR, which would not apply if Metro planned to carry out the project. Subdivision (a) would instead apply and Metro would be the appropriate lead agency. (DEIR, p. ES-1.) But as all available evidence shows, Metro will *not* carry out the Project.

cont'd GO8-3

Metro documents, created during a confidential process by which Metro determined ARTT LLC would have sole source status to construct and operate the Project, show that the Project "is envisioned to be privately designed, built, operated, maintained, funded, insured, and financed" and that "Metro does not envision taking a hands-on, prescriptive, or performance minded approach to this project, instead focusing on the elements of the project for which Metro would be responsible." (Response to Metro Request for Information ["Response to Metro"], Sept. 26, 2018, p. 8.)[3] Thus, CEQA Guidelines section 15051 subdivision (a) does not apply.

GO8-4

Guidelines section 15051 subdivision (b), which does apply, *strongly* disfavors Metro as the lead agency because Metro does not have the "greatest responsibility for supervising or approving the project as a whole." First, in admitting that it will not take a hands-on, prescriptive approach to the Project, Metro has disavowed that it will supervise the Project's construction.[4] Second, Metro's role in approving the Project will be limited. It will focus only on the Project elements for which it is responsible. (*Ibid*.)

According to the DEIR, Metro's oversight is limited to three approvals:

- review and approval of Project plans for design, construction, and implementation;
- an easement or other approval to allow construction and operation of the Project within a portion of Los Angeles Union Station; and,
- an encroachment permit or other approval to allow construction and operation of the Project within Metro's Gold Line right-of-way.

(DEIR, p. 2-61.)

GO8-5

The first of the above approvals that will purportedly be made by Metro is properly within the jurisdiction of Cal/OSHA's Amusement Ride & Tramway Division, not Metro. It appears the primary reason the Project proponent agreed that Metro could *also* review and

FN GO8-4

[3] See also, Response to Metro, p. 16:

> "Unlike other Metro projects, the ART is a privately funded/financed, designed, built, operated, maintained, and insured transport conveyance to a private property that is open to the public. Like Dodger Stadium, the ART system will be open to the public for certain events and activities but not publicly owned. It is more akin to the Palm Springs Aerial Tram as a service provided for transportation to a specific location."

FN GO8-5

[4] Nor does Metro have the authority to supervise the Project. See section D, *infra*, pp. 8-10.

approve its plans is because the proponent specifically requested and negotiated with Metro to serve as the lead agency, not because it believes Metro has primary authority over the design, construction, and implementation of the Project. To the contrary, as LA ART argues and LA Parks Alliance agrees, Metro clearly does not have this authority:

> In response to Metro's assertion that ART is subject to Metro approval under the requirements of the California Public Utilities Code ("CPUC), ARTT LLC agrees in general that such approval is appropriate since ARTT LLC has asked Metro to act as the Lead Agency for environmental clearance, together with assistance with the acquisition of surface land and/or aerial easements, as necessary, and the potential location of a passenger station at or near Los Angeles Union Station. We do ask Metro to recognize, however, that **aerial gondolas and tramways are regulated by the California Labor Code, Sections 7340-7357, and the detailed implementation of design, plans, and specifications falls under the jurisdiction of the Department of Industrial Relations, Division of Occupational Safety and Health ("Cal/OSHA"), which includes an Amusement Ride and Tramway Unit.**
> (Response to Metro, p. 16 [emphasis added].)

cont'd GO8-5

The DEIR acknowledges that approvals from Cal/OSHA's Amusement Ride & Tramway Division will be required pursuant to Cal. Code Regs. Tit. 8, §§ 3150-3191, including a Certificate of Construction. (DEIR, p. 2-61.) It does not, however, mention that California law requires all passenger tramways to receive a permit pursuant to Division 5 of the California Labor Code. The DEIR is therefore incomplete and inaccurate for failing to acknowledge this additional requirement.[5]

GO8-6

CEQA's mandatory process to determine the appropriate lead agency does not permit confidential negotiations between a project proponent and its preferred public agency for the role, a perverse sort of lead agency "forum shopping." (See *Planning & Conservation League v. Department of Water Resources* (2000) 83 Cal.App.4th 892, 906 ["*PCL v. DWR*"]: private party and local agency are "not at liberty to anoint" the local agency as lead agency through a private agreement.)

GO8-7

Moreover, compared to Metro's somewhat limited role with only two necessary approvals (both for use or encroachment upon Metro land), the anticipated role of the City of Los Angeles is far more extensive and complex. The DEIR identifies the necessary City approvals as likely including, but not limited to:

- a franchise agreement to operate "upon, over, under, or along any street, highway or other place in the City of Los Angeles";

GO8-8

[5] California Labor Code, § 7341: "A passenger tramway shall not be operated in any place in this state unless a permit for the operation of the tramway is issued by the division, and unless the permit remains in effect and is kept posted conspicuously in the main operating terminal of the tramway."

FN GO8-6

- approval of the Project design from the Cultural Affairs Commission for components located within the City's public right-of-way;
- creation of a Specific Plan;
- adoption of a Sign District;
- a Plan Approval under the existing 1960 Dodger Stadium Conditional Use Permit;
- relief from the River Implementation Overlay District, to allow for the construction of several project components (Alameda Station, Alameda Tower, and Alpine Tower);
- relief from Cornfield Arroyo Seco Specific Plan to allow construction and operation of the Chinatown/State Park Station;
- a Development Agreement between the "Project Sponsor" and the City of Los Angeles for 20 years; and,
- "Other discretionary and ministerial permits, approvals, consultations, and coordination will or may be required, including…temporary street closure permits, demolition permits, grading permits, excavation permits, archaeological permits, encroachment permits, building permits, dewatering permits, stormwater permits, noise variances, work hour variances, haul routes, sign permits, any operational agreements…and any applicable permits or clearances related to water and/or energy infrastructure or emergency access."

(DEIR, pp. 2-61 to 62.)

cont'd GO8-8

The vast majority of these "other discretionary and ministerial permits" and other approvals referenced in the DEIR will be made by the City of Los Angeles, since the 1.2-mile-long Project is proposed to be built and operated predominantly on or above City right-of-way. (DEIR, pp. 2-2 and 2-6 [Figure 2-3].)

CEQA strongly prefers to confer lead agency status on an "agency with general governmental powers, such as a city or county, rather than an agency with a single or limited purpose." (CEQA Guidelines, § 15051(b)(1).) Metro is an agency with a single purpose, albeit a very important one. But it does not have general governmental powers as the City of Los Angeles does to, for example, grant relief from City land use regulations, create a specific plan, agree to a franchise agreement for Project use of public rights-of-way, enter into a 20-year Development Agreement, or offer any of the "other discretionary and ministerial permits" and approvals necessary for the Project to be ultimately approved.

GO8-9

As the DEIR admits, the City of Los Angeles has direct and exclusive authority over all streets in the City. (DEIR, p. 3.17-1: "All the streets in the Project study area are under the jurisdiction of the City of Los Angeles.") The required franchise agreement is key to the Project moving forward since the Project operates primarily within the City's public right-of-way. In addition, it is the *City* that is responsible to ensure the Project's consistency with the City's General Plan and its components, including numerous community plans and two existing specific plans, not Metro. (DEIR, pp. 3.11-8 to 3.11-13). Metro has no experience or expertise in evaluating the Project's consistency with the City's General Plan or crafting appropriate mitigation measures to address significant conflicts. The City clearly does.

GO8-10

The City is also entirely responsible for any changes *to* and conditions associated *with* the 1960 Dodger Stadium Conditional Use Permit, and for relief from other City land use regulations in the Project area. The City is also responsible for required "temporary street closure permits, demolition permits, grading permits, excavation permits," etc. (DEIR, p. 2-62.) Metro has no experience, expertise, or authority for a private project over these fundamental City concerns. GO8-11

Metro does not have the desire (recalling that it has already disavowed Project oversight) or the necessary incentive or expertise to enforce the many Mitigation Measures associated with the Project for components not located on Metro property.[6] This may be one reason Metro has allowed so many of the Project's proposed Mitigation Measures to be improperly deferred, a subject that will be raised in greater detail in LA Parks Alliance's (and likely other) comment letters regarding the inadequate DEIR. GO8-12

Indeed, the DEIR appears to assume that ARTT will prepare all these deferred mitigation plans, not Metro. (See, e.g., DEIR 3.13-68 [Construction Noise Management Plan to be prepared by "Project Sponsor."] Presumably, it is the City, with its direct construction permitting responsibilities, local ordinances regulating such impacts as excessive construction noise, and expertise in overseeing such plans and mitigation measures, that will perform the required oversight and, if necessary, enforcement. (See, e.g, DEIR's reliance on LA Municipal Code [i.e., the City] to enforce stormwater runoff prohibitions, pp. 3.10-6.) GO8-13

The City of Los Angeles has direct regulatory authority over approval of the majority of physical Project components, which are primarily located on or above City land or City public right of way. The City is plainly the "public agency with the greatest responsibility for supervising or approving the project as a whole" and has the "general governmental powers" necessary to make most necessary Project approvals. (CEQA Guidelines, § 15051(b).) Metro has neither the greatest responsibility over the Project nor does it have general governmental powers to make Project approvals. Its approvals are limited to only two locations: one for permission to use Metro-controlled land, and another to cross Metro-controlled airspace.

The City of Los Angeles must be the lead agency. GO8-14

B. CEQA Guidelines Section 15051 Subdivisions (c) and (d) are Inapplicable

CEQA Guidelines section 15051 subdivision (c) only applies "[w]here more than one public agency *equally* meet the criteria in subdivision (b)." It is inapplicable, as the City of Los Angeles is clearly the appropriate lead agency under subdivision (b). Even if subdivision (c) did GO8-15

[6] These include: Construction Traffic Management Plan [DEIR, p. ES-14], Construction Monitoring Plan (Built Resources) [DEIR, p. ES-40], Cultural Resources Monitoring and Mitigation Plan (DEIR, p. ES-41], Archeological Testing Plan for Alameda Station (DEIR, p. ES-45], Archaeological Testing Plan for LAUS Forecourt [DEIR, p. ES-47], Archaeological Testing Plan for Los Angeles State Historic Park [DEIR, p. ES-48], Paleontological Resources Mitigation and Monitoring Plan [DEIR p. ES-52], Soil and Groundwater Management Plan [DEIR, p. ES-53], Construction Noise Management Plan [DEIR, p. ES-58, Vibration Monitoring Plan [DEIR, p. ES-67, Temporary Disaster Route Plan [DEIR, p. ES-76], Utility Relocation Plan [DEIR, p. ES-79], and a Fire Protection Plan [DEIR, p. ES-80]. FN GO8-12

apply, and it does not, between Metro and the City of Los Angeles it is the City that would likely "act first on the project in question" due to the many preliminary approvals necessary for a project of this scope and magnitude. (See list of City approvals required for the Project, DEIR, p. 2-61 to 2-62, and discussion supra, pp. 4-6.)[7]

cont'd GO8-15

While the project proponent agreed in a private negotiation that Metro may *also* review and approve Project plans for design, construction, and implementation, as ARTT privately admitted to Metro during early discussions about the Project, the statutory duty to review and approve plans for design, construction, and implementation of an aerial tram system properly belongs to Cal/OSHA pursuant to the California Labor Code, not to Metro. (Response to Metro, p. 16, citing Labor Code, §§ 7340-7357.) Moreover, nothing in the Labor Code or other statute requires it to be the *first* action taken on the Project.

GO8-16

CEQA Guidelines section 15051 subdivision (d) is also inapplicable. It applies "[w]here the provisions of subdivisions (a), (b), and (c) leave two or more public agencies with a substantial claim to be the lead agency." As discussed, here Metro does not have a substantial claim to be the lead agency because it cannot be seen as "the public agency with the greatest responsibility for supervising or approving the project as a whole," and CEQA strongly prefers the lead agency to have "general governmental powers, such as a city or county, rather than an agency with a single or limited purpose." (CEQA Guidelines, § 15051(b).) Metro has taken on the role by private agreement with the Project proponent and with the apparent acquiescence of the City, whose former Mayor championed the Project in his role as chair of Metro's board of directors. Indeed, Mayor Garcetti described himself openly in a recent Metro Executive Management Committee meeting as a "pretty unabashed supporter" of the Project, which raises significant concerns over Metro's possible precommitment to approve the Project.[8]

GO8-17

C. Metro's Decision to Act as Lead Agency is Inherently Prejudicial and Taints the Environmental Review Process.

Choice of lead agency is fundamentally important. "[A]lthough applicants may enter into contracts and agreements prior to the completion of the environmental review process, such contracts or agreements *cannot be used to avoid the scrutiny envisioned by CEQA*." (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 737 [emphasis added].) Thus, where a local agency privately agrees with an applicant to serve as lead agency, or even where local agencies agree amongst themselves to designate one of them as lead agency, if that

GO8-18

FN GO8-15

[7] In fact, the City of Los Angeles already approved a Project-related permit when it issued Permit No. 22020-10000-00312 for ARTT LLC's gondola exhibit within the Dodger Stadium parking lot. See https://www.ladbsservices2.lacity.org/OnlineServices/PermitReport/PcisPermitDetail?id1=22020&id2=10000&id3=00312.

FN GO8-17

[8] See Joe Linton, StreetsBlogLA, *Mayor Garcetti Supports Dodgers Gondola, Disses Project Skeptics Comparing Them To Mitch McConnell*, Sept. 16, 2022, attached as Exhibit A, available at: https://la.streetsblog.org/2022/09/16/mayor-garcetti-supports-dodgers-gondola-disses-project-skeptics-comparing-them-to-mitch-mcconnell/.

designation does not follow CEQA's mandated process, it will be rejected and the environmental review document prepared by the improper lead agency discarded. (See, e.g., *PCL v. DWR*, 83 Cal.App.4th at 907; *see also City of Sacramento v. State Water Resources Control Bd.* (1992) 2 Cal.App.4th 960, 973.)

Metro (and the City of Los Angeles) should take note that CEQA forbids delegation by the properly delegated lead agency to another agency or private entity:

> Neither the [California Environmental Quality Act] nor the state guidelines authorize the city council to delegate its review and consideration function to another body. Delegation is inconsistent with the purpose of the review and consideration function since it insulates the members of the council from public awareness and possible reaction to the individual members' environmental and economic values. Delegation is inconsistent with the purposes of the EIR itself."

cont'd GO8-18

(*PCL v. DWR*, 83 Cal.App.4th at 907, quoting *Kleist v. City of Glendale* (1976) 56 Cal. App. 3d 770, 779.) As plaintiffs successfully argued in *PCL v. DWR*, "appointment of the wrong lead agency taints the entire EIR process, is inherently prejudicial, and compels a fresh start with an appropriate lead agency." (*Ibid.*)

Metro's decision through a private agreement with ARTT LLC to take on lead agency status in the environmental review of the proposed aerial tram system is likewise prejudicial and taints the environmental review process. The only remedy is to begin anew under the direction of the properly designated lead agency, the City of Los Angeles.

D. Public Utilities Code Section 130252 Does Not Change the CEQA Analysis and Neither Requires Nor Authorizes Metro to Serve as Lead Agency.

The Draft EIR suggests that Public Utilities Code ("PUC") section 130252 requires the submittal, review, and approval of proposed plans to Metro for design, construction, and implementation of the Project. (DEIR, p. 2-61.) As discussed above, ARTT LLC explained to Metro that "aerial gondolas and tramways are regulated by the California Labor Code, Sections 7340-7357, and the detailed implementation of design, plans, and specifications falls under the jurisdiction of the Department of Industrial Relations, Division of Occupational Safety and Health ("Cal/OSHA")." (Response to Metro, p. 16.)

GO8-19

PUC section 130252 applies only to "*public mass transit systems* or projects, including exclusive public mass transit guideway systems or projects, and federal-aid and state highway projects." (PUC § 130252(a) (emphasis added).) This project is *not* a public mass transit project or a mass transit guideway system.[9] The Project is *privately* owned and operated and intended primarily to provide service to and from Dodger Stadium, a private sports and event venue. The

[9] ARTT LLC explained, and LA Parks Alliance agrees, that the gondola Project is "not a 'transit guideway system'" and thus is not subject to PUC section 130252(a) for that reason. (Response to Metro, pp. 16-17.)

FN GO8-19

DEIR admits as much: "The overall purpose of the proposed Project is to provide a direct transit connection between LAUS and the Dodger Stadium property…" (DEIR, p. 2-12.)

cont'd GO8-19

The DEIR's repeated assertions that Project purposes include providing access to neighborhoods near Dodger Stadium and to LA State Historic Park and its surrounding neighborhoods (see, e.g., DEIR, p. ES-1) are also belied by the DEIR's gross speculation surrounding these alleged purposes. For example, the alleged access and mobility hub at Dodger Stadium is identified only as a "potential" project component and would be subject to approval by the Dodgers. (DEIR, pp. ES-1.) "The Project Sponsor will *request consideration* by the Los Angeles Dodgers of the *potential for the Dodger Stadium Station to include a mobility hub* where outside of game day periods, passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program and individual bike lockers, to access Elysian Park and other nearby neighborhoods, including Solano Canyon." (DEIR, p. ES-10 [emphasis added].)

GO8-20

The DEIR asserts that the "Chinatown/State Park Station location avoids adjacent private properties while maintaining transit access to surrounding communities within a half mile walkshed to transit, including the Park, Chinatown, Mission Junction including William Mead Homes, Los Angeles River, and North Broadway." (DEIR, p. 2-22.) First, access from Union Station to these neighborhoods are already provided by Metro's Gold Line Chinatown Station, which is located approximately 100 yards from the Project's proposed Chinatown/State Park Station. Second, and perhaps more important, the use of the Project to duplicate this access via the proposed gondola outside of Dodger games and events is entirely speculative, and is based entirely on demand. "It is anticipated that the proposed Project operations would vary the number of cabins in service and speed throughout the day, based on demand." (DEIR, p. 2-42.) Nothing in the DEIR suggests the gondola will operate on a minimum schedule, as Metro's Gold Line does.[10] ARTT LLC or another operator could choose not to run the gondola at all if demand is insufficient.

GO8-21

Even if these currently speculative components were certain to become part of the Project, they would not magically transform it into a public mass transit system. A project owned and operated by a private person or entity for the primary purpose of providing transportation to an entirely private destination is *not* a public mass transit system. As a private transportation project, and as ARTT LLC admitted in its responses to Metro, the Project is not within the scope of PUC section 130252. And even if PUC section 130252 did apply, it has very limited scope.

GO8-22

PUC section 130252 subdivision (a) provides that:

> All plans proposed for the design, construction, and implementation of public mass transit systems or projects, including exclusive public mass transit guideway

[10] Metro's Gold Line schedule provides weekday service on its Northbound segment from Union Station to Citrus College every 12 minutes or less for most of the day between 4am and 12:50am. The weekend schedule is the same hours, with only slightly less frequent service. See https://www.metro.net/riding/schedules/?line=804.

FN GO8-21

> systems or projects, and federal-aid and state highway projects, shall be submitted to the commission [i.e., Metro] for approval.

But PUC section 130252 subdivision (c) substantially limits the meaning of subdivision (a): "As used in this section, "plan" means a project description and ***not*** the detailed project plans, specifications, and estimates." (Emphasis added.) The Project applicant has privately agreed with Metro that it may *also* review and approve Project plans for design, construction, and implementation. (See Response to Metro, p. 16.) As already discussed, however, the primary oversight authority for detailed review of plans for design, construction, and implementation of an aerial tramway project is held by Cal/OSHA, not Metro. Moreover, the DEIR does not cite to any authority authorizing or permitting Metro to *supervise* the Project.

cont'd GO8-22

Metro's and the DEIR's citation of PUC section 130252 does not change the mandated CEQA process to determine the appropriate lead agency for the proposed Project.

CONCLUSION

As the DEIR acknowledges, "a lead agency has an obligation to balance the economic, social, technological, legal, and other benefits of a project against its significant unavoidable impacts on the environment." (DEIR, p. 1-2.) Metro certainly has authority as a *responsible* agency to consider the manner the proposed Project will relate to the important public resources over which it exercises control and oversight. But Metro is not well-situated to be the lead agency charged with the duty to make these balancing considerations over the many public resources that are not within its ambit.

GO8-23

Metro approvals for this Project will be required to allow construction and operation of the Project within a portion of Los Angeles Union Station and within Metro's Gold Line right-of-way. (DEIR, p. 2-61.) It is significant that the DEIR has determined no Mitigation Measures are necessary to protect these public resources. But there are numerous Mitigation Measures proposed to protect other public resources and members of the public in the City of Los Angeles. (See footnote 5, p. 6.) The City is far better situated to act as lead agency than Metro, and since it is directly political accountable to its constituents, is better positioned to balance the alleged Project benefits against its significant unavoidable environmental impacts and ensure that Mitigation Measures to protect the people and resources of Los Angeles are properly monitored and enforced.

The City of Los Angeles must serve as lead agency for the proposed Project, not Metro.

Sincerely,

John Given

Mr. Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
1 Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Ref: Updated Amended and Revised Comments Opposing LAART's "Gondola" DEIR 1/5/2023

Dear Mr. Zelmer,

The Board of Directors (The Board) of the Los Angeles Union Station Historical Society (LAUSHS), a non-profit, Federal Railroad Administration Section 106 historic preservation consultant for Los Angeles Union Station (Union Station), a world recognized National Historic Landmark owned by Los Angeles County Metropolitan Transportation Authority (Metro), has voted to formally ***comment against*** Los Angeles Aerial Rapid Transit's (LAART) private, for-profit cable car line **(aka "Frank McCourt's Gondola")** and its public land and air rights development scheme that proposes to link Union Station and Metro's related "Esplanade-Forecourt" project with Dodger Stadium that The Board believes is contrary to Metro's public participation policy and an **illegal (pending a Superior Court decision**) **"accommodation" for LAART.** The Board believes that LAART's proposed **futuristic/Carnaval-like Union Station Terminal** on Alameda Street and Metro's supporting "Esplanade-Forecourt" project **will blight the viewscape** of the historic and architecturally significant west facade of Union Station, and that Union Station, its trains and patrons could be **physically harmed** if aircraft from the nearby Los Angeles Police Department's "Hooper Memorial Heliport" airport were to be entangled in LAART's overhead cables, gondolas and 13-story towers. Furthermore, **The Board opposes Metro's planned removal of all "Disabled Parking"** spaces from the "Esplanade-Forecourt" area, without public hearings and reasonable alternatives, to accommodate a new so-called "water feature" (a fogging-type water fountain) which would cool LAART patrons cued-up for their cable car rides to Dodger Stadium. Moreover, the water feature would be **contrary to the state's water conservation policy.** (Even if the water feature recirculates, **at least 10% of its water will be lost to evaporation day after day, year after year.)** GO9-1

Until now, The Board has steadfastly refused to take sides in the above major, billionaire development scheme. However, in The Board's opinion, **Metro and its staff have obviously taken a pro-active role supporting LAART, a potential competitor of Metro's efficient "Dodger Stadium Express"** bus service, as well as planning to **"gild the lily" of Union Station** with its Esplanade-Forecourt Project, all **"backstage,"** using public land, resources and airspace but **without public participation** as required by Metro policy and the law, before METRO agreed to be "engaged" by LAART.

Among the reasons for The Board's opposition are, but not limited to:

A) Metro Board member, the former **Mayor of Los Angeles Eric Garcetti, who originally introduced the motion for Metro to assist LAART without public participation** and to enlist Metro staff to **"carry LAART's water"** as it were, did receive, according to public records, **millions of dollars** in both "behest payments" and political cash contributions **from Billionaire real estate and LAART developer Frank McCourt** and/or his family and various entities and associates, which in The Board's opinion, is an apparent **conflict of interest.** Consequently, **Metro is being sued** by the non-profit California Endowment for willfully preventing public participation in Metro's decision to partner with LAART. **(Ironically**, **Metro is using public resources to defend itself, for not allowing public participation, before the Superior Court.)** GO9-2

B) In The Board's opinion, **Metro Deputy Executive Officer Cory Zelmer and/or subordinates and consultants falsified an official environmental document--**LAART's Draft Environmental Impact Report (DEIR)--by checking-off the DEIR box that states there is **no airport within 2 miles [3520 yards]** of LAART's proposed Union Station Terminal, when he had been informed repeatedly to the contrary by The Board. Moreover, The Board presented proof to Zelmer and his superior, Metro CEO Stephanie Wiggins, that the Los Angeles Police Department's "Hooper Memorial Heliport" (variously described as the country's or the world's busiest airport for rotary-winged aircraft aka helicopters) **is only 1/2 mile (880 yards)** from LAART's proposed Union Station Terminal. Furthermore, The Board reminded Zelmer and Wiggins that **according to the Los Angeles Police Department, the California Department of Transportation, the California Public Utilities Commission, the Federal Aviation Administration, and the 8th U.S. Circuit Court of Appeals, all heliports are airports** officially defined as a location where any flying machine is serviced. The fact that some airports serve only rotary-winged aircraft (helicopters) while others serve fixed-wing aircraft (conventional-winged aircraft) does not change the fact that: **all heliports are airports in the eyes of all governing agencies and the Federal Courts.** Furthermore, the argument presented by Metro that Hooper Memorial is a police facility, not a civilian facility, and therefore not subject to the LAART DEIR, is **illogical and fallacious**. A helicopter that becomes entangled in LAART's cables, gondolas and 13-story towers and consequently **crashes into Union Station, and/or its trains and patrons, could cause catastrophic harm** regardless had that aircraft launched from a police facility or a public facility. Simply put, **LAART's proposed location is not safe** for the Union Station community and helicopters from Hooper Memorial Heliport airport. Please note, the *Rules and Regulations of Los Angeles Union Passenger Terminal* (Union Station's original name) has for decades declared: **"General Notice A. Safety is of the first importance in the discharge of duty."** Or did Metro abolish this paramount railroad safety rule when it bought Union Station? GO9-3

C) Contrary to the promises made to The Board by Stephanie Wiggins, Cory Zelmer and LAART, **no meeting has ever been organized between them and The Board to discuss the difference of opinions concerning the nature of LAPD's Hooper Memorial Heliport airport and the proposed location for LAART's Union Station Terminal.** In fact **Metro forbade The Board's examination of the only known 3-D scale model of Union Station's location** because, in The Board's opinion, of a **deliberate subterfuge** that the model dating from former Union Station owner--the Santa Fe Railway--was too old to be accurate today, and furthermore the sharing of the model with The Board would **somehow be a "conflict of interest"(?)** even though The Board previously had access to the model. However, The Board's use of the model did not depend on the model's age, but only the juxtaposition of Union Station with Alameda Street which has not changed appreciably since the station was opened in 1939. Consequently, at a loss for options, The Board asked LAART to produce a 3-D scale model given its apparent resources, but **LAART never responded. This "shadow play,"** in The Board's opinion, was being **performed by LA Metro and LAART to obfuscate the issues and delay public criticism** of LAART contrary to the public weal which Metro is obliged to serve. Furthermore, since the model is public property, The Board's use should have been permitted so it could be compared to LAART's distorted artist's rendering of its Futuristic/Carnaval style Alameda Street Terminal with Union Station's Hispanic-Cathedral style. Finally, after wasting The Board's time and resources for over a year, in December 2022 Metro provided to the public an aerial diagram of LAART's Alameda Terminal that is in the **worst possible viewscape location--directly in front of Union Station!** Cable car rides have their place but **not in front of Los Angeles' world famous "Cathedral of Transportation."** GO9-4

D) In The Board's opinion, LAART is designed to compete with Metro's "Dodger Stadium Express," a highly efficient road service that could be further improved **if Metro switched to modern**, **environmentally friendly motor coaches** that might funded by the savings from not building its Esplanade-Forecourt project. GO9-5

E) Given the seasonal nature of baseball, it is also The Board's opinion that **LAART is a "Trojan Horse"** scheme to facilitate year-around, for-profit real estate development in Dodger Stadium's vicinity **at the expense of public land and airspace, the viewscape of Union Station and safety.** GO9-6

F) Metro's proposed Esplanade-Forecourt project, according to Metro employees--who wish to remain anonymous for the sake of their careers--will be funded by so-called **"overlap money"** that was **"peeled-off" from Metro's defunct LINK-US project** that itself was rejected because of The Board's and the public's opposition. Moreover, Metro has stated to The Board's Executive Director via telephone that ultimately the Esplanade-Forecourt project will come to fruition by a two-step process eliminating all public parking including **"disabled parking"** from in front of Union Station **without public comment or participation in violation of the Americans with Disabilities Act (ADA). (A disabled motorist has already filed a formal complaint with the ADA authorities against Metro's Esplanade-Forecourt project.) Step one would be the "temporary" elimination** of all Union Station west front parking for the construction vehicles needed to build the Esplanade-Forecourt project followed by step two—well there really isn't a step two—**when the project is completed the parking spaces would be left permanently removed**. Not only will this **negatively impact the "disabled Parking" but also the parking for Metro's tenants** the Homebound Restaurant and Brewery, TRAXX restaurant and the numerous social and artistic events that take place in the great **"Ticketing Hall"** which has fallen from use with computerized ticketing. Furthermore, according to a retired Metro staff person, the Esplanade's so-called "water feature" (a fogging-type water fountain) **will likely attract more "homeless" citizens seeking "showers"** contrary to Metro's stated policy--according to former Metro Union Station supervisor the late Ken Pratt--of not catering to the needs of the "homeless." In The Board's opinion, Metro's Esplanade-Forecourt project is designed to cool future LAART and adjacent **Olvera Street tourist attraction visitors** as they saunter between Union Station, LAART and Olvera Street. (While Olvera Street's right-of-way and some of its structures and art works are historic, the **"Olvera Street tourist attraction" per se was invented in 1930** by a husband-and-wife real estate development team who went on to develop Los Angeles' **"New Chinatown tourist attraction**." **(Ironically, Old Chinatown was demolished in a racist bid to rid Los Angeles of the Chinese who settled after building the railroad to Los Angeles, then Union Station was built on top of Old Chinatown's rubble.)** GO9-7

G) Finally, building the Esplanade-Forecourt project's water-feature in semi-desert Los Angeles has been **experiencing one of its worst multi-year droughts in history flies in the face of the State of California's policy to conserve dwindling water resources.** One only needs to recall the classic Los Angeles-based movie **"Chinatown"** to understand what The Board believes is driving LAART and Esplanade-Forecourt schemes—**the greed of land developers, the greed of Metro careerists and ultimately the greed of local politicians!** Or, to paraphrase the immortal Yogi Berra: **"It's 'Chinatown' (*the movie*) all over again."** GO9-8

For the above reasons, but not necessarily only because of them, the Board of Directors of the Los Angeles Union Station Historical Society **opposes construction of LAART and the related Esplanade-Forecourt projects in the interests of honest government, Los Angeles Union Station preservation, the environment and above all *safety*.** GO9-9

Respectfully,

Thomas R. Savio
Executive Director
Los Angeles Union Station Historical Society

CALIFORNIA STATE PARKS FOUNDATION

January 9, 2023

Mr. Cory Zelmer
Deputy Executive Officer, Metro
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Dear Mr. Zelmer:

Thank you for allowing the opportunity to comment on the draft Environmental Impact Report for the Los Angeles Aerial Rapid Transit (LAART) project, released in October.

California State Parks Foundation is an independent, member-supported nonprofit dedicated to protecting and preserving the California state park system, for the benefit of all. Since our founding in 1969, we have endeavored to ensure that every unit of the California state park system is open, welcoming and provides a high-quality recreational experience for the public; and that the irreplaceable natural and cultural wonders of the system are stewarded for future generations to enjoy. GO10-1

We have taken an interest in the LAART project because of its impact on Los Angeles State Historic Park. The proposed project would cross over the western edge of the park and include a new station adjacent to the current Chinatown station on the Metro Gold Line, as well as a junction just to the northwest on Broadway.

Los Angeles State Historic Park formally opened in 2017 after decades of advocacy by the surrounding community – neighbors in Chinatown wanted a park and they did not rest until this green oasis was created. Today when you visit Los Angeles State Historic Park, you see people exercising and walking their dogs, relaxing on the grass, taking in the stunning view of the downtown skyline, and participating in community activities like exercise classes or arts and crafts. It is a peaceful gathering spot that provides desirable amenities to its low-income neighbors, and one that represents a true respite from its urban surroundings. GO10-2

We are concerned that the construction and operation impacts of the project may permanently alter the peaceful experience of the park. First, the project would require amending the General Plan for the park to include transportation as an acceptable use – a worrisome precedent for other parks in the system. Too often, parks are seen as empty spaces that can be used for infrastructure like roads and power lines. We remain absolutely committed to pushing back against that thinking whenever and wherever it occurs, because parks are already essential infrastructure for health, wealth, and quality of life. GO10-3

Noise is another concern – impacts will be unavoidable and significant during construction, which is bad enough. The draft EIR also finds that the system will generate between 61 and 64 decibels of additional noise during regular operation. This is just below levels that can affect health in the form of noise pollution, so it's another issue we'll be watching closely. GO10-4

Finally, it is very difficult to tell from the materials that have been released thus far what the impact of the proposed project will have on the park's views and vistas. While we understand that some of these concerns are beyond the scope of what is required in an Environmental Impact Report, park vistas are an important part of the experience at Los Angeles State Historic Park. We request that California State Parks and Los Angeles Metro prepare a set of visuals that show what park visitors in GO10-5

the southwestern third of the park would see and experience at ground level after the proposed project is constructed.

cont'd GO10-5

Proponents of the project seem to believe that the potential of taking cars off the road is worth any potentially serious impacts to the park's visitor experience. To us, this is a false choice – in Los Angeles, as in most urban areas in California, it is increasingly expensive to carve out additional green open spaces, even though we know that these spaces are vital to the quality of life and health of the surrounding community. We ask that you commit to additional efforts to study and fully understand the proposed project's impact on the park's General Plan, ambient noise and views prior to any action to approve and implement this project.

GO10-6

Thank you for the opportunity to offer these thoughts and concerns. I would be happy to discuss them further should you have questions.

Sincerely,

Rachel Norton
Executive Director
California State Parks Foundation

Ref: Comments and Complaints against LAART, its Draft Environmental Report and DEIR meeting at Cathedral High School

Dear Mr. Zelmer,

I was present at the meeting hosted by you, and/or LA Metro, Frank McCourt, Los Angeles Aerial Rapid Transit, ClimateResolve, Cathedral High School and Does 1 to 10. I attended as the representative of the Los Angeles Union Station Historical Society (LAUSHS). Here are my recollections that in my opinion bring into question the legitimacy of the meeting: GO11-1

A) Although I arrived at Cathedral High School meeting venue at the beginning of the meeting, I was delayed by thirty minutes getting to the venue because there was no **Disabled Parking** in or around Cathedral High School. (This has since been confirmed by Cathedral High School staff.) Consequently, I was late because I am a **Disabled Person**, and since all normal street parking was occupied by residents and/or meeting participants, I was obliged to park on the sidewalk after driving about for nearly 30 minutes, in fear of not representing the views of the LAUSHS. Consequently, I waddled with cane in hand to the distance to the meeting. This, in our opinion, a reasonable person would conclude that Mr. Zelmer and/or other "hosts" do not care about providing reasonable accommodations for **Disabled Persons** and myself. Furthermore, it indicates to us Mr. Zelmer's indifference to the **Disabled** and/or his **incompetence i**n hosting same at the public meeting. GO11-2

B) When I finally entered the meeting, it had the appearance and sound of a **near riot.** I was told by bystanders that the spontaneous demonstration was because Mr. Zelmer and other hosts refused to take any questions of the 70 to 100 members of the local community in attendance. It is our opinion that a reasonable person might conclude that Mr. Zelmer is incompetent in representing Metro, and LAART in a public forum. GO11-3

C) Furthermore, the working press and Community representatives said that they were told to ask Brother John Montgomery, Principal of Cathedral High School for answers to their questions on LAART. Brother John is not to our knowledge a credentialed transit or environmental expert. (All known nonaligned experts and the Sierra Club are against the Gondola.) Brother John then extolled to them via nation-wide TV, the reasons he saw for building the Gondola, without mentioning the pertinent fact that his employer, Cathedral High School, gets significant funds from Frank McCourt, an apparent conflict of interest in our opinion. GO11-4

D) Therefore, the Los Angeles Union Station Historical Society has concluded that given all the above, the legal validity of the meeting was compromised and that a new meeting should be rescheduled with a live democratic GO11-5

give-and-take on the issues, better crowd control and hosted by an uncompromised Metro meeting expert, not Mr. Zelmer who a reasonable person might conclude is compromised by an apparent conflict of interest in that he is a Metro employee in charge of investigating the Gondola project for the public weal whilst his salary is gifted to Metro by the Gondola's chief antagonist Frank McCourt.

cont.
GO11-5

Respectfully,
/s/

Re: Comments on LA ART Draft EIR dated October 2022

Dear Mr. Zelmer:

The Sierra Club submits this letter to set forth its comments and concerns regarding the LA ART Draft EIR.

Executive Summary ("ES") 1 Introduction: At the outset, LA Aerial Rapid Transit Technologies LLC is identified as the Project Sponsor. While neither the ownership or management of this LLC is specified in the Draft EIR, we understand from news reports[1] and multiple other sources that the project is promoted by Frank McCourt, who in turn is a 50 percent owner of the Dodger Stadium Parking Lot.

GO12-1

The Introduction sets forth the conclusion that Metro is the "lead agency" and as such has the authority to approve the project and implement mitigation measures. However, significant concerns have been raised by The California Endowment and the LA Parks Alliance that Metro is not in fact the appropriate "lead agency" for the LA ART, particularly as the proposed project for the stadium parking lot is private in nature. Rather, the City of Los Angeles is the appropriate lead agency on the basis of its general governmental powers and its direct accountability to its constituents. We concur with these concerns and particularly express concerns with the dedication of Metro's employees and significant resources to this private project.

GO12-2

[1] *Challenges Loom for gondola to Dodger Stadium planned for 2028 Olympics,* LA Times 1/9/23; *LA's Transit Infrastructure Can Always Get Dumber: Meet the Gondola* (https://knock-la.com/las-dumb-gondola/)

FN GO12-1

ES 2 Project Purpose/ES 5 Project Overview: There is significant doubt as to whether the LA ART would alleviate congestion and air pollution, which in turn is a fundamental premise of the Draft EIR. The UCLA Mobility Lab Study dated October 24, 2022 concludes the gondola will do little to reduce traffic and green-house gas emissions. We concur with the concerns raised by the study. The study also casts significant doubt on the Draft EIR Section 1.0 conclusion that LA ART is an "environmental leadership transit project" that is in turn entitled to streamlined judicial review. GO12-3

In particular, the multiple Draft EIR references to the "5,000 people per hour" gondola capacity are refuted by the UCLA Mobility Lab Study. The Draft EIR further assumes patrons would use the gondola both before and after events.[2] However, the study (and common sense) indicate that many stadium attendees are not likely to wait for the gondola following games and concerts and will instead use the express bus or ride share services back to LAUS or to other destinations. Moreover, the "5,000 people per hour figure" gondola capacity figure does not reflect non-event day or off-season usage. The UCLA Mobility Lab Study concludes very few people would use the gondola as a form of transportation outside of travel to/from games.[3] Any discussion in the Draft EIR relating to gondola ridership and the estimated reduction in vehicle miles travelled must take these two factors into account. GO12-4

The Draft EIR is also incomplete and lacking in transparency in that it is focused solely on the gondola. Neither the Purpose nor Project Overview discussions address commercial developments apparently contemplated by Mr. McCourt for the stadium parking lot or how the parking lot might ultimately be reconfigured to allow commercial development.[4] We concur with the concern that the gondola is essentially a private project that is proposed to be built using public resources and over public rights-of-way and publicly owned property. The failure to address commercial development of the parking lot and resulting increase in traffic and greenhouse gas emissions from development renders it impossible to evaluate the overall impact of the proposed project on traffic and greenhouse emissions. Consequently, the conclusions on ES page 53 and elsewhere in the report that construction and operations of the LA ART would have a "less than significant impact" on greenhouse gas emissions are not supported. GO12-5 GO12-6 GO12-7

Moreover, the LA ART does not serve any broad public purpose. The suggestion that the gondola might possibly serve communities near LAUS and Dodger Stadium is not persuasive. These communities are within walking, biking, or Dash bus ride distance of LAUS, State Historic Park and the Stadium. The communities may also be served by the Metro Micro on-demand rideshare service that is already operating in many other Los Angeles communities including the Highland Park/Eagle Rock/Glendale service zone. GO12-8

FN GO12-4 [2] This flawed assumption is carried through in the report's 2026 projection of 6,000 riders and 12,000 round trips and the 2042 projection of 10,000 riders and 20,000 round trips.

FN GO12-4 [3] Excepting employees, Dodger Stadium is nearly empty on days when there is no game or concert. Park goers have found their way to Elysian Park for decades without a gondola.

FN GO12-5 [4] This lack of detail on the critical topic of commercial development contrasts with other topics that are covered in excruciating detail.

The Draft EIR highlights gondolas operating in various foreign countries such as Bolivia and Mexico, but it does not describe the Portland Aerial Tram or NYC's Roosevelt Island Tramway. The Portland Aerial Tram is actually operated for the public benefit, i.e., primarily for patients, students and staff commuting year-round between two Oregon Health and Sciences University locations and incidentally for the general public.[5] Similarly, the Roosevelt Island Tramway provides daily commuter transportation between Roosevelt Island and the Upper East Side of Manhattan and primarily serves workers. The Portland and Roosevelt Island tram services can serve as templates for Los Angeles's broader public purposes such as transportation to our major year-round employment centers, medical facilities and already existing year-round entertainment/cultural centers *and* reduction of greenhouse gas emissions. GO12-9

ES 7 Proposed Project Alignment - Impact on State Historic Park and Views:

The City of Los Angeles should jealously guard and preserve the jewel that is State Historic Park rather than permit the diminishment of this public open space.[6] The construction and operation of the Chinatown/State Park station on park land is at complete odds with these goals of protection and preservation. The Draft EIR contemplates at Section 2.9.4 that the Chinatown/State Park Station would have a footprint of 2,605 square feet including 2,195 square feet within the southernmost part of State Historic Park.[7] Further, the station canopy would have an overhang of 9,320 square feet over the park. Eighty-one trees would need to be removed (including 75 from the park and six from the public right-of-way adjacent to the park) with an unspecified number of trees to be replaced. The station would thus encroach on the park and eliminate a significant amount of park space and open sky view. This assumes LA ART is able to obtain the requisite approvals from the California Department of Parks and Recreation for the proposed uses.[8] Such approval is not feasible, as state park historic units may only include facilities that "are required for the safety, comfort, and enjoyment of the visitors, such as access, parking, water, sanitation, interpretation, and picnicking."[9] A gondola boarding station and tower are not required for these park visitor purposes. GO12-10 GO12-11

The Draft EIR notes that one of the principles in the Park's General Plan is to "Promote a 'Touchstone Landscape' for Reflecting on Los Angeles' Natural and Cultural Heritage" by making the Park a place of inspiration, reflection and appreciation of history and nature through the interpretation of the Los Angeles River."[10] Installing a massive gondola tower and station within State Historic Park for a sports stadium destination does not comport with GO12-12

FN GO12-9 [5] See gobytram.com for information on Portland's tram service.

FN GO12-10 [6] Likewise, the City should focus on preserving the El Pueblo de Los Angeles Historical Monument (also a State Park) and not permit the construction and operation of the Alameda Street terminal adjacent to this historical monument, Olvera Street and associated architectural structures.

FN GO12-10 [7] Elsewhere the Draft EIR only indicates that the Chinatown/State Park Station would be constructed "partially" within the park boundaries without specifying the square footage.

FN GO12-11 [8] Draft EIR Section 2.10.

FN GO12-11 [9] Cal. Public Resources Code section 5019.59.

FN GO12-12 [10] Draft EIR Page 3.4-3.

this inspirational principle. Rather, it is an abuse of public land designated for this historic purpose and for open space values.

cont'd GO12-12

We also disagree with the Draft EIR conclusions that the LA ART "would not substantially degrade the existing visual character or quality of public views . . . of the site and its surroundings and the impact would be less than significant", particularly as these conclusions apply to State Historic Park, the Broadway Junction and Dodger Stadium.

GO12-13

The proposed Chinatown/State Park Station and massive three level, 98-foot tower at the station are completely at odds with the existing park entrances, landscaping, layout and amenities, which provide pedestrians and bicyclists with a beautiful, restorative atmosphere. The proposed station and the 98-foot tower would detract from the park's stunning views of the downtown skyline[11] to the south and the San Gabriel and San Bernardino Mountains to the north. The Draft EIR authors concede at Page 3. 1-43 that the "Chinatown/State Park Station is a new and large visual element in the landscape, and views of residents would already be altered noticeably". The report's authors go on to suggest at Pages 3. 1-43 and 3. 1-46 that the noticeable alterations created by the station would not be so bad because residents and park goers would be compensated by a "potential" mobility hub, 740 square feet of new concessions, restrooms, landscaping and hardscaping, pedestrian improvements and "potential" seating. But this is no consolation at all because State Historic Park already offers *all of these features* including an in-park restaurant and many other restaurants easily within walking distance. The suggestion that the park's scenic views should be compromised for a little more landscaping and hardscaping in a beautifully landscaped/hardscaped 32-acre park is not persuasive. Likewise, the Draft EIR suggestion at page 3.1-45 that "existing views of downtown from within the park are already interrupted under existing conditions by trees and intervening development" does not justify the additional massive and continuous gondola interruptions proposed by LA ART (assuming for purposes of argument only that trees constitute an interruption of the view).

GO12-14

GO12-15

GO12-16

Even though the Chinatown/State Park Station is proposed to allow passenger boarding, the Draft EIR makes no reference to parking for passengers boarding at the station. State Historic Park is already served by the Metro Chinatown station (located within yards of the park's beautiful main entrance!) and nearby LAUS and thus the park would not benefit much from the proposed boarding station.[12]

GO12-17

Moreover, the proposed alignment of the gondola directly over a long stretch of State Historic Park (and thus over park goers) and directly over and past private residences is invasive and contrary to current recreational and residential uses. The Draft EIR indicates cabins near the Broadway Junction would "be constantly moving in and out of view"[13] and

GO12-18

FN GO12-14 [11] As noted in Section 2.3.4 of the Draft EIR, "[v]iews of the downtown Los Angeles are available from the majority of the Site."

FN GO12-17 [12] State Historic Park and the nearby Mission Junction neighborhood would benefit from the addition of one or more pedestrian crosswalks across North Spring Street, a far less expensive and invasive solution than the gondola.

FN GO12-18 [13] Draft EIR Page 3. 1-48.

could be seen from residents and yards and from inside their residences. The resulting disturbance and intrusion to park goers and nearby residents would persist during construction and year-round, daily gondola operation.

cont'd GO12-18

The proposed 179-foot Stadium Tower and massive 37,000+ square foot Dodger Stadium Station are completely at odds with the character of Elysian Park[14] and the Stadium's peaceful park setting.[15] The Draft EIR does not in our view adequately address any of the foregoing concerns.

GO12-19

ES 8 System Operations; Costs?: The Draft EIR does not specify how construction or post-construction operating, security, maintenance costs and power costs would be funded and paid, even though it is specified that all these elements would be required for proposed daily operation. Apparently, this lack of specificity arises because financing has not been fully worked out.[16] This of course raises the issue of whether taxpayers will end up footing these year-round costs for the McCourt family's private gain.

GO12-20

ES 11 Alternatives to Reduce Significant Impacts: We concur with the Draft EIR in one respect, namely, the TSM Alternative, which contemplates enhancing the Dodger Stadium Express Service, is the Environmentally Superior Alternative, particularly when operated with zero emission buses.

GO12-21

However, the TSM Alternative is not addressed adequately in the Draft EIR. No doubt the existing Express Service can be expanded in size and staging locations. The operation of the massive Park and Ride and Bowl Shuttle bus service between the Hollywood Bowl and various sites in the city during the concert season (including bus only lanes) demonstrates the viability of expanding the Dodger Express Service.

GO12-22

Moreover, the development of an off-site loading facility for the TSM Alternative would be far less disruptive to State Historic Park and surrounding communities than the LA ART. In fact, the TSM Alternative would not have any impact on the park. As for bus lanes, Cesar Chavez and Broadway lane closures and diversions are already utilized on game days and expansion of such lanes appears viable. The LA Zoo parking lot provides an excellent bus loading/unloading location.

GO12-23

The Spring Street Alignment, which contemplates the construction of a gondola station within Historic Park, is mentioned as an alternative. This alignment is unacceptable in our view, as it would destroy part of this refuge that was over 17 years in the making and block part of the open sky above the park.

GO12-24

FN GO12-19 [14] As described in Section 2.3.1 of Draft EIR, Elysian Park is the oldest and second largest park in the City.
[15] Tommy Lasorda nicknamed the stadium "Blue Heaven on Earth." https://en.wikipedia.org/wiki/Dodger_Stadium.

FN GO12-20 [16] "It remains unclear how LA ART will be funded, or how much of the price tag will be passed onto taxpayers through Metro's sponsorship." *LA's Transit Infrastructure Can Always Get Dumber: Meet the Gondola* (https://knock-la.com/las-dumb-gondola/); "Gondola operations would likely be funded largely by corporate sponsorships and tourist fares, said Nathan Click, a spokesperson for the group [Climate Resolve]. But the financing plan is still being worked out." *https://www.latimes.com/california/story/2023-01-09/challenges-loom-for-gondola-to-dodger-stadium-planned-for-the-olympics*

Other transportation related alternatives that would serve to conserve energy and reduce green-house gas emissions are (i) the construction of solar panels in the stadium parking lot, (ii) the addition of electric vehicle charging stations and bike share facilities in the lot and (iii) the expansion of the Dash bus service to Elysian Park and State Historic Park. These alternatives are not mentioned in the Draft EIR, which apparently was drafted to present the gondola as the only option. It is not. GO12-25

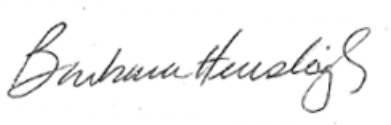
ES 12 Design Options: Design and Use Option E, contemplating the construction of a pedestrian bridge in Historic Park, is attractive but clearly may be accomplished without construction of the gondola. GO12-26

ES 13 Summary of Environmental Impacts: Contrary to this summary, the proposed 98-foot tower at the Chinatown/State Park Station would in fact block and degrade part of the scenic vista and view of the downtown skyline that is observable from Historic Park. GO12-27

In sum, the Draft EIR is incomplete and inaccurate in significant respects and lacking in transparency. It misrepresents the potential impact of the LA ART on ridership and the reduction of greenhouse gas emissions. There are better and less intrusive ways to transport people to and from Dodger Stadium, Elysian Park and surrounding communities while also preserving and even improving State Historic Park and these communities. Any gondola built within the City of Los Angeles must serve a much broader public purpose than moving passengers between LAUS and Dodger Stadium. GO12-28

We welcome the opportunity to meet with you to discuss these concerns.

Sincerely,



Chair, Central Group (Los Angeles)
Angeles Chapter
Sierra Club

RE: Comments on the Draft Environmental Impact Report for the Los Angeles Aerial Rapid Transit Project

Dear Mr. Cory Zelmer:

We appreciate the opportunity to comment on the Draft Environmental Impact Report (DEIR) for the Los Angeles Aerial Rapid Transit Project ("Project"). These comments are on behalf of the Natural Resources Defense Council and our many thousands of members and activists throughout California. Our comments are offered to ensure Metro's consideration of the Project complies with the California Environmental Quality Act ("CEQA"), California Code of Regulations, title 14, § 15000 et seq. ("CEQA Guidelines"), and the Los Angeles CEQA Threshold Guide. We urge Metro to consider the issues identified below and to update the EIR to fully and accurately describe the Project and analyze its impacts. GO13-1

NRDC has a vested interest in preserving the quality, character, accessibility, and enjoyment for those visiting the Los Angeles State Historic Park given our decades-long advocacy along with many other community allies to protect and create the parkland. Los Angeles State Historic Park was created after a tremendous community campaign to defeat a warehouse development plan that threatened the 32-acre open space. We offer the following comments to ensure Metro adequately considers all the impacts the Project will have on the park and adjacent downtown Los Angeles neighborhoods.

I. The DEIR's impact analysis is flawed and should be revised. GO13-2

The DEIR appears to employ an overly broad and contradictory analytic approach that may not describe with adequate specificity the full range of significant negative impacts the Project will have on the aesthetic and cultural characteristics of the Project site and surrounding areas. As such, a court might find that the DEIR fails in its basic purpose as a useful, informational document for the public and decision makers.[1]

FN GO13-2

[1] *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

A. The DEIR's aesthetic impacts analysis should be augmented and revised.

The DEIR presents an insufficient analysis of the aesthetic impacts the Project will have on the immediate surrounding areas, particularly near Los Angeles State Historic Park. The DEIR divides the immediate vicinity of the Project alignment into six different Landscape Units that encompass the location of the Project alignment and adjacent areas beginning in the southern portion of the Project alignment and ending in the north. Of most significance, the DEIR does not sufficiently analyze the aesthetic impacts to Landscape Unit 4, which begins at the southwestern corner of Los Angeles State Historic Park. The LA CEQA Thresholds Guide notes the value of preserving sightlines to designated scenic resources or areas of visual interest from public vantage points. The DEIR acknowledges that the subjects of valued or recognized views may be focal or panoramic, including urban skylines, mountain ranges, or large bodies of water. The DEIR further acknowledges the Project's interruption to the panoramic skyline views of downtown Los Angeles from Los Angeles State Historic Park. GO13-3

Los Angeles Historic State Park is a large open space that is in stark contrast to the dramatic skyline of downtown Los Angeles.[2] Sometimes referred to as the "front porch" of Los Angeles, there are no other sites that capture this welcoming view of downtown.[3] Despite acknowledging the aesthetic significance of the downtown Los Angeles urban skyline, the DEIR concludes the Project will have no significant impact for a variety of unpersuasive reasons. For example, the DEIR vaguely relies on a "walkway in the park" as an area that will continue to have uninterrupted views.[4] The DEIR further asserts that there are no significant aesthetic impacts because "existing views of downtown from other areas in the park are already interrupted under existing conditions by trees."[5] The mere possibility that one may potentially be able to find an area within the park where the view may be seen would not seem to negate the significant negative impact to a designated area of visual interest. CEQA does not require that a view be hindered from every possible vantage point; rather, CEQA demands an inquiry into whether the Project would have potentially significant impacts with respect to views if the Project's development were to obstruct an existing view of a valued visual resource.[6] GO13-4

Further, the DEIR purports to describe its consistency with the Los Angeles State Historic Park General Plan. For a project in an urban area, a significant impact to visual character or quality occurs if the project conflicts with applicable zoning regulations or other regulations governing scenic quality. The DEIR appears to contain contradictory statements regarding the Project's consistency with the Los Angeles State Historic Park General Plan. On the one hand, it states that the proposed Project must obtain an amendment to the Los Angeles State Historic Park General Plan to allow transit uses within the park. However, later in the DEIR it states that the proposed Project would be consistent with Los Angeles State Historic Park General Plan GO13-5

[2] Los Angeles State Historic Park General Plan (2005), https://lastatehistoricpark.org/wp-content/uploads/2021/07/LASHP-General-Plan.pdf.
[3] *Id*. at 38.
[4] Draft Environmental Impact Report, Appendix C- Visual Impact Assessment at 74, https://www.dropbox.com/sh/trfpt09to0kp4a8/AACPE0qySShhT2mqXi172mAha/Documents/Draft%20EIR%2010.17.22/Draft%20EIR%20and%20Appendices?dl=0&preview=Appendix+C_VIA.pdf&subfolder_nav_tracking=1.
[5] *Id*.
[6] California Code Regs., title 14, Section 15000 Appendix G.

FN GO13-4

aesthetic resources goals to protect and enhance scenic viewsheds and features. Not only does the DEIR appear to lack any description of the Project's ability to protect and enhance scenic viewsheds and features, but the document also fails to acknowledge the project's existing inconsistency with the Los Angeles State Historic Park General Plan, which prohibits the very type of (transit) Project proposed.

cont'd GO13-5

The DEIR also appears to minimize the significant negative visual impacts the Project will have on the surrounding area. For CEQA purposes, visual impacts in urbanized areas are assessed based on changes to views from publicly accessible locations or public views. However, in finding that the Project will have no significant impact, the DEIR states that pedestrians and motorists may have less of a personal investment in the visual appearance of the proposed Project because they are "primarily visiting and do not necessarily reside in the area." The DEIR relies on residents not being included in viewership, while simultaneously minimizing negative impacts by asserting that public viewers have "fleeting and/or temporary views" since they do not reside in the area. The DEIR posits a circular argument, obviating the possibility that pedestrians and motorists experience significant impacts since CEQA requires the Lead Agency to only consider the views of the public, then relying on the presumption that the public could never experience a significant impact since their views are temporary as non-residents. This type of reasoning would render the viewership analysis requirements of CEQA meaningless.

GO13-6

CEQA requires the data in an EIR to be not only sufficient in quantity but presented in a manner calculated to adequately inform the public and decision makers.[7] Given the inconsistencies throughout the DEIR's examination of potential aesthetic impacts, we urge Metro to include an accurate and robust analysis of the Project's aesthetics impacts, particularly as these impacts affect Los Angeles State Historic Park.

GO13-7

B. The DEIR's analysis of impacts to cultural resources is flawed and should be revised.

CEQA and its implementing guidelines require the evaluation of potential impacts to cultural resources.[8] The evaluation of impacts to historical resources consists of a two-part inquiry: (1) a determination of whether the Project Site contains or is adjacent to a historically significant resource or resources and, if so; (2) a determination of whether the Project would result in a "substantial adverse change" in the significance of the resources. A "substantial adverse change" in the significance of a historical resource is an alteration that materially impairs the characteristics that convey its historical significance and justify its eligibility for listing.

GO13-8

Under these guidelines, the DEIR does not appear to adequately analyze the Project's impact on cultural resources. The proposed Project is located within the urbanized and developed City of Los Angeles communities of downtown, El Pueblo, Chinatown, Mission Junction, Solano Canyon, and Elysian Park. These areas are known, in part, for their rich historical and cultural resources including over thirty culturally significant buildings, sites, districts, structures, and

FN GO13-7 [7] Public Resources Code Section 21000 et seq.
FN GO13-8 [8] CEQA Guidelines Section 15064.5.

landscapes within the immediate vicinity of the Project alignment. While the DEIR acknowledges the significant presence of cultural resources the Project may affect, it denies without explanation any significant impacts to the resources.

cont'd GO13-8

The DEIR minimizes the Project's significant impact to the Los Angeles Union Station Passenger Terminal and Grounds, a cultural resource listed by the federal National Historic Preservation Act of 1966 and the California Register of Historical Resources. Built in 1939, Los Angeles Union Station is an architectural gem, utilizing a unique combination of Spanish Colonial Revival and Art Deco styles. Passengers, commuters, and tourists are welcomed with lush courtyards laden with orange trees, fan palms, and espalier magnolias. The DEIR describes the Project's proposed Alameda Station as "a concrete structure and platform with a barrel-arched canopy made of custom-perforated metal." The Project station would be over 75 feet above street grade, with a platform of over 30 feet above street grade. The DEIR further states: "The proposed Alameda Station would become a dominant visual feature of Alameda Street due to its size, design, and location elevated over the street. The proposed Alameda Station would be a highly visible change to the overall setting of the Los Angeles Union Station Passenger Terminal and Grounds property, which is designated for both its architectural and historical significance." Despite the assertions recognizing the visibly dominating impacts the enormous new proposed Alameda Station will have on the Los Angeles Union Station Passenger Terminal and Grounds, the DEIR inconsistently found the Project to have a less than significant impact. GO13-9

We look forward to the EIR containing a thorough and accurate analysis of the Project's impacts not only on Los Angeles Union Station Passenger Terminal and Grounds, but also to the other cultural resources identified throughout the DEIR.

II. The DEIR's project description may be incomplete and may not fully analyze reasonably foreseeable activities as required by CEQA.

CEQA requires that a project be described with enough particularity that its impacts can be assessed.[9] The relevant standard for ascertaining what constellation of activities should be deemed to be a part of the "whole of an action" of a Project is whether such activities comprise "a group of interrelated actions" that are "part of a single, coordinated endeavor."[10] We are concerned that the DEIR may lack enough information to examine and evaluate the Project fully, effectively analyzing the project in a vacuum rather than including related and necessary operations, and omitting certain of the Project's foreseeable impacts. GO13-10

A. The DEIR may be lacking critically important details in its project description.

Despite our understanding that documents exist associating the Project with foreseeable commercial and residential growth at the 260-acre McCourt Global property, the DEIR omits any mention of near-future commercial activity or development plans at Dodger Stadium. CEQA prohibits a project proponent from seeking approval of a large project in smaller pieces in order GO13-11

FN GO13-10

[9] *County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 192.
[10] *Association for a Cleaner Environment v. Yosemite Community College Dist*. (2004) 116 Cal.App.4th 629, 636.

to take advantage of environmental exemptions or lesser CEQA review for smaller projects.[11] California courts have repeatedly held that "an accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient [CEQA document]."[12] Absent a complete project description, courts view the environmental analysis under CEQA as impermissibly limited, thus minimizing the project's impacts and undermining meaningful public review.[13]

California courts have articulated "general principles" for determining whether two actions are one CEQA project, including "how closely related the acts are to the overall objective of the project," and how closely related they are in time, physical location, and the entity undertaking the action.[14] The appropriate inquiry is whether two projects are related to one another, *i.e.* they comprise the "whole of an action" or "coordinated endeavor."[15]

cont'd GO13-11

Courts have found improper piecemealing when the purpose of the reviewed project is to be the first step toward future development."[16] It is both logical and reasonable to infer that the Project is soon likely to be associated with development activity given the facts surrounding Dodger Stadium and the practical effects of the Project. For example, there are 81 home games in a regular baseball season, with up to 12 post-season games. The City of Los Angeles's Conditional Use Permit for Dodger Stadium allows a maximum of four special events per month. Even assuming additional special events, the Project is likely to be used at capacity no more than one hundred fifty days of the year. Accordingly, developing the area surrounding the Dodger Stadium Tower for entertainment, retail, and other commercial activities is a reasonable conclusion that could provide a practical basis and explanation for carrying out the Project.

We recommend that the EIR be revised to consider the entirety of the Project, including all reasonably foreseeable phases, consistent with CEQA.

B. The DEIR should include an analysis of induced growth.

Section 15125.2(d) of the CEQA Guidelines requires a discussion of the ways in which a project could induce growth. This includes ways in which a project would foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Induced growth is any growth that exceeds planned growth and results from new development that would not have taken place without the implementation of a proposed project.

GO13-12

When evaluating the potential environmental impact of a project that has growth inducing effects, an agency is not excused from environmental review simply because it is unclear what future developments may take place; it must evaluate and consider the environmental effects of

the "most probable development patterns."[17] In fact, even if there is uncertainty as to the precise form of development that would eventually occur, a Project is not insulated from CEQA.[18]

cont'd GO13-12

It is not our position that the DEIR must analyze with significant detail every conceivable development scenario; however, the DEIR needs to analyze the impacts in relation to the most probable development patterns. Publicly available resources have revealed the possibility of future development at the site of the Project. For example, information from the Los Angeles County Recorder's Office details possible future developments at Dodger Stadium that "may include, but are not limited to (i) office buildings, (ii) hotel and exhibition facilities, (iii) residential buildings, (iv) medical buildings, (v) academic buildings, (vi) parking structures, and/or (vii) retail, dining, and entertainment facilities.[19] Further, the company that owns fifty percent of the parking lot at Dodger Stadium publicized its ownership interest in the 260-acre Dodger Stadium land as a "current real estate project."[20] Even without the aforementioned documents evidencing potential development at Dodger Stadium, the DEIR should account for the foreseeable and probable growth inducing development impacts of the Project.

GO13-13

The EIR should examine ways in which the proposed Project could foster economic growth, either directly or indirectly, in the surrounding environment.

III. Conclusion

We have concerns as to whether the DEIR is adequately disclosing, analyzing, and mitigating the Project's environmental impacts. CEQA requires that Metro's review adequately identify and analyze the Project's foreseeable direct, indirect, and cumulative impacts. Thank you for your consideration in this matter. We look forward to reviewing your responses to our comments.

Subject: COMMENT LETTER - Los Angeles Aerial Rapid Transit Project SCH 2020100007

Dear Mr. Zelmer -

Attached please find a comment letter submitted on behalf of LA Parks Alliance and its members with respect to the so-called LA-ART project, State Clearinghouse no. SCH 2020100007. Please confirm receipt of this email and comment letter at your earliest convenience and ensure that my office is on all notification lists for the project.

Thank you for your consideration of the attached comments.

Sincerely,

John Given

RE: Los Angeles Aerial Rapid Transit Project
SCH 2020100007

Dear Mr. Zelmer:

This letter is submitted on behalf of LA Parks Alliance[1] with respect to the above-captioned Los Angeles Aerial Rapid Transit Project (the "Project") in response to the release of the Project's Draft Environmental Impact Report ("Draft EIR" or "DEIR"). GO14-1

As an initial matter, please provide me with notice of all hearings, votes, or determinations related to the proposed Project, including timely provision of notices required pursuant to Public Resources Code 21167(f). GO14-2 Note that LA Parks Alliance adopts and incorporates by reference all DEIR comments and objections raised by others during the environmental review process. (See Pub. Res. Code, § 21177.) GO14-3

As explained below in detail, the Draft EIR is deficient in many respects. It is incomplete, inaccurate, misleading, and largely supported by assumptions rather than substantial evidence. Among its more serious deficiencies, some of them fatal to its use as the proposed Project's environmental document, the DEIR misidentifies Metro as the Lead Agency, misidentifies the Project as public transportation, misidentifies the Project as eligible for SB 44, fails to identify and seek review by all required responsible and trustee agencies, assumes the Project may use state parkland for a significant part of its proposed alignment, and engages in piecemealing by ignoring reasonably foreseeable indirect physical changes in the environment due to the Project. In addition, evidence exists that an endangered species may be adversely affected, and Project approval would raise considerable concerns regarding gentrification and environmental justice. GO14-4

At the very least, the DEIR must be revised and recirculated after its many deficiencies have been corrected. In the alternative, Metro should seriously consider terminating review of the Project at the outset since it plainly cannot be constructed as currently proposed. GO14-5

FN GO14-1 [1] LA Parks Alliance was formed in 2019 as a response to land use threats to LA State Historic Park. Its members are park and public space advocates. See https://www.laparksalliance.org.

I. GENERAL COMMENTS

A. Arts District Community Council LA Letter of February 26, 2021

Following close of the Notice of Preparation / Project Scoping for the Project, on February 26, 2021, my office submitted a letter on behalf of Arts District Community Council LA ("ADCCLA") objecting to Metro's inadequate Notice of Preparation ("NOP") issued on or about October 1, 2020. LA Parks Alliance adopts the letter as reflecting its own position on the inadequate NOP, and requests that the DEIR respond to the allegations in that letter as if fully set forth herein.[2] The following summarizes the February 26, 2021, letter comments and objections. GO14-6

The October 1, 2020, Notice of Preparation for the Project is legally inadequate. The appropriate remedy is a revised Notice of Preparation and recirculation with a new review and comment period for responsive and trustee agencies and members of the public. Title 14 of the California Code of Regulations (hereafter "CEQA Guidelines") requires that an NOP "shall provide the responsible and trustee agencies, the Office of Planning and Research and county clerk with *sufficient information describing the project and the potential environmental effects to enable the responsible agencies to make a meaningful response*." (CEQA Guidelines, § 15082(a)(1) (emphasis added).)

The October 1, 2020, NOP is inadequate because it fails to provide sufficient information about the probable environmental effects of the project for responsible agencies to meaningfully respond, and indeed misleads these agencies through use of vague and otherwise inaccurate descriptions of the project. For example, the NOP suggests that there may be no direct impact on LA State Historic Park by describing a *direct flyover* of the park by the preferred project alternatives as being "in connection with providing additional transit service *adjacent to* the Los Angeles State Historic Park." (NOP, p. 2.) A reasonable interpretation by an uninformed reader of the NOP text could include that if an adjacent station is not constructed that the aerial tram would *not* fly directly over the park. As the February 2021 letter notes, even if the proposed Project did not encroach *on and over* LA State Historic Park, its development adjacent to the park would still have significant adverse impacts on the Park. GO14-7

The NOP is also inadequate in that it fails to include a summary of the "[p]robable environmental effects of the project." (CEQA Guidelines, § 15082(a)(1)(C).) Instead, it lists the entirety of the CEQA Guidelines Appendix G analysis categories, explaining that the Draft EIR to follow will address all of them. While that may be factually accurate, the mere listing of analysis categories to be included in a later environmental review document cannot be understood as a description of "probable environmental effects," and does not serve to provide responsible agencies with sufficient information to make a meaningful response with respect to the scope of environmental review required. If only generalized information is provided to responsible agencies, only generalized responses will be received from them, which is GO14-8

FN GO14-6 [2] The February 26, 2021, letter is attached as **Exhibit A**. Note that while it was submitted following the close of the formal scoping process, Metro was required to consider the comments in preparation for the Draft EIR and it is already part of the administrative record of the case. (Pub. Res. Code, § 21082.1(b).)

insufficient to fulfill those agencies' mandatory NOP response obligations. (See CEQA Guidelines, § 15082(b)(3): "A generalized list of concerns not related to the specific project shall not meet the requirements of this section.")

cont'd GO14-8

Under CEQA, a "project" is "the whole of an action, which has a potential for resulting in *either a direct physical change* in the environment, *or a reasonably foreseeable indirect physical change* in the environment." (CEQA Guidelines, § 15378(a) (emphasis added)). Where multiple "activities are part of a coordinated endeavor, among the various steps which taken together obtain an objective, or otherwise related to each other, they constitute a single project for purposes of CEQA." (*County of Ventura v. City of Moorpark* (2018) 24 Cal.App.5th 377, 385 [internal quotation marks and citations omitted].) "CEQA 'cannot be avoided by chopping up proposed projects into bite-size pieces' which, when taken individually, may have no significant adverse effect on the environment. [Citations.]" (*Tuolumne County Citizens for Responsible Growth, Inc. v. City of Sonora* (2007) 155 Cal.App.4th 1214, 1223.) This improper practice is commonly referred to as "piecemealing."

GO14-9

The NOP is therefore also inadequate for its incomplete and misleading project description, which must include the readily foreseeable future development at the Dodger Stadium terminus of the Project, where development of some portion of the 260 acres around Dodger Stadium owned or controlled in part by McCourt Global (also owner of the gondola development company ARTT LLC) is plainly foreseeable. McCourt Global's website included the following statements (published even after the NOP was released):

- "Our *current real estate projects include…260 acres of land at Chavez Ravine in Los Angeles*."
- "McCourt currently owns *260 acres of land at Chavez Ravine in Los Angeles, the home of Dodgers Stadium*. *Among other plans for the area*, McCourt will develop a cutting-edge aerial tramway from Los Angeles Union Station to Dodgers Stadium through its company, Aerial Rapid Transit Technologies."[3]

GO14-10

The failure to include *any* information in the NOP about this clearly foreseeable development associated with the proposed Project precluded responsible agencies and members of the public from providing meaningful responses on the "whole of the project." This comment is expanded upon at length below, as the Draft EIR suffers from the same fatal flaw.

GO14-11

[3] McCourt Global, *McCourt / Our Company,* last viewed / downloaded May 18, 2021, attached as part of **Exhibit B** (emphasis added); *and* McCourt Global, *Real Estate Overview*, Nov. 26, 2020, last viewed / screen captured Jan. 12, 2022 via "Internet Archive Wayback Machine" (https://web.archive.org), attached as part of **Exhibit B** (emphasis added), available at: https://web.archive.org/web/20201126121740/https://www.mccourt.com/real-estate-overview.

But see McCourt Global, *McCourt Partners Real Estate*, attached as **Exhibit C**, available at: https://www.mccourt.com/real-estate, last viewed / screen captured Jan. 12, 2022 (scrubbing references to "real estate projects" and "other plans for the area" around Dodger Stadium except the LA ART project. See also lengthy discussion re Dodger Stadium "piecemealing," *infra* pp. 26-33.

FN GO14-10

The February 2021 letter also criticizes the description of project alternatives, which then included only the so-called Spring Street alternative, the Broadway alternative, and the no-project alternative. The letter concludes by noting that the inadequate NOP frustrated members of the public, including members of ADCCLA. Its inadequacies interfered with their ability to provide informed comment to the lead agency, and ADCCLA requested that a revised, legally sufficient NOP be recirculated and a new comment period provided. GO14- 12

Subsequently, ADCCLA, through LA Parks Alliance's letter of December 19, 2022, asserts that Metro was improperly designated as the lead agency under CEQA, and no longer requests that Metro revise and recirculate a legally adequate NOP. Instead, because Metro cannot be designated as the lead agency pursuant to CEQA Guidelines section 15051, both ADCCLA and LA Parks Alliance request that Metro refrain from further environmental review of the Project and instead allow the properly designated CEQA lead agency, the City of Los Angeles, to begin the environmental process anew.[4] GO14-13

B. Metro Ignored Mandatory Project Review by Responsible and/or Trustee Agencies.

The "State Clearinghouse" is responsible for managing CEQA review for state agencies. (CEQA Guidelines, § 15205.) The lead agency has a mandatory duty to provide sufficient copies of an EIR to the State Clearinghouse so it may distribute them for agency review and comment for all agencies that are either "a responsible agency, trustee agency, or otherwise [have] jurisdiction by law with respect to the project" or when the project is identified "as being of statewide, regional, or areawide significance." (*Ibid.*, subd. (b)(2)-(3).) GO14-14

The Project fits both requirements. Review is required by many state agencies, including several trustee agencies. The Project is also one of "statewide, regional, or areawide significance" under CEQA Guidelines section 15206 as the Project is within and would substantially impact the Santa Monica Mountains Zone as defined in the Public Resources Code, which includes virtually the *entire* Project area. (See CEQA Guidelines, § 15206, subd. (b)(4).) Public Resources Code section 33105 states, in relevant part (emphasis added):

> The [*Santa Monica Mountains Zone*] *shall* also *include Elysian Park* and *El Pueblo de Los Angeles State Historic Park and*, for purposes of providing a recreational trail corridor, it *shall also include hiking and equestrian trail connections and accessways between Griffith Park, Elysian Park, and El Pueblo de Los Angeles State Historic Park*. GO14-15

The entire Santa Monica Mountains Zone also falls within the state-designated Rim of the Valley Trail Corridor, for which a Master Plan was adopted in June 1990. (*See* Pub. Res. Code, §§ 33105.5, 33204.3 et seq.) The Rim of the Valley Corridor, including the entirety of the

FN GO14-13 [4] See John P. Given, letter to Metro Deputy Executive Officer Corey Zelmer ("Objection to Metro as Lead Agency"), Dec. 19, 2022, already a part of the Project record as a comment to the DEIR, and available at https://www.laparksalliance.org/2022/12/21/objection-to-metro-as-lead-agency/.

Santa Monica Mountains Zone, has been proposed to be added as a boundary adjustment to an expansion of the National Park Service's Santa Monica Mountains Recreation Area.[5]

cont'd GO14-15

Among the documents provided to the public by Metro when it released the Project's Draft EIR are a "Notice of Completion & Environmental Document Transmittal" and "Summary Form for Electronic Document Submittal."[6] The Notice of Completion lists a "Reviewing Agencies Checklist" to allow the lead agency to request the State Clearinghouse to distribute the Notice and Draft EIR documents to reviewing agencies so that those agencies can fulfill their CEQA comment obligations. (Notice of Completion, p. 2.) The Summary Form similarly allows the lead agency to provide a list of responsible or trustee agencies to the State Clearinghouse. (Summary Form, p. 2.)

Metro failed to include at least two state agencies that should have received notice and copies of the Draft EIR on the Notice of Completion form as required. The first, the Santa Monica Mountains Conservancy ("SMMC"), is a designated trustee agency over resources within the Project area. (See Pub. Res. Code, § 33105, quoted above.)[7] It was not listed on either State Clearinghouse Form.[8]

GO14-16

The second state agency Metro failed to notify, the California Department of Housing and Community Development ("HCD"), has responsibilities which include ensuring every California city (whether a general law or charter city) assesses, analyses, and plans for "an

---

FN GO14-15

[5] See **Exhibit D**, which includes: Santa Monica Mountains Conservancy (SMMC), Rim of the Valley Trail Corridor Boundary map and excerpts from Rim of the Valley Trail Corridor Master Plan; National Park Service, Rim of the Valley Unit Proposed Addition to Santa Monica Mountains National Recreation Area. SMMC's entire ROV Master Plan is available at: https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=&ved=2ahUKEwi1_YmO88z8AhWjKkQIHUZLCPEQFnoECAYQAQ&url=https%3A%2F%2Fsmmc.ca.gov%2Fwp-content%2Fuploads%2F2020%2F04%2FROV-Master-Plan.pdf&usg=AOvVaw0pYr2L5XdpzX_kj982-GC6 .)

[6] As of December 21, 2022 the documents seem to no longer be available at Metro's web page for the Project (https://www.metro.net/projects/aerial-rapid-transit/) or in the related Dropbox file link found on that page for the DEIR and other documents. They should be a part of the Project record, but are attached as part of **Exhibit E**.

FN GO14-16

[7] See also, Supervising Deputy Attorney General Christina Bull Arndt, letter to Executive Director Joseph T. Edmiston, Santa Monica Mountains Conservancy, July 26, 2021, attached as **Exhibit F**. "The Conservancy meets the definition of a trustee agency because it is a state agency which has jurisdiction over the natural resources of the [Santa Monica Mountains] Zone, which it holds in trust for the people of California…[T]he Conservancy should be considered a trustee agency for any CEQA project which affects natural resources within the Zone." (Exhibit F, p. 3.)

[8] Curiously, the Notice of Completion lists a similar agency, the "California Baldwin Hills Conservancy (BHC)," as a reviewing agency for the Project even though at closest Baldwin Hills is approximately seven miles distant from, and has no resources near or within, the Project area. For more information, see http://bhc.ca.gov.

inventory of land suitable and available for residential development, including vacant sites and sites having realistic and demonstrated potential for redevelopment during the planning period to meet the locality's housing need" for various income levels. (Cal. Gov. Code, § 65583, subd. (a)(3).) It was likewise not listed on either State Clearinghouse Form.

cont'd GO14-16

The Surplus Lands Act (Govt. Code sections 54220-54234) provides for a right of first refusal to other public agencies whenever a local agency proposes to dispose of surplus land. A notice of availability requirement is applicable to both the SMMC and the HCD. (Govt. Code, §§ 54222, 54230.5.) Sales and leases of surplus lands generally qualify as dispositions requiring approval of HCD before sale or lease of surplus land can be finalized. (Govt. Code, § 54230.5, subd. (b)(1).)[9] Similarly, California law requires that the sale of *any property* by a public agency within the Santa Monica Mountains Zone requires offering the land to the SMMC first:

> The conservancy shall have the first right of refusal on any property within the zone presently owned by a public agency and scheduled for disposal as excess lands, except where such lands are designated for acquisition as a park or recreation area by a federal, state, or local agency. The conservancy shall have the right to acquire such lands at the disposing agency's purchase price plus any administrative and management costs incurred by the disposing agency. (Pub. Res. Code, § 33207(b).)

GO14-17

The DEIR describes public lands within the City of Los Angeles as potential sites for several Project components. For example, "the proposed Alameda Tower, which would be constructed on the Alameda Triangle, a portion of City ROW between Alameda Street, North Main Street, and Alhambra Street." (DEIR, p. ES-4.) "The proposed Alpine Tower would be constructed at the corner of Alameda Street and Alpine Street on city-owned property." (*Ibid.*) "[T]he proposed Chinatown/State Park Station would be constructed partially on City ROW and partially within the boundaries of the Los Angeles State Historic Park." (*Ibid.*)

The City of Los Angeles maintains and periodically publishes a list of declared and undeclared surplus properties that can be reviewed by registering for and then downloading them from the Department of General Services website.[10] Review of recently downloaded declared and undeclared surplus properties lists discloses that none of the site described in the DEIR were listed as either declared or undeclared surplus properties when the DEIR was released.[11]

Before the City of Los Angeles may dispose of any of the lands described in the DEIR as city-owned, under the Surplus Lands Act it must notify both SMMC and HCD that the lands are

FN GO14-16 [9] See also, HCD's Surplus Lands Act FAQ, available at: https://www.hcd.ca.gov/docs/planning-and-community-development/slafaq.pdf.

[10] See https://gsd.lacity.org/services/integrated-asset-services/property .

FN GO14-17 [11] See "City of Los Angeles – Surplus Declared Properties as of (12/6/2022)" and "City of Los Angeles – Surplus Undeclared Properties as of (12/6/2022)" downloaded from the General Services website on December 20, 2022, attached as **Exhibit G**.

surplus and follow the appropriate legal process before it may dispose of them for the benefit of a private project, including the LA-ART gondola Project. But Metro's State Clearinghouse submissions failed to identify SMMC and HCD as responsible agencies and failed to identify SMMC as a trustee agency. There is no indication that either agency has had any notice of the Project, let alone adequate notice.

cont'd GO14-17

LA Parks Alliance notes that it is highly unlikely that the proposed site for the Alpine Tower Project component, described as "currently being used as non-public parking storage for City vehicles" (DEIR, p. ES-8), would be available to the proposed Project given its highly suitable location for affordable housing. Affordable housing is particularly appropriate at sites near public transit. The parcel at the proposed Alpine Tower location is approximately 700 feet from Metro's Gold Line Chinatown station, less than half a mile from LA Union Station, and located between and at most only a few hundred feet from existing major bus route stops along Alameda Street. (See DEIR, Table 3.17-1 and Figure 3.17-2, pp. 3.17-13 to 3.17-16.)[12] If desired, bus stops could be added or re-located nearer to the parcel to be even more convenient for a future affordable housing project at the site.

There are numerous state incentives for housing opportunities near public transit. California's Density Bonus Law, for example, allows affordable housing projects to reduce or eliminate parking, providing a major cost benefit for affordable projects. (See generally, Govt. Code, §§ 65915-65918). HCD has an Affordable Housing and Sustainable Communities Program, which "funds land-use, housing, transportation, and land preservation projects to support infill and compact development that reduce greenhouse gas ("GHG") emissions."[13] The City of Los Angeles has its own Transit Oriented Communities Affordable Housing Incentive Program and Guidelines which in some respects exceeds the baseline requirements of the State Density Bonus Law. (See Los Angeles Municipal Code ("LAMC"), § 12.22 A.31.)

GO14-18

For the preferred alternative of the Project to proceed, it would almost certainly have to undergo a major design overhaul to relocate the Alpine Tower, as there is very little chance a tower could be constructed at the desired site given the site's suitability for a far more urgent need with legally superior right to the site than a private gondola project. Moreover, the environmentally superior alternative, the Transportation Systems Management Alternative, remains available, and with only modest modifications could easily achieve most Project goals, leaving the proposed Alpine Tower site for its more suitable use as affordable housing.

Metro's failure to provide notice to SMMC and HCD requires, at the least, an immediate extension of the comment period so that these agencies have sufficient time to study the Draft EIR with respect to Project concerns related to their respective jurisdictions. The DEIR is inadequate for its failure to identify the clearance required by HCD before any of the City public land identified by the DEIR may be transferred to a private party to construct or operate the

GO14-19

FN GO14-18

[12] As the County's regional transportation authority, Metro is particularly well suited to analyze the suitability of the site for affordable housing with respect to proximity of existing public transit options.

Project. It is further inadequate for failing to identify the potentially significant land use conflicts under the Surplus Lands Act and Public Resources Code related to the public interest and resources identified in those statutes. The environmental review process cannot proceed until this serious procedural error has been fully remedied.

cont'd GO14-19

C. The Project is Not a Public Transit Project Eligible for SB 44 Streamlining

As discussed briefly in an earlier DEIR comment letter, the Project is *not* a public transit project, as it is proposed to be privately owned and operated and intended primarily to provide service to and from Dodger Stadium, a private sports and event venue.[14] It is therefore not eligible for SB 44 streamlining as an environmental leadership transit project ("ELTP") as claimed in the DEIR. (DEIR, pp. 1-4 to 1-9.) The Draft EIR is therefore inaccurate and misleading and fails as an informational document for including these false claims. Moreover, since the Project is not eligible for SB 44, any attempt by Metro to limit the exercise of project objectors' rights under generally applicable law that does apply would violate CEQA's strict procedural mandates and likewise allow for objectors to seek an appropriate legal remedy.

GO14-20

The mandatory requirements for SB 44 are found in Public Resources Code section 21168.6.9. An ELTP is a "project to construct a fixed guideway and related fixed facilities that meets *all*" of the conditions of subdivision (a)(1) of that statute. The first requirement is the project be a "fixed guideway operating at zero emissions." The ELTP statute uses the federal definition for "fixed guideway" found in Chapter 53 (Public Transportation) of the United States Code. (Pub. Res. Code, § 21168.6.9, subd. (a)(2), citing 49 U.S.C. § 5302.)

Under federal law, a "fixed guideway" is precisely defined as follows:

> Fixed guideway.—The term "fixed guideway" means a public transportation facility—
>
> (A) using and occupying a separate right-of-way for the exclusive use of public transportation;
> (B) using rail;
> (C) using a fixed catenary system;
> (D) for a passenger ferry system; or
> (E) for a bus rapid transit system.
>
> (49 U.S.C. § 5302, subd. (8).)

GO14-21

The term "public transportation" used in the definition for "fixed guideway" is further defined as follows. "Public transportation:"

> (A) means regular, continuing shared-ride surface transportation services that are open to the general public or open to a segment of the general public defined by age, disability, or low income; and
> (B) does not include—

FN GO14-20 [14] See Given letter, pp. 8-10, *supra* p. 4 fn. 4.

(i) intercity passenger rail transportation provided by the entity described in chapter 243 (or a successor to such entity);
(ii) intercity bus service;
(iii) charter bus service;
(iv) school bus service;
(v) sightseeing service;
(vi) courtesy shuttle service for patrons of one or more specific establishments; or
(vii) intra-terminal or intra-facility shuttle services.

(49 U.S.C. § 5302, subd. (15).)

cont'd GO14-21

The proposed Project is not "public transportation" within the meaning of federal law.

First, the Project is not a "regular, continuing shared-ride surface transportation" service. It is not "regular" and "continuing." The Project is intended primarily to provide "a direct transit connection between LAUS and the Dodger Stadium property…" (DEIR, p. 2-12.) On non-game and non-event days, the Project would operate at the discretion of the operator, not on a regular schedule: "It is anticipated that the proposed Project operations would vary the number of cabins in service and speed throughout the day, *based on demand*." (DEIR, p. 2-42 (emphasis added).) Compare this demand-based operational decision-making to the continuing and regular Gold Line and local bus route schedules, which operate each day on a published schedule without respect to day-to-day demand.

Moreover, the Project's proposed use for other purposes, including travel to and from Dodger Stadium for use by community members in neighborhoods near Dodger Stadium are entirely speculative. See DEIR, p. ES-10: "The Project Sponsor *will request consideration* by the Los Angeles Dodgers *of the potential* for the Dodger Stadium Station to include a mobility hub where outside of game day periods, passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program and individual bike lockers, to access Elysian Park and other nearby neighborhoods, including Solano Canyon."

GO14-22

The decision to operate based on commercial demand rather than on a regular schedule, and speculative permissive use by a separate entity to allow operation on some days but not others mean the Project is not "regular" and "continuing" and therefore is not "public transportation" under applicable federal law.

Second, the Project would not provide *surface* transportation at all, as it is an *aerial* tramway. It is designed and intended to carry its passengers *above* surface transportation, to entirely avoid vehicle traffic. Consideration of the project types that may be considered a "fixed guideway" is informative. (See 49 U.S.C. § 5302, subd. (8), which lists only rail, fixed catenary systems, passenger ferry systems, and bus rapid transit systems.) None are or include aerial, non-surface transportation, such as a gondola or aerial tram.

GO14-23

Third, on game and event days at Dodger Stadium, the Project would not be "open to the general public or open to a segment of the general public defined by age, disability, or low

GO14-24

income." The Project would prioritize Dodger ticket holder (and presumably special event use) (DEIR, p. 3.17-25) and may entirely exclude the "general public" at those times. Such limitations show the Project is not "public transportation" as defined in section 5302 subdivision (A). In fact, such limitations cause the Project to be more accurately described as a "courtesy shuttle service for patrons of one or more specific establishments," which is specifically excluded from being considered "public transportation" under section 5302 subdivision (B). cont'd GO14-24

The DEIR also describes the Project's use for tourism. "Tourism ridership would be driven by the proposed Project capturing a share of the existing tourism market in Los Angeles, particularly for tourists to downtown Los Angeles visiting other attractions." (DEIR, p. 3.17-25.) But "sightseeing" services for tourism are also specifically excluded from consideration as "public transportation" under relevant federal law. (49 U.S.C. § 5302, subd. (15)(B)(v).) GO14-25

The Project is not "public transportation."

Since the first requirement of a "fixed guideway" is that it be a "public transportation facility" the Project cannot be considered a "fixed guideway" and on that basis does not qualify for SB 44 ELTP streamlining. But even assuming the Project could be considered "public transportation," which plainly based on a textual analysis of the federal statute it cannot be, other section 5302 requirements are also not met.

Notwithstanding the DEIR's contrary conclusion, the project would *not* "us[e] and occupy[] a separate right-of-way for the exclusive use of public transportation." The DEIR claims, "the proposed Project would exclusively use and occupy the airspace above the public right-of-way through a franchise agreement with the City of Los Angeles" and "[f]or that reason, the proposed Project, as a type of aerial tramway, is properly classified as a "fixed guideway" as defined by SB 44." (DEIR, p. 1-5) This analysis is incomplete, inaccurate, and misleading. GO14-26

The Project's *surface* components would be built primarily (but not exclusively) within an existing City right-of-way that is used primarily by surface vehicles (DEIR, p. ES-4). Only the *aerial* components of the Project would be constructed and operated above that right of way, but they would also not operate exclusively in that area. The Project would use other areas in addition to the City's right of way areas for its operation. It would also use airspace above private properties, above Los Angeles State Historic Park, above Metro's Gold Line, and above the SR-110 freeway. (ES-4 to ES-7.) It's queuing areas could also be expected to use surface area space dedicated to other purposes. (See, e.g., ES-8, describing queuing areas located "in a proposed new pedestrian plaza at El Pueblo…")

And the Project proposes to use significant surface area of the Los Angeles State Historic Park. (DEIR, p. 3.11-38: "The Chinatown/State Park Station would have a footprint of 2,195 square feet in the park, and the station canopy would have an overhang of 9,320 square feet over the park.") It is evident from information included in the DEIR that the Project would *not* use and occupy a separate right-of-way for the exclusive use of public transportation, since it would also use spaces within several parks and other public and private spaces that are *not* reserved for the exclusive use of public transportation. Even the surface area of City rights-of-way where GO14-27

Project components would be built (and over which they would "overhang," as the DEIR describes it, see, e.g., DEIR, pp. 2-51 to 52), are not exclusively used for public transportation, as they are roadways open for ordinary vehicle traffic. GO14-27

The DEIR fails to provide a meaningful SB 44 analysis including the Project's anticipated use of the described ground and airspaces that are proposed to be used by the Project that are not reserved for the exclusive use of public transportation. The DEIR's conclusory statement about only one part of the Project that uses an *aerial* portion of the City right-of-way is in no way adequate to show it meets all of section 5302's requirements. GO14-28

To complete the analysis under section 5302, the Project is not a "rail" project. It does not use a "fixed catenary system."[15] It is not for a "passenger ferry system" or a "bus rapid transit system." (49 U.S.C. § 5302, subds. (8)(B)-(E).) GO14-29

As the Project does not meet *any* of the basic requirements of relevant federal law to be considered a "fixed guideway facility" it is clearly not eligible for SB 44 streamlining status. This is, without more, sufficient to show that the Project is not eligible as an environmental leadership transit project under SB 44.[16] But the requirement to be a "fixed guideway facility" is but *one* of SB 44's requirements. Among other things, the DEIR must *also* demonstrate that the Project "reduces emissions by no less than 50,000 metric tons of greenhouse gases directly in the corridor of the project defined in the applicable environmental document over the useful life of the project, without using offsets," "reduces no less than 30,000,000 vehicle miles traveled in the corridor of the project defined in the applicable environmental document over the useful life of the project," *and* that it is consistent with applicable planning and transportation strategies. (Pub. Res. Code, § 21168.6.9, subds. (1)(B)-(E).) The DEIR analysis of these additional requirements is likewise inadequate, inaccurate, and incomplete for the DEIR's failure to consider and analyze the readily foreseeable future development at the Dodger Stadium terminus of the Project, a significant and fatal flaw which will be discussed further below.[17] Dodger Stadium development would draw passenger vehicles to the Project area that are not considered in any DEIR analysis category, and invalidate all conclusions with respect to reduction of greenhouse gas emissions, vehicle miles traveled, and consistency with applicable planning and transportation strategies. GO14-30

"Full compliance with the letter of CEQA is essential to the maintenance of its important public purpose. Reviewing courts have a duty to consider the legal sufficiency of the steps taken by [administrative] agencies [citation], and *we must be satisfied that these agencies have fully* GO14-31

[15] "[A] catenary is a system of overhead wires used to supply electricity to a locomotive, streetcar, or light rail vehicle which is equipped with a pantograph. The pantagraph [sic] presses against the underside of the lowest overhead wire, the contact wire." Southeastern Pennsylvania Transportation Authority (SEPTA), *What is a Catenary?*, July 13, 2017, https://iseptaphilly.com/blog/catenary . The Metro Gold Line is such a system. (DEIR, p. 5-61.) FN GO14-29

[16] Notably, and as discussed in LA Parks Alliance's earlier letter, ARTT LLC has even argued that its Project is not a "transit guideway system." See Given letter, *supra* note 4, p. 8, fn. 9.

[17] See also, comments re NOP, *supra* pp. 2-4. FN GO14-30

complied with the procedural requirements of CEQA, since only in this way can the important public purposes of CEQA be protected from subversion." (*Envtl. Prot. Info. Ctr. v. Johnson* (1985) 170 Cal.App.3d 604, 622-623 (citations and internal quotation marks removed, emphasis added).) The Project is not eligible for SB 44 as an environmental leadership transit project. The environmental review process must therefore follow CEQA's generally applicable procedural mandates.

cont'd GO14-31

D. No Part of Los Angeles State Historic Park is Available for Sale or Lease for Commercial Purposes; Proposed Entitlements from California Department of Parks and Recreations to Allow Use of the Park Cannot be Granted.

1. Proposed Use of Los Angeles State Historic Park.

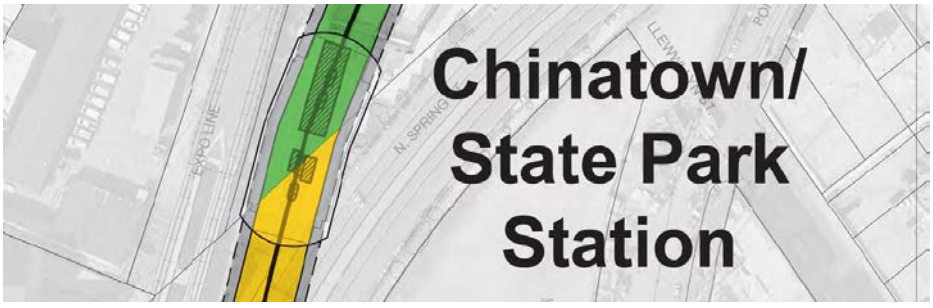
The preferred Project alignment proposes the use of land and airspace at and above Los Angeles State Historic Park ("LASHP"). (DEIR, p. ES-4.) The DEIR describes the Project's Chinatown/State Park Station as "constructed partially on City ROW and partially within the boundaries of" LASHP, suggesting that the station is evenly shared between City land and the park. (*Ibid.*) The more accurate description for those who venture beyond the DEIR's executive summary, discloses that the station uses far more parkland than City ROW:

> The station would have a footprint of 2,605 square feet, comprised of 410 square feet located on City ROW and 2,195 square feet in the park. The station canopy would have an overhang of 15,030 square feet, comprised of 5,710 square feet over City ROW and 9,320 square feet over the park.

GO14-32

(DEIR, p. 2-52.)

More than 84 percent of the station's footprint is located within the LASHP boundary, and approximately 62 percent of the station's "overhang" is located above the park. The following image, taken from DEIR Appendix Q, p. 4, shows how the Project footprint and "overhang" of the Chinatown/State Park Station are predominantly within LASHP.



In addition, the DEIR states that "[t]he proposed Project's required aerial clearance width over the Los Angeles State Historic Park would be 53 feet 2 inches wide with an area of approximately 59,470 square feet, *plus an Additional Separation Buffer*." (DEIR, p. 2-52 (emphasis added).) While the "Additional Separation Buffer" is mentioned within the DEIR

GO14-33

numerous times (e.g., *ibid.*), nowhere is it specifically defined. The discussion of American National Standards Institute (ANSI) Standard B77.1 (DEIR, pp. 2-18 to 2-19), clearly states that the 53 feet 2-inch width does *not* include the Additional Separation Buffer. Overhead images in the DEIR that show the Additional Separation Buffer likewise do not provide meaningful information about the area the buffer would occupy. (See, e.g., DEIR, Figure 2-7, p. 2-20; DEIR Appx. Q, p. 4.) The DEIR thus fails to provide the necessary information necessary to understand how much park area would be used by the Project. cont'd GO14-33

The above measurements describe an *area* for the Project alignment, which is perhaps helpful to understand the Project when viewing it on an overhead plan view. But the Project is not flat. It will exist and operate within a 3-dimensional envelope. The DEIR fails to explain the total *volume* of space required by the Project to operate safely within LASHP, only noting that "[t]he aerial clearance would allow the continued use of the park, with certain limitations." (DEIR, p. 2-52.) The DEIR fails not only to provide the necessary information to understand the volume of space used by the Project, but also to explain the specific limitations that might be imposed upon LASHP visitors as they use the park as a result of construction of the Project. GO14-34

The DEIR does explain that certain activities, such as kite flying, would not be possible in the vicinity of the Project, and that LASHP special event spaces would need to be altered to some degree from where they might otherwise be located to accommodate the Project. (DEIR, pp. 5-60 to 5-63.) But park uses in the vicinity of the Project area, and not solely beneath the area where gondolas would continuously cross through the park's airspace, would be profoundly and adversely impacted. The DEIR fails to describe the amount of parkland area at the western edge of LASHP that is cut off, "orphaned" from the rest of the park as a narrow remainder parcel sliver. It appears to be at least several tens of thousands of additional square feet when viewed from overhead. (See DEIR, Appx. Q, p. 4.) GO14-35

The DEIR describes approvals thought necessary from the California Department of Parks and Recreation on DEIR page 2-61:

> Approvals determined necessary by the California Department of Parks and Recreation for the Project could include, but not necessarily be limited to:
>
> a. Pursuant to Government Code section 14666, an easement and/or aerial easement, to construct and operate the Project within/over the Los Angeles State Historic Park.
>
> b. Pursuant to Public Resources Code section 5003.17, a lease or other agreement, to construct and operate the Project within/over the Los Angeles State Historic Park.
>
> c. Pursuant to Public Resources Code Section 5003 and Government Code Section 14666, a right of entry, to construct the Project within/over the Los Angeles State Historic Park.

GO14-36

d. Pursuant to Public Resources Code section 5002.2, an amendment to the Los Angeles State Historic Park General Plan.

cont'd GO14-36

As discussed in the following sections, these approvals cannot lawfully be made.

2. Legal framework

With "approval of the state agency concerned," Government Code section 14666 allows grant of an easement or right-of-way "across real property belong to the state…for those purposes as the [Director of General Services] deems are in the interest of the state." The state agency responsible for LA State Historic Park is our Department of Parks and Recreation ("DPR" or "Department"). (See Govt. Code, §§ 5001-5019.5.) DPR is the controlling authority for California state parks, which are "to be preserved and managed for the benefit and inspiration of all state residents and visitors to the state parks." (Pub. Res. Code, § 5001, subds. (a)(2), (b).) The DPR's Director "*shall* promote and regulate the use of the state park system *in a manner that conserves the scenery, natural and historic resources, and wildlife in the individual units of the system for the enjoyment of future generations*." (Pub. Res. Code, § 5001.2 (emphasis added).) Similarly, the Department "*shall* administer, protect, develop, and interpret the property under its jurisdiction *for the use and enjoyment of the public*." (Pub. Res. Code, § 5003 (emphasis added).)

The DPR is "authorized to provide means of ingress and egress" to provide access to the public. (Pub. Res. Code, § 5003.5.) And the Department has done so: one ingress/egress location is conveniently located approximately 300 feet from Metro's L Line (Gold Line) Chinatown Station, there are several gates located along Spring St. that may be opened when access is desired, and there are two vehicle entrances/exits. GO14-37

But the Department is expressly *limited* in allowing use of parkland to provide right-of-way access to *other* land. The mandatory inquiry requires the Department to consider whether the land to which access is requested already has "reasonable access." Only where reasonable access "does not exist or cannot be economically constructed outside the boundaries of the park" may DPR grant a permit for right-of-way access across state parkland. (*Ibid.*)[18]

[18] Public Resources Code section 5003.5 states, in its entirety:

The department is authorized to provide means of ingress to and egress from all state parks in order to provide ready access thereto by the public and to provide means of ingress and egress to highways and roads across state parks from lands separated from such highways and roads by state parks, and for that purpose may enter into contracts or agreements with cities, counties, and other political subdivisions of the State and with other state agencies or with persons, firms or corporations for the acquisition, construction, and maintenance of suitable roads, trails, and pathways.

When application is received by the department, other than under Section 5012, from any person, firm or corporation for right–of–way across a state park for ingress and egress to a highway or road from their lands separated from such highway or road by the state park, the department shall determine whether any reasonable access exists outside the boundaries of the park, or could be economically constructed.

The only reasonable interpretation of Public Resources Code section 5003.5 paragraph two is that access provided under the conditions of this section are intended for parcels that are *actually contiguous with* a state park, and cut off from a road or highway located on the far side of parkland. (Pub. Res. Code, § 5003.5, ¶ 2, describes an "application…for right–of–way across a state park for ingress and egress *to a highway or road from their lands separated from such highway or road by the state park*…" (emphasis added).)

cont'd GO14-37

The Department may also grant permits and easements to a *public agency* for public roads, for public bicycle and pedestrian trails, and for utility lines, or for "electric, gas, water, sewer, telephone, telegraph and utility lines, and pipelines and structures incidental thereto, to perform a public service or oil or gas pipelines." (Pub. Res. Code, § 5012, subds. (a)-(d).)[19] Before the DPR may lease land pursuant to Public Resources Code section 5003.17, the Director must make a finding "that the use would be compatible with the use of the real property as a unit or part of a unit and with the sound management and conservation of resources within the unit." (Pub. Res. Code, § 5001.65.)

GO14-38

Most important, and with few exceptions (all of which are inapplicable here), **"[c]ommercial exploitation of resources in units of the state park system is prohibited."** (Pub. Res. Code, § 5001.65.)[20]

3. Analysis

GO14-39

As discussed above and elsewhere, the proposed Project is *not* a public transportation project. (See discussion, *supra* pp. 8-12.) While the Project proposes that provision of new

---

FN GO14-37 Where reasonable access does not exist or cannot be economically constructed outside the boundaries of the park, the department shall grant a permit for right–of–way across the park over such route and subject to such conditions and construction and maintenance specifications as the department may determine which will cause minimum alteration to the physical features of the park and minimum interference with the use of the park by the public. The permittee shall at his own expense construct and maintain the means of ingress and egress in accordance with the terms and conditions set forth in the permit, noncompliance with which in any part shall be due cause for revocation of such permit. The department may require a permittee or permittees to allow the use of such means of ingress and egress by any other applicant whose lands are similarly situated. The department shall grant a permit for such use under terms and conditions imposed upon existing users, upon payment of a reasonable compensation for construction and maintenance of the road, by the applicant to the existing permittee, or permittees.

[19] Subdivisions (e) and (f) of Public Resources Code section 5012, which relate to the use of state parks for small craft harbors and recreation areas and oil and gas pipelines, are not relevant.

FN GO14-38 [20] In addition to the above statutory regime, which protects our state parkland from unlawful encroachment by those who would seek to use these valuable resources for personal and commercial gain, the Park Preservation Act (Pub. Res. Code, §§ 5400-5409) forbids a public entity's (whether city, county, city and county, etc.) acquisition of existing public parkland for nonpark purposes "unless the acquiring entity pays or transfers to the legislative body of the entity operating the park sufficient compensation or land, or both." (Pub. Res. Code, § 5401, subd. (a).) Applicability of the Park Preservaction Act will be analyzed separately below.

access to LA State Historic Park will be an important feature of the Project, the Park is already well-served by existing Metro service via the Gold Line Metro Station, which operates only a few hundred feet from where the Project's proposed Chinatown/State Park Station would be located. In addition, the DEIR provides information about local bus lines operating in the Project area, including near LASHP.

"The overall purpose of the proposed Project is to provide a direct transit connection between LAUS and the Dodger Stadium property…" (DEIR, p. 2-12.) The relevant legal question to determine whether the state parkland at LASHP may be made available for the purpose of providing access to Dodger Stadium is "whether any reasonable access exists outside the boundaries of the park, or could be economically constructed." (Pub. Res. Code, § 5003.5.)

There is but one answer possible: physical access to Dodger Stadium is plentiful.

Dodger Stadium is not made landlocked by its proximity to LA State Historic Park—it is not even immediately adjacent to LA State Historic Park. At its *nearest* point to the park Dodger Stadium is more than 1,500 feet distant. It is accessible by numerous roadways and entrances, and as the DEIR notes, on game days is already served by Metro's Dodger Stadium Express. (DEIR, p. ES-19.) Because there are already numerous entrances to Dodger Stadium, as a matter of law it must be found that "reasonable access exists outside the boundaries of [LA State Historic Park]."

LASHP is therefore *neither necessary nor available* to provide additional Dodger Stadium with additional access it does not need. The controlling Public Resources Code section provides no exception. Moreover, since access to Dodger Stadium already exists, no "alteration of the physical features of the park" or level of "interference with the use of the park by the public" can be justified. No part of LASHP is *necessary* to provide access to Dodger Stadium, and Public Resources Code section 5003.5 therefore *prohibits* use of the park by the Project.[21]

The DEIR states that a secondary Project purpose is to provide access to LASHP from Union Station and Dodger Stadium and local neighborhoods near Dodger Stadium. But the DPR has already provided for adequate access to LASHP. Metro's Gold Line Chinatown Station and several bus lines already provide convenient public transportation to the park, and many people arrive by bicycle or on foot. It is noteworthy that ARTT LLC approached Metro and the Department with its proposal. DPR did not ask for help increasing park access, because it has already provided adequate access.

Moreover, these alleged access enhancements are illusory and speculative. On days where there is no baseball game or other event at Dodger Stadium, the Project would operate at the discretion of the operator, not on a regular schedule. As the DEIR notes, service would vary, "based on demand." (DEIR, p. 2-42.) If demand is insufficient, nothing guarantees that the Project will operate. Likewise, travel *to* the Park from Dodger Stadium station for neighborhoods

cont'd GO14-39

GO14-40

GO14-41

FN GO14-40

[21] It makes no difference under Public Resources Code section 5003.5 whether access being sought is ground-based or aerial. The statute makes no distinction between provision of ground or aerial access.

near Dodger Stadium is subject to private approval and is completely speculative. (DEIR, p. ES-10: "The Project Sponsor *will request consideration* by the Los Angeles Dodgers *of the potential* for the Dodger Stadium Station to include a mobility hub where outside of game day periods, passengers would be able to access a suite of first and last mile multi-modal options, such as a bike share program and individual bike lockers, to access Elysian Park and other nearby neighborhoods, including Solano Canyon.")

cont'd GO14-41

Further, the DEIR analysis of neighborhood ridership is deeply flawed. First, as noted above it relies on the speculative availability of Dodger Stadium Station, and then arbitrarily doubles the size of the surveyed ridership area around the stadium from a half-mile walking distance to an entire mile, assuming that the same number of people who might walk half a mile would also ride bicycles up to a mile. (DEIR, p. 3.17-25.) Second, the DEIR does not analyze, or even discuss, the hilly topography of the neighborhoods surrounding Dodger Stadium that would allegedly be served by a new mobility hub, assuming it is ever built. There seems to have been no survey of potential Dodger mobility hub users to determine whether they either would walk or ride to a hub facility. Third, the park user ridership analysis assumes, without evidentiary support, that 10% of existing Gold Line users to the park would instead use the gondola, assuming there is enough demand that it is running at the time. (*Ibid.*)

GO14-42

Finally, Public Resources Code section 5012 is not applicable to the Project with respect to the Project's proposed use of LASHP. No public agency is requesting access for the purpose of providing roads, public bicycle or pedestrian trails, or utility lines. No request is being made for "electric, gas, water, sewer, telephone, telegraph" or other utility lines. No public or private entity is requesting use of the park for oil or gas pipelines.

The Project request is for access as a *private* transportation project to serve a commercial sports and entertainment venue with existing substantial access, including convenient access by *public* transportation (Dodger Stadium Express). While the DEIR suggests the Project would be nominally open to the public when it is operating, on Dodger game days or for special events at Dodger Stadium, Dodger ticket holders (and presumably special event patrons) would have priority access to gondola use. (DEIR, p. 3.17-25.)

GO14-43

As explained above, the Project is not public transportation. It is better described as a "courtesy shuttle service for patrons of one or more specific establishments" (see 42 U.S.C., § 5302 subd. (B)). In other words, the DEIR description of the Project as open to the public (except when it isn't) doesn't change that the gondola is a *commercial* private transit enterprise to benefit Dodger Stadium and whatever future development might one day be built there. "Commercial exploitation of resources in units of the state park system is prohibited." (Pub. Res. Code, § 5001.65 (emphasis added).)

4. Conclusion

Based on the above, LA Parks Alliance *strongly* objects to *any* use of LASHP for the Project's private commercial use. Construction and operation of the Project within LA State Historic Park would plainly violate state law that protects units of state park system from

GO14-44

commercial exploitation. Nor is there any exception within the relevant statutes that allows for the Director and Department to agree to unlawful commercial exploitation of LA State Historic Park to take advantage of proposed desirable Project features (for example, a mid-park bridge across the Gold Line rail to Broadway, an enhanced concession area, a mobility hub). Should the Director and Department do so, they would violate the fundamental duties set forth in Public Resources Code sections 5001, 5001.2, 5001.65, 5003, 5003.5, 5003.17, and other statutes.

The Department ***must*** manage state park units "for the benefit and inspiration of all state residents and visitors to the state parks," and the Director must conserve "the scenery, natural and historic resources, and wildlife in the individual units of the system for the enjoyment of future generations." (Pub. Res. Code, § 5001, subd. (a)(2), and § 5001.2.) **Commercial use of the state parks is prohibited.** (Pub. Res. Code, § 5001.65.)

The proposed Project may not lawfully use *any* part of LA State Historic Park for access to Dodger Stadium, including its airspace.

cont'd GO14-44

E. The Public Park Preservation Act and Other Relevant Statutes Prohibit Use of LA State Historic Park for Non-Park Uses.

Public comments submitted during the scoping comment period show that many community members object to use of public parkland for the private commercial gondola project. A representative sample included in DEIR Appendix A follows:

- Email comment of Julie Rico, Nov. 7, 2020: I am concerned about the potential negative impacts of the proposed Los Angeles Aerial Rapid Transit project on Los Angeles State Historic Park which we view as the greatest threat to Northeast Los Angeles open space in over 20 years.
- Comment of Tom Norris, Nov. 12, 2020: "Los Angeles State Historic Park (LASHP) is a unique public open space with historical significance and strong community ownership… This is a park space that is used often by family and friends, especially now when meeting outdoors in open spaces is the only safe option during this Covid health crisis. We do not want to give our public lands over to the McCourt family!"
- Email comment of Phyllis Ling, Nov. 16, 2020: "[T]his gondola would cut through the middle of the Los Angeles State Historic Park. This project would be at the expense of the Chinatown Community, who fought hard for this open space, rather than see it turned into an industrial office park. After it was dedicated as park land, the community waited many more years for construction to be completed. And now, just as we are beginning to enjoy this open space, a private company wants to cut through the heart of the park with this massive monstrosity. This is offensive, especially as the City is making efforts to advance social equity. This public resource in a low income community must not be sacrificed to a private company for private gain."

GO14-45

- Comment of Jeff Pawling, Nov. 17, 2020: "Personally, I oppose this gondola system being constructed over the Los Angeles State Historic Park. If Frank McCourt couldn't deliver a World Series to LA, why would we deliver him a tram over a beloved and beautiful park? This EIR needs to address the exact route the proposed gondola would take over the park and how it would affect the park as a whole both during and after construction. There are simply other efficient modes of transportation that can be utilized to transport people to and from Dodger Stadium that do not involve a gondola."
- Comment of Philip Lee, Nov. 17, 2020, who requests: "Full transparency on the rapid transit and how it affects public lands. McCourt should not be given any public land."
- Letter comment of Los Angeles River State Park Partners, Nov. 10, 2020, p. 2: "Los Angeles State Historic Park is now a gem among the State Parks in the Los Angeles area and a national model for urban parks. But the State's major investment that made LASHP possible may be at risk if private interests are allowed to spoil the public good represented by the park."

cont'd GO14-45

In addition to the express limitations of Government Code sections 5001 through 5019.5 discussed above, the California Public Park Preservation Act and other statutes detail additional limitations on the use of California parkland resources, and in particular on state park historical units. Our legislature has enacted strict limitations on how California parklands may be used, whether by public agencies or by private actors who would exploit these precious resources.

GO14-46

The loss of any parkland for the benefit of the Project constitutes a significant and unavoidable environmental impact, requiring denial of the Project or selection of a feasible alternative. (Pub. Res. Code, § 21002: "The Legislature finds and declares that it is the policy of the state that public agencies should not approve projects as proposed if there are feasible alternatives…")

1. **The Public Park Preservation Act does not authorize acquisition of public parks, including LA State Historic Park, for use by the Project.**

The Public Park Preservation Act of 1971 ("Park Preservation Act" or "Act") (Public Resources Code sections 5400–5409) forbids the acquisition of land by a public agency if the land to be acquired is already in use as a public park at the time of acquisition, "unless the acquiring entity pays or transfers to the legislative body of the entity operating the park sufficient compensation or land, or both…" (Pub. Res. Code, § 5401(a).) While the Park Preservation Act nominally restricts only public agencies, that does not mean such acquisitions are permitted by private entities or actors (since other generally applicable Public Resource Code sections already restrict these actions — see Part. I(D), *supra* pp. 12-18). The Park Preservation Act thus provides no alternative vehicle for Metro (or ARTT LLC or any other entity) to acquire any portion of LA State Historic Park for the benefit of the proposed Project.

GO14-47

Although it is clearly not possible for ARTT LLC to acquire any portion of LA State Historic Park for the Project pursuant to the Park Preservation Act, it is nonetheless appropriate to briefly review the Act to illustrate the nature of limitations that would be imposed on public agencies were such an agency inclined to attempt use of the Act's procedures to assist the Project proponent. The DEIR is incomplete in not including this important background information to assist decisionmakers and members of the public in understanding that even a state agency could not acquire this land for the benefit of the Project.

cont'd GO14-47

As noted above, the basic premise of the Park Preservation Act is explained in Public Resources Code section 5401, subdivision (a), which states in its entirety:

> No city, city and county, county, public district, or agency of the state, including any division, department or agency of the state government, or public utility, shall acquire (by purchase, exchange, condemnation, or otherwise) any real property, which property is in use as a public park at the time of such acquisition, for the purpose of utilizing such property for any nonpark purpose, unless the acquiring entity pays or transfers to the legislative body of the entity operating the park sufficient compensation or land, or both, as required by the provisions of this chapter to enable the operating entity to replace the park land and the facilities thereon.

GO14-48

Stated differently, the Parks Preservation Act allows a California public agency (but not a private entity or actor) to acquire existing parkland and use it for a non-park purpose, so long as the "acquiring entity pays or transfers" "sufficient compensation or land, or both," to the public agency that operates the existing parkland. But this general premise operates within very strictly defined limitations, as explained in subsequent sections of the Act.

Initially, it is important to note that none of the express exceptions of the Act apply to transportation infrastructure, whether private or public. The first exception relates to "the construction or maintenance of underground utility services." (Pub. Res. Code, § 5402.) The second exception is for a public utility (public or private) acquiring land to provide services to the park and where the services cannot feasibly be located underground. (Pub. Res. Code, § 5403.) The third exception relates to a public utility (public or private) acquiring an interest in a waterway. (Pub. Res. Code, § 5403.5.)

Since no exception applies, a public agency might acquire land at LA State Historic Park, but only if it first provided the *cost* of substitute park land, *actual* substitute park land, or some combination of the two. But "cost of acquiring substitute park land" means providing sufficient payment to cover:

GO14-49

> [L]and of comparable characteristics and of substantially equal size located in an area which would allow for use of the substitute park land and facilities by generally the same persons who used the existing park land and facilities, and the cost of acquiring substitute facilities of the same type and number, plus the cost of

> development of such substitute park land, including the placing of such substitute facilities thereon.
> (Pub. Res. Code, § 5405, subd. (a).)

Likewise, "substitute park land" provided by the acquiring agency means:

> [Land] of comparable characteristics and of substantially equal size located in an area which would allow for use of the substitute park land by generally the same persons who used the existing park land, and the cost of acquiring substitute facilities of the same type and number, plus the cost of development of such substitute park land, including the placing of such substitute facilities thereon.
> (Pub. Res. Code, § 5405, subd. (b).)[22]

The proposed Project cannot utilize the Park Preservation Act because no public agency seeks to be the "acquiring entity" of LA State Historic Park land on its behalf. The DEIR nonetheless fails as an informational document because it evaluates neither the availability nor cost of substitute park land to adequately compensate the people of California for use of public parkland that has been set aside and held in trust for their benefit. See California Public Resources Code, section 5019.91, subdivision (b): cont'd GO14-49

> **The mission of the California State Park system** is to provide for the health, inspiration, and education of the people of California by helping to preserve the state's extraordinary biological diversity, protecting its most valued natural and cultural resources, and creating opportunities for high-quality outdoor recreation. **State parks are set aside** to protect their natural, historical, cultural, and recreational values **in perpetuity for the people of the state.**
> (Emphasis added.)

The Park Preservation Act also allows for improvement of unacquired park land in lieu of acquiring substitute park land. (Pub. Res. Code, § 5404.) However, that alternative would still require the acquiring agency to account for and pay the entire cost in land or compensation as described in Public Resources Code section 5405. Moreover, it would only be possible where the land to be acquired is "less than 10 percent of the park land, but not more than one acre." (*Ibid.*) Here, the footprint of the proposed Project's Chinatown/State Park Station is "2,195 square feet in the park, and the station canopy would have an overhang of 9,320 square feet over the park." (DEIR, p. 3.11-38.) This is both less than ten percent of the 32-acre park and less than an acre. But it does not account for the massive use of airspace required for the Project (almost 60,000 square feet as seen from an overhead view, a number which does not include the vague "Additional Separation Buffer"). (DEIR, p. 2-52.) The Project would therefore utilize well over an acre of LA State Historic Park land, and the "in lieu" alternative would not be available to a public agency desiring to acquire the land for a non-park purpose. (As discussed, a private entity cannot take the land at all.) GO14-50

FN GO14-49 [22] Any combination of exchange of substitute park land and payment to allow acquisition of new substitute park land must meet the same standard. (Pub. Res. Code, § 5405, subd. (c).)

The informational value of the Park Preservation Act is to assist the public in understanding underlying limitations on the use of public parkland. Only an absolutely absurd interpretation of the statutes describing the fundamental duties, powers, and authorities of the Department of Parks and Recreation and the Director of Parks could lead one to conclude that even though no public agency can use public parkland without adequately compensating the people of California for land held *in perpetuity*, that the Director and Department could quietly negotiate with a private actor to allow acquisition or exchange of parkland for non-park use for only minor improvements without considering the cost and availability of "substitute park land" or calculating and obtaining that value.[23]

cont'd GO14-50

To be clear, the Public Park Preservation Act is not applicable to the Project. It does, however, inform the propriety of a monetary or land exchange, if one were possible, or the offer of public benefits such as park improvements in exchange for use of public parkland. It provides at least one basis to consider the amount of compensation necessary to justify a private taking of land meant to be held in perpetuity by and for the people of California, assuming such a taking is permissible, which it is not. The DEIR fails as an informational document for failing to provide this information. The DEIR acknowledges that LA State Historic Park serves "a region that has been historically limited in terms of access to parkland" (DEIR, p. 2-9), but it does not include the information necessary to allow members of the public and decisionmakers to understand the profound impacts the significant loss of public parkland at LA State Historic Park would have.[24]

2. **Public Resources Code section 5019.59 prohibits use of LA State Historic Park for the Project.**

There are also several Public Resources Code sections specifically relevant to the proposed Project because of its proposed use of LA State Historic Park. For example, Public Resources Code section 5019.50 requires that "[a]ll units that are…a part of the state park system…shall be classified by the State Park and Recreation Commission into one of the categories specified in [Article 1.7 of Chapter 1 of the Public Resources Code]." LA State Historic Park, as its name suggests, is classified as a "historical unit." (Pub. Res. Code, § 5019.59; see DEIR, pp. 3.11-1 to 3.11-2, 3.11-38.)

GO14-51

Historical units of the state park system are expressly limited in the type and nature of development allowed within the unit. As the DEIR notes, the primary purpose of historical units

[23] As discussed, this is "land of comparable characteristics and of substantially equal size located in an area which would allow for use of the substitute park land by generally the same persons who used the existing park land, and the cost of acquiring substitute facilities of the same type and number, plus the cost of development of such substitute park land, including the placing of such substitute facilities thereon." (Pub. Res. Code, § 5405, subd. (b).) LA Parks Alliance does not believe such land exists.

FN GO14-50

[24] While the discussion in this section is focused on the significant adverse impact and the DEIR's lack of useful information with respect to compensation for loss of land at LA State Historic Park, LA Parks Alliance notes that it is equally applicable to El Pueblo de Los Angeles Historical Monument. See also discussion re Land Use and Planning conflicts, *infra* pp. 73-75.

is "to preserve objects of historical, archaeological, and scientific interest, and archaeological sites and places commemorating important persons or historic events." (Pub. Res. Code, § 5019.59; DEIR, p. 3.11-38.) Under state law, development is therefore dramatically limited:

> The *only facilities that may be provided* are those *required* for the safety, comfort, and enjoyment of the visitors, such as access, parking, water, sanitation, interpretation, and picnicking. Upon approval by the commission, lands outside the primary historic zone may be selected or acquired, developed, or operated to provide camping facilities within appropriate historical units. Upon approval by the State Park and Recreation Commission, an area outside the primary historic zone may be designated as a recreation zone to provide limited recreational opportunities that will supplement the public's enjoyment of the unit. Certain agricultural, mercantile, or other commercial activities may be permitted if those activities are a part of the history of the individual unit and any developments retain or restore historical authenticity.
> (Pub. Res. Code, § 5019.59 (emphasis added).)

cont'd GO14-51

The DEIR notes that the Project conflicts with the Park's General Plan, which does not permit the Project. It provides a conclusory rationale that the park's General Plan may be revised to allow for "transit," and argues that if the General Plan is so revised the Project will then be consistent with LA State Historic Park's General Plan *and with* Public Resources Code section 5019.59, "which permits facilities for the comfort and enjoyment of the visitors, such as access." (DEIR, p. 3.11-42.) But the DEIR's analysis of Public Resources Code section 5019.59 is grossly incomplete, suggesting that so long as proposed development is within the list of items (access, parking, water, sanitation, interpretation, or picnicking) there is no further analysis necessary. But of course there is.

The plain text of the statute does not permit any and all development that might be made "for the comfort and enjoyment" of park visitors. Public Resources Code section 5019.59 uses the word "required" to modify and limit the type and amount of development at a state park historical unit. As already discussed, the Park has plentiful access via several entrances, and is already served by existing Metro train service and numerous bus lines. Further development to provide additional access is not *required*. Nothing in the DEIR provides substantial evidence to support a contrary conclusion.

GO14-52

Further, and as already discussed, on days where no baseball game or event is held at Dodger Stadium, the Project would operate at the discretion of the operator, not on a regular schedule. Service would vary "based on demand." (DEIR, p. 2-42.) Nothing guarantees the Project will operate daily to provide Park access. Travel to the Park from Dodger Stadium station for neighborhoods near Dodger Stadium is subject to private approval and thus completely speculative. (DEIR, p. ES-10.) And on Dodger game or stadium event days, use of the Project to get to the Park would be secondary to ticket holders' preferred use. (DEIR, p. 3.17-25.)

Appendix N's meager analysis of ridership for users of LA State Historic Park is incomplete and entirely speculative. The DEIR provides no discussion of *daily* ridership use for

LASHP, whether from the Project's Union Station terminus or Dodger Stadium terminus. (DEIR, Appx. N Ridership Model, pp. 13-14, 15-16.) It only analyzes ridership to special events at the Park. Even then, the Fehr & Peers Ridership Model Development report acknowledges that it is entirely based on guesswork. "No data are available for mode share of attendees travelling to events at the Park. For the purposes of this analysis, Fehr & Peers assumed a 10% mode split for attendees taking transit from Union Station." (*Ibid*., p. 13.)

Thus, the DEIR *assumes* with *no apparent basis or supporting data* that on special event days as many as 10% of park visitors traveling from LA Union Station to the Park would instead use the Project for access. (DEIR, p. 3.17-26.) Put another way, the DEIR acknowledges that 90% of park special event riders from Union Station would arrive some other way than the Project. If not for the Project siphoning off a small percentage of park visitors, 100% would have little difficulty in arriving via existing alternatives. Even assuming the 10% assumption were true, and no substantial evidence supports it, how does the DEIR's best case assumption concluding that 90% of visitors arriving from Union Station by means other than the Project support a conclusion that it provides *required* access? This is the only relevant question for development of historical unit under Public Resources Code section 5019.59.

cont'd GO14-52

Likewise, discussion of neighborhood ridership does not describe in any detail the number of people who would use the Project to travel from the Dodger Stadium terminus and depart at the Chinatown/State Park Station, assuming the Project even runs on non-Dodger game or event days. Using information provided in the DEIR it is impossible to conclude that a significant number of LA State Historic Park users would arrive via the Project. The analysis does not distinguish between those who depart the Project at Chinatown/State Park Station to go to the Park as opposed to other destinations. (DEIR, Appx. N Ridership Model, p. 21.) There is no substantial evidence to show the Project is *required* to provide access to LA State Historic Park, the mandatory finding required by Public Resources Code section 5019.59.

An additional limitation of Public Resources Code section 5019.59 restricts commercial activities. The project is *not* a public transportation project. It will be privately built and operated to transport ticket holders to Dodger Stadium for baseball games and private events, a commercial activity. Commercial activities are only permitted at historic units of the state park system when they "are a part of the history of the individual unit and any developments retain or restore historical authenticity." (Pub. Res. Code, § 5019.59.) Obviously, the Project has nothing to do with the historic identity of LA State Historic Park. Since the DEIR does not provide sufficient evidence to show that the Project is *required* to provide access to LA State Historic Park, it must be considered a prohibited commercial activity.

GO14-53

The Department of Parks and Recreation has jurisdiction over LA State Historic Park and may amend its General Plan to permit lawful activities, but it does not have the abililty to modify the General Plan to allow *commercial* activities in violation of Public Resources Code section 5019.59. (See Pub. Res. Code, § 5001.65: "Commercial exploitation of resources in units of the state park system is prohibited." And see Pub. Res. Code, § 5009.53: "Improvements [to state park units] that do not directly enhance the public's enjoyment of the natural, scenic, cultural, or ecological values of the resource, *which are attractions in themselves*, or which are otherwise

available to the public within a reasonable distance outside the park, *shall not be undertaken within state parks.*" (Emphasis added.))

cont'd GO14-53

The Department simply cannot modify the General Plan for the benefit of the Project.

The DEIR fails to identify the significant and unavoidable land use conflict between the Project and Public Resources Code section 5019.59. No Project alternative including an alignment on or over LA State Historic Park can be built, because the Department of Parks and Recreation may not approve a facility that is not *required* for access and may not approve commercial activity with no historic connection to a historical unit of the state park system.

GO14-54

F. Project Approval Would Pre-Commit the Future Discretion of State and Local Officials, in Conflict with the California Constitution and State and Local Law.

Proposed Project approvals with the City include a development agreement and franchise agreement. (DEIR, pp. 2-61 to 62.) Approvals for the use of airspace over LA State Historic Park, which are not lawfully available to the Project, would require an amendment to the park's general plan and an easement and/or aerial easement pursuant to Govt. Code section 14666 and a lease or other agreement under Public Resources Code section 5003.17 to allow construction and operation on and over the park. (*Ibid.* at p. 2-61.)

A development agreement with the City of Los Angeles would be limited to 20 years. (*Ibid.*) A franchise agreement with the City is limited to 21 years. (Los Angeles City Charter, § 390, subd. (c).)

Franchises of up to 40 years may be granted "for the construction and operation of subways, elevated railways and grade separated railways." (LA City Charter, § 390(c).) The Project is none of these and so is limited to a maximum length of 21 years. LA Parks Alliance notes that, unlike the secretive sole source contract awarded to ARTT LLC, before the City may grant *any* franchise, the City Council *must* "advertise its intention to grant the Franchise and shall award the Franchise to the highest responsible and responsive bidder after competitive bidding, in accordance with the procedures prescribed by ordinance governing the granting of Franchises." (*Ibid.*, subd. (b).)

GO14-55

Even if the Project could lawfully obtain the necessary approvals to operate on and over LA State Historic Park, and it cannot, agreements made with the Department of Parks and Recreation may not exceed *10* years, unless a future "Joint Legislative Budget Committee" agrees with the Department's extension of the agreement (Pub. Res. Code, § 5003.17, subd. (d)(2).) Project approvals made now would therefore tie the hands of future City and state elected officials, precluding them from exercising their complete authority and discretion to choose not to renew the development agreement, franchise agreement, and lease or other agreements necessary for the project to move forward.

Given the express limitations of the public resources code to limit agreements for the use of state park resources to no more than 10 years, with extensions beyond that time made under

the sole authority of a *future* joint legislative budget committee based on documentation to be provided by a *future* Director, it would be highly improper for the Department of Parks and Recreation to enter into an agreement to construct private infrastructure that would nullify the discretion of a future Director and future members of the joint legislative budget committee. Initial approval of such a lease agreement by the current Department and Director, part of the *executive* branch of our state government, even assuming it is lawful in the first instance which it is not, would pre-commit the future discretion of *elected* legislators by creating a status quo that would be impossible to undo. The pre-commitment necessary to approve the Project for a term longer than the legislature has permitted violates basic separation of powers principles under the California Constitution and hamstrings the discretion of future elected officials from disapproving the continuation of the Project.[25]

cont'd GO14-55

The DEIR fails to adequately describe or engage with any of the above limitations and therefore fails as an informational document.

G. The DEIR Engages in Improper Project Piecemealing by Failing to Consider or Analyze Foreseeable Development of Land Around Dodger Stadium.

1. Legal background

The California Environmental Quality Act's definition of "project" contains one of the fundamental black letter law concepts of California environmental law: "'*Project*' *means the whole of an action*, which has a potential for resulting in either a direct physical change in the environment, or a *reasonably foreseeable indirect physical change in the environment*." (CEQA Guidelines, § 15378 (emphasis added).) "'*Project*' is given a *broad interpretation* … to maximize protection of the environment." (*Riverwatch* v. *Olivenhain Mun. Water Dist.* (2009) 170 Cal.App.4th 1186, 1203 (emphasis added.) Project descriptions must accurately reflect the whole of the action considered. (*McQueen v Board of Dirs*. (1988) 202 Cal.App.3d 1136, 1144.)

GO14-56

It is improper to divide a single CEQA "project" into smaller sub-projects to evade review of the entire scope of project impacts, a practice known as "piecemealing." "CEQA 'cannot be avoided by chopping up proposed projects into bite-sized pieces' which, individually considered, might be found to have no significant effect on the environment." (*Tuolumne County Citizens for Responsible Growth, Inc. v. City of Sonora* (2007) 155 Cal.App.4th 1214, 1223.) Our courts prohibit piecemeal review, in part, to protect public participation in the decisionmaking process, requiring that members of the public and decisionmakers are adequately informed "of the environmental consequences of decisions *before* they are made. (*Berkeley Keep Jets Over the Bay Com*. *v*. *Board of Port Cmrs*. (2001) 91 Cal.App.4th 1344, 1356 [emphasis in original].)

---

[25] See Cal. Const., art. III, § 3: "The powers of state government are legislative, executive, and judicial. Persons charged with the exercise of one power may not exercise either of the others except as permitted by this Constitution." "The purpose of the [separation of powers] doctrine is to prevent one branch of government from exercising the *complete* power constitutionally vested in another…" (*Younger v. Superior Court* (1978) 21 Cal.3d 102, 117.)

FN GO14-55

In considering whether an EIR is legally adequate, courts look "not for perfection but for adequacy, completeness, and *a good faith effort at full disclosure*." (*California Oak Foundation v. Regents of University of California* (2010) 188 Cal.App.4th 227, 262, quoting CEQA Guidelines, § 15151 (emphasis added); see DEIR, p. ES-2.) However, "the fact that a particular development which now appears reasonably foreseeable may, in fact, never occur does not release it from the EIR process. [Citation.] Similarly, the fact that future development may take several forms does not excuse environmental review." (*City of Antioch v. City Council* (1986) 187 Cal.App.3d 1325, 1338.)

cont'd GO14-56

2. Piecemealing concerns were raised in scoping comments; the DEIR ignored the comments and evidence of foreseeable development.

Future development of Dodger Stadium parking lots represents a "foreseeable indirect physical change in the environment" due to the proposed Project that must be considered in the environmental review process. A significant number of comments received during the Project's scoping process raised concerns regarding foreseeable future development of land around Dodger Stadium that is currently used for parking.

For example, one scoping commenter questioned the purpose of the Project's intermediate stop (the Chinatown/State Park Station), "[u]nless someone is planning to build a mall or entertainment complex in the area — perhaps in the freed-up Dodger parking lots? — then the additional stop is a waste of resources that will damage the biological and social environment. Are such plans afoot?"[26] Another wondered, "[w]hat are the plans to develop the Dodoger [sic] Stadium parking lot? Will the LA ART be used year-round? Doubt this expensive system is being created just for Dodger games."[27] Chinatown stakeholder King Cheung expressed suspicion of the Project: "Why spend $125 millions to build a gondola just to transport people to the Dodgers games? Mc Court [sic] does not own the Dodgers anymore. So it is an expense venture. What does he gain? What is his future goal? Build a downtown Disney type of entertainment center on the empty parking lots?"[28]

GO14-57

In a joint letter from The California Endowment and Homeboy Industries to then-Metro CEO Phillip A. Washington and then-Los Angeles Mayor and Metro Board Chair Eric Garcetti asked simply, leaders of these vital local nonprofits asked simply: **"What is the proposed future use of the vacant parking lots at Dodger Stadium caused by the Project?"[29]**

[27] Patricia Perez, LA ART Virtual Scoping Meeting comment, Oct. 22, 2020, DEIR, Appx. A, pdf. p. 502.

[28] King Cheung, scoping comment email to laart@metro.net, Nov. 16, 2020, DEIR, Appx. A, pdf. p. 177.

[29] Dr. Robert. K. Ross, MD (The California Endowment) & Father Gregory Boyle, S.J. (Homeboy Industries), joint comment letter to Phillip A. Washington re NOP comments for LA ART Project, Nov. 16, 2020, p. 12. This letter is already part of the administrative record for the proposed Project.

The question of future Dodger Stadium development was also important to Metro at one point—enough so that in asking for information about ARTT LLC's business plan for the project, Metro explained ARTT LLC should "outline the following: … Future plans at Dodger Stadium site." (Los Angeles Aerial Rapid Transit, Response to Metro Request for Information, Sept. 2018, pp. 12-13.)[30] Just as the DEIR fails to address scoping comment concerns about development at Dodger Stadium, ARTT LLC's response interprets the question narrowly: "The only plan for Dodger Stadium related to the ART is to provide a station on the Dodger Stadium property, together with appropriate pedestrian connections from the station to the stadium." (*Ibid*., p. 13.) The DEIR makes no mention of potential development plans at Dodger Stadium, despite widespread media attention on such plans locally for well over a decade, so ARTT LLC's strategy of interpreting the broad question narrowly seems to have worked. But it has not worked with community members who demand more information.

ARTT LLC's narrow interpretation of Metro's request for information makes no sense. Metro already knew from the basic premise of the Project that it would include a gondola station at or near LA Union Station and at Dodger Stadium. A reasonable interpretation of Metro's question could thus only have been to ask about *other* development, in *addition* to the Project's Dodger Stadium Station. Allowing ARTT LLC, owned by McCourt Global, to evade such a fundamental question is either naïve or disingenuous on Metro's part. But even if Metro believes there are no future development plans, as lead agency under CEQA it has an independent duty to consider foreseeable indirect physical changes to the environment due to the Project. GO14-58

Perhaps Metro didn't consider Dodger Stadium parking lot development foreseeable. This is far-fetched, but not impossible.

But this is why CEQA has a scoping comment process, so community members and responsible and trustee agencies can raise their own questions and concerns, including consideration of potential indirect physical changes in the environment the lead agency may have inadvertently overlooked. (See CEQA Guidelines, § 15083.) If Metro thought Dodger Stadium development was not a reasonably foreseeable indirect change in the environment before scoping, after receiving so many scoping comments they could no longer ignore it. Yet they did.

A review of scoping comments is informative.

Commenter Susan Karat MacAdams cited a story published by the Los Angeles Times in 2012, in which Times' writer Bill Shaikin described land-use documents associated with the sale of the Los Angeles Dodgers from Frank McCourt to current-owner Guggenheim Baseball.[31]

---

[30] This document should be in the administrative record of the case, but is also attached as **Exhibit H**.

[31] See DEIR, Appx. A, Susan Karat MacAdams letter to Cory Zelmer, Nov. 16, 2020, p. 2, citing and quoting Bill Shaikin, *Dodgers' owners to pay $14 million a year to rent parking lots from McCourt entity*, LA Times, May 4, 2012, available at https://www.latimes.com/sports/la-xpm-2012-may-04-la-sp-0505-dodgers-land-20120505-story.html. The Shaikin article is attached as part of **Exhibit I**.

MacAdams' letter quotes portions of the article highly relevant to foreseeable future development at the Dodger Stadium parking lots:

> The Dodgers' new owners will pay $14 million per year to rent the parking lots from an entity half-owned by Frank McCourt, according to **land-use documents intended to "facilitate the orderly development" of the property surrounding Dodger Stadium.** [¶] The **potential uses for the property include shops and restaurants, homes and offices, and another sports venue, according to documents obtained Friday by The Times**. The **documents also discuss** the **possibility of parking structures on the land**….**citing as examples the restaurants and clubs surrounding AT&T Park in San Francisco and Petco Park in San Diego**.
> (*Ibid*., emphasis added.)

cont'd GO14-58

Shaikin's article reports that the land-use documents were withdrawn from the Dodgers' bankruptcy proceedings after an attorney for the Times objected to the documents having been filed under seal. They were filed with the Los Angeles County Recorder's office shortly thereafter when McCourt's sale of the Dodgers to Guggenheim Baseball was made final. (Shaikin, *supra* fn. 31.)

A document entitled "Declaration of Covenants, Conditions, Restrictions and Easements for Chavez Ravine" (hereinafter "Chavez Ravine CC&Rs") is clearly one of the documents referenced in the Shaikin article, as it was executed on April 27, 2012, and recorded May 1, 2012, several days before the Shaikin article was published.[32] As accurately reported by the Los Angeles Times, the agreement is intended, in part, to "*facilitate the orderly development*" of the Dodger Stadium parking lots (then owned by an entity named "Blue Landco LLC"). (Chavez Ravine CC&Rs, pp. 1-2 (emphasis added).) As Shaikin reported, Blue Landco LLC was co-owned by former Dodger owner McCourt and "an entity affiliated with the new team owners."[33] The agreement contemplates that Landco would gain control of the Dodger Stadium parking lot areas upon construction of parking structures, which would free up space in the parking lot areas to allow for development to occur. (Chavez Ravine CC&Rs, p. 2.) The agreement requires efforts to reduce the amount of parking utilized by Dodger Stadium patrons, including by developing what the agreement refers to as "Mass Transportation." (*Ibid*., pp. 26-27.) This would allow the required number of vehicle spaces to be reduced first from 19,000 to 16,500 (*ibid*., p. 11), and with approval of the City of Los Angeles, to below 16,500. (*Ibid*., pp. 11, 26-27.)

GO14-59

[32] Declaration of Covenants, Conditions, Restrictions and Easements for Chavez Ravine, recorded May 1, 2012, is attached as **Exhibit J**.

[33] Shaikin, *supra* note 31. While details regarding stadium and parking lot ownership are interesting, and to some degree relevant as the Project proponent is owned or controlled by McCourt, the *primary relevance* of the agreement in the CEQA analytic context is the *foreseeability of future development* of Dodger Stadium parking lots, not development of them by any particular individual or entity.

Article IV, subdivision 4.1 of the agreement lays out Blue Landco LLC's rights to pursue development of substantial commercial, residential, medical, academic, and other structures and facilities:

> The Parties acknowledge that Landco, in the future, may apply for governmental approvals for future development on the Landco Parcels (the "**Development**"), which Development may include, but shall not be limited to, (i) office buildings, (ii) hotel and exhibition facilities, (iii) residential buildings, (iv) medical buildings, (v) academic buildings, (vi) parking structures, and/or (vii) retail, dining and entertainment facilities.
> (*Ibid*., p. 25.)

cont'd
GO14-59

The Shaikin article relates substantial evidence that future development of Dodger Stadium due to the Project is not only foreseeable, but likely. This substantial evidence, without more, is sufficient to show that development of the Dodger Stadium parking lots is a "reasonably foreseeable indirect physical change in the environment" due to the Project. (See CEQA Guidelines, § 15378.) The available evidence shows such development is not only foreseeable but has actually been foreseen and planned for by former Dodger owner Mr. McCourt (who coincidentally owns or controls the Project proponent, ARTT LLC). Metro's apparent failure to already have investigated, analyzed, and discussed the obviously foreseeable indirect physical change in the environment and its potentially significant environmental effects through the Project DEIR after receiving queries from many scoping commenters is unacceptable.

Moreover, there is far more evidence showing that Dodger Stadium development is foreseeable, much of it (including the already-cited 2012 Bill Shaikin article) publicly known and reported on in local and national media for well over a decade, including reporting on former Dodger owner McCourt's earlier development plans:[34]

- Bill Shaikin and David Zahniser, *Dodgers to add shops, a museum, and garages*, LA Times, Apr. 24, 2008, available at: https://www.latimes.com/archives/la-xpm-2008-apr-24-sp-dodrep24-story.html (describing a letter sent to Dodger season ticket holders regarding a plan "to transform at least part of the parking lot into an area offering dining and shopping for fans who arrive early and stay late, avoiding pregame and postgame traffic").
- Dakota Smith, *New Dodgers Stadium Reveal: We Got Trees!*, Curbed Los Angeles, Apr. 24, 2008, available at: https://la.curbed.com/2008/4/24/10572290/dodger-stadium-2 (describing a press release from former Dodger owner Frank McCourt and noting Dodger Stadium would be "a place to visit year-round to shop, dine and play").
- Dylan Hernandez and Bill Shaikin, *Stadium makeover is unveiled*, LA Times, Apr. 25, 2008, available at: https://www.latimes.com/archives/la-xpm-2008-apr-

GO14-60

[34] The cited articles, as well as select images from the "On deck: Dodger Stadium Renovations (photo slideshow)", are attached as **Exhibit I**.

25-sp-stadium25-story.html (describing the same $500M project, which would occupy "about 15 acres of parking, or about 2,000 spaces").

- On deck: Dodger Stadium Renovations (photo slideshow), LA Times, Apr. 2008, available at: https://www.latimes.com/sports/la-dodger-stadium-improvements-pg-photogallery.html (photo slideshow documenting Frank McCourt's public unveiling of $500M proposed Dodger renovations with elected officials, media, and beloved Dodger announced Vin Scully – see select photos in Exhibit I).[35]
- Bill Shaikin, *Rick Caruso, Joe Torre withdraw from bidding to buy Dodgers*, LA Times, Feb. 23, 2012, available at: https://www.latimes.com/archives/blogs/dodgers-now/story/2012-02-23/rick-caruso-joe-torre-withdraw-from-bidding-to-buy-dodgers (noting that Los Angeles developer and former mayoral candidate Rick Caruso and former Dodgers manager and famed MLB executive Joe Torre withdrew from bidding on the Dodgers in early 2012 because then-owner Frank McCourt refused to include the Dodger Stadium parking lots as part of the sale. The article noted this was "the clearest evidence yet that McCourt intends to keep the lots and try to build on them.")
- John Gittelsohn and Nadja Brandt, *Stadium land seen as Dodgers key*, Bloomberg News/ArkansasOnline.com, Apr. 8, 2012, available at: https://www.arkansasonline.com/news/2012/apr/08/stadium-land-seen-dodgers-key-20120408/ (discussing Guggenheim Partners' 2012 acquisition of the Dodgers for $2.15B, a record price for any sports team at the time; the article quotes UCLA economics professor Lee Ohanian that such a price "didn't make sense," and expected that revenue to justify such a high price would come from development of the land around Dodger Stadium.)
- Roger Vincent and Ken Bensinger, *Developing Chavez Ravine is likely in play for new Dodgers owner*, LA Times, Apr. 16, 2012, available at https://www.latimes.com/sports/la-xpm-2012-apr-16-la-fi-dodgers-land-20120417-story.html (noting numerous well-known real estate developers had made bids for the team, and the $2.15B price suggested development in the parking lot development was likely, recalling that "[f]our years ago, McCourt proposed a $500-million plan to ring the stadium with restaurants, shops and a Dodgers museum.").

GO14-60

[35] Presentation materials for the "LA Dodgers Stadium Next 50" still appear on architecture firm Johnson Fain's website at https://johnsonfain.com/projects/architecture/commercial/la-dodgers-stadium-next-50/ (last viewed, Jan. 11, 2023). Johnson Fain's Next 50 web page includes visualizations and descriptions of stadium improvements as well as an "[u]rban plaza surrounded by administrative office buildings," a Dodger museum, 20,000 square foot Dodger Store, café, two 8-level 900-car parking structures, and a "Top of Park plaza." The plaza would be "located at the highest elevation on site [and] will feature breathtaking 360 degree views spanning the Downtown skyline and Santa Monica Bay, the Santa Monica and San Gabriel Mountains, and the Dodger Stadium diamond."

- Adrian Glick Kudler, *Everyone Betting on Dodger Stadium Land Development*, Curbed Los Angeles, Apr. 17, 2012, available at: https://la.curbed.com/2012/4/17/10379072/everyone-betting-on-dodger-stadium-land-development.

cont'd GO14-60

As discussed above, a letter submitted on behalf of Arts District Community Council of Los Angeles in February 2021 also provides Metro with substantial evidence of foreseeable development of the Dodger Stadium parking lots. (See Exhibit A, *supra* fn. 2.) The ADCCLA letter cites statements found on McCourt Global's website (still present as recently as March 31, 2022), noting that McCourt Global's "current real estate projects include…260 acres of land at Chavez Ravine in Los Angeles." (See Exhibit B, *supra* fn. 3.) McCourt Global's revised web page no longer mentions the 260 acres of Chavez Ravine as a "current real estate project." It instead promotes the "Los Angeles Aerial Rapid Transit project" as "an opportunity for our organization to partner with community leaders and stakeholders to contribute to the region's aggressive climate goals and promote sustainability through innovative, zero-emission mobility technology— all while improving mobility and access to Dodger Stadium." (See Exhibit C, *supra* fn. 3.) But web archives show text on that page state, as recently as January 26, 2021:

> McCourt currently co-owns 260 acres of land at Chavez Ravine in Los Angeles, the home of Dodgers Stadium. *Among other plans for the area*, McCourt will develop a cutting-edge aerial tramway from Los Angeles Union Station to Dodgers Stadium through its company, Aerial Rapid Transit Technologies. (McCourt Global, *Real Estate Overview*, Nov. 26, 2020, attached as part of Exhibit B, *supra* p. 3 fn. 3 (emphasis added).)

GO14-61

Metro's choice to allow ARTT LLC to ignore Metro's query as to development plans at Dodger Stadium during early negotiations between the two does not erase the objective reality that such development is reasonably foreseeable. The evidence is *manifest* that development of a portion of the Dodger Stadium parking lots is not only foreseeable but likely. The DEIR is fatally flawed for failing to consider, analyze, and explain the potentially significant environmental impacts that would result from this foreseeable development that will follow due to the Project. Under CEQA, deferring environmental review of foreseeable indirect environmental impacts and thus deferring any and all necessary mitigations associated with those impacts is impermissible. "While foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can." (CEQA Guidelines, § 15144.)

Most important, since reasonably foreseeable development at Dodger Stadium would be expected to draw many people to the Chavez Ravine site daily on non-game and non-special event days (and would also likely cause additional traffic and transportation issues on days with games and special events from drawing even more people than the approximately 56,000 fans that attend a sellout game at the stadium), the DEIR's complete failure to consider and analyze impacts of such readily foreseeable development entirely undercuts major claims of Project benefits with respect to reduced energy usage, reduced greenhouse gas emissions, reduced vehicle miles traveled (VMT), and assertions regarding other standard environmental impact analysis categories.

GO14-62

In short, the Project's environmental review process is made entirely invalid by the Draft EIR's egregious failure to disclose, discuss, and evaluate the foreseeable development. cont'd GO14-62

Moreover, development of Dodger Stadium parking lots is not the only reasonably foreseeable use of the Project. The Project would also allow Dodger Stadium to be used as a "satellite lot" to allow people to drive to downtown Los Angeles in order to park at Dodger Stadium and use the private gondola to come down from Dodger Stadium to attend events in downtown Los Angeles sports and entertainment venues and to large events at LA State Historic Park. This injection of additional vehicles into the downtown area is also a reasonably foreseeable indirect environmental impact that is not discussed or analyzed in the DEIR.

For example, at a recent meeting of Metro's Ad Hoc 2028 Olympics Committee, the board received a staff presentation explaining how Dodger Stadium parking area had been used as satellite parking for the MLS Cup Final, scheduled at 1pm on Nov. 5, 2022, hours before USC's scheduled home football game at the Coliseum the same day.[36] The MLS Cup Final satellite parking utilized a private shuttle bus service which ran from 9 am to 6 pm. According to Metro, 500 car and 1,500 riders used this shuttle service. If the Project were constructed shuttle buses would not be necessary to move sports event attendees from Dodger Stadium to downtown sports venues, as patrons could use the ARTT LLC private gondola to gain access to Metro's public transit system, whether via trains or bus lines. This foreseeable use of the Project would also draw vehicle traffic to Dodger Stadium that is not accounted for by the Draft EIR. GO14-63

At the Ad Hoc meeting, public commenter Phyllis Ling noted: "It sounds like you are opening the door to people using Dodger Stadium parking lot as a park and ride lot. That would be – would that be the biggest park and ride lot in the nation? That's a lot of additional Vehicle Miles Traveled into our neighborhood." She also expressed that Metro should learn the lessons from the London and Rio Olympics, which had both built gondolas for their Olympics, and that had not worked out as long-term infrastructure choice for transportation. As Ling stated: "The Rio gondola ran out of money for maintenance and is no longer running. The London gondola has hardly any local riders, it is used mostly for tourism and needs taxpayer funding to support it."[37] As discussed at length above, the federal definition for "public transportation" does *not* include services used for tourism or "sightseeing," which is specifically excluded from consideration as "public transportation" under federal law. (49 U.S.C. § 5302, subd. (15)(B)(v).)

---

[36] See excerpts from Metro Ad Hoc 2028 Olympics Committee Agenda – Final, Nov. 16, 2022, agenda item 6, "Mobility Lessons Learned from World Sports Events," as well as p. 11 of a slide presentation presented at that meeting entitled "Major Events Lessons Learned," attached as **Exhibit J**. Metro presents the audio and video of the Ad Hoc committee's meeting audio/video on its media website: https://metro.granicus.com/player/clip/2413?view_id=2&redirect=true&h=461b5c8f36092ebca0c1ed190e407b21 (last viewed Jan 10, 2023). The agenda and related materials are also available at: https://metro.legistar.com/MeetingDetail.aspx?ID=1005579&GUID=696A3208-D9CE-4B9E-8728-977FC65341C8&Options=&Search= (last viewed Jan 10, 2023). The Metro Ad Hoc 2028 Olympics Committee meeting audio/video for this meeting *must* be made part of the Project's administrative record.

[37] See link to audio/video, *supra* fn. 36.

The Ad Hoc 2028 Olympics Committee meeting presentation also included discussion of an event on October 28, 2018, known locally and nationally as the "Los Angeles Sports Equinox," because games in every major US sports league occurred in Los Angeles on the same day: NFL (Rams), MLB (Dodgers), NBA (Clippers), NHL (Kings), and MLS (Galaxy). If the Project were built, expanded use of Dodger Stadium as a satellite (or park and ride) lot for similar high conflict sports and event days in downtown Los Angeles is a readily foreseeable physical change due to the project and would likewise be expected to draw significant vehicle traffic to Dodger Stadium, increasing greenhouse gas emissions and vehicle miles traveled.

cont'd GO14-63

Ling's public comment also expressed surprise that the private ARTT LLC gondola project had been placed on Metro's "Comprehensive MCP Project List."[38] Following the close of public comment, in response to Ling's comment, Ad Hoc committee chair, Supervisor Hilda L. Solis questioned its inclusion on the list as well: "You know, just a quick question for staff—I don't recall reading in my materials that the proposed gondola was a part of this. Is that correct?" Metro staff member Ernesto Chaves responded evasively: "It's not part of the prioritized list that is coming up in the next item." But Ms. Ling's comment was not that it was placed on the *prioritized* list, it was that it was placed on the *comprehensive* list, which is correct.

The "lessons learned" presentation was followed by discussion of Metro's "2028 Games Mobility Concept Plan." As discussed above, the Project is included on Attachment C to that agenda item. (See fn. 38, this page.) The Project's inclusion on Metro's "Comprehensive MCP Project List" prepared for the Olympics must be construed as a formal acknowledgement *by Metro* that a reasonably foreseeable indirect physical change due to the Project is the use of Dodger Stadium parking lots as a satellite lot for Olympics event attendees. The presentation to Metro makes clear that even if Dodger Stadium is not an Olympic venue use of its parking lots for satellite lot use as in the recent MLS Cup Final is an available and perhaps desirable, more important reasonably *foreseeable*, option for many downtown sports venues where Olympic events *will* be held.[39] As discussed above, this foreseeable use would draw additional vehicle traffic to Dodger Stadium to utilize the private gondola, which would increase greenhouse gas emissions and vehicle miles traveled, among other potentially significant impacts, thus calling into significant question the DEIR's GHG, VMT, and other conclusions. The DEIR does not address this foreseeable indirect physical change or its potential impacts.

GO14-64

Finally, the DEIR discusses that attendees at periodic special events at LA State Historic Park could take the private Project from LA Union Station to the proposed Chinatown/State Park Station, instead of existing *public* transit options. The DEIR assumes without substantial evidence that it would "capture" 10 percent of such riders. (DEIR, p. 3.17-26.) But the DEIR seems to assume that LASHP special event attendees will come only from the Union Station

GO14-65

FN GO14-64

[38] See Comprehensive MCP Project List, p. 5, attached as **Exhibit K**. The list is Attachment C to agenda item 7 on the Ad Hoc 2028 Olympics Committee Nov. 16, 2022 agenda; see Exhibit J, *supra* fn. 36. It is available at http://metro.legistar.com/gateway.aspx?M=F&ID=b8e94467-6e56-4687-b2bc-3d0bb08fb2fa.pdf.

[39] See Metro presentation, Motion 42 Update: 2022 Prioritized MCP Project List, Nov. 16, 2022, p. 3 (showing a map and list of downtown Los Angele venues), attached as **Exhibit L**.

terminus of the Project. It does not discuss or analyze the foreseeable use of the Project to allow Dodger Stadium parking lots as a potential satellite lot for LA State Historic Park special events which, like other foreseeable uses that would use the Dodger Stadium parking lots for a park and ride or satellite use, would draw additional vehicle traffic to the local community, increasing greenhouse gas emissions and vehicle miles traveled, among other environmental impacts.

cont'd GO14-65

Metro's inexplicable failure to disclose, discuss, and analyze the above foreseeable indirect environmental impacts of the Project cannot be corrected merely by adding additional information in the Final EIR. The purpose of an EIR is to provide the public with detailed information about a project *before* it is approved (Pub. Res. Code, §§ 21002.1, 21003.1) "[W]hen significant new information is added to the EIR after public notice…but before certification, the EIR must be recirculated…" (Pub. Res. Code, § 21092.1; CEQA Guidelines, § 15088.5). The Draft EIR for the Project *must* be revised and recirculated to address the many deficiencies described in this and other comment letters so that the public has an opportunity to review and provide meaningful comment. Recirculation is required when a DEIR is "so fundamentally and basically inadequate and conclusory in nature that public comment on the draft was in effect meaningless." (*Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1130.)

GO14-66

The DEIR's analyses in numerous impact categories is clearly incomplete and deficient for its failure to consider potentially significant impacts of the foreseeable indirect physical change in the environment caused by likely future development at the Dodger Stadium parking lots or use of the lots as satellite for downtown Los Angeles events. These include the Project's analysis of Air Quality, Energy, Geology and Soils, Land Use and Planning, Noise, Public Services, Parks and Recreation, Transportation and Traffic, and Utilities and Service Systems, among others. Conclusions about greenhouse gas (GHG) emissions and vehicle miles traveled (VMT) are particularly suspect.

GO14-67

In addition, the failure to consider foreseeable indirect impacts completely invalidates the DEIR's Cumulative Impact and Growth-Inducing Impact Analyses. As the DEIR acknowledges: "Secondary effects of growth could result in significant, adverse environmental impacts, which could include increased demand on community public services, increased traffic and noise, degradation of air and water quality, and conversion of agricultural land and open space to developed uses." (DEIR, p. 5-57.)

GO14-68

Metro has failed to make "a good faith effort at full disclosure" of the Project's environmental effects. (See *California Oak Foundation*, 188 Cal.App.4th at 262.) The entire DEIR is rendered invalid for its failure to address any impacts from the foreseeable indirect physical changes to the environment likely to be caused due to the proposed Project and must revise and recirculate the DEIR. In the alternative, Metro could instead deny the Project outright. This is the most appropriate course of action since there are superior feasible alternatives that would reduce the Project's significant (and unavoidable) adverse environmental impacts. (See Pub. Res. Code, § 21002: "[P]ublic agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects….")

GO14-69

II. SUBSTANTIVE COMMENTS ON IMPACT ANALYSES

The following comments are generally presented in the order addressed in the Draft EIR.

A. The Executive Summary is Incomplete and Inaccurate.

Note that some comments associated with the Executive Summary will be made within specific DEIR analysis sections following this section.

GO14-70

1. CEQA requires the City of Los Angeles to serve as Lead Agency.

As discussed at length in this office's letter on behalf of LA Parks Alliance of December 19, 2022, LA Park's Alliance objects to Metro's negotiated arrangement to serve as lead agency for the Project. (DEIR, p. ES-1.) The Executive Summary's conclusory analysis that Metro is "the public agency with the greatest responsibility for supervising or approving the project is a whole" is grossly in error. Metro has not documented that it has performed the mandatory analysis pursuant to CEQA Guidelines section 15051 to determine the appropriate lead agency. Had the proper analysis been done, plainly the City of Los Angeles would be designated as the lead agency, not Metro.

GO14-71

Metro's errant conclusion is presented as a fait accompli. This is confusing and misleading to the public (and perhaps also to some agency decisionmakers), most of whom are unlikely to understand that the determination of lead agency must follow the CEQA guidelines. If the CEQA Guidelines were followed the City of Los Angeles would be designated as lead agency, not Metro, for all the reasons discussed in the letter of December 19, 2022.

Designation of the incorrect lead agency prejudicially taints the EIR process, a fatal flaw that can only be remedied by beginning the environmental review process anew with the correct lead agency, here the City of Los Angeles. (See *Planning & Conservation League v. Department of Water Resources* (2000) 83 Cal.App.4th 892, 907.)

2. The number of Dodger Stadium parking spaces to be removed is not included in the DEIR.

The Executive Summary notes that "[i]mplementation of the Dodger Stadium Station would require the removal of parking spaces," but nowhere does the DEIR detail the number of spaces permanently lost at the stadium due to implementation of the Project. (DEIR, p. ES-10; see also, DEIR, p. 2-39.) The DEIR is incomplete in not including this information.

GO14-72

3. Claims of reduced GHG emissions and reduced VMT do not consider reasonably foreseeable indirect physical changes in the environment due to the Project.

The DEIR explains in the Executive Summary and repeats many times throughout that "the proposed Project would reduce vehicle miles traveled (VMT) and congestion, leading to

GO14-73

reduced GHG emissions and improved air quality." (DEIR, p. ES-13.) But as discussed above, the DEIR does not consider reasonably foreseeable indirect physical changes in the environment due to the Project, such as development of Dodger Stadium parking lots, or use of those lots as a satellite or "park and ride" lot, which would likely draw many thousands of cars to Dodger Stadium. Thus, all DEIR conclusions regarding GHG, VMT, and many other analysis categories are incomplete and inaccurate and cannot be relied upon.

cont'd GO14-73

4. The Executive Summary's "Summary of Public Comments" glosses over neutral and negative comments received during the scoping process.

The Executive Summary's "Summary of Public Comments" improperly mischaracterizes the public comments received during the Project's scoping process by minimizing all negative and neutral comments received. (DEIR, p. ES-17.) The Executive Summary describes the numerous mixed comments in one sentence: "Many community members expressed conditional support for the proposed Project with a strong interest in future Project developments." (*Ibid.*) This comment seems intended to dissuade DEIR reviewers from bothering to review Appendix A, which includes hundreds of pages of comments, including not only positive and conditionally supportive, but also negative and neutral comments that would likely have informed additional public comment on the DEIR.

GO14-74

California's Supreme Court has held that the environmental review process is intended "to demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action." (*Laurel Heights Improvement Assn. v. Regents of the University of California* (1988) 47 Cal.3d 376, 392.) "[B]efore project approval, the law presumes the lead agency is neutral and objective and that its interest is in compliance with CEQA. … The agency's unbiased evaluation of the environmental impacts of the applicant's proposal is the bedrock on which the rest of the CEQA process is based." (*Golden Door Properties, LLC v. Superior Court* (2020) 53 Cal.App.5th 733, 782.)

Metro falls far short of CEQA's goals of transparency, full disclosure, and lack of bias when it grossly mischaracterizes public comments received during the scoping process and uses the DEIR as an advocacy document rather than a neutral, unbiased evaluation of the Project. Because the DEIR must be revised and recirculated (if not entirely discarded) due to its numerous fatal flaws, LA Parks Alliance urges Metro to take the opportunity to remove misleading statements that mischaracterize public comment received in any later environmental review document prepared for the Project.

5. The Executive Summary's list of significant and unavoidable impacts is incomplete and inaccurate.

As discussed above, while the California Department of Parks and Recreation clearly has jurisdiction over LA State Historic Park, neither the Department nor the Director have unbridled authority to permit changes to state parkland that would result in a violation of state law. Since the Project may not use any portion of LA State Historic Park for all of the reasons discussed in Parts I(D) and I(E) of this letter (see pp. 12-25), the Executive Summary is incomplete and

GO14-75

inadequate for failing to identify that impacts to LA State Historic Park are significant and unavoidable.

cont'd GO14-75

B. The DEIR's Introduction is Incomplete and Inaccurate.

1. The DEIR fails to identify all trustee and responsible agencies.

As discussed above, Metro failed to include at least two state agencies as trustee and/or responsible agencies. (See Part. I.B., *supra* pp. 3-7.) As a result, DEIR section 1.3 is incomplete and inaccurate for failing to identify the Santa Monica Mountains Conservancy and California Department of Housing and Community Development. (DEIR, p. 1-2.)

GO14-76

2. The DEIR misidentifies the Project as eligible for SB 44.

The DEIR's SB 44 analysis of the Project concludes that it is eligible for SB 44 streamlining as an environmental leadership transit project. (DEIR, pp. 1-4 to 1-9). However, this conclusion is incorrect for all the reasons discussed above (primarily because the project is not "public transportation" and therefore cannot be considered a "fixed guideway"). (See Part I.C., pp. 8-12.) In addition to objections already raised, the DEIR's SB 44 analysis is also vague, inaccurate, and misleading.

GO14-77

First, although the Project is only 1.2 miles in length (DEIR, p. ES-1), the DEIR states: "For the purposes of SB 44, this Draft EIR defines the 'corridor of the project' as the area in which Dodger fans travel to and from games at Dodger Stadium, based on existing ticket sale data." (DEIR, p. 1-4.) The DEIR is vague and ambiguous in not explaining why the "corridor of the project" is so much greater than the actual project area and suggests that the Project takes credit for GHG and VMT reductions not associated with the Project. The response to DEIR comments should explain why the "corridor of the project" can be so vast when compared to the small actual corridor the proposed Project would occupy if constructed.

As discussed above, the DEIR's calculation of GHG and VMT reductions do not include consideration of reasonably foreseeable indirect physical changes in the environment (foreseeable development at Dodger Stadium parking lots as well as use of the lots for satellite parking), and therefore information provided in support of the DEIR's SB 44 analysis of GHG and VMT is inaccurate and must be recalculated. (See DEIR, pp. 1-5 to 1-6, 1-8.) This claim is made repeatedly throughout the DEIR.

GO14-78

The DEIR's consistency analysis with the Goals of Connect SoCal is inaccurate. For example, the second goal is met in part "by reducing passenger vehicle miles traveled." (DEIR, p. 1-6.) As discussed above, the VMT calculations are incorrect due to the DEIR's failure to consider reasonably foreseeable indirect physical changes in the environment due to the Project. Likewise, the fifth and seventh goals are met in part by assuming a reduction in net GHG due to the Project, which is also calculated without considering reasonably foreseeable indirect physical changes in the environment due the Project. (DEIR, pp. 1-6, 1-7.) The Project meets the sixth

GO14-79

goal by relying on an entirely speculative "*potential* mobility hub" at Dodger Stadium, which would allegedly increase access to Elysian Park and surrounding communities. (DEIR, p. 1-7.)

The DEIR's analysis of consistency with the eighth listed goal states that it would "leverage new transportation technologies and data-driven solutions that result in more efficient travel." (*Ibid*.) There is no evidence presented in the DEIR to support this pie-in-the-sky consistency conclusion—the conclusory statement is no more than unabashed cheerleading in support of the Project.

cont'd GO14-79

The DEIR's analysis of consistency with Connect SoCal's ninth goal suggests that the Project will encourage housing growth. (*Ibid.*: "The proposed Project would encourage development of diverse housing types.") While LA Parks Alliance believes this statement is likely *true*, since the DEIR fails to consider the growth-inducing impacts of the reasonably foreseeable indirect physical changes to the environment due to the failure to address future development at Dodger Stadium (which could not only *include* housing, but also would likely increase the number of permanent jobs in the region, which would induce housing demand), it is completely at odds with the DEIR's later conclusion that the Project will not promote any growth in housing, whether directly or indirectly. (DEIR, p. 5-58.) The Project cannot both *encourage* housing while not directly or indirectly inducing growth. Metro needs to explain this internal inconsistency.

GO14-80

The DEIR's analysis of consistency with the tenth and final Connect SoCal goal states that the Project "would promote conservation of natural and agricultural lands and restoration of habitats by being constructed in a previously developed area, and would not impede the region's goal of conserving land and restoring habitats." (DEIR, p. 1-7.) This is an outrageous conclusion given that the Project seeks to use well over an acre of the Los Angeles State Historic Park for a significant portion of its alignment and would require 81 trees in and adjacent to the Park to be destroyed. On this basis alone, it is evident that the Project does not "promote conservation of natural…lands and restoration of habitats." Further, and as discussed below, removal of 81 trees and Project-related activity at the western side of the Park removes habitat, and the Project's gondola cable system will likely result in deadly bird strikes. These significant impacts do not "promote conservation."

GO14-81

C. The Project Description Minimizes Project Impacts, Includes Artificially Constrained Project Objectives, and is Inaccurate, Incomplete and Misleading.

1. The project description of Los Angeles State Historic Park minimizes aesthetic, cultural, historic, and other Project impacts.

GO14-82

The DEIR provides general descriptions of major landmarks within the alignment of the proposed Project. Section 2.3.4 of the DEIR's Project Description provides information about Los Angeles State Historic Park. The bland description of LA State Historic Park greatly undervalues its importance as a treasured resource within both the local community it serves and to the people of California more generally.

LA State Historic Park's name was specifically chosen "in an effort to support the broad interpretive purpose of the Park in *telling the whole cultural story of Los Angeles*." (LASHP General Plan, p. 10 (emphasis added).)[40] As LA State Historic Park's General Plan states:

> Who are Angelenos? What is Los Angeles? As noted historian Dr. Leonard Pitt stated, "No other available 32 acres holds as much opportunity to enlighten us about the history and culture of Los Angeles and this region…" The Park site and its surroundings have a sense of place rooted in a long history of settlement. There are opportunities for discovery and revelation based on the untold stories, some contained in the remnant material culture of the site. The tangible resources today appear to be few, but we can still hear the whispers of the past resonating in the voices of the present, proclaiming the future of the area. … [¶]
>
> The site has been the crossroads and hub for many peoples in the past and is still in a transportation corridor that is connected to the larger region by rail, the nearby river, and major thoroughfares. It has been the scene of discovery, adventure, and tragedy. Struggles and triumphs were part of the changing landscape of the people passing through, moving in, moving out, forced out, and returning. It is the core of a town that grew to a megalopolis with global influence that was, and still is, often veiled in myth and controversy.
>
> On the other hand, the Park is nestled into the heart of Los Angeles' urban core surrounded by clusters or pockets of identifiable neighborhoods and communities that have long rooted connections to the history of the city. While intimately connected to the surrounding dense urban development, the open space of the 32 acres of this site will be able to provide escape from the structure and pace of urban life.
> (LASHP General Plan, pdf. p. 9 ("Sense of Place").)

cont'd GO14-82

One of LA State Historic Park's major features, identified by its General Plan as an "aesthetic resource," is its iconic view of the City of Los Angeles. (*Id*., p. 38.) "As viewed from the north, especially from the northern two-thirds of the property, the Park site is a large open space that is in stark contrast to the dramatic skyline of downtown Los Angeles. Sometimes referred to as the 'front porch' of the City, *there are no other sites that capture this welcoming view of downtown Los Angeles*." (*Ibid.* (emphasis added).)

GO14-83

LA State Historic Park's General Plan's Final EIR includes Mitigation Measure Aes-1 to protect this "front porch" view of the Los Angeles skyline. It requires that those necessary facilities to be constructed at LA State Historic Park "[i]mplement design practices that reduce the overall negative aesthetic effect of new facilities." (*Id*., p. 122.) These design practices include use of vegetation to screen negative views, incorporating architectural site/design

FN GO14-82

[40] California Department of Parks and Recreation, Los Angeles State Historic Park General Plan and Final Environmental Impact Report (hereafter "LASHP General Plan"), 2005, available at: https://www.parks.ca.gov/pages/21299/files/LASHP%20General%20Plan-EIR.pdf.

elements consistent with the plan, limit and direct lighting downward, and evaluating the location of structures to enhance positive views *from* and *of* the Park. (*Ibid.*)

The DEIR description of the iconic "front porch" viewshed states only that "[v]iews of downtown Los Angeles are available from the majority of the site." This bland description seems calculated to minimize the importance of protected views of downtown Los Angeles from LA State Historic Park, and to set the table for later minimization of the Project's significant aesthetic impacts on the Park, which are discussed further below.

cont'd GO14-83

2. The project description of Dodger Stadium is incomplete.

The DEIR's one-paragraph description of Dodger Stadium is accurate, but incomplete.

The DEIR's description of Los Angeles Union Station explains the LA Union Station Master Plan "encompasses approximately 38-acres" [sic]. (DEIR, p. 2-7.) The DEIR's description of El Pueblo de Los Angeles notes that its Historic District has an area of approximately 9.5 acres. (DEIR, p. 2-8.) The DEIR's description of Los Angeles State Historic Park states that it "comprises 32 acres of open space." (DEIR, p. 2-9.)

GO14-84

The DEIR's description of Dodger Stadium notes the date it opened, its street address, where it is located, its seating capacity, its location relative to local freeways, and the neighborhoods located around it.

But the DEIR does *not* mention that Dodger Stadium is surrounded by 260 acres of parking lots. This is a curious omission, given that one of the DEIR's fatal flaws is its failure to discuss or analyze the reasonably foreseeable indirect physical change in the environment likely to occur due to the Project: the development of some portion of the 260 acres of parking lots surrounding the stadium. (See discussion Part I(G), *supra* pp. 26-34.)

3. The Project Purpose and Need section is incomplete and misleading.

The DEIR includes a brief discussion describing the need and alleged purpose of the Project. (DEIR, pp. 2-10 to 2-12.) It explains that with the potential ability to move 10,000 people within two hours prior to the start or after a game or event at Dodger Stadium, and with average Dodger Game attendance of approximately 49,000 people, the private gondola could transport approximately 20,000 fans to Dodger Stadium. (DEIR, p. 2-12.) This assertion suggests that the gondola would operate at essentially maximum capacity right out of the gate.

GO14-85

But the question is not how many people *could* use the gondola, it is how many *would*.

The DEIR states that if immediately constructed and operational in 2026, the initial average ridership to attend Dodge Games would only be 6,000 fans. (DEIR, pp. 3.17-34 to 3.17-35.) The Project Description is thus very misleading, grossly overstating the initial Dodger Stadium game ridership as potentially more than even the DEIR claims—not approximately 20%

of fans, but approximately 12% (that is, if the many DEIR assumptions regarding ridership are accurate).

Moreover, the DEIR's ridership assumptions are that 100% of gondola users will use it both for arriving to *and departing from* Dodger Stadium. (DEIR, p. 3.17-24). But there is no chance this unsupported assumption is correct. A healthy person could walk from Dodger Stadium to Union Station in far less than the two hours it would take to transport 10,000 fans there. According to the Google Maps direction tool, a walk from Dodger Stadium to Union Station (which is flat or downhill the entire way), would take 35-37 minutes, depending on the precise route chosen.[41] The DEIR estimates that 15% of riders would transfer from the Metro Gold line at its Chinatown Station. (DEIR, p. 3.17-24.) This is a considerably shorter walk from Dodger Stadium than to Union Station, only 1.2 miles, and would take only 25 minutes.[42]

cont'd GO14-85

For those who would not choose to wait for their turn in a post-game gondola line who cannot or prefer not to walk to the nearest Gold Line station or to Union Station, many would likely use another available alternative than stand and wait for an hour or more. Other options include a rideshare service such as Uber or Lyft, the Dodger Stadium Express bus (assuming it is still in operation), or a shorter walk to an intermediate location, for example Sunset Boulevard, to take a rideshare vehicle or other public transportation from there.

As Metro's precursor agency (Los Angeles County Transportation Commission) learned from the August 1990 Gruen Associates report, a gondola tramway alternative offers the lowest capacity of typically available people mover technologies, and therefore the greatest waiting times compared to other technology options.[43] Metro seems to have forgotten the earlier study. While the 1990 gondola option was a slightly different technology and route than the currently proposed Project, its conclusions comparing the relative waiting time among people moving technologies remains valid. The LACTC Study amplifies two important points ignored by the Project's DEIR:

GO14-86

- Gondola boarding wait times far exceed wait times for other options
- Proper transportation planning requires consideration of not only the time it takes for the technology to deliver passengers from one point to another, but the *total amount of time* spent waiting/boarding and traveling.[44]

[41] **Exhibit M** is a Google Map page created January 9, 2023, showing two walking routes from Dodger Stadium to LA Union Station, both of approximately 1.8 miles, estimated to take between 35-37 minutes.

FN GO14-85

[42] **Exhibit N** is a Google Map page created January 9, 2023, showing walking routes from Dodger Stadium to the Metro Gold line Chinatown Station, the shortest of which is 1.2 miles, estimated to take approximately 25 minutes.

[43] Gruen Associates, Dodger Stadium Transit Access Study prepared for the Los Angeles County Transportation Committee (hereafter LACTC Study), Aug. 1990, pp. iii-iv, attached as **Exhibit O**.

FN GO14-86

[44] See LACTC Study, *supra* fn. 43, p. 30.

As the LACTC Study notes, "[a]ny transit technology must accommodate a peak loading phenomenon where up to 56,000 persons enter or leave [Dodger] Stadium within a brief period of time before or after events." (LACTC Study, p. iii.) But the DEIR *never* discusses the total time between Union Station and Dodger Stadium including both waiting and travel time. It only ever discusses the brief travel time. (See, e.g., DEIR, pp. ES-1, ES-3, 1-1, 2-1, 2-12, 2-42, 3.11-54, 3.11-55, 5-59.) The DEIR discusses queueing *areas*, but not queueing *times*. 10,000 patrons cannot all occupy one 30-40 passenger gondola cabin. At a rate of only 5,000 passengers per hour, if the gondola is as popular as projected (and no substantial evidence supports that it will be) the last gondola would leave Dodger Stadium approximately two hours after conclusion of a game or special event. The DEIR assumes 100% round trips (DEIR, p. 3.17-24) but fails to consider that not all patrons will be willing to wait that long. The LACTC Study, completed more than 30 years ago, did not make this fundamental error.

cont'd GO14-86

Also entirely missing from the project description's statement on the proposed Project's alleged purpose and need is any discussion of future development at Dodger Stadium. As discussed at length above, public reporting on potential development of the Dodger Stadium parking lots has been in the public realm for well over a decade, and was noted repeatedly during the Project's scoping process, yet is entirely ignored in the project description's discussion of the Project's purpose. (See discussion, *supra* pp. 26-33.) The effort to remove vehicles from local roadways is not likely to be significant (see UCLA Mobility Lab study, *infra* fn. 46). But removal of a significant number of vehicles from Dodger Stadium parking lots is likely to free up space in those parking lots for the foreseeable development described in the many articles attached to this comment letter. (See Exhibit I, *supra* fn. 34.)

GO14-87

The Project Description's purpose and need section is misleading and incomplete. It omits the expected travel time between Union Station and Dodger Stadium, leaving out the very lengthy expected wait times for passengers who would use it to attend Dodger games and events, and assuming all passengers would both arrive and depart via the private gondola, as opposed to arriving via the gondola and departing by some other means. And it fails to acknowledge that the alleged goal of removing passenger vehicles from local roadways would also coincidentally remove them from the Dodger Stadium parking lot, freeing up some portion of those lots for long-planned development as earlier described.

4. The Project Objectives are artificially constrained to favor the preferred project alternative.

An EIR's project description must contain a "statement of the objectives sought by the proposed project." (CEQA Guidelines, § 15124 subd. (b).) The purpose of providing a statement of objectives is to "help the lead agency develop a reasonable range of alternatives to evaluate in the EIR" and to "aid the decision makers in preparing findings or a statement of overriding considerations, if necessary." (*Ibid*.; see also CEQA Guidelines, § 15126.6(c): "The range of potential alternatives to the proposed project shall include those that could feasibly accomplish most of the basic objectives of the project and could avoid or substantially lessen one or more of

GO14-88

the significant effects.") An EIR's alternatives section, informed by the statement of objectives, is part of the very "core of the EIR." (*In re Bay-Delta etc.* (2008) 43 Cal.4th 1143, 1162.)

Project objectives may not define a project so narrowly "as to preclude any alternative other than the Project." (*We Advocate Thorough Environmental Review v. County of Siskiyou* (hereafter *WATER*) (2022) 78 Cal.App.5th 683, 692.) "[I]f the principal project objective is simply pursuing the proposed project, then no alternative other than the proposed project would do. All competing reasonable alternatives would simply be defined out of consideration." (*Ibid*.) The statement of project objectives for the proposed Project charts just such an unlawful course.

The project objectives start with a recitation of the Project's overall purpose, which has at least three or four separate "overall" purposes embedded within it:

> The overall purpose of the proposed Project is to provide a direct transit connection between LAUS and the Dodger Stadium property via an aerial gondola system and improve connectivity for the surrounding communities by linking to the Los Angeles State Historic Park, Elysian Park, and the neighborhoods along the proposed alignment and the region's rapidly growing regional transit system at LAUS.
> (DEIR, p. 2-12.)

cont'd
GO14-88

Here, a reasonable and sensible "overall" purpose could very well be providing a direct transit connection between LAUS and the Dodger Stadium property. That is but *one* overall purpose. Must that overall purpose limit feasible projects to those that are "an aerial gondola system?" Must it also "improve connectivity for the surrounding communities by linking to the Los Angeles State Historic Park," or is that merely a clever rationale to justify taking well over an acre of LA State Historic Park for a commercial, private transit system?

The list of bullet-pointed project objectives that follow the DEIR's initial "overall purpose" statement includes several impermissible objectives that are plainly intended to define out of consideration competing reasonable alternatives, limiting the number of reasonable alternatives considered. (See *WATER*, 78 Cal.App.5th at 692.) These include (objectionable wording is emphasized with *italicization*, with some parenthetical commentary):

- Attract new transit riders to the Metro system through a *unique experience of an aerial transit system* connecting to Dodger Stadium. (Attracting new Metro riders through a Dodger Stadium connection need not be via aerial transit—this objective unnecessarily precludes feasible alternatives.)
- Improve the Dodger Stadium visitor experience by providing *efficient, high-capacity, and faster alternative* access to Dodger Stadium. (Since the DEIR fails to include data on queueing times, it is unclear whether the preferred alternative meets this objective.)
- Enhance safety of neighborhoods adjacent to Dodger Stadium by reducing the number of vehicles in the area. (Based on a report prepared for the Project

GO14-89

proponent, many gondola users are likely to drive downtown to take the gondola, and others are likely to use rideshare services before and/or following the game.[45] It is thus unclear how well the preferred alternative meets this project objective, if at all.)

- Reduce transportation related pollution and greenhouse gas (GHG) emissions as a result of reduced vehicular congestion in and around Dodger Stadium, on neighborhood streets, arterial roadways, and freeways during game and special event days. (See preceding comment—it is unclear how well the preferred alternative meets this project objective; foreseeable indirect physical changes due to the preferred alternative would also draw additional vehicles to the Project area not considered.)
- Improve transit rider experience *by providing unique scenic views of the Los Angeles area to ART passengers and Dodger fans*. (This objective unnecessarily precludes feasible alternatives.)
- *Bring a world class aerial transit system to the Los Angeles area*. (This objective unnecessarily precludes feasible alternatives.)
- Enhance community connectivity by providing first/last mile transit and pedestrian access to areas that have historically been underserved, *including the Los Angeles State Historic Park* and Elysian Park. (This objective is an attempt to justify use of public parkland for the benefit of the Project, which is impermissible under California law. See discussion, *supra* pp. 12-26).)
- Identify comparable, affordable, and accessible fare opportunities for community and *Los Angeles State Historic Park* and Elysian Park access. (See preceding comment. LA State Historic Park is already well-served by public transit.)
- *Minimize the Project's environmental footprint* through the integration of sustainability and environmentally-friendly design features into the materials, construction, operations, and maintenance of the proposed Project. (Building a project out of sustainable materials does not minimize its aesthetic, cultural, historic, and other significant impacts. This project objective is far better met by the environmentally superior alternative, which requires little, if any, permanent infrastructure to be built along the Project's 1.2 mile long corridor, and has no meaningful aesthetic, cultural, historic, or other impacts.)
- Provide a sustainable form of transit *by operating the ART system* with the use of zero emission electricity with battery storage backup in order to reduce GHG emissions and improve air quality. (The objective assumes an aerial

cont'd
GO14-89

[45] See Fehr & Peers, Los Angeles Aerial Rapid Transit Project–Parking Study (Sept. 2022 Draft), pp. 8-9. This document is already part of the administrative record for the Project, and is available at: https://www.dropbox.com/sh/trfpt09to0kp4a8/AACpn7RaYP9KN2zG7ncfAYt6a/Documents/LA%20ART%20Parking%20Study?dl=0&subfolder_nav_tracking=1.

rapid transit (ART) system, which unnecessarily precludes feasible project alternatives.)

- Maximize the Project's alignment along the public ROW and *publicly owned property* and *minimize aerial rights requirements* over private properties, taking into account existing and future adjacent land uses. (The objective assumes an aerial rapid transit system, which unnecessarily precludes feasible project alternatives, and fails to distinguish between publicly owned property that is and is not preserved as public parkland.)

cont'd GO14-89

The above parenthetical objections illustrate how a substantial number of project alternatives are unnecessarily precluded by the DEIR's artificially narrow project objectives, which were plainly crafted to favor the preferred alternative aerial rapid transit system over other feasible alternatives to transport Metro riders from LA Union Station to Dodger Stadium with a stop at (within) LA State Historic Park to attempt to justify use of public parkland for the benefit of the Project.[46] It is improper to take an artificially narrow approach in crafting project objectives to ensure that the results of an alternatives analysis is only "an empty formality." (*WATER*, 78 Cal.App.5th at 692.)

LA Parks Alliance notes that it is the *lead agency*, not the project proponent, that is responsible for a project's environmental document. (Pub. Res. Code, § 21067; CEQA Guidelines, § 15050.) The proposed project objectives provided here *by Metro* suggests a strong precommitment to the proponent's preferred aerial tram alternative. (See *Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116, 138-139: an agency must not commit itself to particular project features "so as to effectively preclude any alternatives or mitigation measures that CEQA would otherwise require to be considered…"; see also CEQA Guidelines, 15126.6, subd. (e).)

GO14-90

The DEIR's project objectives have been artificially narrowed to favor an aerial tram alternative and should be re-crafted so as not to unnecessarily preclude other alternatives that feasibly attain most of the basic objectives of the project (focused on moving passengers from Union Station, and perhaps other locations, to Dodger Stadium) and avoid or substantially lessen the significant effects of the Project.

GO14-91

5. The Project alignment diagrams provide insufficient detail.

Illustrations of the proposed Project alignment found in the DEIR's project description are insufficient to allow interested members of the public to evaluate the alignment. Figure 2-7 (entitled "ANSI Requirements and Additional Separation Buffer") and Figure 2-8 (entitled "Proposed Alignment Over Public ROW/Publicly-Owned Property and Private Property") each

GO14-92

[46] If the fundamental Project goal were to remove passenger vehicles from local roadways, there would be no proposed intermediate Chinatown/State Park Station, which encourages parking on local streets in Chinatown and at and near LA State Historic Park. Instead, gondola passengers could take the Gold Line one stop to Union Station and queue for the gondola at its Union Station terminus. This alternative is not studied in the DEIR, perhaps because with no justification for use of LA State Historic Park's airspace, the preferred alternative is actually not feasible.

FN GO14-89

use one page to show the entire Project alignment. (DEIR, pp. 2-20 to 2-21.) While they provide a generalized view of the proposed Project location, zooming in does not provide interested community members (or decisionmakers) sufficient detail to understand the alignment's proximity to nearby buildings and other structures.

cont'd GO14-92

Figure 2-8 does not distinguish between types of publicly owned property—showing all publicly owned property in one color, whether public right-of-way or public parkland.

GO14-93

Referenced images found in Appendix Q are more detailed, but still provide insufficient information, and are also quite large file sizes. Metro should not presume that all members of the public have adequate computer technology at their disposal to enlarge the images by "zooming in" to study these images. Rather than providing one electronic image that may be zoomed in, the DEIR should instead (or in addition) provide an enlarged representation of both Figures 2-7 and 2-8, as well as each page found in Appendix Q, on a mapped series of images so that all interested members of the public, including those who need to view the document in hard copy as well as those who have computer access but cannot readily manipulate large files, have an opportunity to review and comment on concerns regarding the Project alignment after having reviewed adequately sized images.

GO14-94

The Project alignment illustrations also do not provide adequate information about the so-called "Additional Separation Buffer." (See discussion, *supra* p. 12.)

GO14-95

6. Project Ridership is based on speculation, not substantial evidence.

The project description describes ridership estimates for the Project. "During peak operations, the proposed Project would carry up to approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes." (DEIR, p. 2-42.) As discussed above, the Project Description misleadingly focuses not on the total time it would take to be transported from Union Station to Dodger Stadium via the Project including the wait or queueing time, but only on the travel time. In addition, the project description's focus on alleged 2042 estimates of 5,000 people per hour per direction misleads a DEIR reviewer who may not delve further into the details. The 2026 estimated hourly users are only 3,000 per hour. (DEIR, pp. 3.17-34 to 3.17-35.)

GO14-96

The estimate of people allegedly moving through the system per hour also depends entirely on the configuration of gondola cabins. The DEIR discloses that gondola cabins can be configured to carry between 30 to 40 people. (DEIR, pp. ES-3, 2-2, 2-18.) A survey of the DEIR, including Appendix N (which includes discussion of the gondola ridership model), discloses that there is no discussion whether cabins will be configured to carry 30 people or 40 people, or some other number, or whether there would be a mix of cabin configurations. The number of passengers moved per hour if each cabin has 40 people is obviously significantly greater than the number that can be moved if each cabin only has 30 people.

For example, assuming the gondola system were able to operate perfectly with a 23-second headway that is never interrupted by any delay due a technical issue or passenger loading

problem, the Project would move 156.5 cabins per hour. (60 minutes x 60 seconds ÷ 23 ≈ 156.5.) This number of cabins configured to hold 30 passengers can thus move 4,695 passengers per hour. (156.5 x 30 = 4,695.) Cabins configured to hold 40 passengers can move as many as 6,260, or 33% more passengers per hour. (156.5 x 40 = 6,260). The actual cabin configuration, which the DEIR does not explain, matters a lot. These are maximal projections, assuming there is *never* a breakdown, *never* a passenger loading or other problem, and *all* cabins are *always* full.

cont'd GO14-96

Moreover, the Dodger Game Project ridership estimates are based on an untested model created specifically for the Project. (DEIR, Appx. N, pdf p. 6 (Fehr & Peers, Ridershop Model Development report, Sept. 2022).) The model inexplicably seems to use data from only two zip codes for inputs, one very near Dodger Stadium (90012, 0.6 miles away) and one in South Los Angeles relatively far from Dodger Stadium (90044, 10 miles away) to model estimated Project ridership. (*Ibid.* pdf pp. 9-12 (Table 1: Model Inputs and Data Sources).) It is inappropriate to extrapolate from such a small amount of data to model Los Angeles's complex transportation system. (Moreover, for nearby 90012 patrons only 0.6 miles away, why would they *ever* wait in line for up to two hours to return home when they could walk in ten to fifteen minutes?)

A far more reliable transportation analysis was performed by the UCLA Mobility Lab to assess claims made by the Project proponent that it would have up to 10,000 riders per Dodger Game, thereby removing up to 3,000 vehicles from Los Angeles streets:[47]

> The UCLA researchers — led by Dr. Brian Yueshuai He and Dr. Jiaqi Ma in the UCLA Mobility Lab at the UCLA Samueli School of Engineering — used the "LA Sim" model they created based on activity-based travel demand and agent-based simulation models. The model is *grounded in the theory of "discrete choice," for which Daniel F. McFadden won a Nobel Prize in economics* in 2000. *Based on real data* about road network, traffic, public transportation, and other modes of moving around the city, including walking and bicycling, LA Sim simulates the individual choices that millions of travelers will make when something changes, such as adding another form of transportation, like a gondola to the Los Angeles transportation network.
> (UCLA Mobility Lab report, pp. 1-2 (emphasis added).)

GO14-97

Using the "discrete choice" model "based on real data," the UCLA Mobility Lab study concluded that the proposed gondola would have far fewer users, and the majority of those (2,500 of 4,690 gondola riders) would be drawn from regular users of the Dodger Stadium Express. (UCLA Mobility Lab report, p. 3.) The study concluded that only 608 vehicles would be removed from local roadways compared to current conditions, only a small fraction of the claimed vehicle reduction due to the project. (*Ibid.*)

More important, only a fraction of those who would use the gondola on the way to a game would use it afterwards. "This suggests that *fans are unlikely to wait in line for the gondola*

GO14-98

FN GO14-97 [47] UCLA Mobility Lab, *Study Finds Proposed Aerial Gondola to Dodger Stadium Will Do Little to Reduce Traffic and Emissions*, Oct. 24, 2022, attached as **Exhibit P**.

after the game, instead taking the Dodger Stadium Express or *perhaps opting for a ride-share*, which would *increase traffic and greenhouse gas emissions* after the game." (*Ibid*., p. 4.) UCLA's study is corroborated by LACTC's 1990 Dodger Transit Access study, which showed that an aerial tram was the worst choice of the options then studied, because it had the longest wait times. "Any transit technology must accommodate a peak loading phenomenon where up to 56,000 persons enter or leave [Dodger] Stadium within a brief period of time before or after events." (LACTC Study, *supra* fn. 43, p. iii.)

cont'd GO14-98

The project description ridership estimate focuses the reader on future conditions unlikely to ever occur, based on an unreliably speculative and untested model that inappropriately extrapolates a tiny amount of data from only two zip codes to model the entire Los Angeles transportation network. (DEIR, Appx. N, pdf pp. 9-12.) The unbiased UCLA Mobility Study uses real-world, multi-modal transportation data to reliably predict actual Project ridership.

GO14-99

The DEIR fails as an informational document because the project description estimate of Project ridership is not based on reliable, substantial evidence, but rather on speculative assumptions.

7. The DEIR's description of Project queueing is incomplete.

The DEIR project description describes that "[q]ueueing areas would be built into *and as necessary, adjacent to*, each of the stations to provide a gathering place for passengers waiting to enter the stations, thereby preventing crowding of sidewalks and walkways by passengers around stations." (DEIR, p. 2-44 (emphasis added).) This project description is not sufficiently precise to inform the public where the additional queueing areas, proposed to be built on an as-needed basis, would be located. It also does not allow commenters to examine whether the spaces proposed for queueing will be of sufficient size. These failures are particularly important because the Project plans to utilize existing public parklands to accommodate its land use needs including, apparently, for queueing.

GO14-100A

For example, discussion of queueing for the Alameda Station explains some queueing for will be located "to the west north of the Placita de Dolores of El Pueblo de Los Angeles. (DEIR, p. 2-52; see also, DEIR, p. 3.2-2, providing additional description explaining that queueing would be located "in a proposed new pedestrian plaza in an area currently containing a parking and loading area for El Pueblo.") There is no basis for the Project to simply *take* public parklands for its own needs. (See also discussion of El Pueblo land use conflicts, *infra* pp. 73-75.)

GO14-100B

The Alameda Station queueing plan also states: "Queueing for Alameda Station would occur in the planned LAUS Forecourt area on the east side of Alameda Street." (DEIR, p. 2-44.) But while the DEIR briefly mentions the LAUS Master Plan and LAUS Forecourt and Esplanade Improvements Project, nowhere does it discuss potential conflicts with either the Master Plan or original plans for the Forecourt. (See DEIR, pp. 2-7 to 2-8.) This is especially puzzling because the Final EIR for the Forecourt and Esplanades Improvements Project from March 2018 is cited in the DEIR. (DEIR, p. 2-8, fn. 8.)

GO14-101

LA Parks Alliance also notes that the uniform resource locator (url) provided for the Los Angeles Union Station Master Plan (https://www.metro.net/projects/la-union-station/) now auto-loads the web page for Metro's LA Union Station Forecourt and Esplanades Improvement Project (https://www.metro.net/projects/la-union-station-forecourt-and-esplanade-improvements/). (DEIR, p. 2-8, fn. 7.) Review of Metro's list of project web pages (https://www.metro.net/projects/) discloses no web site url for the LAUS Master Plan. The DEIR thus provides public commenters with no easy access to the Master Plan so they may review it for consideration of potential Project conflicts with the LAUS Master Plan. GO14-102

Further, the DEIR does not provide sufficient information as to the typical number of people expected to be queueing at *any* of the Project's proposed stations. For a Project that proposes to push up to 10,000 people through a private transit system 30 to 40 people at a time for two hours, the failure to include this information is incomprehensible. Because the information is missing, there is *no* evidence, let alone substantial evidence, to support the DEIR's conclusion that queueing at the proposed Chinatown/State Historic Park station can be accommodated entirely within the station structure. (DEIR, p. 3.1-42.) Review of the entire DEIR shows discussion of queueing *locations*. Queueing *times* and *volume* are nowhere found. GO14-103

The DEIR fails as an informational document because the project description and DEIR do not provide the Project queueing information necessary to analyze and consider potentially significant conflicts between queueing locations and activities that would impact parklands used by and adjacent to the Project, and also because the DEIR does not discuss potential conflicts between the Project and the existing LAUS Master Plan and LAUS Forecourt and Esplanade Improvements project, the latter of which has already undergone environmental review. GO14-104

8. The DEIR's project description regarding signage raises potentially significant environmental impacts that are never discussed or mitigated.

The DEIR project description notes that the "proposed Project would include signage" which "may include identification and other static signs, *electronic digital displays and/or changeable message light-emitting diode (LED) boards* that include both transit information and other content, *which may include off-site advertising*… Signage would be architecturally integrated into the design of the ART system including its *stations*, the junction, *towers*, and *cabins*." (DEIR, p. 2-45 (emphasis added).) DEIR Appendix C does not provide any additional information with details of the Project's signage program. (See DEIR, Appx. C, pdf pp. 15, 363.) GO14-105

The DEIR states: "Signage would be in conformance with all applicable requirements of the Los Angeles Municipal Code (LAMC)." (*Ibid.*) That signage would conform to the Los Angeles Municipal Code (which is, of course, always subject to change) is not sufficient to limit its potentially significant environmental impacts along the proposed Project alignment. For example, it is not uncommon to find electronic digital displays attached to the top of ride share vehicles, notwithstanding that California law allegedly prohibits them.[48] If such signage were

[48] See Cal. Vehicle Code, §§ 25400, 25950. But see, Uber dot com, Uber Out-of-Home (OOH) cartop advertising program, showing a typical cartop digital advertising display frequently seen on Los Angeles

attached to the exterior of moving gondola cabins the aesthetic and other impacts at visually sensitive locations along the Project alignment, for example, within Los Angeles State Historic Park, would be potentially significant.

The DEIR's aesthetic impact analysis acknowledges that views of the Los Angeles skyline, considered a protected aesthetic resource in the LA State Historic Park General Plan and Final EIR (see discussion, *supra* p. 39), "would be partially interrupted due to the Project" without even considering impacts from possible cabin-mounted electronic digital displays. In addition, the DEIR's discussion of light and glare impacts is incomplete with no discussion of such displays, which invalidates the DEIR's conclusion that operational impacts would be less than significant. (DEIR, p. 3.1-52 to 3.1-53.) The DEIR also seems to have neglected inclusion of depictions of nighttime lighting or signage to assist the public or decision makers in assessing nighttime aesthetic or other impacts.

cont'd GO14-105

Because the project description includes the possibility that gondola cabins, among other Project elements, may have electronic digital displays but describes virtually no details and provides no limitations on their implementation, it is impossible to assess the potentially significant adverse environmental effects of the Project to Los Angeles State Historic Park or other locations along the Project corridor. The DEIR thus fails as an informational document for failing to include information necessary to allow the public and decisionmakers to consider the Project's environmental effects and whether a mitigation measure is necessary to eliminate or limit adverse impacts.

GO14-106

9. The Emergency Operations Plan must not be deferred.

The project description explains that an "Emergency Operations Plan *would be prepared* as part of the proposed Project…" (DEIR, p. 2-47.) Given that the DEIR and Project proponents repeatedly refer to the aerial tram "[a]s a breakthrough and innovative technology for the region" (DEIR, p. 1-7) it is critical that the Emergency Operations Plan not be deferred but be presented as part of the DEIR to allow for public review and comment. With not even the outline of an Emergency Operations Plan found in the DEIR, it is not possible for members of the public or decisionmakers to assess potentially significant environmental effects on public services (police and fire) or potentially significant planning conflicts with City of Los Angeles Emergency Operations Plan. (See DEIR, p. 3.9-10 to 3.9-11.) The DEIR provides no discussion or analysis of these issues, and states only that the Project would comply with the City's Emergency Operations Plan and Los Angeles Fire Code. (DEIR, pp. 3.15-19 to 3.15-20.) The project description is inadequate for failing to provide any further information on the Project's Emergency Operations Plan.

GO14-107

10. The project description includes the proposed Project's improper use of public parkland as part of its "sustainability features."

GO14-108

FN GO14-105 streets, available at https://www.uber.com/us/en/about/car-advertising/ (last checked Jan. 11, 2023). A screen capture of the page depicting the cartop digital advertising display is attached as **Exhibit Q**.

The DEIR project description of sustainability features makes numerous unsupported claims. For example, it suggests the Project will "[r]educe vehicle trips to…Elysian Park, and the Los Angeles State Historic Park." (DEIR, p. 2-48.) As already discussed, these claims are illusory and unsupported by substantial evidence. (See discussion, *supra* p. 9 (*potential* mobility hub at Dodger Stadium) and pp. 16, 23 (LA State Historic Park ridership is assumed, not supported by substantial evidence).)

Most surprising (and tone-deaf and offensive) the project description lists the Project's unprecedented and unlawful use of LA State Historic Park (see discussion, *supra* pp. 12-26) at the very top of its list of *sustainable* site features, lumping LA State Historic Park into the category of "publicly owned property" as if it had no special protections as a historical unit of the California State Park system. (DEIR, p. 2-49.) The sustainable site feature list also suggests, with no trace of irony, that the project is sited and designed "to minimize impacts to historic and archaeological resources, and to preserve viewsheds and local character." (*Ibid*.) The sustainable site feature list also claims it will provide an "opportunity to enhance open space and green space at the Los Angeles State Historic Park."

cont'd GO14-108

These Orwellian claims are audacious and unsupported. The sustainability claims disregard that the Project is in *direct* conflict with LA State Historic Park's General Plan and mitigation measures of the park General Plan's Final EIR, as well as with state law that protects our state parks, especially historic units, from incursion by commercial interests. None of these obvious conflicts are adequately discussed or analyzed in the DEIR.

The DEIR project description misleadingly minimizes impacts to LA State Historic Park and insults the public's intelligence by referencing the devastating impacts as project benefits.

D. The DEIR's Analysis of Aesthetic Impacts is Grossly Inadequate.

This letter focuses its primary objection to the DEIR's inadequate aesthetics impact analysis on the DEIR's minimization of adverse aesthetic impacts to Los Angeles State Historic Park. LA Parks Alliance notes, however, its strong objection to the DEIR's inadequate analysis of impacts to LA Union Station, El Pueblo de Los Angeles State Historic Park, and other parkland and public areas along the proposed Project corridor, for similar reasoning as included below in subsections D(1) and D(3), as well as for the reasons other commenters will undoubtedly provide in response to the grossly inadequate DEIR.

GO14-109

"A project will normally have a significant effect on the environment if it will…[h]ave a substantial, demonstrable negative aesthetic effect[.]" (*Quail Botanical Gardens Foundation, Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1604, quoting CEQA Guidelines, Appx. G.) "[I]t is inherent in the meaning of the word 'aesthetic' that any substantial, negative effect of a project on view and other features of beauty could constitute a 'significant' environmental impact under CEQA." (*Ibid*.)

The DEIR fails to adequately analyze aesthetic impacts, including visual impacts along the entire Project corridor, but especially on views of and from Los Angeles State Historic Park. As the DEIR notes, "analysis of existing visual or aesthetic resources and potential visual or

aesthetic impacts can be highly subjective, dependent upon the background of the assessor and the opinions of viewers." (DEIR, p. 3.1-29.) California courts generally agree, finding that analysis of potentially significant aesthetic impacts is not the sole province of experts. The opinion of lay persons with respect to aesthetic and certain other impacts, particularly when presented by more than just a few persons, often constitutes substantial evidence of a significant environmental impact. (See, e.g., *Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist.* (2004) 116 Cal.App.4th 396, 402-403.)

cont'd GO14-109

1. The DEIR's use of images is misleading and incomplete.

The DEIR minimizes the Project's aesthetic impacts through its use of misleading images sprinkled throughout the DEIR and by failing to provide necessary simulated depictions of the Project to assist the public and decision makers to fully understand its visual impacts. For example, Figure 2-5, depicting the "Illustrative Design of a Station" (DEIR, p. 2-15), shows a view of Alameda Station as seen from the LA Union Station property looking approximately northwest. Later, the DEIR shows a depiction of existing LA Union Station from an angle that appears to be the approximate reverse angle. (DEIR, p. 3.1-19, Figure 3.1-3; see also DEIR, Appx. C, pdf p. 46, Figure 4-6.) But where is the simulated view depicting the Alameda Station in front of LA Union Station?

Every simulated view of Alameda Station appears to have been selected to avoid depicting the station as obscuring views of LA Union Station in any way. (DEIR, Appx. C, Figures 5-1 through 5-11, pdf pp. 109-119.) But clearly there are views that would obstruct Union Station, or the depiction of Alameda Station in the bottom image of Appx. C, Figure 5-4, would not be possible.

GO14-110

Similarly, Figure 2-6 depicts the "Illustrative Design of a Tower." (DEIR, p. 2-16.) This simulated view shows the Project's Alameda Tower (described in the image caption as being "in the foreground") and Alpine Tower (described as being "in the middle ground"). (*Ibid.*) But whether intentional or inadvertent, the simulated image's use of "foreshortening" obscures the apparent height of the towers, making them appear far smaller than they really are. The "foreground" Alameda Tower appears shorter than an even nearer telephone poll, even though it is likely four or five times taller. The more distant Alpine Tower appears only half as tall as the Alameda Tower. When used to create whimsical photographs, foreshortening can provide an entertaining, comical effect.[49] But it can also be used to minimize the visual impact of a large structure, even if perhaps inadvertently, as it does in the DEIR.

The selection of simulated views of the Project appears calculated to minimize visual impacts of the Project. For example, a depiction of the proposed pedestrian plaza at El Pueblo is is at an angle showing the plaza at a great distance while depicting only a small portion of the

GO14-111

[49] Most people are familiar with photographs depicting persons interacting in some way with a distant object, often a building. For example, a photo at the following web page depicts the leaning tower of Pisa as if it were part of a large ice cream cone being enjoyed by a visiting tourist: https://huebliss.com/foreshortening-photography/ (last viewed Jan. 12, 2023).

FN GO14-110

massive station (see Figure 2-9), which the DEIR describes as "173 feet long, 109 feet wide, and 78 feet high." (DEIR, p. 2-23.) A depiction of pedestrian improvements at the proposed Chinatown/State Park Station shows one of the few somewhat close views of the station, but from a vantage point that is almost entirely obscured by plants, pedestrians, and Project hardscape shelter elements. (Figure 2-9, DEIR, p. 2-31.) There is no other simulated view depicting the Chinatown/State Park Station in the main DEIR document. The top image of Figure 6-18 (DEIR, p. 6-33) depicts the proposed Project from the "roundhouse" area of LA State Historic Park, approximately 1,300 feet away (measured using Google maps "measure distance" feature). (See also DEIR, p. 6-30 (textual description of the simulated image).)

cont'd GO14-111

The only close image of Chinatown/State Park Station within Appendix C appears to be Figure 5-17. (DEIR, Appx. C, pdf p. 125.) Chinatown/State Park Station completely dominates and obscures the existing park entrance. Figure 5-18 depicts a simulated view of Chinatown/State Park Station masked by a large tree in the foreground. (DEIR, Appx. C, pdf p. 126.) Figure 5-19 includes a depiction of the Project looking southeast from the southwestern portion of LA State Historic Park, directly beneath the eastern-most gondola cables. (DEIR, Appx. C, pdf. p. 127.) In this depiction the station can be seen, presumably because trees that would have obscured it had to be removed to avoid being too close to hanging gondola cabins. (See upper "existing" image.) But this depiction is taken at an angle that shows the Los Angeles skyline to the right of the station. Almost the entirety of LA State Historic Park would experience the station as being between the viewer and the Los Angeles skyline. Figure 5-20a depicts the station partially obscuring the Los Angeles skyline. (DEIR, Appx. C, pdf p. 128.) But this image is taken from an elevated angle, and therefore depicts the station as appearing lower on the horizon than it would if taken from the location of people on the lawn below. Figure 5-20b corrects this problem as it depicts a simulated image from a lower elevation. (DEIR, Appx. C, pdf. p. 129.) Curiously, however, even though this is described as from the same location as the previous depiction (from the roundhouse within LA State Historic Park), the entire City of Los Angeles skyline has somehow shifted several degrees to the right and is no longer partially obscured by the Chinatown/State Park Station.

GO14-112

It is also appropriate to note that the simulated images do not always accurately portray gondola cables. The DEIR's cover image clearly shows six cables (two sets of three). (DEIR, cover page.) This is consistent with a textual description of the cable system. (DEIR, p. ES-3). But numerous simulated images show only four cables (two sets of two). (See, e.g., from the DEIR: Figure 2-6, Figure 4-10, Figure 6-14 (top image), and Figure 6-16 (bottom image); from DEIR, Appx. C: Figure 5-5, Figure 5-9, Figure 5-10, Figure 5-11, Figure 5-15, Figure 5-18, and Figure 5-19). These conflicting images, some with four gondola cables and some with six, make assessment of the visual impacts of the Project difficult to understand and assess.

GO14-113

Finally, Figures 5-21 and 5-22 simulate additional distant views of Chinatown/State Park Station, the first from the sidewalk in front of the LA State Historic Park, the second from the Park itself. (DEIR, Appx. C, pdf pp. 130-131.) Using the Google maps measuring tool and the image key (Figure 4-4, DEIR, Appx. C, pdf p. 44) the depicted views appear to be from

GO14-114

approximately 1,600 feet (Figure 5-21) and 2,200 feet (Figure 5-22) distant.[50]

The DEIR's use of misleading images and failure to provide images that adequately convey the full scope of visual impacts along the entire Project corridor, but especially impacts associated with LA Union Station, El Pueblo de Los Angeles, and Los Angeles State Historic Park, cause it to fail as an informational document.

cont'd GO14-114

2. The DEIR ignores protections and mitigation measures imposed by the certified Final EIR for Los Angeles State Historic Park's General Plan.

The DEIR acknowledges that the Project would have a "significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect." (DEIR, ES-58.) The DEIR asserts, however, that the essential conflict between the Project's proposed use of land at Los Angeles State Historic Park is technical, and correctable by adoption of Mitigation Measure LUP-A which merely requires "[o]btain[ing] a Los Angeles State Historic Park General Plan Amendment." (*Ibid.*) This assumption is grossly in error. Under California law, LA State Historic Park is plainly not available for the benefit of the Project. (See discussion, *supra* pp. 12-26.)

GO14-115

More important, even if a Park General Plan amendment were available to benefit the Project, and it is not, the DEIR fails as an informational document for making little effort to describe the nature of the environmental impacts intended to be addressed by the mitigation measure. Before a mitigation measure may be proposed to address a significant environmental effect, the environmental effect must be adequately identified. (Pub. Res. Code, § 21002.1.)[51] Without first understanding the complete nature of the significant effect it is not possible to assess whether a mitigation measure would reduce impacts to a level less than significant, or if another feasible mitigation measure would be superior. (See CEQA Guidelines, § 15126.4, subd. (a)(1)(B): "Where several measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified.")

But the DEIR does not clearly identify the Project's significant environmental effect(s)—it only identifies the mitigation. The DEIR assumes that whatever the significant effect is, papering over it with a revised General Plan will suffice. There is thus no way to assess whether the mitigation is sufficient to reduce the significant environmental effect(s) to a level less than significant, because the nature of the impact is not adequately described.

GO14-116

FN GO14-114 [50] DEIR Figure 5-23 depicts a simulated view from the "North Broadway historic bridge" at a distance of approximately 3,400 feet using the Google maps measuring tool. (DEIR, Appx. C, pdf p. 132.) The utility of depicting the Project from the No. Broadway bridge is unclear, however the massive structure of the Chinatown/State Park Station can be easily seen even from this great distance, though it does not obscure the Los Angeles skyline from this simulated camera position.

FN GO14-116 [51] When a lead agency determines that a mitigation measure cannot be legally imposed, as Metro should have determined here, the mitigation measure need not be proposed or analyzed. (CEQA Guidelines, § 15126.4, subd. (a)(5); see discussion, *supra* pp. 11-25.)

The DEIR's aesthetics analysis summarizes the goals and guidelines of LA State Historic Park's General Plan. (DEIR, pp. 3.1-2 to 3.1-3.) While this recitation is accurate, the DEIR's analysis falls far short. As in its project description of LA State Historic Park, the DEIR's description of the park within Landscape Unit 4 fails to convey the importance of protected views of and from the Park. Lumping LA State Historic Park in with the other community visual features found in Landscape Unit 4, the DEIR concludes that the visual quality of LU-4 is "moderately low." (DEIR, p. 3.1-30.) Moreover, and as will be discussed further, LA State Historic Park's goals and guidelines are intended for use by *Park* facilities, and are simply not applicable to non-park structures, which have no place and are not permitted in the Park.

GO14-117

For its thresholds of significance, the DEIR chooses the State CEQA Guidelines Appendix G questions and employs guidance from the City of Los Angeles CEQA Threshold Guide in the analysis. (DEIR, p. 3.1-32.) While the Appendix G questions are usually considered adequate for review of a typical development project, they are not adequately responsive to the needs of a historic state park that has *aesthetic resource protections already imposed* by the Park General Plan and certified Final EIR, including mitigation measures put in place to protect the aesthetic and other resources identified in the Park's EIR.

The primary mode of visual analysis undertaken by the DEIR to assess operational aesthetic impacts is use of existing and simulated views of the Project taken from a series of Key Observation Points ("KOPs"). (DEIR, p. 3.1-35; see also Figure 4-1 (KOP Locations Overview), DEIR, Appx. C, pdf p. 41.) As already discussed, the locations selected for these photos seem to have been selected in a manner calculated to minimize the Project's visual impacts. (See discussion, *supra* pp. 53-55.) The DEIR also does an inadequate job explaining the selection process for KOP locations.

GO14-118

The first Appendix G question asks if the Project would "have a substantial view on a scenic vista." (DEIR, p. 3.1-33.) The protected views of the Los Angeles skyline as seen from LA State Historic Park (along with numerous other important visual resources such as views of designated cultural and historic landmarks within the Project area) are largely swept aside as not technically comprising a scenic vista: "There are no *designated* scenic vistas present in the [Area of Potential Impact]."[52] (DEIR, p. 3,1-33 (emphasis added).) Construction impacts are determined to be less than significant because viewers are either deemed to generally have low sensitivity "and do not necessarily have a personal investment in these views" or because views are "only minimally noticeable because of the distant aspect of that view and the presence of vegetation" or because views of mountain ranges and the Los Angeles skyline would "continue to be available to pedestrians and recreationalists through street corridors." (DEIR, p. 3.1-34.)

GO14-119

[52] The DEIR does at least acknowledge that some viewers might view things differently: "[V]iews of the downtown Los Angeles skyline, LAUS, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the mountains that make up the Transverse Ranges, including the San Gabriel and San Bernardino Mountains…could be considered scenic to certain viewers *although not officially designated as such*." (DEIR, p. 3.1-34.)

Operational impacts are likewise minimized: "no designated scenic vistas are present in the API." (DEIR, p. 3.1-35.) The protected views from LA State Historic Park, and views of other cultural and historic landmarks in the Project are not individually analyzed. Lumping the entirety of the aesthetic views together allows the DEIR to dismiss them with sweeping generalizations:

> While the Project would include tall visual elements, views of other scenic or panoramic views would continue to be visible from more prominent view locations, such as park areas, or other sections along local streets. In addition, the Project would comprise a very small portion of the broad urban view field. As such, the Project as viewed from public areas in each LU would not block prominent views of notable visual features.
> (DEIR, p. 3.1-35.)

GO14-120

The DEIR continues:

> *Overall*, the proposed Project would not significantly block scenic or panoramic views, such as views of the downtown Los Angeles skyline, LAUS, El Pueblo, Los Angeles State Historic Park, Arroyo Seco Parkway, Dodger Stadium, and the mountains that make up the Transverse Ranges, including the San Gabriel and San Bernardino Mountains." (*Ibid*. (emphasis added).)

The word "overall" does an awful lot of work in the above sentence. Simply put, any "analysis" that lumps a set of individual visually important views together, including views of designated cultural and historic sites (at least one specifically protected by mitigation measures in a certified EIR, see below) instead of analyzing them for their own unique individual values, must be considered inadequate.

With respect to only LA State Historic Park, the DEIR states: "[V]iews from the Los Angeles State Historic Park toward the surrounding existing urban landscape exhibit various visual values, and the proposed Project would not substantially impact these views *as shown in the simulated views*." But as discussed above, the simulated views are entirely inadequate to convey the substantial visual impact of the Project on LA State Historic Park, as the views seem to have been selected in a manner calculated to downplay visual aesthetic impacts. Consequently they do not provide a basis to completely evaluate aesthetic impacts.

GO14-121

Of course, it is also true that courts are generally deferential to an agency's determinations with respect to aesthetic impacts. (See, e.g., *North Coast Rivers Alliance v. Marin Municipal Water Dist. Bd. of Directors* (2013) 216 Cal.App.4th 614, 627.) Here that cuts *against* Metro's determination for the Project, because the agency responsible for determining the aesthetic resources of Los Angeles State Historic Park, the Department of Parks and Recreation, has already well defined the park's aesthetic resources and certified an EIR with a mitigation measure intended to protect them:

GO14-122

Viewsheds

As viewed from the north, especially from the northern two-thirds of the property, the Park site is a large open space that is in stark contrast to the dramatic skyline of downtown Los Angeles. *Sometimes referred to as the "front porch" of the City, there are no other sites that capture this welcoming view of downtown Los Angeles.*

Views of Elysian Park present a welcoming view of green hills and trees. The more distant views of the Verdugo Hills and the occasionally snow-covered San Gabriel Mountains provide vistas of natural landscapes.

In the immediate vicinity of the Park are structures with distinct architectural styles, including a variety of buildings in the Chinatown area, the Chinatown Transit Station, the Capitol Milling Company building, and the Broadway Bridge. (LASHP General Plan, pdf. pp 52-53 (emphasis added).)[53]

cont'd GO14-122

The Park's Final EIR acknowledges that it is located "in a dense urban environment," but that fact is an additional justification *to protect visual resources*, including views seen *from* the Park, and also views seen *of* the Park as seen from *outside* its boundaries:

> This Park is situated in a dense urban environment. It does, however, provide a *spectacular view of the downtown Los Angeles skyline*, as well as *views to the nearby Elysian Park and the Verdugo Hills*, *open space elements that can be rare in an urban landscape*. **Any changes that substantially degrade the visual experience *for park visitors and others viewing the Park from adjacent property* have the potential to cause significant impacts**.
> (*Ibid*., pdf p. 121 (discussing the purpose of Mitigation Measure Aes-1) (emphasis added).)

The certified Environmental Impact Report for LA State Historic Park protects these important visual resources by restricting the type, location, screening, and materials of structures permitted in the park:

> **Mitigation Measure Aes-1.** Visual impacts can be avoided or reduced by appropriate siting, design, and selection of materials. Specific project designs will define aesthetically appropriate design features, identify visual resources, and identify optimum methods for protecting existing resources. Potential aesthetic quality impacts associated with the development of new facilities shall be reviewed at the project-level for specific facilities or management plans proposed. Mitigation measures include, but are not limited to:

GO14-123

FN GO14-122 [53] The Los Angeles State Historic Park General Plan and Final EIR was approved/certified by the State Park and Recreation Commission on June 10, 2005. (LASHP General Plan, pdf p. 125.)

- Implement design practices that reduce the overall negative aesthetic effect of new facilities, including, but not limited to:
    - Include vegetation to screen negative views, or soften the visual effect of parking areas, visitor facilities, roads, trails, or transit corridors, where appropriate;
    - Incorporate architectural site/design elements that support and are consistent with the plan vision;
    - Where night lighting is necessary, direct the lighting downward and locate new exterior lighting such that it is not highly obtrusive;
    - Evaluate the location of structures and activity areas to enhance positive views within and outside of the Park site;
    - Design and site new roads and trails to minimize grading and the visibility of cut banks and fill slopes; utilities should be placed underground where feasible;
    - Schedule construction and maintenance activities to decrease any negative impacts to visitors and adjacent property owners.

(LASHP General Plan, pdf pp. 121-122.)

cont'd GO14-123

Moreover, the LA State Historic Park General Plan and Final EIR created the above mitigation for application to *Park* structures permitted by its General Plan: "Potential installation of facilities *allowed by the Plan* may constitute a potentially significant aesthetic change…" (*Ibid*., pdf. p. 115 (emphasis added).) The General Plan and Final EIR do not contemplate mitigations for structures that are *not* permitted by the Park's General Plan. "[P]otential facilities" evaluated in the General Plan and Final EIR do not provide for non-Park facilities (see *ibid*., pdf pp. 132-133) which *are not permitted in a historical unit of the state park system*. (Pub. Res. Code, § 5019.59.) There is no appropriate siting or screening possible for an intruding non-park, commercial structure in LA State Historic Park. The DEIR lists the Park's General Plan goals and guidelines (DEIR, pp. 3.1-2 to 3.1-3.) as if they can be applied to any structure, including non-park structures, but the General Plan goals and guidelines are intended only for *permissible* structures. Other structures are simply not permitted.

GO14-124

As discussed above, the State Parks Commission, in approving the General Plan and certifying its Environmental Impact Report, also protected views *of* the Park. The DEIR's use of City of Los Angeles CEQA Thresholds to disregard the Park's Mitigation Measure Aes-1, which protects views of the Park from both public *and private* locations, thus improperly modifies an adopted mitigation measure. (See DEIR, p. 3.1-47 (analysis of LU-4 including LA State historic Park): "the operation of the proposed Project within LU-4, would not substantially degrade the existing visual character or quality *of public views* of the site and its surroundings, and the impact would be less than significant."; see also DEIR, p. 3.1-47: "[V]isual impacts under the L.A. CEQA Thresholds Guide are assessed based on changes to *public* views.")

GO14-125

This is improper. A lead agency may not cancel or modify a previously adopted mitigation measure without reviewing its continued need, explaining the change, and supporting its determination with substantial evidence. (See *Katseff v. Dept. of Forestry & Fire Protection* (2010) 181 Cal.App. 4th 601, 614.) The appropriate lead agency to modify mitigation Aes-1 is

the Department of Recreation and Parks, not Metro. But the Project EIR must explain why Aes-1 is no longer needed and appropriate to change, and support this determination with substantial evidence. Here Metro has not acknowledged the existence of the mitigation measure, let alone explained why it is no longer needed or supported its conclusion with substantial evidence.[54]

cont'd GO14-125

The DEIR's description of gondola movement with respect to protected views of the Los Angeles skyline also minimizes the Project's aesthetic impacts. "The cabins would be *constantly moving in and out of view*, and the cables have similar characteristics to the overhead powerlines that are prevalent in views in this area. As such, the proposed cables and cabins would not significantly impact views in this area." (DEIR, pp. 3.1-45 to 3.1-46 (emphasis added).) First, no powerlines are located directly over the top of LA State Historic Park, and gondola cables are larger than powerlines. (DEIR, p. 3.4-19). If gondola cables are both physically closer and also larger, it is logical that they will have a much greater visual impact than distant, smaller powerlines. Second, and more obviously, if gondola cabins are "constantly moving in and out of view" they will have a greater distracting visual impact, especially in the evening and at night when they are lit or display signage (particularly potential electronic digital display signage). The DEIR fails to evaluate and minimizes the visual impacts of gondola cables and cabins.

GO14-126

The DEIR concludes not only that the Project would not have significant aesthetic *impacts*, but also that it would provide significant visual *benefits* to LA State Historic Park. (DEIR, p. 3.1-46.) This is absurd. Compare, for example, the before and after images shown in Figure 5-17 of the existing entrance at the Park's southwest corner (DEIR, Appx. C, pdf p. 125):

GO14-127

The proposed siting of the Project's Chinatown/State Park Station *within* LA State Historic Park at the Park's southwest corner (where many visitors first experience views of the park as they

FN GO14-125

[54] The DEIR notes the existence of the Park's Final EIR (see DEIR, p. 3.1-1, fn. 1), but does not mention, discuss, or analyze modifications to mitigation measures that would be necessary due to the Project. With respect to CEQA's ability to protect *private* views, see *Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist.* (2004) 116 Cal.App.4th 396, 402-403.

arrive) belies the notion that "visual changes of the proposed Project are minimized somewhat" by its southwest corner location.

cont'd GO14-127

As the DEIR documents, the massive Chinatown Station (DEIR, p. ES-8: "200 feet long, 80 feet wide, and 98 feet tall at its tallest point") can be easily seen from adjacent views, which the Park's Final EIR protects. (See, e.g., Figure 5-23, DEIR, Appx. C, pdf p. 132 (depicting a simulated view from the "North Broadway historic bridge" approximately 3,400 feet distant.) Protected views of the Park may also be visible from Elysian Park and other distant elevated locations, but the DEIR provides no simulated views. At ninety-eight feet tall, it is a certainty that Chinatown/State Park Station cannot be screened with vegetation to minimize its impact.[55] Nor does the DEIR suggest screening is needed. (But see LASHP General Plan and Final EIR, mitigation measure Aes-1, describing a general need for screening of structures within the Park.)

Close up – Chinatown/State Park Station (DEIR Appendix C Figure 5-23)

GO14-128

The discussion above does not include consideration that to install the massive Chinatown/State Park Station removal of a substantial number of trees will be necessary. The DEIR describes that the Park includes "mature trees" (DEIR, p. 3.1-24), but the only significant discussion of trees in the aesthetic impact analysis of LA State Historic Park describes how "existing views of downtown from other areas within the park are already interrupted under existing conditions by trees…," ignoring that the trees in the Park are themselves an aesthetic resource, and entirely neglecting that 24 trees on the State Historic Park property and six street trees adjacent to the Park would be removed to allow construction of the Chinatown/State Park

GO14-129

FN GO14-128 [55] LA Parks Alliance notes that Design Option C, which would be 35 feet taller than the preferred Project, would have an obviously greater impact on protected views of and from LA State Historic Park.

Station, and *an additional 51* trees would be removed to accommodate the gondola alignment over the Park. (DEIR, p. 3.4-23.)

The aesthetic analysis does not consider the function of trees within the Park landscape that would be removed. For example, are they part of the Park General Plan and Final EIR mitigation that screens and softens the visual impact of adjacent urban areas using vegetation? The aesthetic analysis, in fact, entirely *ignores* the removal of these 81 trees. They are in the way of the Project component and alignment, so they will be removed without respect to their age, purpose, or aesthetic or habitat value. No trees can be planted in their place within the gondola alignment—they would interfere with the Project.

cont'd GO14-129

In a letter to the editor recently published in the Los Angeles Times, Kathleen Johnson, executive director of Los Angeles River State Parks Partners, a "cooperating association" for LA State Historic Park, justifiably refers to the gondola Project's removal of trees and taking of parkland as an "environmental injustice."[56] LA Parks Alliance agrees.

3. The DEIR's analysis of Project lighting impacts is incomplete.

The DEIR includes a Lighting Study. (DEIR, Appx. C). The study is incomplete for failure to consider the totality of the Project's proposed signage program, which "may include identification and other static signs, *electronic digital displays and/or changeable message light-emitting diode (LED) boards* that include both transit information and other content, *which may include off-site advertising*… Signage would be architecturally integrated into the design of the ART system including its *stations*, the junction, *towers*, and *cabins*." (DEIR, p. 2-45.) The Lighting Study neither discusses this nor provides additional information regarding the signage program.

GO14-130

The DEIR fails to consider the specific impacts of lighting and glare on views *from* and *of* LA State Historic Park protected aesthetic resources. As the Park's General Plan Final EIR states: "Inappropriate lighting throughout the Park may create visual impacts. Obstructing an existing viewshed (such as the Los Angeles downtown skyline) may be considered an adverse impact."

Thus, lighting or glare created or made worse by any Project component, including its gondola cabins, which the signage program acknowledges may include electronic digital displays integrated into the design of stations, towers, and cabins, must be considered in the DEIR. But the DEIR relies only on the City of Los Angeles municipal code, which is subject to change, to protect LA State Historic Park, even though the Park is also (and better) protected by the Park's General Plan and Final EIR, which requires minimizing or eliminating inappropriate lighting. As Project cabins traverse the airspace of the Park lighting from within the gondola cabins, lighting from digital displays, lighting of traditional advertising, reflection of light from other sources,

GO14-131

FN GO14-129 [56] Kathleen Johnson, *Damaging a hard-won park* (LA Times letter to the editor), published Jan. 11, 2023, attached as Exhibit R. (More information on LA River State Parks Partners, including its "cooperating association" status with state parks, is available at its website: https://www.larsppartners.org.)

even unlit cabins traveling across the nighttime backlit skyline, could constitute potentially significant environmental effects of the Project. The DEIR studies none of them.

The DEIR's lighting analysis is incomplete and therefore inadequate. The Final EIR must include a mitigation to ensure gondolas are not vehicles for electronic digital display advertising that would cause a significant light/glare impact at LA State Historic Park. (Additional criticism of the DEIR's inadequate lighting analysis is found in Exhibit S (LPP letter), *supra* p. 64 fn. 59, pp. 6-7. LA Parks Alliance adopts these concerns as if fully set forth herein.) cont'd GO14-131

4. The Shading Impact analysis discloses a significant but unmitigated impact at LA State Historic Park.

The DEIR describes that the LA CEQA Thresholds Guide considers shading impacts of more than three hours between the hours of 9:00 am and 3:00 pm Pacific Standard Time between late October and early April, or for more than four hours between the hours of 9:00 am and 5:00 pm Pacific Daylight Time between early April and late October, to be a significant impact. (DEIR, Appx. C, pdf p. 94.) It goes on to describe shading impacts of shade-sensitive uses during winter months at LA State Historic Park as being significant under the DEIR's threshold:

> Fall shadow diagrams for the proposed Chinatown/State Park Station are depicted on Figure 72 through Figure 76 of Appendix B. A small segment of the western walkway in and near the southern entrance of Los Angeles State Historic Park would be shaded for four hours from 9:00 a.m. to 1:00 p.m. A small segment of walkways in the eastern side of the park would be shaded for four hours from 12:00 p.m. to 4:00 p.m. …[57]
>
> [T]he proposed Chinatown/State Park Station would result in the shading of shade-sensitive uses for more than three hours between the hours of 9:00 a.m. and 4:00 p.m. Pacific Standard Time (between late October and early April) in the Winter. Small portions of the eastern and western walkways and park green space near the southern entrance of the park would be shaded by the proposed Chinatown/State Park Station in the Winter."
> (*Ibid*., pdf p. 98.)

GO14-132

Despite fitting within the DEIR's chosen threshold to find a significant shading impact, the DEIR nonetheless concludes that the shadow impacts due to construction of Chinatown/State Park Station would be less than significant even though it provides no mitigation measures to lessen the significant impact. (*Ibid*., pdf pp. 98-99.) The aesthetic analysis is therefore inadequate for identifying a significant impact under the threshold but determining it not to be significant, as well as for failing to propose a mitigation measure to reduce or eliminate the adverse impact.

[57] LA Parks Alliance notes that the main DEIR document neglects to mention the four-hour shading impact between 9:00 am to 1:00 pm detailed in Appendix C. (DEIR, p. 3.1-55.)

E. The DEIR's analysis of the Project's potentially significant impacts to biological resources is incomplete and inadequate.

The DEIR provides the essential background on the regulatory setting for protection of biological resources (DEIR, pp. 3.4-1 to 3.4-4) but nonetheless fails to perform an adequate analysis of potentially significant impacts in the Project area.

The DEIR's wildlife survey concludes that only a limited number of bird species are found in the biological survey area, including ten common species and three non-native species. (DEIR, pp. 3.4-10 to 3.4-11.) But the DEIR limited the survey area to only "the proposed aerial alignment, stations, junctions, towers, cabins, and cables, and a 500-foot survey buffer around the alignment." (DEIR, p. 3.4-13.) Because the Project will cause direct physical changes and also foreseeable indirect physical changes in the environment beyond the 500-foot survey buffer area, in particular in Los Angeles State Historic Park, this survey area was too small to capture the full extent of potentially significant biological resource impacts.[58]

The DEIR describes two field surveys having been performed. The first survey was conducted April 1, 2020, "to document and photograph existing biological resources" and included a survey of "tall structures such as mature trees, power poles and towers, billboards, and buildings" searching for the "presence of nests." (DEIR, p. 3.4-14.) A second "follow-up" survey was conducted on April 24, 2021, an entire year later, "to verify and record tree species occurring in the Project component footprints," though apparently not to survey for the presence of additional wildlife species that may not have been present during the 2020 survey. (*Ibid.*) GO14-133

The DEIR notes: "Raptor species such as red-tailed hawk, Cooper's hawk, great horned owl, American crow, and common raven are known to use tall structures as nesting sites in urban environments." It continues: "Red-tailed hawk were observed flying in the vicinity of Dodger Stadium during the 2021 survey." (*Ibid*., p. 3.4-11 (latin species names omitted.)) The DEIR found no raptor nests but noted "[i]ndications of songbird nesting activities were detected during the 2021 survey in the Los Angeles State Historic Park." The DEIR also stated that while "[n]o active tests were detected," "ornamental landscaping, including mature trees throughout the [biological survey area], provide potentially suitable nesting habitat for songbirds and raptors." (*Id*.) The DEIR's summary is consistent with the full biological resource assessment found in DEIR, Appendix E. (See DEIR, Appx. E, pdf p. 44.)

A comment letter from Land Protection Partners explains why the biological survey area used by the DEIR is inadequate.[59] LA Parks Alliance adopts the Land Protection Partners letter as its own position, and **requests that Metro respond to the entire letter as if fully set forth herein**.

---

[58] See Figure 4, DEIR, Appx. E, pdf p. 26, showing the area of the biological survey area, leaving out more than half of Los Angeles State Historic Park from the survey area.

[59] Travis Longcore, Ph.D & Catherine Rich, J.D., M.A., letter to Cory Zelmer re LA Aerial Rapid Transit Project ("LPP letter"), Jan. 16, 2023, attached as **Exhibit S**.

The biological survey area should have extended "up to 200 feet upward from the alignment" and included sufficient range to include birds within a reasonable distance of the alignment, since typical songbirds fly at a rate of 30 miles per hour (meaning they would cross the entire study area in "less than 23 seconds"). (LPP letter, p. 2.) It should also have not been completed in a single daytime session. The LPP letter explains that "a single daytime survey in April cannot describe the volume and diversity of migratory birds that traverse the project location at night…during spring and fall migrations," and such a limited survey is inadequate and cannot be considered substantial evidence to support the DEIR's conclusions. (*Ibid.*)

cont'd GO14-133

1. **The DEIR's analysis of potentially significant biological impacts due to bird collisions is inadequate and not supported by substantial evidence.**

The DEIR minimizes the risk of operational impacts in the form of bird collisions with the proposed stations, junctions, towers, cabins, and ropeway cables, finding that "[s]ignificant impacts typically occur when towers or wires are constructed in migratory corridors and obstruct the flight paths of migrant birds." (DEIR, p. 3.4-18.) The DEIR asserts that because the proposed Project is "not in or near a known avian migratory corridor and lacks habitat and topographic features that would promote concentrated avian migratory activity" impacts to migratory birds would be less than significant. (DEIR, pp. 3.4-18 to 3.4-19.)

The DEIR explains that collisions with resident or migrant birds using habitat areas found in the biological resource area would be able to detect and avoid collisions with larger physical components of the Project (e.g., stations, towers, and cabins). (DEIR, p. 3.4-19.) The DEIR asserts that bird strikes with gondola cable systems would be unlikely, because compared to power transmission lines, gondola cables are much larger ("1.75 to 2.5 inches in diameter" compared to only "1 to 2 inches in diameter" for transmission lines, and only "0.4 to 0.5 inches in diameter" for shield wires). (*Id*.)

GO14-134

There are two problems with this analysis. First, it appears to be unsupported by substantial evidence. Appendix E of the DEIR does cite a paper by Bernardino, et al., explaining that "[p]owerline-specific factors" such as wire diameter and the number of vertical wire levels are factors that "*may* provide insights about the potential for birds to collide with ropeway cables." (DEIR, Appx. E, pdf p. 52 (emphasis added).)[60] That such factors *may* be relevant does not justify evading an actual analysis of the potentially significant environmental impact of deadly bird collisions. In fact, the cited paper notes "there is *comparatively little scientific evidence for power line-specific factors, namely* what is the impact of the *number of vertical levels*, or *wire height* and *diameter*." (Bernardino, *supra* fn. 59 (emphasis added).) This is precisely the *opposite* of the meaning imputed to the paper by the DEIR.

"[T]here is evidence that power line collision mortality can even lead to changes in migratory patterns and flyways." (Bernadino, citing Palacín et al., 2017). This may explain, in

[60] Citing J. Bernardino, et al., *Bird collisions with power lines: State of the art and priority areas for research* (hereafter "Bernadino"), Biological Conservation, 222: 1-13 (2018), available at: https://www.sciencedirect.com/science/article/abs/pii/S0006320717317925.

part, the DEIR comment that the Project area is not on a known migratory route. The cited paper also notes "collision as the most widespread interaction" between birds and infrastructure such as the Project. The Bernardino paper explains that "*virtually any aerial wire can pose an obstacle to flying birds*." (*Ibid.* (emphasis added).)[61]

cont'd GO14-134

Second, the gondola cables are viewed by the DEIR as very large for purposes of considering their risk to bird strikes. (DEIR, p. 3.4-19.) But these very same cables are considered insignificant in the Project's aesthetic analysis, because "they have similar characteristics to the overhead powerlines that are prevalent in views in this area. As such, the proposed cables would not significantly impact views in this area." (DEIR, p. 3.1-37.) The gondola cables seem to have the perfect goldilocks size: they are deemed to be *small* (like powerlines) when it comes to assessing their visual impact (notwithstanding that they are not in the distance, but directly overhead within LA State Historic Park), but so *large* (unlike powerlines) that birds will have no difficulty in seeing them.

GO14-135

In addition, it is well-known that bright lights such as those at a sports stadium like Dodger Stadium frequently attract birds.[62] The proposed Project would be constructed between Dodger Stadium and the Los Angeles River, home to an ever-expanding presence of waterfowl and other birds. In addition, LA State Historic Park's easternmost area very near the river provides additional habitat for birds and wildlife. As discussed above, these areas should have been included in the biological survey area but were not.

GO14-136

The Land Protection Partners letter addresses the above points and others in far greater detail than the DEIR. The LPP letter notes that the DEIR arguments and conclusions regarding cable size, cable spacing, alleged increased visibility of three cables, relative risk compared to transmission lines, concentration of avian movement, and artificial light in the Project area, among other things, are incorrect and unsupported by substantial evidence. The letter details specific species that are particularly susceptible to collision that are found in the Project area. The letter finds that the DEIR *misrepresents the scientific literature* and that the Project will result in a *significant number of bird kills*, an impact that *cannot be mitigated*. (LPP letter, pp. 2-5.) Unlike the DEIR, the letter is supported by substantial evidence throughout.

GO14-137

As one example of the kind of species that might be impacted by the gondola cables, drawn towards Dodger Stadium by its bright stadium lights, last fall during the 2022 MLB playoffs between the Los Angeles Dodgers and San Diego Padres, a large goose flew onto the field, interrupting the game for a time before it was eventually captured, removed from the field, and ultimately released to an undisclosed location.

GO14-138

FN GO14-134 [61] The DEIR's "state of the art" article (section 3.4, footnote 17) dates to 2012. The *2018* Bernardino article's purpose is to update the state of the art on bird collisions with power lines based on much newer studies and to "identify major knowledge gaps that should be the subject of subsequent research." (*Id.*)

FN GO14-136 [62] See, e.g., Valerie Fellows, *Dim the Lights for Birds at Night!*, US Fish & Wildlife Service, Apr. 28, 2022, available at: https://www.fws.gov/story/2022-04/dim-lights-birds-night.

Travis Longcore, president of the Los Angeles Audubon Society and an adjunct professor at UCLA, identified the bird as a greater white-fronted goose. An article in the Los Angeles Times explained the occurrence:[63]

> [Greater white-fronted geese] are known to migrate from the Arctic tundra in Alaska, where they breed in the summer, and fly south in the fall along the Pacific, settling in the wetlands in the Central Valley of California or even farther south into Mexico, a flight pattern the birds have carried out for thousands of years, Longcore said.
>
> The bird on Wednesday was probably following this migration pattern when it became distracted by the stadium lights that tower above Chavez Ravine, a common obstacle for migrating birds, said Longcore, whose research includes the effects of light pollution on migratory birds.

Greater white-fronted goose from article, Wally Skalij / Los Angeles Times

The article later continues:

> Most white-fronted geese are spotted along bodies of water, such as lakes at MacArthur and Echo parks, at the L.A. River, or in the wetlands of Playa del Rey or the South Bay, Longcore said. The goose Wednesday would have been accustomed to landing in water, which would explain its hard landing on the field, he said.

cont'd
GO14-138

[63] See Jonah Valdez, *What happened to the goose that stole all the attention at Dodgers playoff game?*, LA Times, Oct. 13, 2022, available at: https://www.latimes.com/sports/dodgers/story/2022-10-13/what-happened-to-the-goose-at-dodger-stadium-experts-say-its-a-rare-species-from-alaska.

> Bird enthusiasts have been buzzing online in recent weeks about large flocks of greater white-fronted geese spotted throughout coastal Southern California, said Kimball Garrett, a researcher at the Natural History Museum of Los Angeles County.

cont'd GO14-138

The failure of the DEIR to fully evaluate the risk to migratory and other birds or to support its conclusions with substantial evidence must be corrected, and the DEIR revised and recirculated for additional public comment.

2. **The Project design is likely to result in large Rock Pigeon roosts.**

As discussed in the Land Protection Partners letter, the DEIR includes depictions that show station structures with large open canopies with exposed structural beams and girders. (See, e.g., Figure 2-5, DEIR p. 2-15; cover image, DEIR, Appx. C; Figure 5-4, DEIR, Appx. C, p. A-4.) This design is "likely to result in large Rock Pigeon roosts" which is likely to necessitate "chemical and/or physical methods that would be used to exclude pigeons from roosting within these structures," a potentially significant environmental effect of the Project that is not disclosed in the DEIR. (LPP letter, pp. 7-8.)

GO14-139

3. **The Least Bell's Vireo, an endangered species, has been sighted in LA State Historic Park; the DEIR must re-evaluate its faulty conclusion of no Project impacts to protected wildlife species.**

The DEIR states: "Because the BSA [biological survey area] has been completely disturbed during urban development and consists of roadways, sidewalks, buildings, and rail tracks, habitats preferred by regional special-status wildlife species are not present (refer to Appendix A, Table B)." (DEIR, Appx. E, pdf p. 47.) The "least Bell's vireo" is specifically called out in the DEIR as one of 39 special-status species identified in the California Natural Diversity Database (CNDDB) "to have historically been recorded from the Los Angeles surrounding eight quadrangles, and from a search of IPaC for the Project area." (*Ibid*., pdf pp. 45-46.) The DEIR notes that "[t]here are no CNDDB records of any federal or State-listed wildlife species from the BSA in over 100 years" and concludes: "The BSA does not provide habitat potentially suitable for any of the regional special-status wildlife species identified during the literature review. The Project area *has been completely disturbed and the native habitats these species are known from have long been removed from the BSA*." (*Ibid*., pdf. p. 46.)

GO14-140

Notwithstanding the DEIR's conclusions, a male least Bell's vireo was recently surveyed in LA State Historic Park on May 24, 2022, by UCLA Institute of the Environment and Sustainability doctoral student, Jenny Aleman-Zometa.[64] Ms. Aleman-Zometa's doctoral work includes researching the way birds use local parkland, particularly parks sited on former brownfields such as LA State Historic Park, to learn the beneficial impact of these parks on

[64] Telephone interview with Jenny Aleman-Zometa, doctoral student, UCLA Institute of the Environment and Sustainability, Jan. 13, 2023. See also https://www.ioes.ucla.edu/person/jenny-aleman-zometa/.

species diversity. Ms. Aleman-Zometa took several images and a short video of the least Bell's vireo during her survey.

The images and video of the least Bell's vireo have been reviewed by leading ornithologists, who confirmed the species' identification and noted that its birdsong is evidence of a "pioneering male" beginning to use LA State Historic Park as habitat. Given this clear evidence of a protected special-status endangered species surveyed recently at LA State Historic Park, the question is what impact the proposed Project might have on this protected species listed as endangered under both state and federal law. The DEIR has not considered this question.

Least Bell's Vireo in LA State Historic Park, May 24, 2022 / courtesy Jenny Aleman-Zometa[65]

cont'd GO14-140

Ms. Aleman-Zometa's May 2022 survey at LA State Historic Park included observation of 35 native bird species. Within the Project alignment and 500-foot buffer she surveyed 16 species, including in the southwest part of the Park. Her survey included common species but also included migrating, wintering, and breeding bird species.

GO14-141

Even if the DEIR's biological survey area with a 500-foot buffer from the Project alignment were sufficient elsewhere, and it was not (see LPP letter, p. 2), it did not consider the need to expand in the area of LA State Historic Park due to direct and indirect physical changes in the environment at the Park due to the Project. Activities at LA State Historic Park that currently occur at the western side of the park in the vicinity of the proposed gondola alignment would be moved significantly eastward as a result of the Project, towards Park areas featuring significantly more wildlife habitat including, when there is sufficient rain as now, an intermittent riparian wetland area with willows and mulefat.[66] For example, the DEIR suggests that special

GO14-142

FN GO14-140 [65] Full format images and video are available on request and will be temporarily available at: https://www.dropbox.com/sh/m1wzhkbvf9md5g5/AADgRm_LqbvwA0imlevui3KNa?dl=0.

FN GO14-142 [66] That there is additional wildlife habitat at the Park's eastern side does not diminish the significant loss of habitat, including removal of 81 trees necessary for the Project as well as operation of the gondola, at the Park's western side. As Ms. Aleman-Zometa explained, "there is still a lot of diversity present at the western side of the Park where the gondola would be sited, and that will be adversely impacted."

event stages, currently located at the western edge of the Park, be moved toward the location of the Park's "Roundhouse" feature. (See DEIR, p. 5-62.) This particular suggestion is not feasible—the Roundhouse is a significant archaeological site at the Park and is inappropriate as a stage location. Another location would have to be found for staging, likely further east where it is more likely to have an adverse impact on wildlife, including the endangered least Bell's vireo. cont'd GO14-142

4. **The DEIR fails to consider habitat and wildlife corridor impacts due to brush clearance activities at the Project's proposed Stadium Tower.**

"If a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measure shall be discussed…" (CEQA Guidelines, § 15126.4, subd. (a)(1)(D), citing *Stevens v. City of Glendale* (1981) 125 Cal.App.3d 986.) The DEIR describes tree removal and brush clearance activities necessary in the area surrounding the Project's proposed Stadium Tower site. (DEIR, pp. ES-80 to ES-83 (describing Mitigation Measures WFR-1 and WFR-2).) The DEIR notes that at least 31 "significant" pursuant to City of Los Angeles regulations will be removed at the Stadium Tower site (10 significant trees for the Stadium Tower, and 21 additional significant trees for the Stadium Tower Fire Buffer Zone for Construction). (DEIR, Table 3.4-1, p. 3.4-23.) GO14-143

The DEIR fails to consider whether removal of the significant trees or other brush clearance requirements may cause a potentially significant environmental effect on wildlife corridors or habitat in the Stadium Tower area. LA Parks Alliance recommends that Metro consult with the Santa Monica Mountains Conservancy as the appropriate Trustee agency with relevant expertise for wildlife corridors and habitat in the Santa Monica Mountains Zone for its advice with respect to determining whether the impact is significant, and if it is considered a significant impact, for appropriate mitigations to reduce the environmental impact to a level less than significant.[67]

F. The Project's Significant Historic and Cultural Impacts Must Be Properly Mitigated or Avoided.

1. Mitigation measures for sensitive cultural and historic resources are improperly deferred.

The DEIR describes many historic and cultural resources within the Project corridor that would be significantly impacted by the Project. These include Los Angeles Union Station, El Pueblo de Los Angeles Historic State Park, and Los Angeles State Historic Park, among other important resources. (DEIR, pp. 3.5-10 to 3.5-33.) The DEIR also identifies numerous important archaeological resources, which is unsurprising given the proposed Project's location within and near areas of first human settlement in the Los Angeles region, dating back as much as 10,000 years. (LASHP General Plan, pdf. p. 29.) GO14-144

FN GO14-143 [67] "[T]he Conservancy should be considered a trustee agency for any CEQA project which affects natural resources within the [Santa Monica Mountains] Zone." (Exhibit F, *supra* fn. 7 p. 3.)

As described above, the Project has obvious aesthetic impacts at many of these sites. In addition, the DEIR describes significant impacts requiring mitigations at many other sites. Mitigations are necessary to protect specific cultural and archaeological resources at El Pueblo, including the Winery, the El Grito mural, and Avila Adobe (MM-VIB-A and MM-VIB-B, DEIR, pp. ES-33, ES-36, ES-67), archaeological resources generally (MM-CUL-A, DEIR, pp. ES-41 to ES-42, a mitigation measure relating to "all ground disturbance activities extending into native soils within known archaeological sites and other areas of high sensitivity") and to create an "Archaeological Resource Worker Training Program" (MM-CUL-B, DEIR, p. ES-44) and "Archaeological Testing Plans" (MM-CUL-C, for Alameda Station, DEIR, p. ES-45; MM-CUL-D, for LA Union Station; MM-CUL-E, for Los Angeles State Historic Park, DEIR, p. ES-48). If significant resources are found pursuant to MM-CUL-E, an additional mitigation would reconfigure planned improvements at LA State Historic Park. (MM-CUL-F, DEIR, p. ES-49.)

cont'd GO14-144

LA Parks Alliance objects that all these mitigations are improperly deferred. Deferring mitigations is generally impermissible under CEQA. (See CEQA Guidelines, § 15126.4, subd. (a)(1)(B).) Particularly where, as here, known sensitive cultural and archaeological resources are within the impact area of the Project and could (indeed, are likely to be) harmed by construction activities, it is appropriate for mitigation measures to be fully formulated and subject to public review in advance of certification of the environmental document. To the extent that mitigation measures may require some additional study to be fully formulated, that study must occur now, before environmental review is completed and certified, and in advance of the commencement of any construction activities.

GO14-145

Given the existence of at least one feasible alternative that eliminates or lessens virtually all the Project's potentially significant and significant and unavoidable impacts (DEIR, pp. ES-19), it would be irresponsible to construct anything within archaeologically sensitive areas until the full extent of those resources are known, and if appropriate excavated or otherwise preserved and protected on site.

GO14-146

2. The DEIR ignored numerous NOP scoping comments urging protection of the "Monument to Sharing" artwork at LA State Historic Park

The Spring Street Alternative described in DEIR Chapter 4.0 "Alternatives" should not have been presented as a project alternative. As a project alternative that would have even greater impacts than the preferred alternative due to its location running directly through the center of Los Angeles State Historic Park, it is not an appropriate alternative, since it does not reduce environmental impacts. (*Watsonville Pilots Assn. v. City of Watsonville* (2010) 183 Cal.App.4th 1059, 1087, citing CEQA Guidelines, § 15126.6, subd. (a).)

GO14-147

Numerous scoping comments discussed grave concern about a public artwork known as "Monument to Sharing" located at one of the entrances to LA State Historic Park that would be damaged by the Spring Street Alternative, presented as one of two alignment alternatives during the Project's scoping process. (See, e.g., DEIR, Appx. A, pp. 130-133, 140, 226, and 278, among others.) Despite the scoping comments, the discussion of the Spring Street Alternative does not mention aesthetic or cultural impacts to the "Monument to Sharing" artwork.

G. Potential Dewatering May be Toxic and Require Mitigation.

The DEIR discusses groundwater conditions in the Project area as known to be toxic in the vicinity of construction activities proposed at Los Angeles State Historic Park. (DEIR, p. 3.10-26). Groundwater toxicity at other locations is "not specifically known." (*Id.*) The DEIR proposes Mitigation Measure HAZ-1 ("Prepare a Soil and Groundwater Management Plan") to address construction impacts:

> The Soil and Groundwater Management Plan shall provide a summary of the environmental conditions at each Project component site, including stations and towers. The Soil and Groundwater Management Plan shall include methods and procedures for sampling and analyzing soils and/or groundwater to classify them as either hazardous or nonhazardous; and if identified as hazardous, shall include additional methods and procedures for the proper handling and removal of impacted soils and/or groundwater for off-site disposal and/or recycle. (DEIR, pp. ES-53 to ES-54.)

GO14-148

The DEIR describes construction activities as potentially requiring dewatering operations if "nuisance seepage from boreholes" or from excavation activities is encountered. (DEIR, pp. 3.10-26 to 3.10-27.) The Project will require deep piles at several Project component locations likely to be lower than the water table. (See Table 2-4, DEIR, p. 2-51, describing one drilled pile location of 80 feet and five drilled pile locations of 120 feet or greater; the Dodger Stadium Station drilled piles would be only 55 feet deep.)

LA Parks Alliance notes that in the EIR for Metro's Link Union Station, Metro proposed a series of mitigation measures to deal with dewatering operations, including dewatering for discharge of non-stormwater wastes.[68] While those proposed mitigations were also largely deferred, primarily requiring compliance with regulations and existing dewatering permits, it was *Metro* that would supervise and ensure that mitigations were properly enforced, not the Project's builder (whoever that turns out to be).[69]

GO14-149

[68] See Link Union Station – Draft EIR, Executive Summary, pp. ES-xlviii to ES-xlix, available at: http://libraryarchives.metro.net/DPGTL/eirs/Link%20Union%20Station/2019-link-union-station-draft-eir-executive-summary-english.pdf.

[69] In public statements, both ARTT LLC and Climate Resolve claim the Project will be donated to a new nonprofit, Zero Emissions Transit, which similarly has no experience building anything. See https://www.laart.la/faq/ and https://www.climateresolve.org/climate-resolve-launches-new-nonprofit-focused-on-zero-emission-transit-dodger-stadium-aerial-gondola-to-be-first-project/ (both last viewed Jan. 14, 2023). But in a sworn declaration of October 5, 2022, Principal Deputy Counsel, Ronald W. Stamm, Metro's counsel of record in recent litigation asserted that "ARTT's rights and obligations under [its agreement with Metro] cannot be assigned unless and until Metro approves the assignment…" and "[n]o assignment has been proposed yet." (LA Sup. Ct. Case No. 22STCP01030, Declaration of Ronald W. Stamm in Support of Respondent's and Real Party's Joint Opposition to Motion to Augment the Record and File a First Amended Petition, par. 10, filed Oct. 6, 2022.)

Here, knowing of contaminated groundwater conditions very likely to exist in the Project area, Metro does not propose further groundwater testing of Project component areas to understand whether there *will* be a significant impact. Instead, Metro proposes deferring action until such time as hazardous conditions (i.e., significant impacts of the Project) are stumbled across during construction, long after the final EIR is certified. This is not permitted under CEQA. (CEQA Guidelines, § 15126.4, subd. (a)(1)(B).) The Project's mitigation measures should include pre-certification groundwater testing to understand the scope of potential impact and if determined to be significant, a pre-construction mitigation that lessens the impact to a level less than significant must be imposed.

cont'd GO14-149

H. Land Use and Planning Conflicts are Significant and Unavoidable.

In its land use and planning analysis the DEIR states the Project will have a significant environmental effect because it conflicts with the General Plan of the Los Angeles State Historic Park, but that this impact can be made less than significant with the imposition of mitigation measure LUP-A ("Obtain a Los Angeles State Historic Park General Plan Amendment") to allow "transit uses" within the Park. (DEIR, pp. ES-58, 3.11-38.) But a General Plan amendment to permit this Project within LA State Historic Park is a legal impossibility. The proposed mitigation measure to obtain a General Plan amendment is for an activity that state law expressly prohibits in a California state park historic unit. (See discussion, *supra* pp. 12-26.) Here, Metro should have determined the proposed mitigation was legally infeasible. When a lead agency makes this determination, a mitigation measure need not be proposed or analyzed. (CEQA Guidelines, § 15126.4, subd. (a)(5).) There is no mitigation to lessen the impact, which is therefore significant and unavoidable.

GO14-150

The significant and unavoidable impact is fatal to the Project's hope to use any portion of LA State Historic Park for a Project component or part of its aerial alignment. But this is not the only significant environmental effect from land use and planning conflicts that the DEIR fails to properly identify and analyze.

1. The Project conflicts with the General Plan of El Pueblo de Los Angeles, which the City of Los Angeles must follow.

El Pueblo de Los Angeles Historical Monument "is a national and state registered Historical Monument and City-designated Historic-Cultural Monument located in downtown Los Angeles directly west of LAUS. El Pueblo is historically significant as the birthplace of the City of Los Angeles, established in September 1781 by settlers from present day northern Mexico." (DEIR, p. 2-8.) El Pueblo includes a number of important historical structures, including "the Avila Adobe, the City's oldest surviving residence; Pico House, built by the last governor of California under Mexican rule, and the City's first grand hotel; the Plaza Firehouse, the City's first firehouse; and Our Lady Queen of Angels Catholic Church, the City's oldest church and the only building at El Pueblo still used for its original purpose." (*Id.*)

GO14-151

As the DEIR notes, El Pueblo was originally El Pueblo State Historic Park, a historic unit of California's state park system created in 1953. (DEIR, p. 3.5-7.) It was transferred to the City

of Los Angeles, and in 1992 a new City Department, El Pueblo de Los Angeles Historical Monument Authority Department ("El Pueblo Department"), was created to operate, manage, maintain, and control El Pueblo. (LA Admin. Code ("LAAC"), Ch. 25, art. 1, § 22.620.) The Department is overseen by the El Pueblo de Los Angeles Historical Monument Authority Commission (the "Board"). (LAAC, § 22.621.) The Board has the "power and authority to approve street lights, street and sidewalk surfaces, fixtures and other appliances and furnishings proposed to be located in or on the sidewalks, streets and ways immediately adjoining the Monument in order to maintain and enhance the ambiance and character of the Monument." (LAAC, § 22.626.) The Board may "enter into contracts for services and leases as it deems necessary for the operation, management, maintenance and control of the Monument" within certain express limitations, but neither the Board nor Department have any power to "to acquire or sell any real property for or on behalf of itself or of the City." (LAAC, §§ 22.627, 22.632.) The Board may not approve "master plans, development plans, and amendments thereto" without prior approval of the Los Angeles City Council and Mayor. (LAAC, § 22.634.) GO14-151

The DEIR also notes the existence of El Pueblo's General Plan and the El Pueblo Department's El Pueblo de Los Angeles Strategic Plan, which "has as one of its objectives 'historic and asset management'" with a goal to "continue to implement and adhere to El Pueblo's General Plan by restoring and renovating properties to their highest and best use." (DEIR, p. 3.5-8.)

The DEIR fails to mention, however, that the City's acquisition of El Pueblo from the State of California came with specific deed restrictions that limit the City's actions with respect to permissible uses of El Pueblo land it acquired and holds in public trust for the people of the City and California.[70] The Quitclaim Deed restrictions require El Pueblo's development and operation to conform to its April 11, 1980, General Plan. While the City may amend the El Pueblo general plan, in doing so the City "*shall* consider the development criteria of Section 5019.59 of the Public Resources Code." (Quitclaim Deed, condition subsequent no. 1, pp. 1-2.) This statute explicitly limits what can be constructed in a state historic park: "*The only facilities that may be provided* [in a state park historic unit] are those *required* for the safety, comfort, and enjoyment of the visitors, such as access, parking, water, sanitation, interpretation, and picnicking." (Pub. Res. Code, § 5019.59 (emphasis added).) Failure to follow the Quitclaim Deed's express restrictions allows a right of reversion to the State. (Quitclaim Deed, p. 2.) The DEIR fails even to mention these strict land use limitations. GO14-152

The DEIR describes use of El Pueblo land necessary to construct Alameda Station:

> Vertical circulation elements (i.e. elevators, escalators, stairs) for pedestrian access, which would also serve as queuing areas to the station, would be introduced at-grade north of the Placita de Dolores in a proposed new pedestrian plaza at El Pueblo on the west in an area currently used as a parking and loading area for El Pueblo. GO14-153

FN GO14-153 [70] Quitclaim Deed between State of California and City of Los Angeles for El Pueblo de Los Angeles Historic Monument ("Quitclaim Deed"), executed Oct. 27. 1988, attached as **Exhibit T**.

(DEIR, p. 2-23.)

These "vertical circulation elements" would be located on land within El Pueblo's boundary that is subject to its General Plan. Since the City must follow the mandate of Public Resources Code section 5019.59, which restricts permissible facilities at El Pueblo to only those "*required* for the safety, comfort, and enjoyment of the visitors" it may not construct any portion of the Project within the El Pueblo de Los Angeles Historical Monument boundary. The DEIR's failure even to provide basic background information regarding this significant environmental impact due to a clear conflict with the El Pueblo General Plan, let alone any proposed mitigation measure to lessen its significance requires the DEIR to be revised and recirculated.[71, 72]

cont'd
GO14-153

2. The Project conflicts and is inconsistent with numerous land use plans, policies, and regulations adopted for the purpose of avoiding or mitigating environmental effects.

The DEIR asserts the proposed Project is subject to numerous land use plans, policies, and regulations, including, but not limited to (DEIR, pp. 3.11-37 to 3.11-38):

- Los Angeles State Historic Park General Plan
- Dodger Stadium Conditional Use Permit
- City of Los Angeles General Plan, including several community plans
- City of Los Angeles RIO District Ordinance
- Cornfield Arroyo Seco Specific Plan

GO14-154

The DEIR performs a conclusory analysis of the above and other land use plans, policies, and regulations (see Tables 3.11-1 through 3.11-6, DEIR, pp. 3.11-39 to 3.11-73) and concludes that the only land use conflict requiring mitigation is the Project's acknowledged conflict with the LA State Historic Park General Plan. (DEIR, p. 3.11-77.) As discussed above, the Project conflict with LA State Historic Park is significant and unavoidable, and the proposed mitigation to paper over the conflict is legally infeasible. (See discussion, *supra* pp. 12-26.) Likewise, the

[71] This assumes a mitigation is possible. As with the Project's similar conflict with LA State Historic Park's General Plan, the impact appears to be significant and unavoidable. (See discussion, *supra* p. 25.)

[72] For the record, LA Parks Alliance notes a discrepancy between an *illustration* of El Pueblo found in the 2016-2020 Strategic Plan and the *actual El Pueblo park boundary* as the park was accepted by the City from the State of California. Page four of the Strategic Plan appears to show a small triangular cutout of El Pueblo's boundary along Alameda Street, adjacent to the Old Winery, Avila Adobe, and Placita de Dolores locations at the Historic Monument. The true park boundary as indicated on the 1980 General Plan applicable to the property and as accepted by the City has no such triangular cutout. See Quitclaim Deed, Exhibit "B" Sheet 1, pdf. p. 13; see also El Pueblo General Plan, pdf p. 6 (El Pueblo de Los Angeles State Historic Park, Drawing No. 17269, "Project Description & Vicinity"). The El Pueblo boundary along Alameda adjacent to the Project is a continuous straight line with no triangular cut out. Even if the City could provide this surplus land to the Project, SMMC has a right of first refusal under Public Resources Code section 33207(b).) (See discussion, *supra* pp. 6-8.)

FN GO14-153

proposed mitigation for the Project's equally clear conflict with the El Pueblo General Plan is also legally infeasible. (See discussion, *supra* pp. 73-75.)

cont'd GO14-154

Without more it is evident that the Project has significant and unavoidable environmental impacts within the land use and planning analysis category. Nonetheless, this letter will briefly touch on some of the more obvious conflicts between the Project and other plans, policies, and regulations discussed in the DEIR.

GO14-155

LA Park's Alliance notes that the land use consistency analysis includes many speculative and unsupported claims already mentioned above. For example, and as discussed above, the DEIR repeatedly describes the speculative use of Dodger Stadium Station as an access point for communities adjacent to Dodger Stadium as a Project feature even though that permissive use would require future consideration and is not guaranteed to occur or remain available, the DEIR's ridership study is entirely speculative and not based on actual data, and the Project itself is not guaranteed to operate every day (as discussed, it will run according to demand, perhaps not at all) and provides priority to Dodger Stadium event ticket holders. The DEIR also repeats that the travel time from Union Station to Dodger Stadium with the Project is only seven minutes, neglecting to provide any estimate of the total time including queueing/ waiting, which is the far more relevant consideration. Any consistency analysis relying on these speculative, unsupported, and incomplete claims is necessarily misleading and inadequate.

GO14-156A

GO14-156B

In addition, because the Project fails to consider the foreseeable development of parking lot areas around Dodger Stadium, any consistency analysis with respect to public services within the City of Los Angeles General Plan (especially its Framework and Land Use Elements) is incomplete and inadequate. These would include plans, goals, policies, and objectives related to police and fire service, parks, libraries, schools, and the like.

GO14-157

Los Angeles State Historic Park General Plan

The DEIR asserts that the "The proposed Project would provide recreation opportunities in coordination with the regional recreation network by providing a connection from the Los Angeles State Historic Park to other local transit lines along the Project alignment and the regional transit system accessible at LAUS…" (DEIR, p. 3.11-39.) The Project is not itself a recreational facility, it is a private transit facility, primarily intended to move people from LA Union Station to Dodger Stadium. Though if the Project were built users could theoretically take it to LA State Historic Park, there is no substantial evidence that people will do so, because a robust public transit system already serves the Park. Ridership studies for the Project are speculative, as are Project features to allegedly transport persons to the Park, to Elysian Park, and elsewhere other than on game days, when Dodger Stadium ticket holders will have priority.

GO14-158

The DEIR asserts: "The proposed Project would not interfere with the passive uses currently enjoyed at the Los Angeles State Historic Park. The proposed Project's aerial clearance would allow the continued use of the park, with certain limitations." (*Ibid.*) The second sentence negates the first. If limitations are placed on the Park's use, the Project necessarily interferes with the Park. In fact, the Project would take well over an acre of the Park for private use, not including the remainder parcel created by the Project alignment's intrusion at the western side of

the Park. Park activities in the area of the gondola will be changed, including for major events, when event stages will be forced to find a new location in the Park (causing foreseeable significant indirect physical changes that have not been analyzed in the DEIR). cont'd GO14-158

The DEIR's assertions regarding consistency with the Park's aesthetic goals are adequately addressed elsewhere in this letter. The Project clearly does *not* "[p]rotect and enhance scenic viewsheds and features and preserve the visitor's experience of the surrounding landscape by minimizing adverse impacts to aesthetic resources." (DEIR, p. 3.11-39.) It does exactly the opposite, harming vital aesthetic, cultural, and historic resources that are protected by the Park's General Plan and Final EIR document. GO14-159

The DEIR asserts that the Project's proposed park amenities would be a visitor benefit. (DEIR, p. 3.11-41.) The Park already has adequate concessions and other park amenities and the proposed amenities are not necessary, and would largely serve to replace existing facilities the Project would destroy. Thus, the DEIR's assertions regarding Park Facilities Goals are specious – but for the Park's destruction of existing facilities, development of replacement facilities would not be necessary. Project facilities are *not* Park facilities, they would merely be located within the Park. Under Public Resources Code section 5019.59, however, they are not permitted. Similarly, the Project is *not* consistent with the Park's Education and Interpretation Goal since the Park's goals do not relate to interpretation of non-Park structures and facilities. That the massive Chinatown/State Park Station might include an exhibit, display, public art, or interpretive display does not diminish the negative impact of its unlawful intrusion. GO14-160

As already discussed, the Project does not assist the Park in meeting its Access and Circulation Goal. The Park's existing access is sufficient to welcome pedestrians, cyclists, and a small number of vehicles. Public transit access is readily available through Metro's nearby Gold Line station and on public bus lines. The Project would not "create a sense of entry and arrival at the Park" (DEIR, p. 3.11-42), it would completely obscure the Park's existing entry. (See discussion and images, *supra* p. 60.) Further, additional access is *not required*, and the DEIR provides no substantial evidence to support that a significant number of people would use the Project for the purpose of traveling to the Park. Per the DEIR's *own study*, at most 10% of visitors to special events *might* use the gondola to arrive, meaning 90% of visitors will not experience the "sense of entry" the Project would impose in achieving its true objective. GO14-161

Dodger Stadium Conditional Use Permit

The DEIR asserts that the Project is consistent with the Dodger Stadium Conditional Use Permit. (DEIR, 3.11-43.) But the DEIR provides analysis of exactly two of the CUP conditions (conditions 1 and 3). (*Ibid.*) Elsewhere, the DEIR describes that a Plan Approval for the Conditional Use Permit is necessary, while adding that condition 4 of the CUP provides for "collaboration 'in devising mass transportation service to the Stadium site…'" (DEIR, 2-62.) The consistency analysis describes no conflict with the CUP. But there logically must be a conflict, or at least a potential conflict, or no Plan Approval would be necessary. The DEIR's consistency analysis is therefore incomplete and inadequate for failing to provide the necessary information to determine whether the Project is or is not consistent with the CUP. GO14-162

City of Los Angeles – Framework Element

The consistency analysis with the City of Los Angeles Framework Element is notable more for what it leaves out of the analysis than what it includes. The DEIR asserts that the Project is consistent with Objective 6.2 of chapter of the Framework Element. (DEIR, p. 3.11-49.) While the Project theoretically would add an additional *private* transit option to transport persons from Union Station to LA State Historic Park (when it is running and not prioritizing Dodger Stadium event patrons), the DEIR provides little evidence a significant number of persons will use it instead of the existing and readily available Metro Gold Line, bus lines, or other options such as walking or riding a bicycle. The proposed Project's consistency with Objective 6.2 is therefore speculative. Consistency with the Framework Element's Transportation policy is similarly deficient.

GO14-163

The Framework Element consistency analysis omits Objective 3.17: "Maintain significant historic and architectural districts while allowing for the development of economically viable uses." (Framework Element, Chapter 3.)[73]

The Framework Element consistency analysis omits discussion of Goal 6A and Objective 6.1, which are particularly relevant to the numerous parks adversely impacted by the Project, particularly LA State Historic Park.

> Framework Element Goal 6A: "An integrated citywide/regional public and private open space system that serves and is accessible by the City's population and is *unthreatened by encroachment from other land uses*."
>
> Framework Element Objective 6.1: *Protect the City's natural settings from the encroachment of urban development*, allowing for the development, use, management, and maintenance of each component of the City's natural resources to contribute to the sustainability of the region.
> (Framework Element, Chapter 6.)

GO14-164

The DEIR's reliance on speculative and unsupported claims and omission of highly relevant goals and objectives causes the Framework Element consistency analysis to be invalid.

Central City Community Plan

Within the Project area, the Central City Community Plan touches only El Pueblo de Los Angeles Historical Monument, so it is only nominally relevant to the Project, and is largely superseded by land use regulations of the El Pueblo General Plan, with which the Project is clearly inconsistent. (See discussion, *supra* pp. 73-75.) As discussed above, the consistency analysis relies on speculative and unsupported claims regarding Project availability to community members and Project ridership and is therefore invalid. With respect to connections

GO14-165

FN GO14-164

[73] The City of Los Angeles Framework Element is currently available at: https://planning.lacity.org/plans-policies/framework-element (last viewed Jan. 14, 2023).

to LA State Historic Park, the Project allegedly provides a transit connection that is duplicative of existing robust public transit options, walking, and cycling. cont'd GO14-165

As in the Framework Element, the Central City Community Plan Element leaves out important objectives and policies. The analysis is incomplete without considering Objective 9.2: "To provide the requisite services, housing opportunities, and community environments to allow the homeless to rejoin the workforce and lead more productive lives." The Project seeks to utilize City surplus land that would be better used for development of affordable housing and job creation and is known to conflict with longstanding community development plans in the area of the Project's Alameda and Alpine Towers. The Project is not only inconsistent with but blocks the attainment of Objective 9.2.

The Central City Community Plan also includes Objective 11-7: "To provide sufficient parking to satisfy short-term retail/business users and visitors but still find ways to encourage long-term office commuters to use alternate modes of access." Objective 11-8: "To *evaluate, study and monitor current parking policies to assess parking demand as a result of changes in development trends*, the growing downtown residential community and the *general intensification of land use* in the Central City area as surface parking lots become developed with other uses." As discussed elsewhere, the claimed benefit of high rate of public transit use for the Project and removal of vehicles from Project area roadways is speculative and highly inflated.[74] Legitimate fears of gondola users driving downtown and inundating the neighborhoods around Union Station and the LA State Historic Park have been a concern of community members since the Project was first made public. The DEIR's failure to address these legitimate concerns, which are consistent with issues identified in the Central City Community Plan by providing even a cursory analysis of the Project's consistency with Objectives 11-7 and 11-8 is puzzling. GO14-166

Central City North Community Plan

The Central City North Community Plan consistency analysis relies on the same speculative and unsupported claims regarding Project availability to community members and Project ridership as the Central City Community Plan and is likewise invalid. The Project's transit connection with LA State Historic Park is duplicative of existing options and there is no substantial evidence of a need for the service for that purpose. GO14-167

The discussion of Goal 12 ("Encourage alternative modes of transportation to the use of single vehicle occupant trips…") is curious, since the primary purpose of the Project is transporting Dodger Stadium game and event patrons, and the average number of persons per vehicle to Dodger Stadium is 3.6.[75] The primary purpose of the Project would thus not reduce single vehicle occupant trips. (This point is equally applicable to Silver Lake-Echo Park-Elysian Valley Community Plan Goal 11, which is identical to Central City North's Goal 12.)

FN GO14-166 [74] See UCLA Mobility Study, *supra* p. 48 fn. 47 (Exhibit P).

FN GO14-167 [75] See UCLA Mobility Study (Exhibit P), p. 3; accord, Dodger Stadium Conditional Use Permit (DEIR, p. 3.11-43).

Relevant Objectives and supporting policies omitted from the Central City North Community Plan consistency analysis include Objective 1-4: "To promote and insure the provision of adequate housing for all persons regardless of income, age, or ethnic background." As in the consistency analysis of the Central City Community Plan with its Objective 9-2, the Project is not consistent with this objective since it seeks to take City surplus land in the Community Plan area very well suited to the development of affordable housing and conveniently located near existing public transit options. The Project is also not consistent with Goal 4 and Objective 4-1, which calls for the conservation of existing recreation and park facilities. The Project would reduce available park space at LA State Historic Park by well over an acre before considering the loss of the remainder parcel to the west of the proposed Project alignment. Similarly, the Project is not consistent with Goal 5 and Objective 5-1, "[t]o *preserve existing open space resources*…" (Emphasis added.) GO14-168

Finally, there can be no doubt that a consistency analysis with the Central City North Community Plan cannot be considered complete without a serious discussion of Goal 17 and its supporting Objective 17-1: "To *ensure that the Community's historically significant resources are protected, preserved, and/or enhanced*." GO14-169

"RIO" River Improvement Overlay District

While LA Parks Alliance does not believe the Project is consistent with the RIO District, and the consistency analysis relies largely on speculative, unsupported, and incomplete information, the primary conflict with RIO that is not adequately discussed in the DEIR is with respect to the potential for light intrusion, particularly from potential electronic digital displays that are described as possible for gondola cabins. The consistency analysis should therefore be revised and recirculated for additional public review and comment. GO14-170

Cornfield Arroyo Seco Specific Plan

The Project seeks an exception from the Cornfield Arroyo Seco Specific Plan ("CASP") and to create a Specific Plan to benefit the project and relieve it from otherwise applicable City of Los Angeles zoning regulations and to allow construction of the Chinatown/State Park Station. (DEIR, p. 3.11-63.) Though the DEIR asserts that "the provision of a station at this location would be consistent with the overall intent of the CASP…" (*ibid*.) that is a legal impossibility. If the Project were consistent with the CASP it would not need an exception to the CASP. (In the City of Los Angeles a specific plan "exception" is essentially equivalent to a variance.) GO14-171

I. The Failure to Mitigate Temporary Loss of Access to Substantial Portions of LA State Historic Park is Impermissible.

The DEIR notes that "[c]onstruction of the Chinatown/State Park Station would require the temporary closure of approximately 1.59 acres of the southern entrance to Los Angeles State Historic Park during the approximately 19 months for the construction of the Chinatown/State Park Station." (DEIR, p. 3.16-16.) The DEIR finds the closure is not significant, justifying its GO14-172

conclusion by comparing loss of this land to park patrons for more than a year and a half to the Park's occasional closure for special events. The comparison is inapt. The DEIR's conclusion does not evince that the determination was made using "careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data." (CEQA Guidelines, § 15064, subd. (b)(1).)

Though not offered in mitigation, since the DEIR has determined the loss is not significant, Metro essentially suggests park visitors can just suck it up—go someplace else, use some other part of the Park, or perhaps just skip going to local parks until the Project is complete. This is unacceptable, especially in light of the identified significant and unavoidable noise impacts to the Park, for which no mitigation has been identified.

cont'd GO14-172

The DEIR is inadequate for failing to adequately analyze whether the temporary loss of 1.59 acres of LA State Historic Park near its southwest entrance is significant, and if it is significant, for failing any attempt to mitigate the significant impact.

J. The Project Alternatives Section Must be Revised to Include Additional Feasible Alternatives, Including a Revised TSM Alternative.

The DEIR identifies the Transportation Systems Management (TSM) Alternative as the Environmentally Superior Alternative, but goes to great lengths to argue the alternative meets too few project objectives to be worthy of consideration.

But this is only because the project alternatives are constrained by artificially narrow project objectives. (See discussion, *supra* pp. 43-46; see also *WATER,* 78 Cal.App.5th at 692.) Of the objectives the DEIR asserts the TSM alternative does not meet, four are the result of project objectives plainly chosen to favor the aerial rapid transit system over other feasible alternatives, defining the feasible TSM alternatives out of consideration (these are objectives 2, 7, 8, and 12). The DEIR's support for its conclusion that the preferred alternative meets two others is largely speculative, not based on substantial evidence, and the result of ignoring reasonably foreseeable indirect changes in the environment due to the project (these are objectives 5 and 9). The remaining two objectives could easily be met by the TSM Alternative with only minor modifications (objectives 10 and 11). (In fact, it is unclear why Metro would not attempt to meet objective 11 in *all* transportation projects it considers—why would it purposely design a project alternative in a way that doesn't attempt to minimize the alternative's environmental footprint?)

GO14-173

The TSM Alternative's design suffers from a conveniently terrible lack of imagination considering it is proposed by one of California's largest public transportation agencies, serving the largest county (by population) in the United States, for a project that was initially proposed to Metro's "Office of Extraordinary Innovation."

//

The TSM Alternative should be minimally revised:

- To travel not only from LA Union Station, but from other sites Metro identifies as appropriate collection points (noting that the current DSE already operates a line directly from the South Bay);

- To use electric buses, which would eliminate GHG emissions in the Project area, the same as the preferred alternative.

cont'd GO14-173

Additional benefits of the revised TSM Alternative would be an expanded fleet of electric buses, which would not be required to travel within only the Project area, but which could be readily available for other uses when not needed for transit to Dodger Stadium games and events. These uses have the potential to greatly reduce VMT and GHG not only within the Project area, but over the entire Metro service area.

Other feasible alternatives to consider are included in the 1990 LACTC Study. (See discussion, *supra* p. 42 fn. 43 (Exhibit O).) Particularly worthy of consideration is the escalator/walkway option, which has a very large capacity (approaching half of the stadium capacity), relatively low cost, and low total travel time (including waiting and boarding). (Id., pdf. p. 7.)

GO14-174

CONCLUSION

Based on all of the above and on other comments and objections by others incorporated by reference herein, the Draft Environmental Impact Report must be revised and recirculated or the Project must be withdrawn from consideration and the environmental review terminated.

GO14-175

Thank you for your consideration of these comments.

Sincerely,

John Given

RE: Los Angeles Aerial Rapid Transit Project
SCH 20201000007

Dear Mr. Zelmer:

This letter is submitted on behalf of Arts District Community Council LA ("ADCCLA") with respect to the above-captioned Los Angeles Aerial Rapid Transit Project (the "Project"), for which Los Angeles County Metropolitan Transportation Authority ("Metro") is acting as lead agency for the Project's environmental review.[1] ADCCLA contends that the Notice of Preparation ("NOP") circulated for the Project by Metro on October 1, 2020 is legally inadequate and the only appropriate remedy is for Metro to revise the inadequate NOP and recirculate with a new review and comment period for responsive and trustee agencies and members of the public.

The *minimum* legal requirements for an NOP are very clear:

> The notice of preparation shall provide the responsible and trustee agencies, the Office of Planning and Research and county clerk with *sufficient information describing the project and the potential environmental effects to enable the responsible agencies to make a meaningful response*. At a minimum, the information shall include:
>
> (A) Description of the project,
>
> (B) Location of the project (either by street address and cross street, for a project in an urbanized area, or by attaching a specific map, preferably a

[1] ADCCLA is a 501c3 non-profit organization made up of a coalition of community stakeholders whose goal is to preserve, protect and enhance the neighborhood it serves. ADCCLA's mission includes providing information, services, and opportunities to participate in rendering a true urban community with an emphasis on green solutions, enhancing and promoting art in the neighborhood and encouraging stakeholder participation. (See https://www.adccla.org.)

> copy of a U.S.G.S. 15' or 7 1/2' topographical map identified by quadrangle name), and
>
> (C) *Probable environmental effects of the project*.
>
> (Cal. Code Regs., tit. 14 (hereafter "CEQA Guidelines"), § 15082, subdiv. (a)(1) (emphasis added).)

The Project NOP circulated by Metro is inadequate because it does not provide "sufficient information describing the project and the potential environmental effects to enable the responsible agencies to make a meaningful response." It also fails to provide sufficient information about the "[p]robable environmental effects of the project." (*Id.*)

The NOP consists of only eight pages, the first three and a half pages of which consist of text, a significant portion of which is boilerplate explanation of basic CEQA concepts and requirements, as well as a public hearing notice and the lead agency's contact information for the Project. The first page provides a general description of the proposal submitted by Los Angeles Aerial Rapid Transit Technologies LLC to Metro for an aerial tram project to connect Los Angeles Union Station to Dodger Stadium. (NOP, p. 1.)

The first page also includes a basic project description, describing the proposed aerial tram alignment as traveling "generally along Alameda Street, Spring Street, and Bishops Road from LAUS to Dodger Stadium." (*Ibid.*) The project description continues: "The proposed Project includes options for an intermediate station to provide additional transit service adjacent to the Los Angeles State Historic Park and the location where the proposed Project flies over portions of the Park (the Spring Street Alternative and Broadway Alternative)." In its totality, this vague project description does not make clear to a reader of the NOP that there is *no* proposed alternative other than the "no-project" alternative which will not significantly and adversely impact LA State Historic Park.

The second page of the NOP begins by referencing the final four non-textual pages of the NOP. (*Id.*, p. 2.) Figure 1 shows a regional map of Los Angeles County with a centrally located dot and label indicating the approximate location of the project within the county. (*Id*., p. 5.) Figures 2 and 3 show the two alignment variations of the one project alternative presented. (*Id*., pp. 6-7.) Figure 4 shows photos of a number of aerial trams in use around the world. While perhaps helpful to a reader entirely unfamiliar with aerial trams, the photographs seem of quite limited value in the context of assisting responsible agencies, trustee agencies, and members of the public in assessing the potentially significant environmental impacts of *this* Project in order to make meaningful responses to the NOP. For example, Figure 4 does not suggest that any of the aerial trams depicted are of the particular type under consideration for the Project, does not show how tall the proposed aerial tram's towers might be, or where they might be located along either of the proposed project variation's alignments.

Page two of the NOP continues with the "Project Location and Environmental Setting," which generally describes the physical location and land uses in the area of the proposed Project. (*Id*., p.

2.) Again, the NOP vaguely suggests there may be no direct impact on LA State Historic Park in describing that the flyover of the park would be "in connection with providing additional transit service *adjacent* to the Los Angeles State Historic Park." This confusing statement easily misleads an uninformed reader. One very reasonable interpretation of the text is that if the optional adjacent station is not included as part of the Project then the aerial tram might not cross directly through the park's airspace at all. The ambiguous statement fails to assist, and arguably impedes, responsible and trustee agencies and interested park stakeholders and other members of the public in making informed comments about the Project to the lead agency.[2]

The NOP continues with a statement of the Project's purpose, nominally "to expand mobility options for transit riders through a permanent direct transit connection between [Union Station] and Dodger Stadium, a regional event center, via an aerial gondola system." (*Id*.) The Project purports to have "potential to increase transit access for open space, parks, and the surrounding communities by linking to the Los Angeles State Historic Park, Elysian Park, and the region's rapidly growing regional transit system at [Union Station]." (*Ibid.*)

Conspicuously absent from the NOP's discussion of potential future uses of the aerial tram is its use in connection with likely future development of the 260 acres around Dodger Stadium owned by McCourt Global, the very owner of the aerial tram development company.[3] "CEQA 'cannot be avoided by chopping up proposed projects into bite-size pieces' which, when taken individually, may have no significant adverse effect on the environment. [Citations.]" (*Tuolumne County Citizens for Responsible Growth, Inc. v. City of Sonora* (2007) 155 Cal.App.4th 1214, 1223.) In addition, CEQA recognizes that transportation projects, in particular, may have growth-inducing impacts separate and apart from later project phases and requiring analysis. (See, e.g., *Napa Citizens for Honest Govt. v. Napa County Bd. of Supervisors* (2001) 91 Cal.App. 4th 342.)

The Project EIR should undertake a serious study of the aerial tram Project's potentially significant impacts in connection with the obviously foreseeable commercial and residential growth at the 260-acre McCourt Global property in Chavez Ravine.[4] McCourt Global LLC's

---

[2] To be clear, even if the aerial tram did not directly cross LA State Historic Park, its adjacency would still significantly and adversely impact the park.

[3] "McCourt currently co-owns 260 acres of land at Chavez Ravine in Los Angeles, the home of Dodgers Stadium. *Among other plans for the area*, McCourt will develop a cutting-edge aerial tramway from Los Angeles Union Station to Dodgers Stadium through its company, Aerial Rapid Transit Technologies." *See* McCourt Global LLC's real estate webpage, available at: https://www.mccourt.com/real-estate-overview (last checked: Feb. 25, 2021) (emphasis added).

[4] It is unfortunately very common for major development projects to be undertaken in piecemeal fashion, which is a fundamental violation of the California Environmental Quality Act. Under CEQA, a "project" is "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment." (CEQA Guidelines, § 15378(a); *see County of Ventura v. City of Moorpark* (2018) 24 Cal.App.5th 377, 385: where multiple "activities are 'part of a coordinated endeavor,' 'among the 'various steps which taken together obtain an objective,' " or otherwise

future plans for its large Chavez Ravine site are clearly alluded to at its website (see footnote 3). Even if McCourt Global's plans are not currently available in significant detail, they should be disclosed at least in broad scope so potentially significant impacts of the entirety of the *true* long-term project do not escape review at the earliest time, or the EIR will have to make broad assumptions about the potentially significant foreseeable indirect impacts in order to avoid the harms of piecemealing. Metro should carefully consider whether it is even appropriate for environmental review for the aerial tram Project to proceed if the whole of the project has not been fully disclosed by Aerial Rapid Transit Technologies LLC or McCourt Global LLC.

The discussion of project alternatives is limited to two basic alternatives: the "no-project" alternative, and two variations of an alternative with an alignment from Union Station down Alameda Street and Spring Street. The first variation (the "Spring Street Alternative") continues northeast on Spring Street before it transects LA State Historic Park roughly in the middle of the park. (NOP, pp. 2, 6.) The other variation (the "Broadway Alternative") continues down Spring Street to the southwest corner of LA State Historic Park, then crosses over the western edge of the park, and turns northwest on Bishop Road after leaving the park and crossing Broadway. (NOP, pp. 2, 7.) Both variations of the one alternative directly impact the park by disrupting the integrity of the park's airspace. There is no alternative offered other than the "no-project" alternative that does not directly and significantly impact LA State Historic Park.

Notwithstanding the obvious potentially significant impacts to LA State Historic Park alone, the NOP does not include a summary of the "[p]robable environmental effects of the project." (CEQA Guidelines, § 15082, subdiv. (a)(1).) Instead, the NOP merely lists the 20 environmental analysis categories from CEQA Guidelines Appendix G that will be later analyzed within the draft Environmental Impact Report, and notes that "[m]itigation measures to reduce potentially significant impacts during construction and operation of the proposed Project will also be identified in the Draft EIR." (NOP, p. 3.) The NOP does not disclose which, if any, of these analysis categories may have significant environmental impacts, whether such impacts are capable of being mitigated, what such mitigations might include, or if there could be significant and unavoidable impacts requiring a statement of overriding considerations in order for the Project to receive approval. (*Ibid*.)

The rest of the NOP consists of a notice for the planned scoping meeting, held on October 22, 2020, and instructions to submit public comments.

A common method used by lead agencies to catalog the "probable environmental effects of the project" is to publish an "initial study" as part of the NOP. (See CEQA Guidelines, § 15063(c)(3), noting the purposes of the initial study include "assist[ing] in the preparation of an EIR if one is required" by, inter alia, "[f]ocusing the EIR on the effects determined to be significant" and "[i]dentifying the effects determined not to be significant.") While CEQA does not require that an initial study be prepared if it is evident that an EIR will be necessary, the absence of an initial study does not excuse the lead agency from including the probable

---

'related to each other,' they constitute a single project for purposes of CEQA." [Citations omitted].)

environmental effects of the project as part of the NOP. (CEQA Guidelines, § 15060(d); see also CEQA Guidelines, § 15063(a): "If the lead agency can determine that an EIR will clearly be required for the project, an initial study is not required *but may still be desirable*." (Emphasis added.)) Listing broad environmental analysis categories is no substitute for the required disclosure of probable environmental effects resulting from the Projeect.

The NOP fails to include any information about the Project's "probable environmental effects," and therefore does not "provide the responsible and trustee agencies, the Office of Planning and Research and county clerk with sufficient information describing the project and the potential environmental effects to enable the responsible agencies to make a meaningful response." (CEQA Guidelines, § 15082.) The NOP does not mention or summarize, even in a cursory way, the nature of project approvals, permits, easements, leases, air rights, or other entitlements that will be required for the Project, which necessarily needs these many approvals to use the public rights of way and public and private airspace to be constructed. It is evident that certain public resources are affected by the Project (the various public rights of way, the LA State Historic Park), but it is not immediately obvious what approvals to utilize these resources are needed, or what the environmental effects on these resources might be. The NOP does not list the state and local responsible agencies expected to have oversight or approval authority for approvals or decisions, or the trustee agencies charged with protecting natural resources affected by the Project. The NOP does not identify public resources directly or indirectly impacted by the Project, whether impacts can be mitigated, or what potential mitigations might be considered.

These many informational failures frustrated members of the public, including members of ADCCLA, from providing their informed comment to the lead agency. The NOP is therefore inadequate, and a revised NOP including the information required by law should be recirculated and a new comment period provided.

Thank you for your consideration of these comments.

Sincerely,

John Given

Our Company

Who We Are

We are an investment firm redefining value by integrating financial results and social impact. McCourt creates powerful partnerships to discover new opportunities and innovative ideas that strengthen the communities in which we work. We break through the old silos that separate business from people to create inclusive networks that benefit all stakeholders.

Our team come from diverse backgrounds across industry, government, and social impact. We seek and cultivate personalities with the boldness to think outside the box and suggest imaginative ideas; the entrepreneurship that brings passion to building something great; the adaptability to grow and evolve to meet a changing world; the humility that helps us learn from both triumph and failure; the results-orientation that drives success in the face of challenges; and the generosity that defines the spirit of our commitment to our people, partners, and communities.

What We Do

We are guided by our mission, “We invest in better, building a better business and better world,” which underscores our commitment to integrate business with impact. We apply this to our entire portfolio, which spans real estate, finance, sports, media, and technology.

Nowhere is our mission more evident than Unfinished, a network of networks envisioned by Frank H. McCourt, Jr., to bring the collective creativity, knowledge, and resources of our partners together in new and innovative ways to solve the most critical challenges of our time. Unfinished leverages creative media and new technology to elevate issues and create space for inclusive conversations that lead to new solutions. By creating accessible spaces for all people to engage experts and leaders, Unfinished allows everyone to participate in the full power and possibility of civic imagination.

McCourt builds stronger communities through our real estate investments, which feature

inclusive public spaces, green technology and resilient design. Our current real estate projects include 360 Tenth Avenue in New York City; 1201 Brickell Bay Drive in Miami; the Stage in London, and 260 acres of land at Chavez Ravine in Los Angeles.

Our finance vertical provides innovators and entrepreneurs the tools they need to pursue their passions and bring ideas to life. This includes MGG Investment Group, a specialty finance firm and direct lender, and McCourt Partners, a private investment platform with more than $1 billion in permanent capital.

Our belief in the power of sport to bring people together is an integral part of our heritage and continues with McCourt's stewardship of the iconic French football club Olympique de Marseille, which inspires the citizens of France's second city and elevates the Marseille community through the Olympic de Marseille Foundation.

McCourt also supports the McCourt School of Public Policy at Georgetown University; The Shed, a transformative cultural institution in New York City; and The McCourt Foundation, which empowers communities to build a healthier world through athletic events like the Los Angeles Marathon. These ongoing relationships are pivotal to creating and renewing institutions to confront today's most challenging problems with innovative ideas.

Where We Are

Founded in 1893 as a Boston road-building company, McCourt has expanded to an international company with offices in New York City and Los Angeles. Our partners and businesses operate in many other places around the world, giving McCourt a truly global presence.

Real Estate

In 2015, McCourt joined a consortium to co-develop The Stage, a mixed-use commercial and residential project in the Shoreditch neighborhood of London, UK. The site broke ground atop the site of the lost Curtain Theater of Elizabethan England, where Shakespeare first performed *Romeo and Juliet* and *Henry IV*. Upon discovering the ruins and realizing their cultural significance, the project incorporated over an acre of inclusive public space for the community, including a performance area and park, with a special exhibit showcasing the subterranean ruins of the historic landmark.

In New York City, we are developing 360 10th Avenue. Adjacent to The Shed, a transformative cultural center and founding partner of Unfinished, 360 10th Avenue will feature green technology and resilient planning to ensure minimal environmental footprint and maximum safety for tenants.

McCourt is also developing a 2-million-square-foot luxury residential property in Brickell Bay Drive in Miami, Florida. The building will be among the tallest in the state and is adaptably designed to withstand changing environmental patterns, prioritizing the long-term welfare of its residents.

McCourt currently owns 260 acres of land at Chavez Ravine in Los Angeles, the home of Dodgers Stadium. Among other plans for the area, McCourt will develop a cutting-edge aerial tramway from Los Angeles Union Station to Dodgers Stadium through its company, Aerial Rapid Transit Technologies. The aerial tram will reduce the environmental and traffic footprint caused by massive game day road congestion. Chavez Ravine is also the starting point for the Los Angeles Marathon, the world-renown endurance race donated by Frank McCourt to The McCourt Foundation in 2019.

McCourt Partners Real Estate
At McCourt, we are builders. And, our portfolio of real estate projects spans the globe, spurring growth, development, and sustainability from Los Angeles to London.
When the McCourts immigrated to Boston from Ireland, in the late 1800s, they brought with them a strong work ethic and a belief in the American Dream. After working his way up to a role as foreman at Boston Gas, John McCourt launched the John McCourt Company in 1893—and in the decades that followed, the McCourt family built the roads, arteries, and runways that defined the region's infrastructure.

When the McCourts immigrated to Boston from Ireland, in the late 1800s, they brought with them a strong work ethic and a belief in the American Dream. After working his way up to a role as foreman at Boston Gas, John McCourt launched the John McCourt Company in 1893—and in the decades that followed, the McCourt family built the roads, arteries, and runways that defined the region's infrastructure.

When Frank McCourt left his grandfather's 80-year-old construction business in the 1970s to establish the McCourt Company, he took with him that sense of history and legacy. He quickly made an impact, working closely with community leaders and city officials in Boston to develop what would become the South Boston Seaport District—a groundbreaking vision that turned an abandoned waterfront railyard into a glittering city landscape. As the McCourt Company grew and updated its name to McCourt Global, it also created its own real estate entity – McCourt Partners Real Estate (MPRE), which has built a portfolio of innovative development projects across the United States and around the world.

OUR CURRENT PROJECTS

In London, our mixed-use commercial and residential venture, **The Stage**, brings together innovative design with historic roots, reinvigorating the site's Shakespearean history and sharing its cultural significance with a new generation. This project honors its cultural significance, amidst the historic ruins of Curtain Theatre dating back to Elizabethan England, and features over an acre of inclusive public space including a performance area and park, and an exhibit showcasing the subterranean ruins of the historic landmark.

In New York, **360 10th Avenue** is a new high-rise commercial building strategically located between Hudson Yards and Manhattan West, two of New York City's most recent large-scale development areas, where it will have a direct connection to the expanded High Line greenway that connects to the new Moynihan Train Hall in New York's Pennsylvania Station. The project will focus on a carbon neutral approach to significantly reduce the building's environmental impact as well as incorporate the latest environmental health and safety technology to promote improved user performance and wellness experiences.

In Texas, our 40-acre portfolio in the **Dallas Design District** sits between two urban trails providing an unparallel canvas to expand on an already vibrant multi-use space in a premier community destination. As the soul of the district will remain design-centric showrooms, our vision involves developing complementary mixed use live and work amenities to fully activate this one-of-a-kind area.

And in California, the **Los Angeles Aerial Rapid Transit** project presents an opportunity for our organization to partner with community leaders and stakeholders to contribute to the region's aggressive climate goals and promote sustainability through innovative, zero-emission mobility technology— all while improving mobility and access to Dodger Stadium.

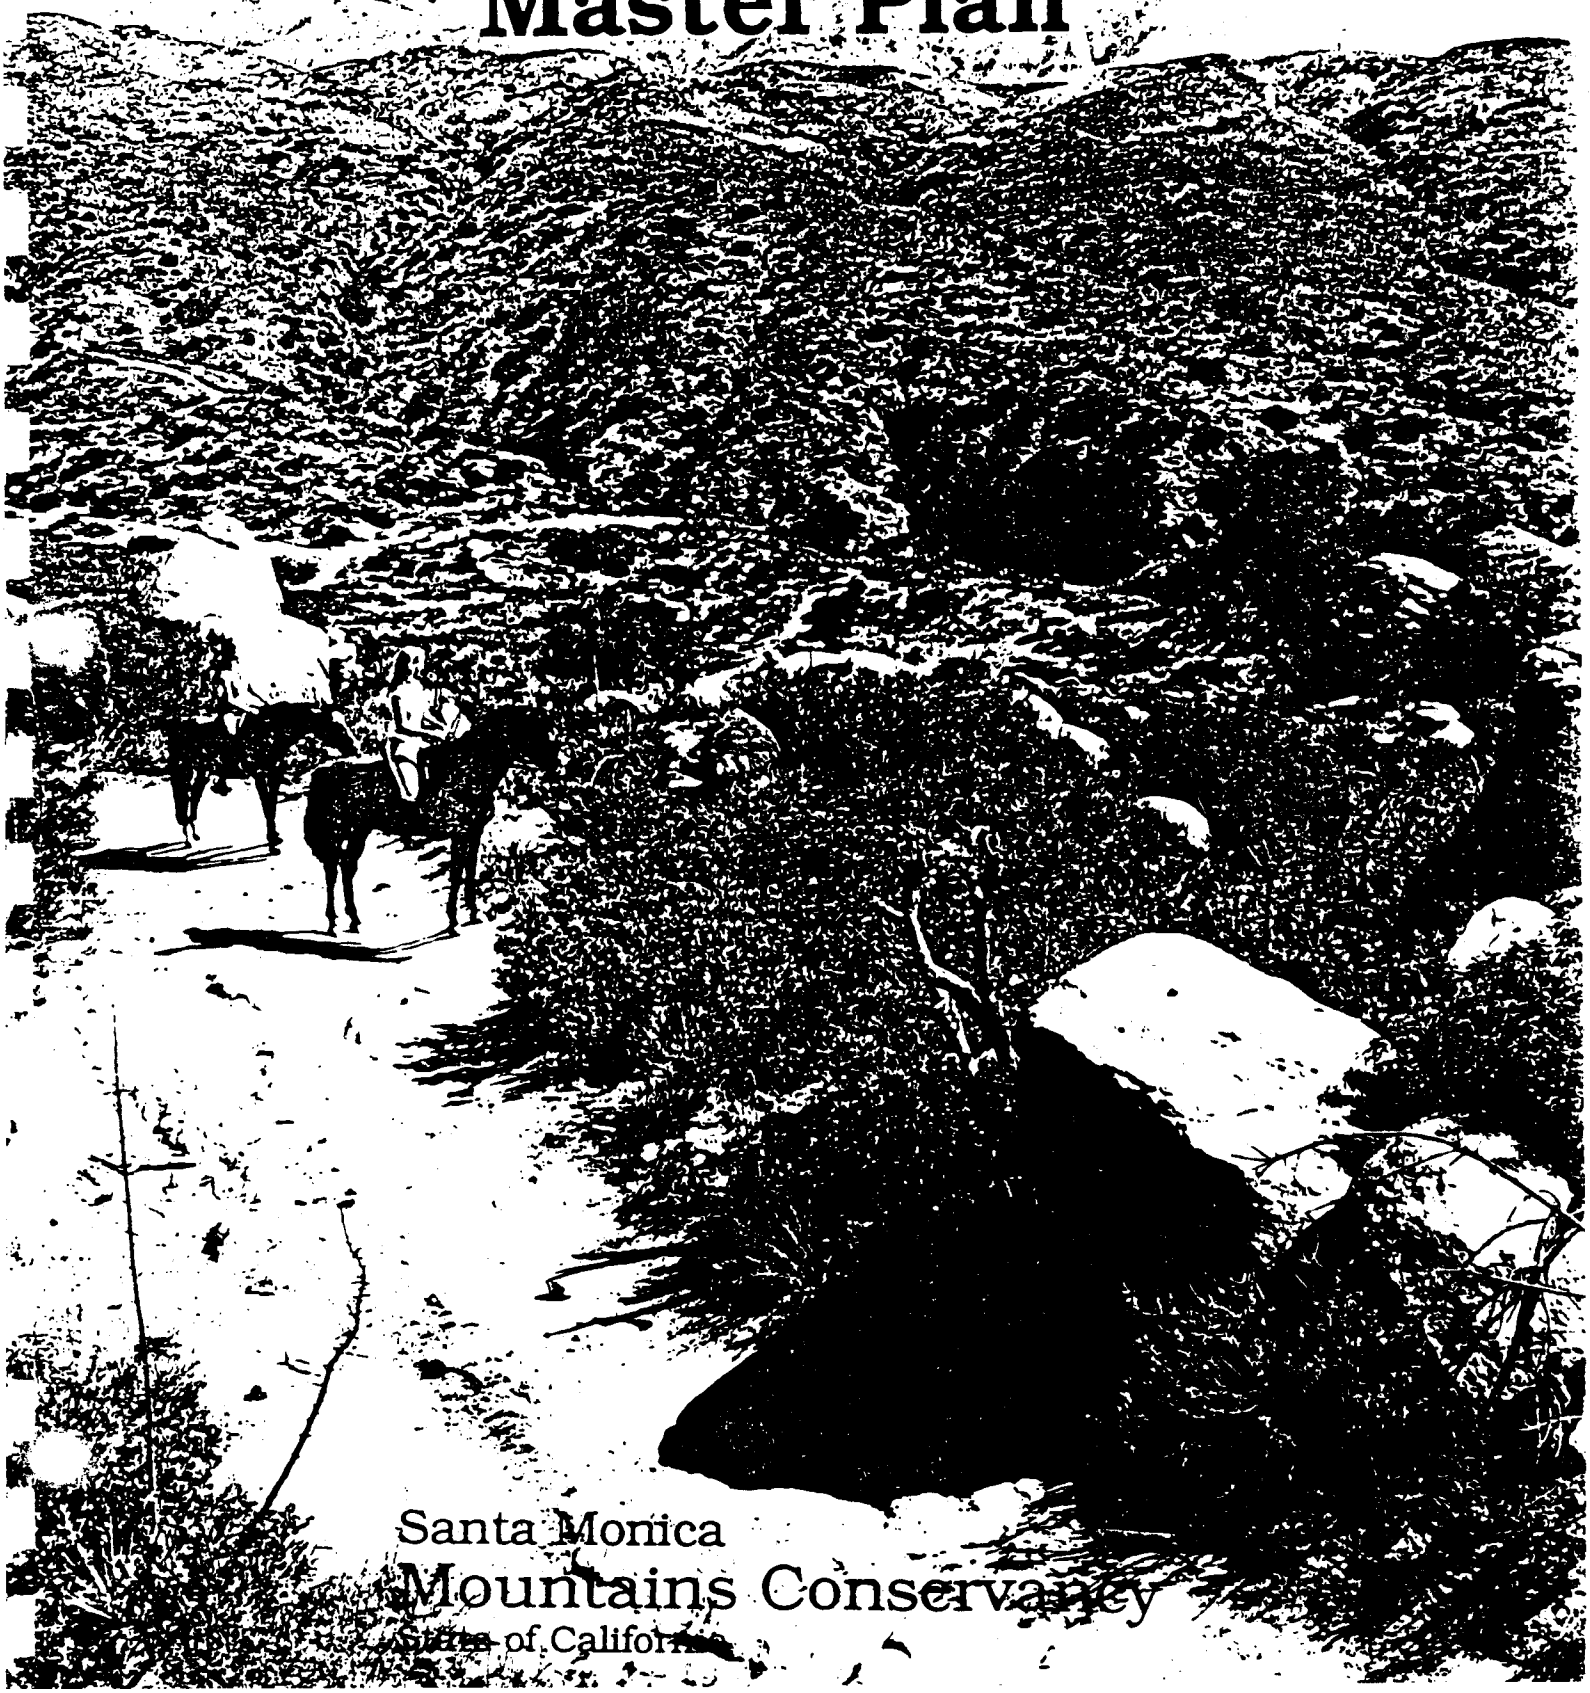
Rim of the Valley Trail Corridor Master Plan



Santa Monica Mountains Conservancy

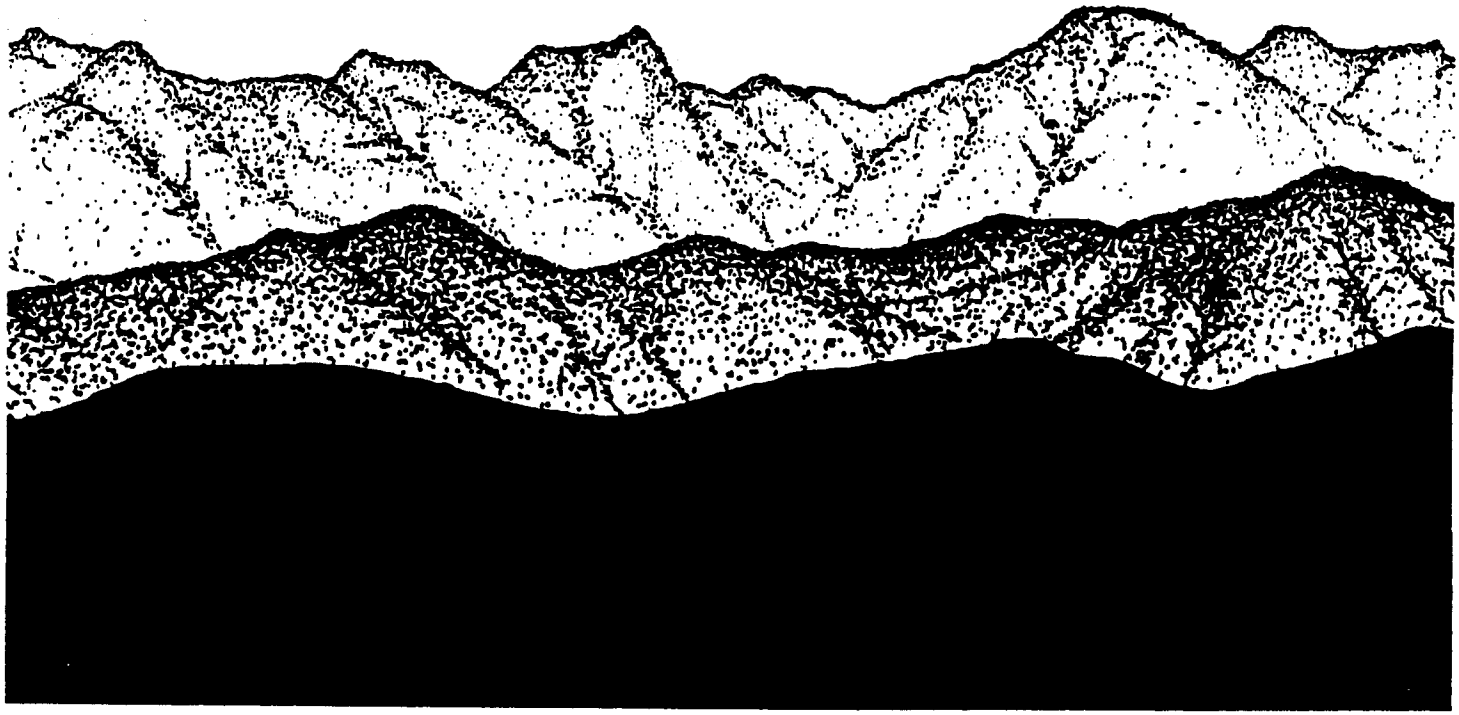
State of California

Rim of the Valley Trail Corridor Master Plan

June 28, 1990

Santa Monica
Mountains Conservancy
State of California

prepared by
Dangermond & Associates



Summary
Rim of the Valley Trail Corridor Master Plan

The preparation of the following Master Plan is the direct result of AB 1516 authored by Assemblyman Richard Katz which was approved by the Legislature and signed by Governor George Deukmejian in 1989. The Master Plan is intended to guide both the Mountains Conservancy and the Legislature over the next five to ten years in preserving important resources within the Rim Corridor and providing public recreation.
The legislation requires the preparation of the plan, specifies elements which must be included, requires a number of public hearings, and establishes a deadline for reporting back to the Legislature. The specific requirements have been met in accordance with the legislation.

Eleven public hearings were held by the Mountains Conservancy, as required in the legislation. These were well attended by elected officials, agency and group representatives as well as the general public. The suggestions and ideas regarding plan elements and needs of the area make up the backbone of the Master Plan which is hereby presented.

The primary components of the Master Plan are the Rim of the Valley Trail and an interlocking system of wildlife habitats and open space areas which provide a corridor connection between the Santa Monica Mountains, the Santa Susana Mountains, the Sespe Mountains and San Gabriel Mountains. Those interrelated components create a major recreation resource and a wildlife link vital to the long-term health and diversity of this region of southern California. Numerous special opportunities exist within this area and when joined together they represent an overall project of tremendous statewide significance.

The major components of the Master Plan include:

1. The Rim of the Valley Trail, which completely encircles the San Fernando and La Crescenta valleys and unifies the various parts of the corridor recreational system.

2. A wildlife corridor which connects the Santa Monica, Santa Susana, Sespe and San Gabriel Mountains. This will provide for long term biological diversity and will incorporate major habitat areas along the way, including the Santa Susana Mountains State Park, Rocky Peak and the Santa Clarita Woodlands.

3. Periodic access trails and trailheads which provide convenient points of access with companion facilities for all users.

4. Major access and loop trails which connect the Rim Trail with important natural and historic areas including: Santa Anita Canyon, Santa Clarita Woodlands,

Placerita Canyon State /County Park, Happy Camp County Park and Santa Susana Mountains State Park.

5. Additional wildlife and scenic open space areas throughout the corridor area. These lesser spaces will also be connected to the primary wildlife corridor between the mountains.

6. Recommendations for major recreational area improvements for future development at Hansen Dam, Happy Camp, Chatsworth Reservoir and Devil's Gate. These will provide large regional park facilities which are also connected to the Rim system by trails.

7. Recommendations for special use trails for nature study and for special populations such as the physically impaired.

8. Recommendations for a chain of campsites along the Rim Trail to accommodate users on extended trips.

9. Proposals for information and interpretive programs to ensure that all residents of the region have access to the parks, to inform users, and to foster good stewardship of the resource.

10. Specific recommendations for a series of boundary adjustments are proposed as a means of incorporating the important projects and additions for the Rim of the Valley Corridor system. The recommendations are: a boundary adjustment easterly to Santa Anita Canyon; westerly to the join the Conservancy Zone boundary at Calleguas Creek; and boundary adjustments to include areas north of Simi Valley and the proposed Santa Clarita Woodlands Park.

This Master Plan is a combination of all the elements found in this report, i.e.,

1. The definitions, objectives and criteria
2. The plan, as described in the text and illustrated in the figures
3. The proposed project list
4. The proposed boundary adjustments

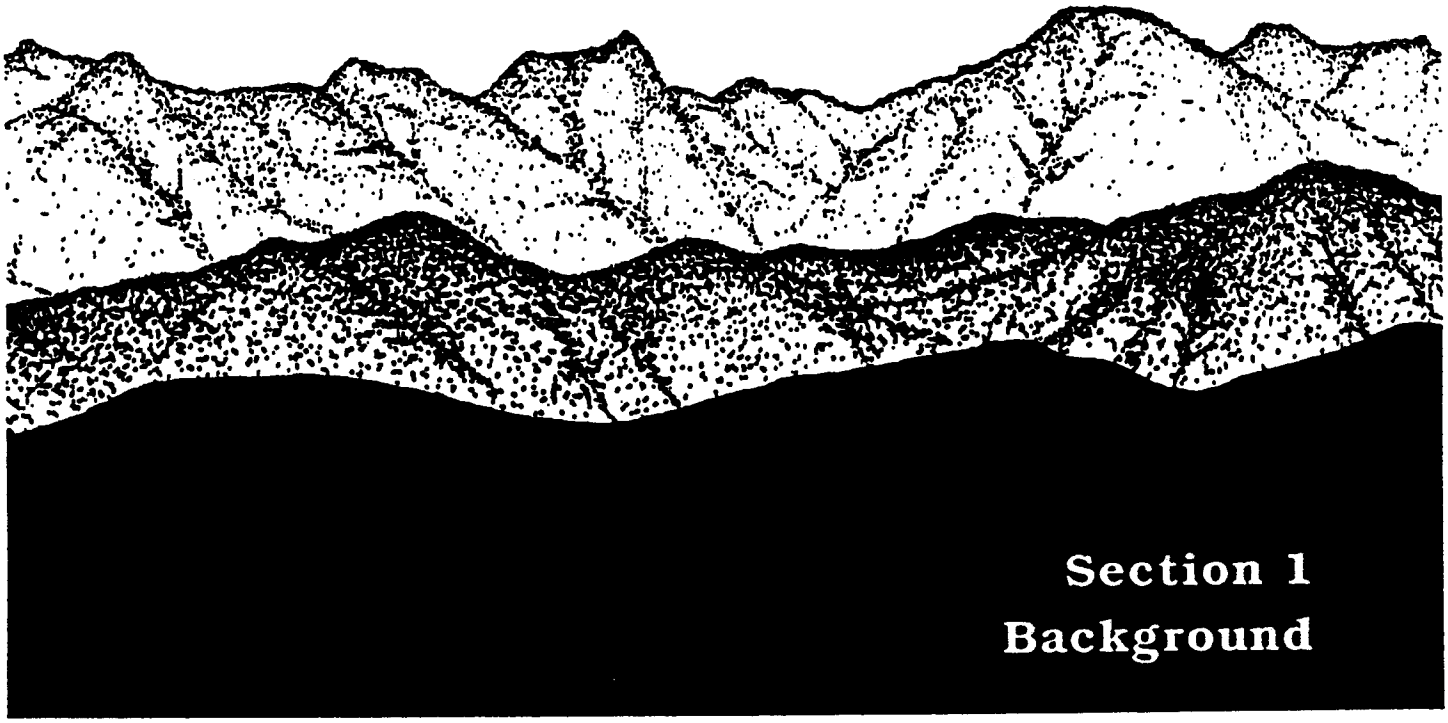
Introduction

INTRODUCTION

The study described in this report was authorized by Assembly Bill No 1516 of the 1989-90 session of the California Legislature, relating to the Santa Monica Mountains Conservancy Rim of the Valley Trail Corridor. The primary goal of that legislation, and therefore this study, is to establish a "master plan", or framework, for the activities and expenditures of the Santa Monica Mountains Conservancy (Conservancy) within the general Rim of the Valley Corridor area over the next ten years.

The following section of this report describes the background of the Conservancy which precedes AB 1516, while Section 2 considers in detail the language and objectives of that proposed legislation. The process and methods used in the study are presented in the third section, followed by a discussion of the Master Plan components in the Section 4. Section 5 provides an overview of the complete Master Plan. Criteria for prioritizing the projects is discussed in Section 6.

All projects considered in this study are listed in Appendix A and keyed to the 21 USGS topographical maps in Section 7 of this report. The maps indicate the location of existing and proposed parks, trails and public open space. The list includes a description of each proposed project and the source of the proposal.



Section 1
Background

SECTION 1
BACKGROUND

THE SANTA MONICA MOUNTAINS CONSERVANCY

The Santa Monica Mountains Conservancy is a State agency created in 1980. Its goals and activities, like those of the California Department of Parks and Recreation or the National Park Service, center around both land preservation and providing opportunities for recreation. There are, however, basic and important differences. The Conservancy's range of activity is more extensive than either of those agencies or local park agencies, including greater flexibility regarding land transactions. Also, the Conservancy often uses its available funds in nontraditional ways by forming partnerships with other agencies. As such, the Conservancy is the agency with primary responsibilities for funding the acquisition of projects with statewide and regional significance, as specified in the Rim of the Valley Trail Corridor Plan of 1990 adopted pursuant to Section 33204.3 of the California Public Resources code. The Conservancy undertakes acquisitions and provides grants to local governments and non profit organizations for various combinations of planning, acquisition, improvement, operation and maintenance of wildlife habitat and recreation resources.

The Santa Monica Mountains Conservancy has filled a void between local government and state and federal agencies by working on resources of major significance in a locally relevant and sensitive manner, and by serving as a coordinator among citizen groups, agencies and landowners.

THE RIM OF THE VALLEY TRAIL CORRIDOR

Legislation in 1983 extended the geographic limits of the Conservancy's authority to encompass an area known as the Rim of the Valley Trail Corridor (Corridor). The Rim of the Valley concept was first conceived and copyrighted by Marge Feinberg in 1974 as a Master's thesis at Cal State University, Northridge.

The Corridor, the definition of its existing boundaries, and much of the impetus for the Conservancy's involvement, came from a grass roots movement to protect the aesthetic, recreation and wildlife resources of the foothills and mountains encircling the San Fernando/La Crescenta Valleys. The Corridor is essentially a defined planning area, a broad band circling the north, east and west edges of the San Fernando/La Crescenta Valleys. It was created to facilitate the development of an interlocking, connected system of public parks, trails and wildlife habitat preserves within the mountain areas. The backbone of that system, the thread which would tie it together, was to be a multi use, long distance trail--the Rim of the Valley Trail (Rim Trail).

Within the Corridor, the Conservancy has placed particular emphasis on a cooperative approach--actions are taken basically at the request of the public or local government, acquisitions are made from willing sellers, agreements are formed with other agencies to jointly accomplish a project, and grants are made directly to local governments and non profit groups.

Section 7
Master Plan Maps

SECTION 7
MASTER PLAN MAPS

The following maps are based on USGS topographic maps covering the Rim of the Valley Corridor and portions of the original Santa Monica Mountains zone. The maps indicate:

- The original Corridor and Santa Monica Mountains zone boundaries, and proposed adjustments
- The Rim of the Valley Trail, with identification of public, private, improved and unimproved sections
- Major loop and access trails similarly identified
- The location of proposed projects, including new acquisitions for parks or trails and improvements
- The location of existing parks and open space

The key and legend preceding the maps depict how the maps are organized and how the information is shown on each map.

Each proposed project is referenced with a unique number in only one location on the maps. Reference to the full descriptions in the list of Proposed Projects will clarify the extent of projects (particularly trail corridors) that may cover very large geographic areas. Major existing parks and open space are referenced by map name and letter.

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

SCH #: 2020100007

Project Title: Los Angeles Aerial Rapid Transit Project

Lead Agency: Los Angeles County Metropolitan Transportation Authority (LSCMTA)

Contact Name: Cory Zelmer

Email: LAART@metro.net Phone Number: 213-922-1079

Project Location: Los Angeles (*City*) Los Angeles (*County*)

Project Description (Proposed actions, location, and/or consequences).

The Los Angeles Aerial Rapid Transit Project would connect Los Angeles Union Station to the Dodger Stadium property via an aerial gondola system in downtown Los Angeles. The proposed 1.2-mile route would travel generally along Alameda Street, Spring Street, and Bishops Road from LAUS to Dodger Stadium, with an intermediate station at the southernmost entrance of the Los Angeles State Historic Park. The proposed system would include aerial cables, passenger stations, a non-passenger junction, towers to support the aerial cables between the stations/junction, and gondola cabins for the passengers. When complete, the proposed Project would have a maximum capacity of approximately 5,000 people per hour per direction, and the travel time from LAUS to Dodger Stadium would be approximately seven minutes.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

See attached Executive Summary

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Other additional evaluations include an evaluation of Los Angeles State Historic Park usage, including kite flying and the Park's special events, the locations of the Alameda and Chinatown/State Park stations, and an airspace analysis as to helicopters and heliports within the Project vicinity.

Provide a list of the responsible or trustee agencies for the project.

July 26, 2021

Joseph T. Edmiston
Executive Director
Santa Monica Mountains Conservancy
26800 Mulholland Highway
Calabasas, California 91302

Dear Mr. Edmiston,

We write concerning your recent inquiry into whether and when the Santa Monica Mountains Conservancy (the Conservancy) should be considered a trustee agency under the California Environmental Quality Act (CEQA). We conclude that the Conservancy should be considered a trustee agency for projects affecting natural resources in the Santa Monica Mountains Conservancy Zone, as defined in the Conservancy Act. (Pub. Resources Code, § 33000, et seq.)

A trustee agency is "a state agency that has jurisdiction by law over natural resources affected by a project, that are held in trust for the people of the State of California." (Pub. Resources Code, § 21070.) Agencies reviewing projects under CEQA must notify trustee agencies and consult with them at various points in the CEQA review process. (See Pub. Resources Code, §§ 21080.3, 21153; Cal. Code Regs., tit. 14, §§ 15063, 15072, 15073, 15082, 15086.)

To be considered a trustee agency for a project, the project must affect natural resources within the agency's jurisdiction. (Cal. Code Regs., tit. 14, § 15386.) The term "affect" has been interpreted broadly, in order to foster inter-agency consultation. (*S.F. Baykeeper, Inc. v. State Lands Com.* (2015) 242 Cal.App.4th 202, 229; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1387.)

> The CEQA Guidelines give examples of four agencies that are trustee agencies:
>
> (a) The California Department of Fish and Game with regard to the fish and wildlife of the state, to designated rare or endangered native plants, and to game refuges, ecological reserves, and other areas administered by the department.
>
> (b) The State Lands Commission with regard to state owned "sovereign" lands such as the beds of navigable waters and state school lands.
>
> (c) The State Department of Parks and Recreation with regard to units of the State Park System.
>
> (d) The University of California with regard to sites within the Natural Land and Water Reserves System.

(Cal. Code Regs., tit. 14, § 15386, subd. (a)-(d).)

This list is not exclusive. Indeed, a variety of unlisted agencies have been recognized as trustee agencies. (*S.F. Baykeeper, Inc. v. State Lands Com., supra,* 242 Cal.App.4th at p. 229 [the California Coastal Commission could be considered a trustee agency of a project outside the coastal zone that would have an effect on natural resources in the coastal zone]; *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1389 [the State Water Quality Control Board had the capacity to be a trustee agency on projects involving water quality]; *Schenk v. County of Sonoma* (2011) 198 Cal.App.4th 949, 958 [the Bay Area Air Quality Management District is a trustee agency].)

The Conservancy was created to address fractured land use in the Santa Monica Mountains that negatively impacts recreational and environmental value. The Legislature found that "planning for the zone was fragmented and there were ineffective means of … evaluating individual projects within the zone as to their effect on the entire region." (Pub. Resources Code, § 33002.) As a result, "piecemeal development projects were occurring within the zone which resulted in the irreplaceable loss of open space and recreational resources," as well as environmental deterioration impacting fish and wildlife. (*Ibid.*) The Legislature found that the zone "exists as a single ecosystem in which changes that affect one part may also affect all other parts[,] and that the preservation and protection of this resource is in the public interest." (Pub. Resources Code, § 33001.)

The Conservancy Act specifically identifies the Santa Monica Mountains Zone (the Zone) which includes most of the Santa Monica Mountains and a portion of the Santa Susanna Mountains. (Pub. Resources Code, §§ 33105, 33105.5, 33105.6.) The Conservancy Act states that the Zone is a "unique and valuable economic, environmental, agricultural, scientific, educational, and recreational resource that should be held in trust for present and future generations." (Pub. Resources Code, § 33001.)

"[T]he pertinent inquiry for identifying a trustee agency is whether the project will have an effect on natural resources over which the state agency has jurisdiction." (*S.F. Baykeeper, Inc. v. State Lands Com., supra*, 242 Cal.App.4th at p. 229.) The Conservancy meets the definition of a trustee agency because it is a state agency which has jurisdiction over the natural resources of the Zone, which it holds in trust for the people of California. (Pub. Resources Code, § 33001; *Robings v. Santa Monica Mountains Conservancy* (2010) 188 Cal.App.4th 952, 957 [The Legislature "created the Santa Monica Mountains Conservancy … as a single governmental agency with responsibility for implementing a mandate to protect and preserve the Santa Monica Mountains Zone and to promote recreational, open space, park, and conservation purposes."].) The Conservancy has jurisdiction over natural resources throughout the Zone. (See Legis. Analyst, California's Land Conservation Efforts: The Role of State Conservancies, Jan. 5, 2001, p. 11 [defining the jurisdiction of the Conservancy as the Santa Monica Mountains, Santa Susanna Mountains, and Placerita Canyon, aligning with the Zone].)

Therefore, we conclude that the Conservancy should be considered a trustee agency for any CEQA project which affects natural resources within the Zone. Please let us know if you have any questions.

Sincerely,

CHRISTINA BULL ARNDT
Supervising Deputy Attorney General

Re: Aerial Rapid Transit System from Union Station to the Dodger Stadium Property: ARTT LLC's Response to Metro's Request for Information

Dear Dr. Schank:

We are very pleased to submit, on behalf of Aerial Rapid Transit Technologies LLC, this response to Metro's Request for Information concerning the Los Angeles Aerial Rapid Transit system to connect Los Angeles Union Station with the Dodger Stadium property. As stated in our Unsolicited Proposal Phase I submission, ARTT LLC will finance, design, build, operate, and maintain this Project. While not requesting funding from Metro, we believe cooperation is essential and will result in tremendous positives for the public including environmental progress toward meeting clean air goals. ARTT LLC is willing to reimburse Metro's staff costs to assist in the Project's review process, and we look forward to working with you to transform this vision into reality as soon as possible.

The ART connection to Union Station will provide direct benefits to Metro, its passengers, and community stakeholders. The ART will increase transit ridership including for "choice" riders through direct access from Union Station with convenient connections to the Metro system and Metrolink trains at the region's transportation hub. For passengers, the Project will introduce a new, high quality, quick and exciting rapid transportation experience, with a travel time of about 5 minutes from Union Station to Dodger Stadium. For neighbors, the Project will be a community benefit as it will reduce the event-related traffic on the roads in and around Dodger Stadium property and surrounding areas, improving air quality, reducing noise, and increasing safety. The Project is also consistent with Metro's Core Business Goals including to:

- Promote extraordinary innovation;
- Exercise fiscal discipline to ensure financial stability;
- Improve the customer experience and expand access to transportation choices; and
- Increase transit use and ridership.

ARTT LLC is anxious to advance this Project expeditiously and is eager to work with Metro as a willing partner to demonstrate that innovative, clean energy, sustainable, privately funded transportation can be made available to Los Angeles in harmony with publicly funded infrastructure. Since our Phase I submission on April 25, 2018, we have been eager to proceed and hereby provide a complete response to your August 2018 Request for Information ("RFI"),

together with proposed next steps for working together. An agreement with Metro for immediate implementation is important to assure that Metro and ARTT LLC are aligned in the objective of delivering this outstanding Project as soon as possible. We respectfully request that Metro work with us to achieve agreement on next steps for proceeding by the end of October 2018.

We are encouraged that Metro's RFI stated that "The Review Team expressed unanimous interest in gathering more information about this proposal," and believe we can form an innovative, mobility partnership that will meet the goals of Metro and ARTT LLC and provide Dodger fans with a permanent rapid transit link at the earliest feasible date. We look forward to moving forward with Metro.

Sincerely,

Martha Welborne, Project Director
Aerial Rapid Transit Technologies LLC

Unsolicited Proposal – Phase II Detailed Review: Response to Request for Information

PROJECT INFORMATION

To be completed by Metro Staff

Project Name: Los Angeles Aerial Rapid Transit (LAART) Project ID: UP-2018-14

Date Submitted: 25 April 2018

Date Received: 25 April 2018

Phase I Response Date: 11 June 2018 Phase II RFI issuance: 10 August 2018

Requested Response Date: 12 November 2018 Review Team:

-Program Management

-Countywide Planning

-Operations

-Vendor/Contract Management

-Office of Civil Rights

-Office of Extraordinary Innovation

Response Date: 26 September 2018

SUMMARY OF PHASE I PROJECT EVALUATION

The Review Team expressed unanimous interest in gathering more information about this proposal and expressed openness to the three main areas of Metro involvement laid out in the Phase I proposal (location at Los Angeles Union Station (LAUS), responsibility as lead environmental agency, and assistance with aerial easements and land acquisitions) (p. 14).

RESPONSE: Thank you for the opportunity to provide more detail regarding the proposed Los Angeles Aerial Rapid Transit system ("ART" or "the Project"). Aerial Rapid Transit Technologies LLC proposed a unique, innovative partnership with Metro in its Phase I Unsolicited Proposal submitted on April 25, 2018, to fund/finance, design, construct, operate, and maintain the Project at no cost to Metro. Recognizing that Metro's ability to implement expansions to the region's transit system is usually limited by the availability of public funding, we believe that this Project presents Metro with an unusual opportunity to demonstrate the feasibility of a self-funded innovative transit partnership that provides significant public benefits. We appreciate Metro's openness to assisting in three areas as detailed below and hope we can proceed as soon as possible to enter into necessary and appropriate agreements with Metro to move forward together.

The discussion then focused on the costs, impacts and benefits of this project, and what role Metro would play should the proposal advance to implementation, as it influences what information to request.

<u>The costs, benefits and impacts of this project</u>

The review team had some concerns whether this project would deliver noteworthy benefits to local and/or regional mobility, air quality and congestion compared to other potential investments (p. 12). However, the review team discussed other benefits, such as the significant investment being made by the developer, and the intangible benefits of this project as a fun and iconic local attraction that captures the public imagination and instills a sense of civic pride.

This project has the potential to create positive net benefits for the people of Los Angeles County. For its involvement and whenever possible, Metro must work to prevent any potentially negative impacts to the people of Los Angeles County and deliver value to the people of Los Angeles County. This includes maximizing the return on investment of the taxpayers who invest in Metro's mission.

There are aspects of this project and the role Metro is being asked to play that will have a cost to Metro and the people of Los Angeles County. These may include the social and political costs of acquiring property; the impacts of construction on local communities; acting as the face of the project and mediating opposition; the opportunity costs of expending limited resources and capacity; and the impact of allowing for an additional transit use on the Union Station property given the myriad of projects, both transit and commercial, in early stages of development. To the extent that Metro will be environmentally clearing the project, claiming property, and substantially involved in other ways, the reputational risks of problems that arise on the project such as delays, mismanagement, or operational incidents, also reflect Metro even if Metro is not paying for the project.

While the risks of this project to Metro and the people of Los Angeles County are lower than most of Metro's planned capital projects, every project has risks that must be explored to ensure that the benefits of the project outweigh those risks. The review team saw great advantages to this investment in the connection between two iconic Los Angeles destinations, but because of the risks, Metro is interested in understanding how risks can be minimized and value can be maximized.

<u>The role Metro would play</u>

The review team felt that it would be advantageous to simplify Metro's role as much as possible, and to focus this Request for Additional Detailed Information (RFI) on understanding the Project assumptions (ridership, site needs, and similar) to inform the environmental process; the business case for Metro; the role Metro would play; the long-term vision for the project; and the project's interface with Los Angeles Union Station.

Because this project is unprecedented, Metro must answer interrelated questions surrounding how the project would be structured, what Metro policies and procedures would apply, what contractual vehicle would be used, which entities will be involved and in what ways, etc. As Metro collects additional information on this project, it will continue to refine its position on many of these key questions. This RFI invites the proposer to weigh in on these questions as well, and feels that the earlier the answers can be understood and agreed upon, the better.

RESPONSE: We agree wholeheartedly that the earlier the better to resolve these key questions and, in particular, the ARTT LLC team is eager to commence face-to-face discussions with Metro staff to work through these items. During the months that have passed since submittal of our Unsolicited Proposal, the team has completed significant additional work to facilitate the Project and regrets the inability to communicate directly with staff due to the "blackout period" that has continued because a sole source determination has not been made.

Moreover, since ARTT LLC has expended very significant funds, a prompt decision on the sole source issue is important to inform its continued investment decisions. As set forth in our Phase I Unsolicited Proposal, ARTT LLC has a unique ability to provide the Project, including essential proprietary information.

- ARTT LLC has a unique ability to deliver the Project, including the necessary station location at the Dodger Stadium property and proprietary information that is required. The Unsolicited Proposal Policy explains that if an unsolicited proposal offers a proprietary concept that is essential to contract performance, it will be deemed "sole source." The ability to provide land where a proposed ART station would be located at the Dodger Stadium property, and to obtain private financing for the Project, is integral to the success and viability of this proposal.

- Proprietary information is essential to contract performance and qualifies the ART for a sole source award. Proprietary information essential to accomplishing the Project includes, but is not limited to: information to support travel planning for Dodger employees and game attendees, rideshare usage information, and parking lot usage information; and ability to develop and implement necessary coordination with the Dodger ticketing system and strategies to coordinate with ART ticketing for Stadium events.

- Competitive solicitation should not be required before agreements are entered into between Metro and ARTT LLC. The Unsolicited Proposal Policy indicates that Metro must undergo the competitive solicitation process only before entering into a competitive procurement contract. Metro's ordinance governing contractor prequalification makes clear that it does not apply to contracts where there is only one source for the necessary services. (See Section 4-05-070 G.) Here, public funds are not being requested, and the contractor prequalification ordinance only applies to contracts with over $100,000 to be expended by Metro. (See Section 4-05-030 C.) In addition, the ordinance governing contractor prequalification does not apply to real estate lease agreements, such as an agreement if ARTT LLC leases Metro property for an ART station. (See Section 4-05-070 F.)

<u>The role of this RFI</u>

This RFI requests a substantial amount of supplemental information, and in doing so, makes some assumptions. The reason for asking for such information is to receive the most complete Phase II proposal possible. The more defined the project at the end of Phase II, the more confidently Metro can make its decision to implement the project, and in what manner.

Most of the information requested in Section 3 of this RFI is requested for the following reasons:

To move forward with providing a location at LAUS, Metro needs to understand where the station will go and the potential impacts to projects, parking, and facility use.

To move the project smoothly through the environmental process, Metro needs project details and to understand which policies the proposer believes apply.

To approve the project, Metro needs to ensure the project will be insured and constructed to applicable codes and specifications, and that the proposer has a sound funding plan and business model.

To move from Phase II to implementation, Metro prefers to have as much project definition as is practicable.

If information requested will not be known or available in Phase II, the proposer should explain its reasoning as well as at what point during the process the information would become available.

Purpose of this Document

The purpose of this Request for Information (RFI) is to gain greater understanding of your firm's Unsolicited Proposal and enable Metro to conduct a Phase II Detailed Review of your proposal. It also allows Metro to communicate key needs, challenges, opportunities, and aspirations in a way that should allow you to reiterate your proposal to more adequately fit these parameters.

This RFI will serve as a tool to gather more information about the conceptual proposal to aid Metro's Review Team in making a Phase II determination. The RFI is drafted based on the feasibility assessment previously conducted and approved for the project during the Phase I Review. *The information you provide to respond to this request should help Metro to understand the business case for implementation of your proposal*.

If Metro ultimately chooses to advance your Proposal, and to issue procurement documents, the information provided in response to this RFI will strengthen the procurement document (whether RFP or sole source). Any information received in response to this RFI may assist Metro's Unsolicited Proposal Review Team, Office of Extraordinary Innovation, and Office of Vendor/Contract Management in finalizing the scope of work and requirements which may be used at a future date in the issuance of a Request for Proposals (RFP), or other contracting mechanism. Submitting a response to this RFI is not a guarantee in any way that a supplier will be selected for any subsequent RFP or contracting mechanism, nor does it preclude any supplier from responding to future procurement opportunities.

The issuance of this RFI does not constitute a commitment to issue a request for bids/proposals, award a contract, or pay any costs incurred in preparation of a response to this RFI. Cost and price information provided in proposals will be held in confidence and will not be revealed or discussed with competitors, except to the extent required by law.

PART I: PROBLEM STATEMENT AND KEY REQUIREMENTS

To Be Completed by Metro Staff

1. Problem Statement

Describe the gap/problem(s), its magnitude (i.e., which mission/functional areas, people, organizations, processes, etc. are affected) and the primary mission or business impacts if not corrected.

Sports venues draw large crowds that overwhelm transportation systems before and after events. Because Dodger Stadium is the largest Major League Baseball stadium (capacity 56,000), is located on a hill in Chavez Ravine, is adjacent to several bustling neighborhoods, and sits within traffic congested Los Angeles, traffic getting to and from Dodger Stadium is notoriously challenging. Dodger Stadium draws regional crowds, the vast majority of whom drive their personal vehicles to access the venue.

These vehicles converge and bottleneck on the surface streets leading up the Stadium, especially Sunset Boulevard/Cesar Chavez from Union Station and into the communities West of Echo Park. This traffic is exacerbated by a lack of high-quality transit options which could more efficiently shepherd people in and out.

As part of the Phase II response, Metro would benefit from hearing more about how the proposer defines the problem statement and solution.

RESPONSE: We agree with Metro's summary above of the current conditions that exist in terms of congestion resulting from personal vehicles as the primary means of access to Dodger Stadium, which with 56,000 seats and approximately 100 baseball games and other events each year continues to set records for annual attendance. In addition to improving the congestion that impacts local streets, the creation of the ART presents the opportunity to reduce air quality impacts resulting from such vehicular traffic. Moreover, congestion occurs on the freeways around Downtown including the 110 Freeway, which impacts commuters and other travelers. If not improved through implementation of the ART system, as the region's population growth and resulting travel needs continue to increase over time, this local and regional roadway system is likely to experience greater congestion.

In terms of the solution, our proposal presents the potential for "triple bottom-line" benefits to reducing congestion around Dodger Stadium: the Project provides economic, environmental, and social equity benefits, consistent with Metro's mission of bringing mobility choice to all parts of Los Angeles County.

As to economics, ARTT LLC is committed to fully fund/finance ART. As Metro continues to expand the transit system throughout the region, there are no existing or proposed plans for providing permanent transit connections to Dodger Stadium. Metro's capacity to expand access is constrained by funding commitments. ARTT LLC's commitment provides an economic upside to Metro as the Project will be completed at no cost to Metro and both fulfills Metro's purpose/mission and provides Metro with economic benefits in the form of new "choice riders" who will gain exposure to the Metro system through a high-quality experience connecting to Dodger Stadium. As a UCLA study earlier this year concluded, attracting such ridership even several times per month offers tremendous benefits to Metro and the region.

Second, there is an environmental cost to the current access system. It is felt by residents and businesses in and around this immediate geography, as well as by the fans trying to get to and from an

event. Traffic congestion, air pollution from vehicles, noise, and safety concerns with the number of cars in neighborhoods all contribute to environmental impact.

Third, the surrounding communities are neighborhoods that are already environmentally impacted as detailed in the metrics of CalEnviroScreen 3.0 (Office of Environmental Health Hazard Assessment). These neighborhoods are in close proximity to major freeways, the SR-110 and the US-101, as well as heavily congested arterials (Sunset Boulevard) that create both safety and air quality issues.

ART contributes to Metro's mission of providing transportation services – indeed, economical and environmentally compatible mobility *choices* – and provides an excellent return on taxpayer investment for Metro as there are no Metro funds being requested or required for any aspect of the implementation, operation, and maintenance of ART service. ARTT LLC envisions that a round trip ride on ART will cost less than the average parking costs at the stadium. Together with expected ridership from other visitors including tourism on non-game days, farebox revenue can finance the Project while reducing the cost of transportation in comparison to private vehicles. This is a further incentive to drivers to choose "transit first."

ART is environmentally friendly. With a carrying capacity of at least 5,000 people per hour per direction (much higher than that of buses), ART can change environmental outcomes by providing a much higher capacity and quality transport experience – and one that is an attraction in and of itself – for Metro riders. In the two-hour timeframe before a Dodger game, ART can carry more than 10,000 people; based on current average vehicle ridership to Dodger Stadium, this will eliminate roughly 3,200 cars from local and regional roads (or 6,400 trips per game or event). These mode-shift benefits are accentuated by the fact that ART is an all-electric transportation mode, which replaces automobiles, most of which use carbon fuels.

ART opens up access and mobility to this major event venue for the whole region, while providing a localized investment that brings equitable benefits to the neighborhoods surrounding the Dodger Stadium property. Given the wonderful renaissance an "accessible Los Angeles" is undertaking with Metro's transit expansion, Angelenos and Southern Californians from all corners of our region can experience "getting there" to a Dodger game in style via Metro and ART. Given that Staples, the Coliseum, and other sports venues have viable transit options, it is time for fans heading to Dodger Stadium, which is identified with Los Angeles all over the world, to have 21st century mobility choices.

ARTT LLC envisions a more holistic aspect to providing the ART as alternative mobility and access to Dodger Stadium than just being for fans. The Project underscores a triple bottom-line approach to community-building and civic structure in the second largest city in the country.

2. Background and Context

Provide additional context that explains the current situation (e.g., policy, process, environmental factors). Identify root causes (if known) and contributors to the observed problem(s). Include relevant research and information on industry or market conditions as appropriate. Keep the focus strategic.

Metro's Responsibility

Because this project is envisioned to be privately designed, built, operated, maintained, funded, insured, and financed, Metro does not envision taking a hands-on, prescriptive, or performance minded approach to this project, instead focusing on the elements of the project for which Metro would be responsible.

Under the structure proposed in Phase I, Metro still needs additional information about each of the above-mentioned aspects of the project to better understand and evaluate it, the case for it, and its impacts, and in order to serve as the agency lead on environmental planning and clearance. Metro also has a significant interest and role to play as the property owner of the LAUS site and a steward of taxpayer investment, which includes better understanding the station location, impact to the immediate site and LAUS facilities, and feedback/approval rights of station designs and operating plans.

For the purposes of this RFI, Metro intends to focus its involvement, and its questions, on the following categories:

1. Metro's mission, financial and business interests, including its role in improving mobility and providing transportation services and return on taxpayer investment for Los Angeles County

RESPONSE: As detailed in the response to Part II, Executive Summary, ART is consistent with Metro's goals and objectives, including advancing the following Metro Core Business Goals: promote extraordinary innovation, exercise fiscal discipline to ensure financial stability, improve the customer experience and expand access to transportation choices, and increase transit use and ridership.

2. Metro's role as the lead agency during the environmental review (California Environmental Quality Act) process, for which it will be helpful to have a better understanding of future development plans at Dodger Stadium and/or associated projects; project design and definition; and assumptions and their basis.

RESPONSE: As further detailed below, ARTT LLC seeks Metro's assistance in three specific areas: potential location of the ART station at Union Station; to act as Lead Agency for environmental clearance; and to potentially assist with matters related to surface land acquisition and aerial easements, as needed. ARTT LLC shall cover the costs associated with the preparation and certification of any required environmental documents including an EIR under CEQA. ARTT LLC shall arrange and pay for all required CEQA studies and reviews at its sole costs and expense. ARTT LLC is also willing to reimburse Metro for its staff costs.

3. Metro's role in acquiring property for this project, per CPUC's explanation of the "Powers and Functions of District"

RESPONSE: ARTT LLC intends to use its best efforts to acquire public right of way and private land and aerial easements. In the event that ARTT LLC needs Metro's assistance in said acquisition, it is anticipated that Metro would utilize the powers provided it by California Public Utilities Code (CPUC) Division 19, "Local Transportation Authorities", Chapter 4, "Powers and Functions". CPUC Section 180152 specifically states:

> The authority may make contracts and enter into stipulations of any nature whatsoever, either in connection with eminent domain proceedings or otherwise, including, but not limited to, contracts and stipulations to indemnify and hold harmless, to employ labor, and to do all acts necessary and convenient for the full exercise of the powers granted in this division.

In addition, Division 10, "Transit Districts", Part 3, "Southern California Rapid Transit District", Chapter 5, Powers and Functions of District, Section 30600 states:

> The district may take by grant, purchase, gift, devise, or lease, or by condemnation, or otherwise acquire, and hold and enjoy, real and personal property of every kind within or

without the district necessary or incidental to the full or convenient exercise of its powers. That property includes, but is not limited to, property necessary for, incidental to, or convenient for joint development and property physically or functionally related to rapid transit service or facilities. The board may lease, sell, jointly develop, or otherwise dispose of any real or personal property within or without the district when, in its judgment, it is for the best interests of the district so to do.

4. Metro's role in approving this project, per CPUC § 130252

RESPONSE: See response to Part I, 5 as to Metro's role in approving the Project pursuant to CPUC Section 130252.

5. Current and future plans for Los Angeles Union Station, impacts, and associated concerns as property owner of this regional hub.

RESPONSE: As detailed in Part II, 4, as to property and facilities, ARTT LLC has identified two potential station locations at or near Union Station: Metro's identified "Development Site C" and over Alameda Street near Union Station. If Development Site C is selected, ARTT LLC would seek a ground lease with Metro for the ART. For any station location at or near Union Station, ARTT LLC would coordinate with Metro concerning pedestrian access to the station.

We understand that Metro is currently undergoing final design for the LAUS Forecourt and Esplanade improvements. ARTT LLC will work with Metro to ensure that the ART station located at or near LAUS will be consistent with improvements to the Forecourt and Esplanade.

LAUS Spatial Context

Information about ongoing and planned projects for LAUS are included in Attachment J

3. Functional Requirements

Summarize functional requirements. Focus particularly on requirements necessary to achieve desired outcomes and measurable performance objectives.

Planning

- The proposal should describe the impacts of the project to Metro and LAUS throughout the lifecycle of the project
- The project should include a conceptual project plan, as well as a high-level schedule, scope and budget, or an explanation of when this information would become available in relation to environmental clearance and/or negotiations
- The proposal should describe the footprint of the facilities, including how much space would be needed for a station, where the preferred station sites are located, and why. The proposal should show how each station area would influence the alignment alternatives. If the alignment alternatives are well known, the proposer should provide some insight into how many properties and aerial easements may need to be acquired, which properties may need to be acquired or operated above, and for what reason.
- The proposal should describe Aerial Rapid Transit Technologies (ARTT), LLC's preferred approach to the environmental process, including but not limited to alternatives analysis, visual impacts, technical analysis, emergency response, feasibility, impact to parking, etc. This should include an interpretation of whether site/economic development plans that rely on this project

will also need to be environmentally cleared, and if their clearance would occur separately from this project. With this in mind, the proposal should include any information relevant to the environmental process.

RESPONSE: We look forward to working with Metro staff to conduct the scoping process consistent with CEQA to determine the issues to be analyzed in the environmental review, and also assess any federal issues and whether a FONSI under NEPA will also be likely to be needed. We agree that route alternatives should be studied. As to the question of site/economic development plans that rely on this Project, the only elements we have identified for analysis are the stations, together with the aerial easement and tower locations. Any impacts at Union Station should be studied as appropriate and similarly, for the station at the Dodger Stadium property, we anticipate the City will require a Plan Approval under the Dodger Stadium Conditional Use Permit as it does for other improvements that serve the existing stadium uses.

- The proposal should explain which Metro policies ARTT believes should not apply to this project, be waived or granted exemption, or would conflict with this project, and why; a worksheet template has been included in Attachment B.

RESPONSE: This policy explanation is provided in Part 1, 4.

- The proposal should indicate what coordination would be required with other jurisdictions, such as the City of Los Angeles and Caltrans, and who would be responsible for that coordination and its associated outcomes

RESPONSE: ARTT LLC will coordinate with the City of Los Angeles regarding any approvals to operate the ART system on and over City streets and rights of way. Additionally, the ART will cross State Route 110 ("SR-110"), which is under the jurisdiction of the State of California Department of Transportation ("Caltrans"). As such, while ARTT LLC will coordinate with Metro as appropriate, we anticipate working directly with Caltrans on any required reviews and approvals for said crossing.

- The proposal should validate its assumptions, whenever possible corroborating assumptions with comparable, existing projects

RESPONSE: Information is included in Part II as to relevant experience from other, existing aerial systems.

- The proposal should not assume that Metro's Dodger Stadium Express would continue to operate when an aerial tram began serving Dodger Stadium (see attachments G and H for more information on the Dodger Stadium Express)

RESPONSE: We recognize that it will be Metro's determination whether to continue operating the Dodger Stadium Express. The Los Angeles Dodgers would welcome the continued operation of both systems. In addition, we note that the current funding for the Dodger Stadium Express comes from air quality related sources and, if the ART replaces that system, should be considered as funding sources for Metro's Union Station-related operating costs for the ART.

- The proposal should assume that if the project were to proceed on the LAUS property, Metro would be involved in community engagement, outreach, and construction relations and mitigations, and should explain ARTT, LLC's approach to community outreach, including what, if any, outreach would be done, and by whom, during the environmental review process.

RESPONSE: We welcome working with Metro on these issues and seek to discuss, as soon as possible, how Metro would like to address these issues. Our working assumption has been that

environmental and community relations consultants would be retained who are deemed qualified by Metro and that ARTT LLC and Metro would work together on managing these processes. As stated in the initial proposal, ARTT LLC is also willing to reimburse Metro for its staff costs. We also seek to complete a services agreement with Metro to identify the time required so that prompt and efficient progress can be made together.

- Based on ridership assumptions, how much parking would the project require and where is the parking assumed to be?

RESPONSE: We anticipate that this issue would be studied further as part of the environmental review following agreement with Metro on a services agreement. ARTT LLC and the Los Angeles Dodgers would work together to encourage ART users to utilize Metro to get to Union Station and transfer from transit to the ART. In addition, we would encourage ART riders to enjoy local restaurant and entertainment opportunities before and after taking the ART.

- The proposer should consider if the project could/might create transit connectivity or walkability between the north and south sides of the Gold Line tracks near Los Angeles Historic Park

RESPONSE: We agree, and at least one ART route based on our initial studies would provide such connectivity.

- The proposer should indicate whether they would prefer that TAP be available as a form of payment

RESPONSE: Our initial thinking is that options would be available for ticket purchase, including that ART fare would be packaged with a Dodger Stadium admission ticket and electronically available to each rider who is attending a game or event at Dodger Stadium. Where an ART rider is not attending a game, other fares options would be available. We agree that policies should be developed with Metro to encourage transfers from other modes of Metro transit, and look forward to further collaborating with Metro on fare type.

Business Model and Finance

- The business plan should be informed by the planning assumptions above, and outline the following:
    - Business model

RESPONSE: ARTT LLC has identified funding for the initial phases of the project through permitting; at that time, the market offers availability of third-party private financing for the capital construction cost of the Project as proposed. The revenue analysis conducted to date by ARTT LLC indicate that funds available from the private operation and maintenance of the ART system are sufficient for operating costs and debt service, based on the current project budget, and will be further refined as the project proceeds. See Part II, 11 for additional detail.

    - Project budget and the available funding envelope for the project

RESPONSE: See Part II, 11 for additional detail.

- Future plans at Dodger Stadium site

RESPONSE: The only plan for Dodger Stadium related to the ART is to provide a station on the Dodger Stadium property, together with appropriate pedestrian connections from the station to the stadium. As noted above, we anticipate the City will require a Project Approval under the existing Dodger Stadium Conditional Use Permit for the details of this station. The station will occupy land currently utilized for parking and will reduce parking revenue to the property owners.

- How would Metro be compensated for using Metro-owned land and facilities and Metro's authority, for company profit? This should include consideration of assumptions on ground lease payments and/or revenue sharing and/or usage fees, and any other financial payment to Metro for use of the Union Station site and facilities as part of a negotiated agreement; as well as other Metro responsibilities such as right of way acquisition, staff time, etc.

RESPONSE: The Project will invest and risk private funds in order to provide a transportation connection open to the public, with the environmental and other benefits noted above. We believe assisting such benefits to be delivered without cost to Metro is completely appropriate for Metro's mission. We look forward to the ability to commence discussions with Metro on the potential for use of its facilities and associated costs. As noted above, our intent is to reimburse Metro for staff time. All of these issues can be addressed when discussions can commence, and a proposed term sheet for an Exclusive Negotiation Agreement is enclosed. As noted above, to the extent Metro needs to make decisions as to sole source prior to addressing all of these issues, we respectfully request that such a decision be made.

- Staffing assumptions throughout the lifecycle of the project

  - The proposal should include the expected level and number of Metro Full Time Equivalent staff (FTEs), and percentage of staff time required and the proposed considerations related to reimbursement
  - The proposal should propose how the environmental contractor would be procured, if determined by the proposer, and how ARTT would procure these services

RESPONSE: As described above, we anticipate this process would be similar to other Metro environmental projects, and our team includes the former Chief Planning Officer of Metro who has extensive experience with such projects. We look forward to discussing the proposed scope of the CEQA review with Metro staff so the staffing determinations can be made. As to the EIR preparer, we anticipate working with Metro to select a contractor that is deemed qualified by Metro at ARTT LLC's cost.

- The proposal should include proposed staffing assumptions of additional Union Station personnel required in support of, but not direct operation of, the tram

RESPONSE: We do not anticipate the need for such personnel, but would welcome the opportunity to understand Metro's perspective on the potential for such needs.

- The proposal should directly acknowledge that financing, funding, and insuring the project and its operation will be the responsibility of Aerial Rapid Transit Technologies, LLC and its partners, including decommissioning and deconstruction of the facilities should they become non-operational

RESPONSE: This acknowledgement is included in Part IV.

- The proposal should include letters of interest from key financial partners

RESPONSE: ARTT LLC has the necessary financial resources to fund the Project and is planning to do so through environmental review and permitting, at that time, the market offers availability of third-party private financing for the capital construction cost of the Project as proposed, so ARTT LLC can assess whether additional financial partners may become involved. At the present time, it is important to receive confirmation from Metro of its willingness to assist through reaching agreements that allow the Project to publicly demonstrate its ability to proceed with permitting.

- The proposal should include a term sheet

RESPONSE: A term sheet for an Exclusive Negotiation Agreement is included.

- The proposal should explain how the proposer would indemnify Metro from any and all liabilities that may result from the environmental process through construction, operation and decommissioning of the project by a private party.

RESPONSE: Such an indemnification will be included in agreements with Metro.

Operations

- The proposal should indicate the level of service expected to run, and how changes to levels of service impact relevant requirements above
- The proposal should comment on the capacity of the system and anticipated wait times during peak loads
- The proposal shall address how ADA compliance will be achieved, and identify any impacts on proposed capacity

RESPONSE: Operational information is included in Part II, 1, 2, and 4.

This response addresses Metro's identified functional requirements, including planning, ARTT's business model and financing, and ART's proposed operations.

4. Statutory, Regulatory and other Compliance Requirements

Identify any statutory, regulatory, compliance requirements and/or organizational strategic goals and objectives this project/initiative must satisfy. Include as a reference all known statutory and regulatory requirements.

In this RFI, Metro has included a list of policies and laws that it believes may apply to this project. This list is not intended to be comprehensive, nor does it intend to be binding. Attachment B includes a worksheet in which the proposer can describe various policies and laws, including those listed below, and explain whether they consider them applicable and why or why not.

Laws and Policies

- Americans with Disabilities Act
- Metro Adjacent Development Handbook and Adjacent Construction Design Manual (Attachments D, E, F)
- Metro Green Construction Policy

- Construction Careers Policy
- The proposal should outline the preliminary terms of a Project Labor Agreement (PLA) to which LAART would commit, or otherwise argue that the PLA is not applicable to this project
- The review team recommends adherence to the American National Standards Institute (ANSI) Ropeway Standard as best practice (Attachment I)
- Metro Equity Platform Framework (Attachment C)
- LAUS Agreements (Covenants, Conditions & Restrictions and Easement Agreements between LACMTA, MWD, First 5 LA and Mozaic Apartments) to be provided should a formal agreement be entered between LACMTA and ARTT LLC.)
- Laws, policies and procedures associated with crossing freeways, if applicable
- Laws, policies and procedures associated with operating ropeways in California

On Metro projects, Metro follows these Fire/Life Safety Policies:

- National Fire Protection Association NFPA 130 Standard for Fixed Guideway Transit and Passenger Rail Systems
- NFPA 101 Life Safety Code
- NFPA 70 National Electric Code
- NFPA 72 National Fire Alarm Code
- Los Angeles Fire Department Chief's Regulation #4 Standards
- Long Beach Fire Department Fire Protection and Life Safety Certification Program
- Metro Fire/Life Safety Design Criteria

Approval from the Board of Directors

Based on Metro's interpretation of its authority under the CPUC, which establishes Metro and its powers, including the powers of eminent domain, the Metro Board of Directors must approve all plans for the design, construction and implementation of public mass transit projects in LA County, including this one.

Rationale

PUC § 130252 states, in relevant part: "All plans proposed for the design, construction, and implementation of public mass transit systems or projects, including exclusive public mass transit guideway systems or projects . . . shall be submitted to the commission [now Metro] for approval. No such plan shall be approved unless it conforms to the appropriate adopted regional transportation plan . . ."

CPUC General Order 164-3 (Eff. 01 May 2018) further defines its authority over Rail Fixed Guideway System, which are defined as "any light, heavy, or rapid rail system, monorail, inclined plane, funicular, trolley, cable car, automatic people mover, or automated guideway transit system used for public transit and not regulated by the Federal Railroad Administration or not specifically exempted by statute from Commission oversight."

Based on these code sections, the Aerial Tram from LAUS to Dodger Stadium is a public mass transit project, and therefore Metro must approve all plans for its design, construction, and implementation.

Metro is also the statutory designated transit guideway operator in Los Angeles County (see, PUC §130254), although Metro is likely able to delegate this function to a third party.

RESPONSE:

Law and Policies

The ART system will comply with all laws, policies, and procedures applicable to aerial gondola systems. For statutory, regulatory or policy requirements that may be applicable to the Project, please see Appendix B regarding compliance. ARTT LLC will follow Metro's Equity Platform Framework guidelines. ARTT LLC will have a Project Labor Agreement (PLA) consistent with Metro requirements for the Project. ARTT LLC will review Covenants, Conditions & Restrictions and Easement Agreements between LACMTA, MWD, First 5 LA, and Mozaic Apartments when provided by Metro and will work with Metro to address any issues related to ART and the aforementioned Agreements, as necessary and appropriate.

ARTT LLC will coordinate with the City of Los Angeles regarding any approvals to operate the ART system on and over City streets and rights of way. Additionally, the ART will cross State Route 110 ("SR-110"), which is under the jurisdiction of the State of California Department of Transportation ("Caltrans"). As such, ARTT LLC will directly coordinate with Caltrans on any required reviews and approvals for said crossing. ARTT LLC will also coordinate with Metro on these matters, recognizing Metro's existing relationships with both the City and Caltrans.

Approval from the Board of Directors

ARTT LLC will comply with applicable statutory requirements related to the design, construction, operation, and maintenance of an aerial gondola system. In response to Metro's assertion that ART is subject to Metro approval under the requirements of the California Public Utilities Code ("CPUC), ARTT LLC agrees in general that such approval is appropriate since ARTT LLC has asked Metro to act as the Lead Agency for environmental clearance, together with assistance with the acquisition of surface land and/or aerial easements, as necessary, and the potential location of a passenger station at or near Los Angeles Union Station. We do ask Metro to recognize, however, that aerial gondolas and tramways are regulated by the California Labor Code, Sections 7340-7357, and the detailed implementation of design, plans, and specifications falls under the jurisdiction of the Department of Industrial Relations, Division of Occupational Safety and Health ("Cal/OSHA"), which includes an Amusement Ride and Tramway Unit.

Cal/OSHA's Amusement Ride and Tramway Unit utilizes the American National Standards Institute ("ANSI") for aerial gondola and tram systems. ARTT LLC's aerial gondola engineer, Engineering Specialties Group, serves as technical advisor to ANSI in the development and updating of ropeway system standards, thus ARTT LLC will have the most up-to-date standards and requirements expertise in the design and construction of the Project.

We look forward to further discussion with Metro to clarify the roles of various agencies. Because aerial transit is specifically regulated by the Department of Industrial Relations, Cal/OSHA, oversight comes from that agency rather than from the CPUC directly. This regulatory structure has been used in the recently opened Salesforce Tower tram in San Francisco, which contains an aerial transport system reviewed by the Amusement Ride and Tramway Unit.

Unlike other Metro projects, the ART is a privately funded/financed, designed, built, operated, maintained, and insured transport conveyance to a private property that is open to the public. Like Dodger Stadium, the ART system will be open to the public for certain events and activities but not publicly owned. It is more akin to the Palm Springs Aerial Tram as a service provided for transportation to a specific location. In response to Metro's interpretation that CPUC Section 130252 is

applicable to the ART, we note that CPUC Section 130252(a) also refers specifically to "public mass transit" and "exclusive public mass transit guideway" systems or projects: " "All plans proposed for the design, construction, and implementation of public mass transit systems or projects, including exclusive public mass transit guideway systems or projects [] shall be submitted to [Metro] for approval. ART is not a "transit guideway system". As described in CPUC General Order 164-E, "Rules and Regulations Governing State Safety Oversight of Rail Fixed Guideway Systems", transit guideway systems are not defined (see Section 2.22 in the General Order) to specifically include "aerial ropeway systems". These systems are specifically called out in state statute as being under the jurisdiction of the Department of Industrial Relations, Cal/OSHA.

5. Technical Requirements or Limitations

Identify any technical requirements or limitations.

- The station site may not interfere with planned capital projects outlined in this RFI and Attachment J

For the purposes of continuity, some Technical Requirements were included in the Functional Requirements section

RESPONSE: As detailed in the response, ARTT LLC will deliver added transit without interfering with Metro's capital program and will support Metro's continued nationwide leadership in mobility innovation.

6. Other Project Information

Identify any other relevant project information.

RESPONSE: *N/A*

Attachment K – CalOSHA Guidelines for the submission of designed, plans and specifications prior to the construction of new, relocated or modified passenger tramways

PART II. PROJECT DESCRIPTION AND PERFORMANCE OUTCOMES

To Be Completed by Applicant

EXECUTIVE SUMMARY

Please provide a synopsis of the key points of the business case for your proposal. This should include an outline of the solution/service to be obtained and your expectations regarding the potential partnership. Your summary should briefly touch on:

- What the project or service entails
- Boundaries/scope of the project -- what is included and excluded
- What benefits the project or service will provide to Metro and/or our customers/taxpayers
- How the project or service aligns with the goals and objectives of the organization
- Details regarding regulatory and/or statutory compliance
- Estimated costs and potential for cost sharing
- Minimum viable product/project size and the potential to scale or expand
- Risks and how they will be mitigated
- How performance will be benchmarked and measured
- Implementation strategy and key milestones
- Key assumptions and constraints foundational to the analysis

Any other information you feel is relevant to tell the story of how your product, project, or service will help LA Metro to improve mobility in the Region

RESPONSE: ARTT LLC proposes to connect Los Angeles's Union Station to the Dodger Stadium property via the Los Angeles Aerial Rapid Transit system ("ART" or the "Project"). ART is a proven, safe, clean, sustainable, and highly efficient form of transportation that will serve as both a reliable rapid transit system and first/last mile connector, and an iconic new regional tourist destination in and of itself, offering wonderful views of Los Angeles.

ARTT LLC commits to privately fund and obtain financing for the capital construction cost of the proposed Project's direct alternative, as well as privately operate and maintain the ART system. We seek Metro's assistance in three specific areas: potential location of the ART station at Union Station; to act as Lead Agency for environmental clearance; and to potentially assist with matters related to surface land acquisition and aerial easements, as needed. ARTT LLC shall cover the costs associated with the preparation and certification of any required environmental documents including an EIR under CEQA. ARTT LLC shall arrange and pay for all required CEQA studies and reviews at its sole costs and expense.

Although Dodger Stadium is one of the region's most visited venues, the Metro transit system does not include any existing or proposed permanent transit connections. As other venues such as Staples Center and the Los Angeles Memorial Coliseum are now conveniently accessed by transit, and Metro has begun working on a direct connection to LAX, the importance of providing a permanent transit connection to Dodger Stadium has become ever more necessary.

Currently, the Dodger Stadium Express buses provide a connection from Union Station to Dodger Stadium on game days, carrying approximately 1,500 people on average per game, with an average 20-minute travel time to and from the game. While this service is very beneficial and much appreciated, when complete the ART system can carry 5,000 people per hour per direction, and the travel time from Union Station to Dodger Stadium will be about 5 minutes.

Many Dodger fans arrive at Dodger Stadium within two hours prior to the start of a game. At full capacity, 10,000 fans could be transported to the stadium in the two hours prior to a game via the gondola system. The average attendance at a Dodger game is approximately 46,000; accordingly, nearly a quarter of the fans from around the region at a given game could arrive not by car, but by gondola connected to Metro's regional transit system. This would take an average of roughly 3,200 cars off the streets before and after a game.

ARTT LLC and the Los Angeles Dodgers are coordinating to identify available sites at the Dodger Stadium property to locate an ART station. ARTT LLC has also identified potential sites near/adjacent to LAUS, including one site owned by Metro, at which to locate an ART LAUS station. The ART would provide elevated aerial transport either directly (in a straight line), or through two straight lines that connect at an angled station mid-point between LAUS and Dodger Stadium.

ART contributes to Metro's mission of providing transportation services – indeed, economical and environmentally compatible mobility *choices* – and provides an excellent return on taxpayer investment for Metro as there are no Metro funds being requested. Further, ART significantly improves mobility in and around the Dodger Stadium property by providing alternative access to the facility resulting in up to between a 20 to 25% reduction in private automobile trips to and from the stadium on an average game day, thereby reducing existing traffic for the benefit of surrounding communities and neighborhoods.

Further, ART is also consistent with Metro's goals and objectives, including advancing the following Metro Core Business Goals:

- *Promote extraordinary innovation*: The ART system will use state-of-the-art, zero-emission technology, demonstrating the potential of aerial transit in Los Angeles as a key connector to the regional backbone transit system. It will deliver added transit without impacting Metro's capital program and will support Metro's continued nationwide leadership in mobility innovation.

- *Exercise fiscal discipline to ensure financial stability*: ARTT LLC will create the structure for the financing, design, construction, operation, and maintenance of the ART system at no cost to Metro and will obtain necessary financing for the capital construction of the Project.

- *Improve the customer experience and expand access to transportation choices*: Adding to the shuttle bus service currently provided by Metro to Dodger Stadium, this new transportation option will expand access to transportation choices to Dodger Stadium and serve significantly more visitors to the stadium via transit, thus further reducing congestion in the local community and on surrounding regional arterials and freeways.

- *Increase transit use and ridership*: The ART system will substantially boost Metro system ridership by Dodgers fans on game days and could contribute adding other "choice riders" to Metro's system such as tourists. In essence, ART will support Metro's ambition for people to choose transit for mobility. The ease of attending games, events, and recreational activities through ART will encourage thousands of new "choice rider" trips per year and may encourage more regular ridership.

The project assumptions which are most relevant, and which can be validated against existing projects, are related to project costs, projected ridership, and transit service.

The ART, as proposed, is estimated to cost $125 million for a direct route. Potential project costs have been developed at a number of levels for different project elements and compared to costs of other

aerial transit projects. Costs for the electromechanical equipment and for operations were compared to installations in London, New York City, Portland, Telluride, and Austria. Costs for facilities and tower structures were estimated by local construction professionals. Costs for property and rights-of-way were estimated by real estate and rights-of-way experts.

Ridership projections for the project have been developed with assistance from the Los Angeles Dodgers, transportation professionals, and aerial ropeway engineers. The transit capacity of 3S systems such as that proposed for ART is designed for in excess of 5,000 passengers per hour per direction. This capacity has been verified with providers of such systems. Similar systems operate in Russia and Germany with similar capacities. Gondola systems are proven technologies with many installations worldwide to reference. The major transit systems identified were all referenced for their capacities and system availabilities.

ARTT LLC seeks to build and operate the ART system as quickly as possible. To that end, our goal is to issue the Notice of Preparation for the Draft EIR in the fall of 2018. We assume that it will take approximately twelve months to complete all phases of CEQA, after which we will complete the Final Design of the certified alternative and then proceed through permitting, construction, testing and, operations. We anticipate full operation of the system in late 2022.

As noted above, statutory authority to regulate aerial ropeway systems in California is the purview of the State of California Department of Industrial Relations, Cal/OSHA. ARTT LLC will comply with laws, policies, and procedures set forth by Cal/OSHA. Cal/OSHA employs ANSI B77 standards as a basis of their regulations. The Project will also comply with other applicable codes and regulations in designing and constructing its stations and towers.

Since ART will be privately owned and operated, ARTT LLC will evaluate the success of the system on internal criteria including ridership volume, revenue, sponsorship and advertising, operational performance, and customer satisfaction. If desired, we will work collaboratively with Metro to evaluate overall performance of ART as a privately-operated "first/last mile" extension of Metro's transit system.

Gondola systems are incredibly safe, resilient and ecologically-friendly. The ART system would be built to the current structural and seismic standards, and its systems have excellent safety records. This system will be delivered with multiple redundant features to ensure the safety of riders, employees, and the general public. Aerial gondola systems are also emission-free, and the ART system would replace a large number of existing car trips that currently occur in congested conditions, helping both Los Angeles and California continue to be global leaders in greenhouse gas emission and associated pollutant reduction. ART ridership would significantly reduce vehicle miles traveled to and from Dodger Stadium, as well as reduce greenhouse gas and associated emissions.

In the last decade, cities worldwide have successfully utilized aerial rapid technology to augment their transit systems or in some cases serve as their transit system. These cities include Portland, OR; London, England; Mexico City, Mexico; La Paz, Bolivia; Medellin, Columbia; Bogota, Venezuela; and Singapore.

DETAILED PROJECT INFORMATION

1. Project Description

Please provide a short, high level description of the project – what it is and what it is intended to accomplish.

RESPONSE: ARTT LLC proposes to connect Los Angeles' Union Station, Southern California's transportation hub, to the Dodger Stadium property via the proposed Los Angeles Aerial Rapid Transit system ("ART" or the "Project"). ART is a proven, safe, clean, sustainable, and highly efficient form of transportation that will serve as both a reliable rapid transit system and an iconic new regional tourist destination in and of itself, offering wonderful views of Los Angeles.

ART will travel a little over one mile in about 5 minutes and can carry roughly 5,000 people per hour per direction. By creating a high-quality and high-capacity transport link between LAUS and Dodger Stadium, ART ensures that there will be more viable choices in making a trip to a Dodger game or special event at the stadium. With Metro's existing and planned expansion of its transit system, coupled with other providers such as Metrolink, Amtrak, and other municipal bus operators whose services all converge at LAUS, ART provides the opportunity for anyone on the Los Angeles County region to access Dodger Stadium via transit.

ART is an aerial gondola system. Aerial technology – consisting of passenger stations, a ropeway that holds and transports the cabins, and towers to hold the ropeway – has become increasingly popular throughout the world as a high-capacity, high-quality, and economical transit mode. ART will utilize "3S", or triple-rope, technology that enables larger passenger cabins and thus more carrying capacity than other available aerial technology including a single or mono-cable system or an aerial tram.

Although Dodger Stadium is one of the region's most visited venues, the Metro transit system does not include any existing or proposed permanent transit connections. Indeed, regular bus service to Dodger Stadium was discontinued in the early 1990's. As other venues such as Staples Center (Lakers, Clippers, Kings) and the Los Angeles Memorial Coliseum (Rams, USC) are now conveniently accessed by transit, and Metro has begun working on a direct connection to LAX, the importance of providing a permanent transit connection to Dodger Stadium has become ever more necessary.

With the ART system's ability to overcome grade and elevation issues, while providing safe, environmentally-friendly, and high-capacity transit connectivity, it has emerged as the best approach to link the Dodger Stadium site to the region's rapidly growing regional transit system at LAUS. The technology of aerial rapid transit systems has improved to the point that they can carry a capacity equivalent to that of many light rail systems in terms of passengers per hour. The capacity can be quickly increased or decreased to meet demand associated with the intense peaks of activity associated with games and events at Dodger Stadium simply by increasing or decreasing the number of cabins on the ropeway.

Thousands of visitors could reach Dodger Stadium via ART when attending a Dodger game or event at Dodger Stadium. The reduction in thousands of automobiles per game or event will improve the flow of traffic for other vehicles as well as reduce the impacts of congestion on nearby freeways and surrounding areas, thereby improving the game-day transportation experience for neighbors and visitors.

Aerial transit technology is a safe, proven form of rapid transportation. In the United States, Manhattan's Roosevelt Island (42 years) and Portland, Oregon (10 years) provide longstanding urban examples of aerial transit. As world cities seek to combat climate change and congestion with innovative new transit approaches, aerial gondola systems are increasingly popular as effective transportation solutions, including recent examples in London, England; Koblenz, Germany; Mexico City, Mexico; and several South American cities. ART systems can be constructed and deployed more economically and expeditiously than fixed light and heavy rail and reduce air pollution or greenhouse gas emissions.

Indeed, the Project is a game-changer for Metro and the City of Los Angeles. The ART will serve as a new and privately-funded addition to Greater Los Angeles's rapidly expanding transit and mobility-choice network. The proximity of the Dodger Stadium property to Union Station – just over one mile – enables a short and convenient connection to the regional system's transportation hub. The ART system can also become an attraction in and of itself that draws more visitors to take Metro.

2. Project Scope and Duration

Define the project/initiative's scope (e.g., technology, organizations, users, processes, functions, etc.), and any geographic boundaries. Explain what your proposal includes and excludes, and proposed project length.

RESPONSE: The ART system includes stations where the passengers enter and exit the system, cabins in which the passengers ride, towers which hold up the cables, and the cables. ARTT LLC proposes one station located at the Dodger Stadium property and another at or near Union Station. Depending upon the alignment, there could also be an intermediate station. The approximately one-mile ride from Union Station to Dodger Stadium would be short and enjoyable, lasting about five minutes.

The geographic boundaries will be the approximately one-mile between Union Station and Dodger Stadium. The ARTT LLC team has considered a number of possible alignments for the ART system, which we look forward to discussing with Metro and other stakeholders. We anticipate several alternative alignments will be analyzed as part of the Project's environmental review.

The preferred aerial rapid transit technology for the Project is a tri-cable ("3S") detachable gondola system, which is the most advanced technology available and provides the highest transport capacity. Typical 3S cabins comfortably carry between 30 and 40 passengers each, and the system is capable of transporting 5,000 or more passengers per hour per direction.

Currently, many Dodger fans arrive at Dodger Stadium within two hours prior to the start of a game. At full capacity, 10,000 fans could be transported to the stadium in the two hours prior to a game via the gondola system. Since the average attendance at a Dodger game is approximately 46,000, nearly a quarter of the fans at a given game could arrive not by car, but by gondola. This would take approximately 3,200 cars off the streets before and after a game.

Aerial rapid transit systems have been proven as reliable, efficient, and cost-effective rapid transit solutions.

The ART would promote Los Angeles as a leader in high-capacity aerial urban mobility in the United States. The proposed system will use state-of-the art technology, demonstrating the potential of aerial transit in Los Angeles as a key connector to the regional transit system. The Project could also demonstrate the potential for ART in the region, as other projects of similar scope have been

proposed, including a gondola system that would take tourists to the Hollywood sign. Mayor Garcetti described the ART and the Hollywood project as potential "twin crowns to change the landscape of our City." Other U.S. cities currently considering the addition of aerial rapid transit systems to expand transit options include Austin, Boston, Miami, New York, Oakland, and Washington D.C.

3. Project Timeline

Please provide a proposed timeline for project design and execution, including all key milestones. Specifically include information about the timing of provision by Metro of any property and/or services.

RESPONSE: ARTT LLC seeks to build and operate the ART system as quickly as possible. To that end, our goal is to issue the Notice of Preparation ("NOP") for the EIR in the fall of 2018. We assume that it will take twelve months to complete all phases of CEQA, after which we will complete the Final Design of the certified alternative and then proceed through permitting, construction, testing and, finally, operations. We anticipate full operation of the system in late 2022.

ARTT LLC commits to fund and obtain financing for the ART, in order to design, build, operate, and maintain the ART connecting Dodger Stadium to LAUS. ARTT LLC seeks Metro's assistance in three areas: potential location of the ART station at Union Station; Metro to be Lead Agency for environmental clearance pursuant to the California Environmental Quality Act ("CEQA"); and Metro to assist, as necessary, in the acquisition of surface land and/or aerial easements needed for the ART system. ARTT LLC seeks to fully reimburse Metro for all direct costs of the above, as well as for the costs of the Metro staff time for the above work.

ARTT LLC proposes a services agreement for both the environmental review and for Metro assistance on surface land acquisition and aerial easements, as follows:

- ARTT LLC shall cover the costs associated with the preparation and certification of any required environmental documents including an EIR under CEQA. ARTT LLC shall arrange and pay for all required CEQA studies and reviews at its sole costs and expense. Metro shall exercise its own independent judgment in the review and certification of any environmental documents prepared in connection with Metro's consideration of the Project; and

- ARTT LLC proposes to partner with Metro in the acquisition of required surface land and aerial easements as needed to construct, operate, and maintain the ART. ARTT LLC will fully reimburse Metro for any costs incurred by Metro in assisting ARTT LLC with land acquisition and/or aerial easements, including all Metro staff time.

We have proposed that Metro act as Lead Agency for CEQA. Our goal is to begin work with Metro immediately to issue the NOP before year's end, proceed through Scoping, and begin the environmental technical analysis. We will develop a more detailed schedule for the analysis, documentation, and review of each section of the EIR so that Metro staff can anticipate the timing of their involvement.

Concerning property negotiations with Metro for a station location and pedestrian access at Union Station, we anticipate initial negotiations will be part of an Exclusive Negotiation Agreement ("ENA") between ARTT LLC and Metro; the initial draft of a term sheet for the ENA is included in

this submission. Lease negotiations, if necessary, will follow. We anticipate beginning construction in 2021.

Concerning the timing of Metro's assistance with property acquisition (including the exercise of eminent domain, as necessary), we assume that Metro will not be able to use their eminent domain powers until the final alignment has been selected and the EIR has been certified. We should note here that among the early alignment alternatives under review, we are studying several that almost exclusively operate over public rights-of-way. If an alignment is selected that does operate over private properties, we may request Metro's assistance with property acquisition and, if necessary, the use of eminent domain. We anticipate property acquisition would occur in 2020.

4. Project Requirements

Describe all requirements for the project as it is described above, including those related to operations, facilities, property, labor, information technology, data access, etc. Please give additional consideration to Material, Technical, and Labor requirements.

RESPONSE: This response further describes the ART system. As noted above, ARTT LLC commits to fund/finance, design, build, operate, maintain, and insure the ART. ARTT LLC will fully comply with all applicable laws, regulations, and rules related to the design, construction and operation of the ART.

The ART system's interface with Metro and its property will be at the station to be located at or near Union Station and pedestrian access to the station.

ARTT LLC proposes a services agreement that would commence with the environmental review and proceed as needed for other Metro assistance, including the potential for help to acquire surface land and aerial easements.

Ropeway Technology | Safety

Aerial gondola systems are classified based on the number of ropes or cables used in their operation. 3S systems, which ART would use, rely on three steel cables to support and move the cabins. Two stationary cables (track ropes) provide support for the running wheels of the cabins, while the third cable (haul rope) circulates continuously around the system. This tri-cable technology enables 3S systems to provide the highest capacity of any gondola, with larger cabins, longer spans, and greater lateral stability. The haul rope – which is the propulsion rope – is moved by the turning of a large sheave known as a "bull wheel." The bull wheel is turned by motors located at the station. The ropeway is looped around the bull wheel at each station and the haul rope moves at a steady pace around the bull wheels pulling the cabins in and out of each station.

The proposed ART system will be delivered with multiple redundant features to ensure the safety of riders, employees, and the general public. ARTT LLC anticipates that the cabins will feature a combination of video monitoring and/or audio communications, as well as push-to-talk stations in the cabins. ARTT LLC also anticipates the video monitoring of station activities while attendants are on station platforms.

Aerial gondola systems have alternate power sources to provide backup power in the event of an electrical failure. The most common source of backup power is combustion engines; however, because of technological advances and because of our goals of achieving an energy efficient system,

we are assessing the use of electrical battery storage as emergency power for the ART system. The final size, source and quantity of backup power will be determined in the detailed design phase.

Gondola Cabins

3S cabins typically carry between 30 to 40 passengers each. The cabins allow for sitting or standing, wheelchairs and baby strollers, and can accommodate bicycles. Cabins are fully accessible pursuant to requirements of the American with Disabilities Act ("ADA"). Cabins can be air conditioned and ventilated. The cabins can also include cameras for security to view the inside of every cabin and a communication system so passengers can speak to the operator, similar to Metro's existing security approach on its rail systems.

The cabins move at approximately 16 to 18 miles per hour. As they enter a station they slow down to allow passengers to enter and exit the moving cabin. This is achieved by detaching the cabins from the haul rope in the station. Once a cabin is detached from the haul rope, the cabin can move at a speed independent of the haul rope, allowing the cabins "on line" (i.e., not in a station) to continue to move at a higher speed. Based on ARTT LLC's preliminary analysis, cabins will arrive in a station approximately every 25 seconds and once a new load of passengers has boarded, the cabin will re-attach to the cable and advance to the next station.

Towers

The ART system will require approximately four to five towers, which will be built to current seismic and structural standards. The form, location, and height of towers will vary depending on the proposed alignment. Towers would be designed to meet or exceed applicable codes and standards.

The design of the towers can vary widely, as evidenced in the many different approaches to tower design in gondola systems around the world. At most ski resorts, for example, towers are typically utilitarian in design and resemble high-tension power structures. In urban areas, however, towers are often designed more aesthetically and they add a positive visual element in the urban environment. The Project will strive for aesthetic compatibility.

Images (left to right): Emirates Air Line tower in London, England; Seilbahn tower in Koblenz, Germany

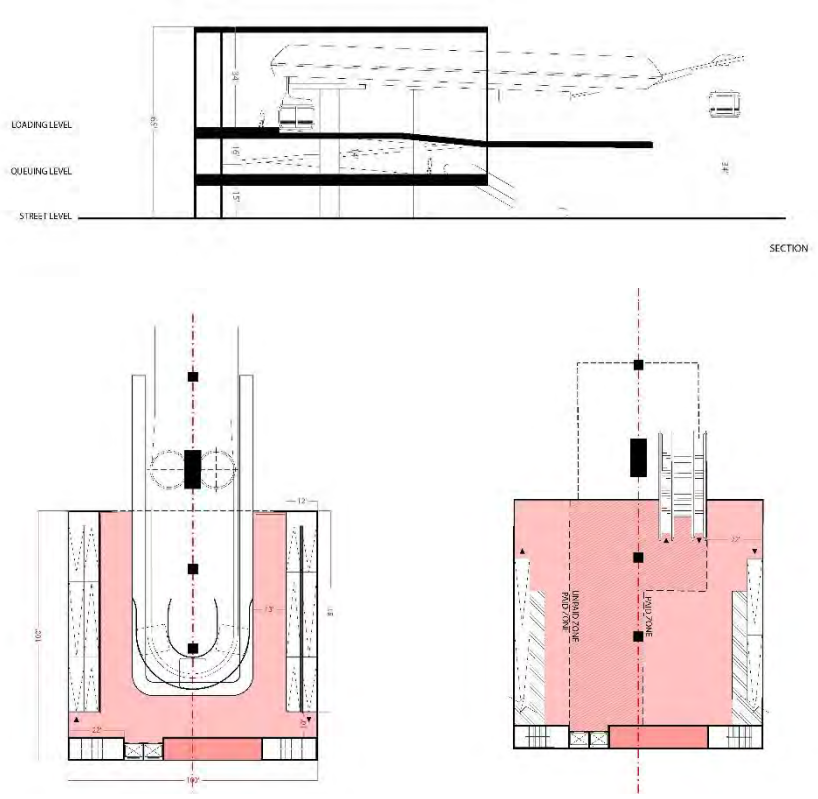
Stations

Stations include areas for ticketing, queueing, loading and unloading of passengers, operations, and for the system equipment. One station will also include a storage and maintenance area for the cabins as well as staff break rooms, lockers, and parts storage. It is anticipated that the storage and maintenance area will be located at the Dodger Stadium property. Stations will be ADA accessible.

A footprint of 15,000 SF would support the basic elements of a station, including vertical circulation, and provide the length needed for the cabin deceleration and acceleration between transit speed and boarding speed. The station with the storage and maintenance facility will require a footprint of 30,000 square feet. As noted, the ART system intends to locate the storage and maintenance facility at the Dodger Stadium property. See attachments for prototypical station plans and sections.

Within the stations, the loading and departure platform will necessarily be elevated so that the cabins leave the station well above people, cars, trees, and other urban elements in the immediate vicinity of the station. The cabins will continue to climb as they leave the station. The elevated arrival/departure platform also allows for a sufficient length of ramps for queuing. Stations will also include elevators and stairs.

Stations also require access to the mechanical systems for servicing. Once the potential station locations are more firmly identified, specific access provisions will be included in the station design.



Images (top to bottom): Section of a prototypical gondola station; Plans of prototypical gondola station [loading level (left), queuing level (right)]

Potential Station Locations

ARTT LLC has identified two potential station locations at or near Union Station.

Metro Potential Development Site C. Metro identified "Development Site C" at the corner of Cesar Chavez and Vignes as a potential development site in the Industry Forum package prepared for the solicitation of a Master Commercial Developer. The site is adjacent to well used bus stops, is across the street from the East Portal entrance to Union Station and Patsaouras Plaza and is within a 5-minute walk (0.25 mile) from the middle of the Union Station pedestrian passageway. This site also presents a great opportunity as a location that is highly visible from Cesar Chavez Avenue.

Alameda Street. ARTT LLC has also identified potential station locations over Alameda Street near Union Station, which in addition to carrying passengers from Union Station, could provide an opportunity to draw visitors to the historic El Pueblo de Los Angeles Historical Monument and provides access to the Civic Center and Downtown.

Should an Alameda Street station be selected as the preferred location for an ART station near Union Station, it is likely that an additional station would need to be located somewhere in the vicinity of Los Angeles State Historic Park in order to accommodate turning movements of the ART into the Dodger Stadium property. Were this to occur, an opportunity to facilitate access to the Los Angeles State Historic Park from the areas west of Broadway Street may be possible. ARTT LLC is willing to work with the public and decision makers who wish to pursue such access.

Operation of the ART System

ARTT LLC proposes to operate the ART system that will connect Los Angeles's Union Station, Southern California's transportation hub, to the Dodger Stadium property. ART is a proven, safe, clean, sustainable, and highly efficient form of transportation that will serve as both a reliable rapid transit system and an iconic new regional tourist destination in and of itself, offering wonderful views of Los Angeles.

ART will travel a little over one mile in about 5 minutes and can carry roughly 5,000 people per hour per direction. By creating a high-quality and high-capacity transport link between LAUS and Dodger Stadium, ART ensures that there will be more viable choices in making a trip to a Dodger game or special event at the stadium. With Metro's existing and planned expansion of its transit system, coupled with other providers such as Metrolink, Amtrak, and other municipal bus operators whose services all converge at LAUS, ART provides the opportunity for anyone on the Los Angeles County region to access Dodger Stadium via transit.

Gondola cabins enter, traverse, and depart stations under fully automated control. Station attendants are within each station to assure safe boarding or to execute stops, if necessary. Attendants also provide customer interaction and observation; if a passenger needs special assistance, an attendant may execute either a slowed or stopped cabin. Typically, a separate operator sits in a booth adjacent to the boarding area and monitors screens, which show activities in each cabin and station as well as all of the system controls. The operator does not typically interact with the passengers.

ART will provide service to all pre-season, regular season and post-season Los Angeles Dodger games and any special events (e.g., concerts) at the Dodger Stadium property. ART may provide service on some or all days of the week to accommodate tourists who wish to visit the Dodger Stadium or simply to ride the ART. Additionally, ART may provide service to adjacent

neighborhoods and/or Elysian Park visitors. Appropriate operational studies and plans will be formulated and discussed as part of the environmental review process.

Since ARTT LLC will operate, maintain, and secure the ART with its own staff, we do not anticipate that Metro will need to add to its staff to support ART. Metro may realize more passengers riding its system, but the addition of choice riders to Metro's excellent services is a positive result and will provide economic benefits to Metro and environmental benefits to our region.

ARTT LLC assumes that the ART will operate in concert with other mobility choices available to access the Dodger Stadium property, including Metro's Dodger Stadium Express. Should Metro wish to re-evaluate continuation of the Dodger Stadium Express, ARTT LLC assumes that Metro will consult and reach agreement with the Los Angeles Dodgers and other stakeholders on the future of this service.

As noted above, forms of payment technology and fare options are being explored by ARTT LLC. We look forward to discussing these issues further with Metro.

Maintenance

ARTT LLC will maintain the ART system. The detailed maintenance plan will be developed in conjunction with the system design.

a. Materiel Requirements

Include requirements for physical materials or assets to be supplied by Metro, including property, facilities, rolling stock, vehicles, supplies, or other assets.

RESPONSE: As detailed above, as to property and facilities, ARTT LLC has identified two potential station locations at or near Union Station: Metro's identified "Development Site C" and over Alameda Street near Union Station. If Development Site C is selected, ARTT LLC would seek a ground lease with Metro for the ART. For any station location at or near Union Station, ARTT LLC would coordinate with Metro concerning pedestrian access to the station.

b. Technical, Interface, and Data Requirements

Include requirements technical capabilities or capacity to be provided by Metro, including any required IT infrastructure, hardware, software, systems, interface, or storage requirements, as well as any data exchange requirements or protocols to the level of detail needed to assess capacity, labor, and cost. A summary table may be appropriate.

RESPONSE: At this time, ARTT LLC does not anticipate having any technical, interface, or data requirements from Metro. See Part II, 5 regarding data collection, reporting, and sharing for additional information.

c. Labor, Contractor Support, and Other HR Requirements

Include requirements for human resources including labor (specify specific trade or union if applicable, as well as non-covered employees), all proposed contractor support, and management/senior leadership.

RESPONSE:

Requirements from Metro

ARTT LLC commits to privately fund and obtain financing for 100% of the design, capital construction, operation, and maintenance costs of the direct route for the proposed Project. No funds are being sought from Metro. We seek Metro's assistance in three areas: location of the ART station at or near Union Station; to act as Lead Agency for environmental clearance; and to assist with matters related to surface land and aerial easements acquisition, as needed. The Project seeks to fully reimburse Metro for these items, as well as the costs of the Metro staff time for the above work.

ARTT LLC is aware of the many projects and programs that Metro has committed to deliver to Los Angeles County residents, and we know that adding another endeavor will require additional resources from Metro. Accordingly, ARTT LLC's Project team seeks to provide as much efficiency as possible to Metro staff while assuring the resources are available for their independent review to ensure the best possible solutions for Metro approval. Consistent with Metro's goals for its Office of Extraordinary Innovation, we look forward to working together so this investment is an innovative, sustainable, zero-emission rapid transit solution to Dodger Stadium, that will also support the improvement of mobility throughout the region.

We provide the following, additional detail about ARTT LLC's requests of Metro:

- Location of the ART station at or near Union Station. An ART station at or near Union Station would provide seamless connections for passengers transferring from regional rail, bus, or local transit. In the event that the station is adjacent to Union Station, but not on Metro property, we will work with Metro to ensure access for ART passengers through Union Station in a safe and appropriate fashion. The Project team will work with Metro staff to assess the previously noted sites and to take into account any of Metro's long-range plans for the Union Station property.

- Lead Agency for environmental review pursuant to CEQA process. ARTT LLC proposes to contract with and fund preparation of the required CEQA documentation for the Project. To the extent feasible for the ART, ARTT LLC will utilize Metro's "on call" list of approved consultants for preparation of the technical analysis and environmental review. We will initially develop a schedule of deliverables jointly with Metro and ensure that qualified consultants provide all necessary technical analysis and environmental documents to the appointed Metro staff for their review. ARTT LLC shall cover the costs associated with the preparation and certification of any required environmental documents including an EIR under CEQA. ARTT

LLC shall arrange and pay for all required CEQA studies and reviews at its sole costs and expense. Metro shall exercise its own independent judgment in the review and certification of any environmental documents prepared in connection with Metro's consideration of the Project. Additionally, ARTT LLC is fully committed to full and open community engagement and collaboration and will be retaining community outreach experts to work with our team and Metro during the environmental review, design, and construction processes.

- Assistance with acquisition of surface land and aerial easements, as necessary. ARTT LLC is committed to paying fair market value for private surface land and aerial easements required to deliver the Project. ARTT LLC anticipates entering into a services agreement with Metro for Metro personnel working with ARTT LLC in the acquisition of surface land and/or aerial easements. ARTT LLC shall fully fund Metro staff time and all direct expenses related to these activities.

5. Data Collection, Reporting, and Sharing

Please describe what data and information will be collected including type, scope, and format, how such data and information will be collected and reported to project partners, and what limitations, if any, would be imposed on the use, discussion, reporting, or sharing of this data and information,

RESPONSE: ARTT LLC anticipates it may collect data from the ART customer base as part of customer surveys or interviews. Information to be collected could include how the passenger arrived at the ART (e.g., bus, train, car, ride-share, bike, or walk); if by car, where did they park; where the passenger came from; why they chose the ART to access a game/event at Dodger Stadium; how often the passenger rides the gondola (one time only, every Dodger game, etc.); and what improvements they would like to see, if any. We also anticipate collecting data on the volume of ridership so that we can calibrate the flow of the cabins. We would be willing to meet regularly with Metro to discuss this data to assist Metro in managing crowd flow through and around Union Station. Certain data, consistent with current practice, may be proprietary to ARTT LLC and/or the Los Angeles Dodgers and would not be for public release.

6. Outline of Potential Terms and Conditions

Please describe any essential terms and conditions that could be part of a subsequent agreement with Metro.

RESPONSE: ARTT LLC is pleased to provide Metro with the enclosed draft term sheet for an Exclusive Negotiation Agreement (ENA) that sets forth the terms and conditions for a services agreement with Metro that would commence with CEQA, as well as for a possible lease of property at Union Station for an ART station, and then continue as appropriate for surface land and aerial easement acquisition. As noted above, we are requesting a sole source determination.

7. Disadvantaged/Small Business Enterprise Participation

Please describe a goal for participation of disadvantaged/small business enterprises (DBE/SBE), as well as expected strategies to achieve that goal.

RESPONSE: ARTT LLC has a goal of including DBE/SBE contractors, to the extent feasible, in the design, construction, operation, and maintenance of the ART at no cost to Metro.

8. Labor Requirements

If the project includes occupations covered by Federal, State, or Municipal/Local wage laws, please describe and indicate how compliance will be documented and certified.

RESPONSE: ARTT LLC will have a Project Labor Agreement (PLA) for the Project, consistent with Metro policies, that governs labor requirements for the Project.

9. Points of Contact: Roles and Responsibilities

Please include information about the individuals who will be responsible for delivering the project, including contact information and key responsibilities for:

- *the lead point of contact for project implementation;*
- *any functional and technical experts that will be involved and may need to be contacted by Metro staff; and*
- *any technical support or service personnel that may need to be contacted by Metro staff.*

RESPONSE: ARTT LLC is dedicated to delivering this Project and has all support and resources necessary for successful project implementation, including an assured ridership base through partnership with the Los Angeles Dodgers and strong support to date from the City of Los Angeles and other stakeholders. Representatives met in Europe this summer with both senior executives and technical staff of the two major manufacturers of gondola systems in the world, which both have US companies as well: Doppelmayr USA, Inc. and Leitner-Poma of America, Inc. At these meetings, we presented the program and reviewed route alternatives; these meetings generated significant enthusiasm and interest from manufacturers for participation while reconfirming the feasibility and ridership benefits of the proposed Project. In addition, team representatives recently toured the successful projects in London, Koblenz (Germany), and Portland, Oregon to refine concept planning with real-life examples of visitor interface, integration into the urban fabric (London and Portland) and access coordination with other transportation modes such as bicycles, automobiles, light rail, and other transit connections. In addition to support of ownership and the Los Angeles Dodgers, the Project continues to be supported by a team of highly-qualified consultants with the expertise necessary to implement the Project. Following submittal of the initial proposal in April, the expert team has continued to advance project design together with key issues such as environmental and air quality analysis, route alternatives and community outreach.

The lead point of contact for the team is as follows:

The Project Director of Aerial Rapid Transit Technologies LLC (ARTT) is **Martha Welborne**, the former Chief Planning Officer of Metro, who led Metro's long-range transportation program in Los Angeles County, and initiated the design and delivery of 12 new transit corridors approved by County voters. She has a track record of delivering ambitious, public-serving projects, including as Managing Director of the Grand Avenue Committee, and in her work to initiate what became Metro's rapid bus transit system.

Martha Welborne, Project Director
700 South Flower Street, Suite 2995
Los Angeles, CA 90017
martha.welborne@aerialrapidtransit.la

As stated in the initial proposal, the other lead consultants include, in a Project Steering Committee, the following:

Engineering Specialties Group provides engineering and consulting services for the transportation and ropeway transit industries. ESG professionals have provided these services for countless clients and installations across the resort and urban environments for over 40 years, including for the recently-completed gondola component of the Transbay project in San Francisco and many others. Staff remain on the forefront of the adoption of ropeways into the urban environment and sit on the national standards committee for passenger ropeways (ANSI B77).

10. Risk Summary

Please provide a summary of key risks (business, legal, financial, technical, etc.), including any risks associated with assumptions, and how they will be mitigated, managed, or shared between partners.

RESPONSE:

General. A key risk to both public confidence and financial confidence in this Project relates to the ability to timely deliver the Project. Since the Project was submitted in April 2018, we are eager to proceed to understand the assistance Metro is willing to provide to ARTT LLC for the Project. The ART offers significant regional and local benefits.

Technical. ARTT LLC has reviewed a number of potential station locations and the resulting alignments for technical feasibility. ARTT LLC has proposed, in part, to partner with Metro to assist, as may be necessary, in the acquisition of needed surface land for stations and towers and/or aerial easements.

Financial. ARTT LLC will fund/finance, design, build, operate, and maintain the ART system. ARTT LLC has made preliminary assessments of the total Project costs and intends to periodically review the cost projections and to monitor the cost implications of major decisions to manage Project costs.

11. Price/Cost Information, Revenue Impacts, and Cost-Sharing

Proposed price or total estimated cost for the effort and/or the revenue generated in sufficient detail for meaningful evaluation and cost analysis, including an annual cash flow for the project and annual or future costs to operate and maintain. If any cost-or risk-sharing, or other innovative payment or pricing schemes are to be included, please explain them here.

RESPONSE: The estimated costs for ART are $125 million. ARTT LLC has proposed that the ART would be funded/financed, designed, built, operated, and maintained by ARTT LLC at no cost to Metro. This commitment is based on the direct route with two stations. ARTT LLC would be happy to coordinate any potential additional points of access (e.g., a station near Los Angeles Historic State Park) if other sources of non-Metro funding are available. ARTT LLC is deeply committed to this innovative project and fully capable of meeting all funding commitments.

As noted, ARTT LLC will operate the system privately and retain all revenue from the system operations. ARTT LLC acknowledges that it will reimburse Metro for its direct costs related to its work as Lead Agency for CEQA and any assistance provided for property acquisition and/or air rights easements. Depending on the ultimate site chosen for the station at Union Station, ARTT LLC may provide lease payments to Metro as part of a long-term lease agreement.

More detailed notes on assumed costs and revenues are provided below.

Capital Costs

A direct route from Union Station to Dodger Stadium is anticipated to cost approximately $125 million, as shown on the attached cost summary. Following completion of environmental review and permitting, ARTT LLC will secure third party financing for the full capital construction cost of the Project. Cost estimates were based on a direct alignment from Union Station to the Dodger Stadium property, a linear distance of approximately 1.2 miles. All cost estimates were developed by professionals based on estimates of quantities of materials necessary to construct land-affixed system components such as towers and stations and manufacture other system parts (e.g., tons of concrete/steel or linear length of the aerial system). Since the Project is currently in the conceptual design phase, this is an early estimate, which will be updated as design progresses.

Components of the mechanical system for the Project's 3S aerial transit system are highly custom and will be manufactured by the manufacturers of such systems outside of the Los Angeles region and installed by local contractors. Cost estimates for these components, which include ropeway, cabins, and the full mechanical system, were estimated based on costs for comparable, recently completed 3S systems in Europe. The 1.2-mile length of the system dictates the amount of ropeway and the maximum number of cabins. Estimates based on these systems were also adjusted for currency and economic inflation.

Cost estimates for stations were based on prototypical station designs developed by the technical team based on space requirements for aerial system components, required station height to accommodate gondola aerial clearance, structural loading, cabin storage, and other ancillary uses such as passenger queueing and ticketing.

Individual tower costs were estimated based on the quantities of materials required to construct towers to the necessary heights for gondola clearance. ART will meet and/or exceed all Code requirements applicable to the Project.

All labor cost estimates assumed fair market labor rates in the local Los Angeles market for construction.

Given expected construction cost growth in the near term, a 15 percent contingency was assumed. These costs have been validated against other system costs internationally and have been checked against similar recent proposals for domestic systems such as in Austin, Boston, New York, and Washington, DC.

Operating Costs

Operational cost assumptions have not yet been developed for ART; however, based on performance of existing systems and estimates of future ridership and ART hours of operation, operating cost components include:

- Labor: Labor costs to operate the ART system are variable based on the number of operational days per year, the daily hours of operation, and the ridership. System staffing requirements include a general manager, other management staff, mechanics, operators, and attendants.

- Energy: Energy costs are estimated based on an assumption of the operation of an 800-horsepower motor during system operations.

- Marketing: ARTT LLC intends to market the ART system to encourage ridership.

- Capital replacement reserve: ART system revenues will contribute to an annual capital replacement reserve for the replacement of system components at varying intervals of time.

Anticipated Revenues

ARTT LLC will generate revenue through passenger fares, advertising, and system sponsorship. While we have not yet established what the range of fares will be, categories of revenue anticipated by ARTT LLC, which were evaluated by the Project team to develop and validate a viable operating model, include:

Passenger Fares – Dodger Stadium Event Attendees: ARTT LLC envisions that a round trip ride on ART will cost less than the average parking costs at the stadium.

Passenger Fares – Tourists: During non-event times, tourists may be able to ride the ART system to take in scenic views of greater Los Angeles and to visit historic Dodger Stadium.

Passenger Fares – Commuters and Park Visitors: ART may facilitate daily commuter and other trips for residents and workers in northern Chinatown, Solano Canyon and at Dodger Stadium, with direct access to and from Union Station, as well as visitors to Elysian Park.

Advertising: In-cabin, on-cabin, and in-station advertising opportunities are a part of ARTT LLC's business model and may or may not be packaged with an overall system sponsorship agreement.

Sponsorship: With visibility from both the ground and as viewed by riders, the ART system provides a significant and valuable opportunity to potential sponsors and advertisers. Such a sponsorship is often packaged with advertising opportunities and can provide substantial upfront and operating capital to subsidize system operations.

Corporate sponsorships and advertising revenue can support annual operations and reduce the direct cost to passengers.

12. Additional Information

Identify any other relevant project information.

RESPONSE: *N/A*

PART III. BENEFITS AND PERFORMANCE

1. Summary of Expected Benefits

Describe the desired/expected outcomes, positive results, benefits, efficiencies, and/or cost savings of implementing this project/program (in measurable terms if possible).

RESPONSE: ARTT LLC anticipates that the implementation of ART will:

- Provide the funding/financing, design, construction, operation, and maintenance of the Project at no cost to Metro.
- Provide people attending Dodger games and events at the stadium with more opportunity to utilize Metro's transportation system via the region's transport hub at Los Angeles Union Station, specifically due to the capacity, speed, comfort and quality experience that ART will provide.
- Provide enhanced economic value to people attending games or events at Dodger Stadium due to the reduced cost of combining a Metro ride and an ART ride versus driving and parking at an event.
- Significantly increase the number of people entering and exiting Dodger Stadium via transit – up to 20 to 25% of overall attendance –due to ART's capacity to carry in excess of 5,000 people per hour per direction.
- Significantly reduce the number of cars entering and exiting Dodger Stadium – and congesting the routes through and adjacent to communities and neighborhoods. ARTT LLC anticipates between a 20 - 25% decrease in private automobiles at Dodger Stadium due to ART.
- Improved air quality in surrounding communities, which are neighborhoods already environmentally impacted as detailed in the metrics of CalEnviroScreen 3.0 (Office of Environmental Health Hazard Assessment). These neighborhoods are in close proximity to major freeways, the SR-110 and the US-101, as well as heavily congested arterials (Sunset Boulevard) that create both safety and air quality issues.
- Reduced congestion in and around Dodger Stadium, its adjacent neighborhoods and communities, and along major arterial and freeway routes, thereby reducing air quality impacts and greenhouse gas emissions.
- Enhanced safety within adjacent neighborhoods and communities due to a reduction in vehicles in the area.

ART will provide a range of benefits, including mobility and accessibility, air quality, economic and fiscal, and benefits to the surrounding communities. Each of these categories is described below.

Mobility and Accessibility Benefits

With the ART system based at the hub of the region's transportation system, transit riders from all over Southern California can have single transfer access to Dodger games and

other events at the stadium, via regional and commuter rail, light rail, bus, shuttle and pedestrian connections at Union Station. ART's unique design provides consistent capacity during peak periods, is reliable, and is ADA compliant and accessible. ART ridership would reduce the potential for transportation congestion and longer trips. ART will also provide riders with an enjoyable ride to their event.

As the ART system has a capacity of at least 5,000 people per hour per direction, at full capacity a minimum of 10,000 people could take the gondola to Dodger Stadium in the two hours prior to a game, which is currently when most Dodger fans arrive. Since the average attendance at a game is 46,000, the gondola could carry more than 20 percent of the fans to the stadium. That is roughly 3,200 cars that will not drive to the stadium and park, thus bringing a notable relief in congestion surrounding the stadium both before and after the games or events.

Air Quality and GHG Benefits

ART is an eco-friendly transit option. ART will help the region maintain and achieve attainment of Federal and State air quality regulation standards. Regional air quality is governed by National Ambient Air Quality Standards (NAAQs) and California Ambient Air Quality Standards (CAAQs), both of which regulate pollutants considered harmful to public health and the environment [including for SO2, CO, NO2, O3, PM10, PM2.5, and Lead (Pb)]. The State of California CAAQs as additional standards, which are generally more restrictive than NAAQS.

ART will also contribute to regional and local efforts to better-integrate environmentally-conscious land use and transportation planning in order to reduce GHG emissions. California's Sustainable Communities and Climate Protection Act (SB 375) requires that all regional planning organizations include a Metropolitan Planning Organizations component in Regional Transportation Plans (TFP). The Sustainable Communities Strategy must achieve GHG emission reduction targets through the development of more compact, complete, and efficient communities.

The Project will contribute to SCAG's goals to reduce per capita transportation emissions by 8 percent by 2020, 18 percent by 2035, and by 21 percent by 2040 (all of which exceed the mandated reduction standards).

Economic and Fiscal Benefits

The proposed $125 million ART system will deliver economic benefits to the Los Angeles region both during construction and during operations. During construction, the Project will produce both direct and indirect jobs. "Direct" impacts include on-site construction jobs; "indirect" impacts are those resulting from construction contractor purchase of goods and services to support the Project. Most of the jobs created to build the Project will occur in the City and County of Los Angeles, with the exception of the gondola mechanism itself, which will be manufactured by the system manufacturer outside the Los Angeles region and then installed in Los Angeles.

The ART system will also produce long-term benefits to the regional economy through its on-going operation. This includes onsite employment of the operations and management team, as well as spin-off benefits of new economic activity likely to be located near the station areas and an increase in tourist activity.

Community Benefits

ARTT LLC is committed to a project that benefits the neighbors of Dodger Stadium and Dodger fans across greater Los Angeles. The Project would be a pleasing addition to the community, with stations and aerial gondolas designed for aesthetic compatibility. Residents in neighboring areas (including Echo Park, Solano, Chinatown and Northeast Los Angeles) would benefit from a reduction in traffic congestion, air emissions, noise, and pollution. Both the reduction in the number of vehicles driving to the Dodger Stadium property and a reduction in the idling time of vehicles spent in local neighborhood areas will lead to a reduction in total air emissions.

Additionally, the Project could support expanded utilization of Elysian Park. The Los Angeles Dodgers have committed to working closely with the Project as transportation for Dodgers fans to games at Dodger Stadium and other events and venues. The Project will undergo a robust CEQA process and engage the community to ensure that it achieves shared objectives.

The ART system is well-aligned with Metro's objectives to provide more mobility choices for Los Angeles County residents. Metro is leading the transformation of Southern California from a car-dominated society toward a dynamic, sustainable transit-oriented region. As the Metro system continues to grow with the many transit projects included in Measures R and M, Union Station will be even more convenient for Dodger fans to visit the Stadium via rapid transit and the ART system, supporting increased growth for Metro's overall system ridership into the future. As an enjoyable experience for visitors, the ART system can also draw new tourists to and through Union Station, demonstrating the region's commitment to equitable transportation investment to the world.

The ease of attending games, events, and recreation through ART will encourage new "choice rider" trips and can catalyze more regular ridership. In addition to Union Station's linkages to 141 miles of subway, light rail and bus rapid transit, it is the hub of Metrolink's commuter train lines; all of these systems are used by Dodger fans. When ART is added to Metro's other system expansions, we anticipate increased transit utilization to Dodger Stadium, with more fans arriving at Union Station by transit and then connecting to the Stadium via the ART system. Many Dodger fans will learn more about Metro and could become regular riders, which would increase the likelihood they will use the Metro system for other trips.

2. Performance Assessment

Please describe how these performance indicators and/or measures will be measured and assessed, including any quantitative measurement, sampling, interpolation/extrapolation, modeling, etc. as well as qualitative assessment.

RESPONSE: Since ART will be privately owned and operated, ARTT LLC will evaluate the success of the system on internal criteria. These measures are likely to include ridership volume, revenue production, success with sponsorship and advertising, operational performance, and customer satisfaction.

3. Final Evaluation and Conclusions

Please describe how the overall performance of the project or program will be evaluated, whether any conclusions or recommendation or further action/next steps will be generated, and if so, how.

RESPONSE: The overall performance of the ART system will be evaluated annually, and improvements made as needed. Our goal is for the system to operate for the full useful life of the mechanical system and it will be replaced with a comparable system of the latest state of art at that time.

PART IV. SUPPORTING INFORMATION

To Be Completed by Applicant. Please identify the following.

1. Contract Type

Type of contract or negotiated agreement being sought (the final determination on type of contract shall be made by Metro, should Metro decide to proceed with a contract).

RESPONSE: Please see the enclosed draft term sheet for an Exclusive Negotiation Agreement (ENA) for a services agreement that would be the contractual vehicle to address Metro role as the Lead Agency on the environmental review pursuant to CEQA and any assistance in the acquisition of surface land and/or aerial easements for the construction and operation of the ART. The ENA would also set forth the parameters for a potential ground lease by and between Metro and ARTT LLC should the siting of an ART station be located on Metro-owned property at or near Union Station.

2. Organizational Information and Qualifications

Include a description of your organization, previous experience in the field, and facilities to be used.

RESPONSE: See response to Part II, 9. ARTT LLC's team includes highly qualified experts that is committed to deliver the Project on an ambitious schedule. ARTT LLC plans to obtain third party private financing for the capital construction of the Project, as well as to privately operate and maintain the ART system. The Proposer is deeply committed to this innovative project and fully capable of meeting all funding commitments.

3. Conflicts of Interest and Environmental Impacts

Please include or attach all required statements and disclosures, if applicable, about organizational conflicts of interest and environmental impacts.

RESPONSE:

ARTT LLC Conflicts of Interest: ARTT LLC has not identified any organizational conflicts of interest.

Environmental Impacts: ARTT LLC anticipates that the operation of the ART will provide an overall net environmental benefit to the areas surrounding Dodger Stadium with regard to traffic, air quality, safety, and greenhouse gas emissions. The potential environmental impacts (and benefits) of the Project will be analyzed as part of the environmental review under CEQA.

4. Financial Resources

Information, in the form of Metro's Pre-Qualification Application (see Exhibits D & E of the Unsolicited Proposal Policy) demonstrating to Metro that the proposer has the necessary financial resources to complete the project, as determined by Metro and OEI staff. Such information may include (i) financial statements, including an Auditor's Report Letter or an Accountant's Review Letter, Balance Sheets, Statements of Income and Stockholder's Equity, and a Statement of Change in Financial Position; (ii) un-audited balance sheets; (iii) names of banks or other financial institutions with which the proposer conducts business; and (iv) letter of credit commitments.

RESPONSE: We note that Metro's Pre-Qualification Requirements are identified in the context of projects to be issued for public bids, while ART LLC has requested Metro to consider its request for a sole source determination. As described above, since no public funds are requested from Metro, and full reimbursement of services is proposed through a services agreement, we seek to proceed to an ENA as quickly as possible.

ARTT LLC has access to the necessary resources to fund and finance this Project including for the initial phases, such as the required next step of environmental review. Upon CEQA clearance and permitting progress, ARTT will also be able to proceed to additional investor engagement. Interest in the Project has been very strong, and demonstrated progress with Metro toward implementation is an important next step. As the Project advances through the approval process, ARTT LLC looks forward to discussing with Metro the additional evidence appropriate to demonstrate ARTT LLC's financial resources in connection with the Project.

This worksheet is not intended to be exhaustive, but to better understand which policies, laws and requirements the proposer plans to meet, and which the proposer believes do not apply or would not be overly burdensome/costly to meet.

Policy	Applicable?	Rationale
American with Disabilities Act (ADA)	Yes	--
Metro Adjacent Development Handbook & Adjacent Construction Design Manual	Yes	--
Metro Green Construction Policy	Yes	--
Construction Careers Policy	Yes	--
Project Labor Agreement (PLA)	Yes	--
American National Standards Institute (ANSI) B77.1-2017	Yes	This latest 2017 revision is not currently codified in California, rather an older version is the basis for California's passenger ropeway codes. ARTT LLC will work closely with Cal/OSHA's Amusement Ride and Tramway Unit regarding codes and standards compliance.
Metro Equity Platform Framework	Yes	--
LAUS Agreements (CC&Rs)	Yes	--
Crossing of State Route 110 (SR-110)	Yes	--
National Fire Protection Association (NFPA) 130 Standard for Fixed Guideway Transit and Passenger Rail Systems	N/A	Not applicable to ropeways; it is intended primarily for fixed guideway and rail systems.
NFPA 101 Life Safety Code	Partial	Intended for buildings; as applicable, could be applicable to stations.
NFPA 70 National Electric Code	Yes	ANSI B77.1 (2.2.1.1.) specifically requires that electrical systems of passenger ropeways comply with ANSI/NFPA 70-2017 (and IEEE C2-2017 National Electrical Safety Code).
NFPA 72 National Fire Alarm Code	Partial	As applicable, could be applicable to stations.
Los Angeles Fire Department (LAFD) Chief's Regulation #4 Standards	Yes	We understand this to be a regulation for the testing and repair of fire protection equipment. As applicable, the station would comply. We would not expect it to be strictly applicable to cabins, although the fire/life safety devices located in cabins may be tested and repaired in accordance therewith.
Long Beach Fire Department (LBFD) Fire Protection and Life Safety Certification Program	No	We understand this to be a program modeled after Chief's Regulation #4 (above), as modified by the Long Beach Fire Department, and therefore not applicable.
Metro Fire/Life Safety Design Criteria	No	This document contains specific requirements for fire protection on fixed guideway transit systems. Transportation systems not included in the definition of fixed guideway transit systems are specifically excluded from its scope (1.1.2 C).

ART Capitalized Project Cost Estimate

Aerial System Procurement & Installation	
Mechanical System, Including Ropeway and Cabins [1]	$30,000,000
Urban Installation Premium (5%) [2]	1,500,000
Aerial Systems Procurement & Installation Subtotal	**$31,500,000**
Stations & Towers Construction	
Dodger Stadium Property Station	$10,500,000
Union Station	10,500,000
Stations Design Premium (30%) [3]	6,500,000
Station Subtotal	**$27,500,000**
Towers (Total Cost) [4]	$7,500,000
Towers Design Premium (50%) [5]	4,000,000
Tower Subtotal	**$11,500,000**
Project Labor Agreement (10% of Station/Towers/Sys Inst.)	**4,000,000**
Stations & Towers Construction Subtotal	**$43,000,000**
Acquisition Costs	
Dodger Stadium Property Land Cost	TBD
Union Station Ground Lease (Capitalized)	TBD
Tower Land Costs [6]	1,750,000
Aerial Easements and Other Land Costs [7]	11,975,000
Acquisition Costs Subtotal	**$13,725,000**
Soft Costs	
Project Administration	$3,700,000
Legal	7,000,000
Public Relations	1,750,000
Metro Unsolicited Proposal Process (through MOU)	1,280,000
Advance Engineering (10% Engineering)	600,000
CEQA Clearance	3,270,000
Work to System Bid Documents (30% Engineering)	2,425,000
Procurement	430,000
ROW & Aerial Easement Acquisition Fees	800,000
Permits & Entitlements	900,000
Community Benefits & Other Costs	5,000,000
Soft Costs Subtotal	**$27,155,000**
Other Costs	
Contingency / Escalation (15% of Tot. Costs excl. Soft Costs)	$13,000,000
CR Site Improvements	TBD
Other Costs Subtotal	**$13,000,000**
Preliminary Conceptual Cost Estimate	**$128,380,000**

FOOTNOTES

1. Based on comparable recent systems, including Penkenbahn and Eisgratbahn in Austria. Adjusted for currency and economic inflation. Estimated costs include the design, purchase and installation of the aerial system
2. Premium TBD. Currently: Marshall & Swift cost estimator (2018). Cost premium compares construction cost indices in Los Angeles, CA with Vail, CO. Assumes 30k GSF per station
3. Design premium includes HVAC and cosmetic improvements beyond basic package
4. Costs TBD. Current assumption is $2.5 to $5 million per tower; potential variance driven by cladding, seismic compliance, and US manufacturing premium vs. Europe.
5. Design premium based on team experience.
6. Agreements to locate towers on public land would likely take the form of a ground lease, but are conservatively included here at fair market value of $250-$350 psf for a 60'x60' or 80'x 80' parcel.
7. Private aerial easement costs assumed to be $50 psf, or roughly 25% of land fair market value, upon purchase from private sellers.

Parties	Los Angeles Aerial Rapid Transit LLC ("ARTT LLC") and Los Angeles County Metropolitan Transportation Authority ("Metro"), each a "Party" and collectively the "Parties"
ART | Project	ARTT LLC submitted an Unsolicited Proposal with the Office of Extraordinary Innovation proposing an aerial rapid transit gondola system connecting Los Angeles Union Station ("LAUS") and the Dodger Stadium property ("ART" or the "Project"). ARTT LLC will finance, design, build, operate, maintain, and insure the Project.
Proposed Timing	ARTT LLC requests that a Term Sheet for Exclusive Negotiation Agreement ("ENA") be approved by October 25, 2018.
Sole Source	Metro has determined to approve the selection, on a sole source basis, of ARTT LLC for the purpose of analyzing and executing the terms and conditions of the ENA concerning the ART and for the purpose of analyzing the Project and allowing planning activities that will include a potential Services Agreement.
Negotiate Exclusively; Good Faith Negotiations	Metro and ARTT LLC desire to negotiate exclusively and in good faith concerning the Project Agreements.
Services Agreement	Metro and ARTT LLC shall work in good faith to negotiate and jointly prepare a Services Agreement that shall include, as an initial matter, provisions relating to (1) Metro's role as the Lead Agency under CEQA and related matters; (2) a schedule of performance; (3) compensation for Metro as to reimbursement of its services for the Project; (4) consideration of ART station location in proximity to LAUS; and (5) other matters as agreed by the Parties.
Metro Obligations	CEQA. Metro has agreed to a role as the Lead Agency under CEQA.
	Property Acquisition. Metro has agreed to assist with acquisition of property and aerial easements, as necessary, for the Project pursuant to its powers under CPUC Section 30600.
	Funding Obligation. Metro has not agreed to fund, subsidize, or otherwise financially contribute in any manner toward the Project.
	Metro Discretion. Metro is not approving, committing to, or agreeing to undertake: (1) the Project or any development; (2) lease of land to ARTT LLC; or (3) any other acts or activities requiring the subsequent independent exercise of discretion by Metro.
ARTT LLC Responsibilities	Project Information. ARTT LLC shall meet with Metro and provide information and documents concerning the Project.
ARTT LLC Responsibilities (cont.)	Environmental Costs. ARTT LLC shall cover the costs associated with the preparation and certification of any required environmental documents including an EIR

	under CEQA. ARTT LLC shall arrange and pay for all required CEQA studies and reviews at its sole costs and expense. Metro shall exercise its own independent judgment in the review and certification of any environmental documents prepared in connection with Metro's consideration of the Project.
	Outreach. Metro and ARTT LLC shall determine the appropriate procedure for responding and handling questions from the public and local residents regarding the Project.
Confidentiality	The Parties anticipate that during the Term each may disclose and provide to the other certain proprietary and confidential information. Unless otherwise required by law, neither Party shall disclosure such proprietary and confidential information.
Deposit	On or before the Effective Date of the ENA, ARTT LLC shall submit to Metro a good faith deposit ("Deposit") in the amount of $50,000 as an initial payment towards Metro's reasonable actual costs related to CEQA compliance.
Term	The ENA shall commence upon the Effective Date and shall terminate six (6) months after the Effective Date. The Parties may extend the Term for additional periods upon mutual agreement of the Parties.

EXHIBIT I

Exhibit I is related to Comment GO14-58 and GO14-60. This Exhibit material was considered in the Response to Comment GO14-58 and GO14-60.

Dodgers' owners to pay $14 million a year to rent parking lots from McCourt entity

BY BILL SHAIKIN
MAY 4, 2012 12 AM PT

The Dodgers' new owners will pay $14 million per year to rent the parking lots from an entity half-owned by Frank McCourt, according to land-use documents intended to "facilitate the orderly development" of the property surrounding Dodger Stadium.

The potential uses for the property include shops and restaurants, homes and offices, and another sports venue, according to documents obtained Friday by The Times. The documents also discuss the possibility of parking structures on the land.

Mark Walter, the Dodgers' controlling owner, said Friday that his group is not contemplating any development at this time.

"Someday, there could be," he said. "We have no plans to build now. We have no plans for parking structures now. In the next 100 years, that could easily happen."

Guggenheim Baseball agreed to a 99-year lease with the company that owns the parking lots, a joint venture between McCourt and an entity affiliated with the new team owners. Walter said McCourt would get some portion of the annual $14-million rent, after accounting for expenses and return on investment.

The $10 Dodger Stadium parking fee will be collected by Guggenheim. Aside from the annual lease payment, Walter said McCourt would not share in any team revenue, including parking fees.

According to the documents, Guggenheim has the authority to sell naming rights to Dodger Stadium. The McCourt-Guggenheim joint venture that owns the parking lots has the authority to sell naming rights to any "non-baseball professional sports facility" on the site.

Dodgers President Stan Kasten said this week that the team has no plans to sell naming rights to the stadium. Although some Dodgers bidders reportedly spoke with the NFL about the league's interest in a football stadium on the site, Walter said his group did not.

"We have not talked to the NFL," Walter said.

In addition to another sports facility, the potential property uses cited in the document include homes, offices, restaurants, shops, entertainment venues, medical and academic buildings, and a hotel and exhibit hall.

Construction on the parking lots would reduce the available parking spaces — now 19,000, according to the documents. Parking structures could replace spaces lost to construction.

The City of Los Angeles and Major League Baseball would have to approve any reduction below 16,500 parking spaces, although the documents specify that MLB would get a say "if and only if the team is then playing home games at the stadium."

Kasten also said the Dodgers have no plans to move from Dodger Stadium.

Tony Natsis, the Los Angeles attorney who represented McCourt in land-use negotiations, confirmed that neither McCourt nor Guggenheim had immediate plans for development.

He said the document was designed to be flexible in accommodating whatever ideas McCourt and Guggenheim might have to build out the property over the next 25 to 50 years, citing as examples the restaurants and clubs surrounding AT&T Park in San Francisco and Petco Park in San Diego.

"It is an ill-conceived concept that the highest and best use of Chavez Ravine is 260 acres for parking," Natsis said. "I consider that to be an ill-conceived notion for the owner of the parking lots and the owner of the stadium."

McCourt owns the Los Angeles Marathon, and the race course starts at Dodger Stadium. The document permits the continued use of the stadium for the race, with the company that owns the parking lots paying the Dodgers $40,000 each year.

The Dodgers initially filed the land-use documents under seal in U.S. Bankruptcy Court. After an attorney for The Times objected, the Dodgers withdrew the documents, waiting to file them with the Los Angeles County recorder's office until the team sale closed this week.

Dodgers to add shops, a museum and garages

BY BILL SHAIKIN AND DAVID ZAHNISER
APRIL 24, 2008 12 AM PT

TIMES STAFF WRITERS

The Dodgers today plan to unveil their most extensive stadium renovation yet, a project that would transform the area behind the outfield to an entrance promenade featuring restaurants, shops, club offices and a Dodgers museum and add two parking garages to help replace the 2,000 spaces lost to construction.

In a letter sent Wednesday to season-ticket holders, owner Frank McCourt and President Jamie McCourt said the improvements would "give the stadium a chance to remain viable and perhaps see its 100th birthday."

The Dodgers would not confirm the project cost or other specifics, but a news release from the office of Mayor Antonio Villaraigosa put the cost at $500 million. The McCourts purchased the Dodgers -- and their stadium and surrounding parking lot -- for $430 million four years ago.

ADVERTISEMENT

The McCourts' letter did not detail the renovations, but the plan would enact a vision Frank McCourt outlined when he bought the team in 2004 -- to transform at least part of the parking lot into an area offering dining and shopping for fans who arrive early and stay late, avoiding pregame and postgame traffic.

The Dodgers would generate additional revenue as well, not only on game days but from year-round use of the new facilities. The Dodgers briefed civic leaders and community groups this week on the project, targeted for completion in 2012.

City Councilman Ed Reyes, whose district includes Dodger Stadium, said the project would surround the ballpark with a ring of greenery, with parks and plazas "almost like a campus setting," so fans could walk from a garage onto a tree-lined walkway leading to an entrance, or to the retail cluster.

"They are not just dropping a box in a middle of a parking lot," Reyes said.

The garages could present a challenge to fans who complained last year after the Dodgers altered longtime parking and traffic rules. The Angels sued the city of Anaheim over proposed development of their stadium parking lot two decades ago, arguing that fans preferred surface-level parking to multi-level garages. (The Angel Stadium garages never were built.)

However, according to a source familiar with the project, the Dodger Stadium garages would have tiered entrances and exits to ease traffic flow, with new underground parking complementing the garages.

Dodger Stadium opened in 1962. In their letter, the McCourts said they were committed to the stadium "for the long haul" but made it clear it could not survive deep into the new century without these new attractions.

"The viability of a 50-year-old ballpark comes into question when you realize that, come next year, Dodger Stadium will be the third-oldest in baseball," the letter read.

Once the two New York teams move into new stadiums next year, the only older ballparks in use will be Boston's Fenway Park, which opened in 1912, and Chicago's Wrigley Field, which opened in 1914.

The plan requires City Council approval, which is expected to be a formality. Villaraigosa, Reyes and City Council President Eric Garcetti, whose district includes many of the streets used to enter and exit Dodger Stadium, will appear at today's news conference.

"This is a project that will green the area around Dodger Stadium and reduce its carbon footprint while spreading out the traffic impact on the neighborhood," Garcetti said.

The Dodgers added 1,000 parking spaces last winter by removing landscaping in the outer areas of the parking lot. Michael Kogan of the Citizens Committee to Save Elysian Park said his group would work with Garcetti to try to restore some of the greenery that he said buffered the neighborhood.

Andy LaRoche, sidelined since tearing a ligament in his right thumb March 7, went one for six for double-A Jacksonville in the first game of a minor league rehab assignment Wednesday.

LaRoche, who did not play in the field, lined a single to right in his first at-bat and came around to score. He also grounded out three times, flied out and struck out in Jacksonville's 15-9 win over Montgomery.

Infielder Tony Abreu, on the disabled list with what's being called a strained groin, had an MRI exam early Wednesday and was to be examined by Dr. Neal ElAttrache and the Dodgers' medical staff later in the day.

The team is growing increasingly frustrated trying to find the cause of the pain that has sidelined Abreu most of the spring. Abreu, who had his 2007 season interrupted by an abdominal problem, underwent hernia surgery in October.

With the Dodgers coming off a 1-4 trip, Manager Joe Torre tinkered with his lineup, holding out second baseman Jeff Kent and elevating slumping outfielder Andruw Jones, who is still recovering from flu-like symptoms, to the second spot in the batting order for the first time since 2004.

New Dodgers Stadium Reveal: We Got Trees!

44

By Dakota Smith | Apr 24, 2008, 11:59am PDT | **44 comments**

Courtesy of Dodgers web site, the newest look at the forthcoming changes coming to Dodgers stadium. As previously mentioned this morning, the stadium is getting a $500 million upgrade that focuses on the perimeter of the stadium, such as planting **2,000 trees** and adding a landscaped grand plaza. Architecture firms Johnson Fain and HKS are behind the three component plan, which notably includes building a "Green Necklace" around the stadium. Green as in sustainable, people. The project is expected to be completed by opening day of the 2012 season. More from this morning's press conference later.

Excerpts from the press release:

"We're creating a new stadium without tearing down the old," said Dodger owner Frank McCourt. "That may take more effort and more resources, but we're talking about Dodger Stadium. This stadium sits in the heart of Los Angeles and in the hearts of Angelenos. The Dodgers are a world class organization, a world class brand and a franchise with a history of courage and vision. What we're announcing today honors that history by protecting and modernizing Dodger Stadium and making sure that it lives on and thrives for the next 50 years."

The three parts:

• **Dodger Way** - A dramatic, new tree-lined entrance will lead to a beautifully landscaped grand plaza where fans can gather beyond center field. The plaza will connect to a modern, bustling promenade that features restaurants, shops and the Dodger Experience museum showcasing the history of the Dodgers in an interactive setting.

• **Green Necklace** - The vibrant street setting of Dodger Way links to a beautiful perimeter around Dodger Stadium, enabling fans to walk around the park, outdoors yet inside the stadium gates. This Green Necklace will transform acres of parking lots into a landscaped outdoor walkway connecting the plaza and promenade to the rest of the ballpark.

• **Top of the Park** - The Green Necklace connects to a large scale outdoor plaza featuring breathtaking 360 degree views spanning the downtown skyline and Santa Monica Bay, the Santa Monica and San Gabriel Mountains, and the Dodger Stadium diamond.

This renewal plan comes on the heels of extensive stadium improvements since Frank and Jamie McCourt became stewards of the Dodgers in 2004. Past improvements include replacing nearly all of the seats in the stadium bowl; planting a new playing field and upgrading the warning track; renovating the concourses with updated concessions and other amenities; and reconfiguring stadium parking.

As a result of these extensive improvements, the stadium will become a destination for fans all year long and a place where, especially on game days, families can go early and stay late. Dodger Stadium will be a place to visit year-round to shop, dine and play.

"We hope to deliver all the modern amenities and conveniences of new ballparks, while protecting and preserving the greatest and most romantic venue in professional sports," said Dodger President Jamie McCourt. "Families will have a reason to come early and stay late any day of the year. Getting to the ballpark will be easier and spending time at the ballpark will be more comfortable and more fun."

As part of the ambitious stadium project, the Dodgers will "Think Blue and Act Green." The stadium will become as environmentally responsible a baseball stadium as there is in America. The Dodgers plans reflect the environmentally-sensitive practices supported by the Natural Resources Defense Council in their "Team Greening Program," a collaboration with Major League Baseball. The new facilities will be designed to meet silver "LEED" sustainability standards.

The renovations call for planting trees around the stadium and a focus on conserving water as well as promoting recycling and other environmental initiatives. The Dodgers will use the latest technologies to save millions of gallons of water each year. Recycling measures include post-consumer waste recycling, and recycling materials that will be removed throughout the building process. The Dodgers will use native or drought-resistant plants for landscaping and, where possible, energy efficient bulbs in all stadium and scoreboard lighting. Other environmental practices will include installing energy efficient appliances in all kitchen and concession facilities, and purchasing building materials and items used in concession kiosks that are made from recycled or quality, durable products.

The ambitious stadium improvement plan also addresses the need for operational enhancements including completing the concourse transformations, started this year with the Field Level Concourse, to include new restrooms, concession facilities and improved kitchen areas so food for fans and guests can be prepared in a fast and convenient manner. In addition to the **new Dodger Experience museum, new buildings will include the ultimate Dodger retail store and a central ticketing facility for fans.** Above these uses, there will be room for Dodger-related office space and work areas for onsite security personnel, Dodger operational staff and the Dodgers Dream Foundation. Parking improvements include two terraced parking structures on either side of the stadium that will replace existing surface parking, along with below-grade parking under the two new plazas.

"We commit to embodying the vision and spirit of this storied Dodger franchise," Frank McCourt said. "We're keeping this wonderful ballpark where it is, and providing more

Stadium makeover is unveiled

BY DYLAN HERNANDEZ AND BILL SHAIKIN
APRIL 25, 2008 12 AM PT

TIMES STAFF WRITERS

Dodgers owner Frank McCourt unveiled plans Thursday for a historic makeover of the 275-acre Dodger Stadium site in Chavez Ravine, describing new features designed to transform the ballpark by 2012 into a year-round destination for dining, shopping and recreation that will be fan- and environment-friendly.

Speaking at a morning news conference in the Dodger Stadium outfield, McCourt outlined a sweeping $500-million project that would include parking structures, a Dodgers history museum and a landscaped plaza behind center field connecting to shops and restaurants.

“It’s not just for the fans,” he said. “It’s for the entire community.”

ADVERTISEMENT

McCourt said the improvements would allow the 46-year-old landmark -- the second-oldest park in the National League after Chicago’s Wrigley Field -- to flourish for another 50 years.

The privately financed makeover would cost more than the $430 million McCourt paid for the team and stadium four years ago.

He challenged civic leaders to follow his investment by extending bus and subway lines to the ballpark.

“The ultimate way to improve access to Dodger Stadium is public transit,” McCourt said.

Mayor Antonio Villaraigosa said he would be happy to work with the Dodgers on finding ways other than driving to get people to the stadium.

“That clarion call, that challenge, I like that,” Villaraigosa said at the news conference. “Isn’t it amazing that we built a public transportation system and it never connected to Dodger Stadium? Wouldn’t it be great if we said, ‘This city is going to also rectify the errors of the past’ and do something to change that? I like that idea. Let’s get working on it.”

McCourt said the loss of about 15 acres of parking, or about 2,000 spaces, would be offset by the construction of two parking garages -- a first for Chavez Ravine -- and additional underground parking. The renovations would include a dedicated bus lane running directly to a transit plaza next to the stadium.

McCourt said he hoped local leaders would “tweak and adjust subway lines” to add a Dodger Stadium stop and provide “bus access in the interim.”

City Councilman Ed Reyes, whose district includes Dodger Stadium, said the ballpark renovation “hopefully can stimulate a whole new transit system that gets us in and out of this great place.”

It remains unclear who would pay for such transit. The Los Angeles County Metropolitan Transportation Authority faces a $1-billion deficit over the next 10 years, spokesman Rick Jager said.

There are no plans to redirect a rail line toward Dodger Stadium, he added.

‘I’m afraid for her life’: Riverside CC women’s coach harassed after Title IX suit

California bracing for one final round of storms as officials assess damage

City transportation officials last month said they were exploring ways to reroute a DASH line to the ballpark but that there were two issues: money and the inconvenience to regular riders.

However they arrive at the stadium, fans would find new, environmentally friendly features that drew praise from Joel Reynolds, director of the Natural Resources Defense Council's urban program.

Citing the expanded use of water- and energy-conserving fixtures and the planting of 2,000 trees, Reynolds said Dodger Stadium has the potential to be "the most environmentally sustainable stadium in the country." He also cited the environmental benefits of preserving rather than tearing down the stadium itself.

By creating new public gathering spots such as the outfield promenade, museum and top-of-the-park terrace, the Dodgers are seeking to bring customers out early, keep them there late and even attract visitors on non-game days.

"It's increasingly clear that fans want these types of amenities," said David Carter, a sports marketing consultant and executive director of the USC Sports Business Institute.

Barry Prevorne of Moorpark, who shares season tickets and estimates that he attends 25 games a season, said he would consider visiting Dodger Stadium in the off-season.

"It depends on what kind of facilities they put there," he said.

"I live 45 minutes away. So if the facilities are worthwhile, I might come out. If it's not worth 45 minutes, there's no way. A game? Of course I'm going to come."

McCourt said the Dodgers filed paperwork Thursday to acquire the necessary permits for the stadium improvements and that he hoped work could begin after the 2009 season.

The Dodgers already plan to renovate the stadium's loge level, as well as the home and visiting clubhouses, during the next off-season. McCourt said the club was also considering installing high-definition scoreboards.

McCourt has spent at least $110 million in stadium improvements in the last four years, including at least $70 million since last season upgrading the field level.

The owner said the economic downturn would not affect his plans.

"Economies go up and down, they're not static," McCourt said.

"We look at this thing in a very, very long-term, also generational fashion. We're not making these decisions based on what the economy is like today. We're making these decisions as huge optimists in the future of the Dodgers."

He declined to comment on whether he would pursue additional projects on the rest of the site, and refused to say whether he would rule out residential development or the addition of an NFL stadium.

DODGERS NOW

Rick Caruso, Joe Torre withdraw from bidding to buy Dodgers

BY BILL SHAIKIN
STAFF WRITER | FOLLOW

FEB. 23, 2012 2:33 PM PT

This article was originally on a blog post platform and may be missing photos, graphics or links. See About archive blog posts.

Rick Caruso and former Dodgers manager Joe Torre have withdrawn a joint bid to buy the Dodgers, three people familiar with the sale process said Thursday.

Caruso cited owner Frank McCourt's refusal to include the Dodger Stadium parking lots in the sale, according to the people, who declined to be identified because they were not authorized to discuss the sale process.

ADVERTISEMENT

In this letter to Major League Baseball, Caruso and Torre explain why they are withdrawing from the Dodgers bidding process.

Caruso could reenter the bidding if McCourt were to agree to sell the parking lots, the people said. McCourt has told people he has at least one bid in which the buyer would let him retain ownership of the parking lots.

Caruso is the Los Angeles developer perhaps best known for the Grove and Americana shopping and entertainment complexes. He commissioned studies on how to improve parking and traffic at Dodger Stadium and ultimately decided he could not provide the desired fan experience without control of the parking lots.

ADVERTISEMENT

Caruso and other bidders have believed the purchase of the parking lots would be negotiable. Caruso's decision to withdraw offers the clearest evidence yet that McCourt intends to keep the lots and try to build on them.

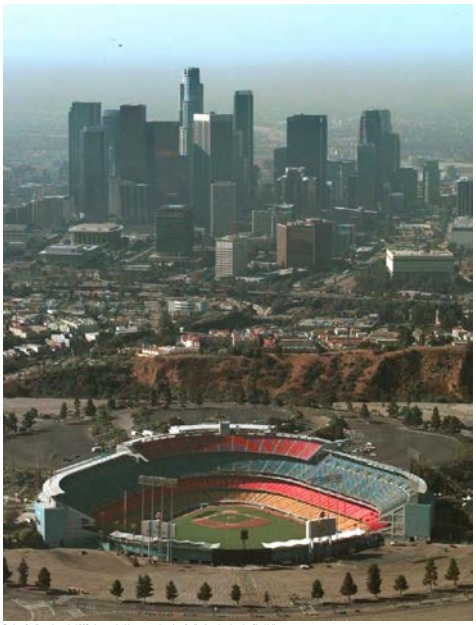
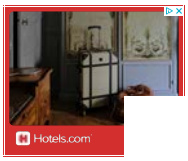
Stadium land seen as Dodgers key

Making property generate cash is viewed as vital for new owners *by JOHN GITTELSOHN AND NADJA BRANDT BLOOMBERG NEWS | April 8, 2012 at 2:32 a.m.*



Dodger Stadium, shown in 1995, sits on valuable property less than 2 miles from Los Angeles City Hall.

ADVERTISEMENT



LITTLE ROCK — The new owners of the Los Angeles Dodgers will need more than great play on the field to justify the record $2.15 billion they paid for the baseball team. They need to transform the real estate surrounding Dodger Stadium into a moneymaker, succeeding where their predecessors failed.

Exploiting the property's value will take years, more capital and lengthy government review, said David Carter, sports business professor at the University of Southern California's Marshall School of Business.

Television rights alone won't be enough, said Lee Ohanian, an economics professor at the University of California, Los Angeles.

"The most likely source could be development of that land," Ohanian said in a telephone interview.

New owners led by Guggenheim Partners LLC Chief Executive Officer Mark Walter, sports executive Stan Kasten and former Los Angeles Laker Earvin "Magic" Johnson haven't outlined plans for the 250 acres near downtown. Past owners including Frank McCourt, who agreed to sell on March 28, unsuccessfully proposed everything from a team museum to a football stadium, leaving the area little changed since 1962.

"It's a vital piece," Carter said in a telephone interview. "It's a longer slog to get there — they will get there — as opposed to licensing and media rights, which take a year or so."

ADVERTISEMENT

The Dodgers will celebrate their 50th season at the stadium in Chavez Ravine, less than 2 miles north of Los Angeles City Hall, at a home opener Tuesday against the Pittsburgh Pirates. As part of the purchase, parking lots and undeveloped land surrounding the stadium were sold for $150 million to a joint venture of McCourt and affiliates of Guggenheim Baseball Management LLC.

The new owners will need to generate about $50 million in additional earnings a year, beyond baseball operations and TV rights, to produce an annual return of about 8 percent on their investment before taxes, Ohanian said. That's because they paid $650 million more than the $1.5 billion he estimates that the team is worth.

"I was surprised by the $2.15 billion," Ohanian said. "It didn't seem to make sense."

The Dodgers reported earnings of $11.3 million before interest and amortization in the 12 months ending March 2011, according to court documents. Ticket sales accounted for $102.9 million of the $286.5 million in revenue, followed by $49.9 million for broadcast rights.

RECORD PRICE

McCourt had been seeking at least $1.5 billion for the team, people familiar with the bidding who asked not to be named because the process was confidential.

The $2.15 billion price tops the $1.1 billion Stephen Ross paid for the National Football League's Miami Dolphins, a record for a professional sports franchise. The previous record for a Major League Baseball team was the $845 million that Joe Ricketts, founder of TD Ameritrade Holding Corp., paid Tribune Co. in 2009 for the Chicago Cubs and Wrigley Field.

Media rights have provided the biggest source of new revenue for major-league teams, said Michael Rapkoch, president of Sports Value Consulting LLC, who has provided studies for about 80 baseball, football, basketball and hockey franchises.

The Texas Rangers signed a 20-year, $3 billion TV contract with News Corp.'s Fox Sports in 2010 and reached the World Series the past two seasons. Last year, the Los Angeles Angels of Anaheim signed a similar contract with Fox, allowing the team to acquire two top free agents, hitting standout Albert Pujols and pitcher C.J. Wilson.

McCourt put the Dodgers into Chapter 11 last June, after baseball Commissioner Bud Selig rejected a new TV contract with Fox Sports, which holds the rights through the 2013 season. The sale must be completed by April 30, according to a divorce settlement with his ex-wife Jamie McCourt, who is owed $131 million.

McCourt may collect more than $1 billion from the sale, before taxes, after paying off creditors and his ex-wife, according to Carter.

The Dodgers' controlling business partner will be Walter, who oversees $125 billion in assets at Guggenheim, which has headquarters in Chicago and New York. Michelle Lee, a spokesman for the partnership, declined to comment on plans for the real estate or stadium.

ADVERTISEMENT
Hotels.com
BOOK NOW

Others in the partnership include Kasten, a former president of the Atlanta Braves and Washington Nationals, and Johnson, the Hall of Fame Lakers guard whose post-basketball career has included real-estate investing and development.

The new owners may have to spend as much as $400 million to renovate the stadium and improve the team, said Kenneth Lombard, president of Johnson's development company from 1992 to 2004.

"Over the years, it has been thought of for mixed-use and housing or as the place for a football stadium," said Lombard, now a business partner of Capri Capital Partners, a Chicago-based real-estate investment firm with $3.6 billion in property and financial investments. "I think we're probably looking at a three- to five-year horizon during which you could make something happen if you're focused."

While the Los Angeles commercial real-estate market hasn't recovered from the recession, Chavez Ravine's potential value comes from its proximity to downtown, "almost within walking distance of 300,000 jobs," said Carl Muhlstein, an executive vice president at the downtown Los Angeles office of Cushman & Wakefield Inc.

STADIUM SAFETY

The owners will also have to improve traffic and safety at the stadium to win support of the neighbors and the city before new development is approved, said City Councilman Ed Reyes, who represents the area and is chairman of the council's planning and land-use management committee.

ADVERTISEMENT
Hotels.com
BOOK NOW

"I'd be more than happy to work with them," Reyes said in a telephone interview. "But this is not the old rancho days when I just give you a piece of land because I like you."

On opening day last year, a San Francisco Giants fan suffered severe brain injuries when he was beaten in the Dodger Stadium parking lot. The Dodgers finished the season 82-79, or 13th out of the 30 Major League teams.

McCourt, who made his fortune as a parking-lot developer in Boston, bought the team for $430 million in 2004 and sold it after MLB accused him in bankruptcy court of being "unable to properly distinguish between his personal interests and those of the club."

McCourt's price broke down to $330 million for the team and $100 million for the real estate, including the stadium. Under the terms of his sale to the Guggenheim group, the property without the stadium has a $300 million value.

A football-stadium proposal for Chavez Ravine would face competition from two other investment groups trying to lure an NFL franchise to the Los Angeles area, which hasn't hosted a home team since 1994, before the Rams moved to St. Louis and the Raiders returned to Oakland.

A Chavez Ravine football stadium is "something I'm sure behind the scenes gets a bit of whisper activity right now because the land is entitled" for use for sporting events, said Lombard, Johnson's former business partner. "Having said that, looking at mixed-use options is probably the buyers' primary focus."

ADVERTISEMENT

For example, the owners of the NFL's New England Patriots developed a 1.3 millionsquare-foot complex adjacent to Gillette Stadium. Patriot Place's shopping center, movie theaters, hotel and medical center attract visitors on nongame days. AEG built an entertainment-and-hotel complex called L.A. Live in downtown Los Angeles, across the street from Staples Center, home of the Lakers.

The San Francisco Giants baseball team last week announced plans for a $1.6 billion office, housing and retail project for its stadium parking lot.

LOSING BIDS

The winning group for the Dodgers was chosen by McCourt over offers from billionaire Steve Cohen, who runs hedge-fund manager SAC Capital Advisors LP, and Stan Kroenke, who owns the NFL's St. Louis Rams and Arsenal of English soccer's Premier League. Cohen and Kroenke didn't respond to requests for comment.

Rick Caruso, a Los Angelesbased developer, dropped out of the bidding after McCourt insisted on keeping a share of the land and parking rights, he said in a Feb. 27 interview with Bloomberg Television.

Chavez Ravine was home to a community of predominantly Mexican immigrants who were driven out under a plan to build public housing. When the Dodgers left Brooklyn for Los Angeles in 1958, the land was an incentive for owner Walter O'Malley to move west.

ADVERTISEMENT

Few teams control real estate with the potential value of Chavez Ravine, said Roger Noll, professor emeritus of economics at Stanford University. Unlike fans in other cities, most Dodgers lovers are a captive audience with limited access to public transit and few options for dining nearby. The new owners may boost revenue by adding amenities to the property.

"I don't know a stadium where there's so much land associated with a sports team," Noll said in a telephone interview. "At the time it was built, it was state of the art. But obviously it's out of date now."

Information for this article was contributed by Christopher Palmeri, Steven Church and Scott Soshnick of Bloomberg News.

Developing Chavez Ravine is likely in play for new Dodgers owner

BY ROGER VINCENT AND KEN BENSINGER, LOS ANGELES TIMES
APRIL 16, 2012 12 AM PT

It's a developer's dream — nearly 300 empty acres above downtown Los Angeles, close to three major freeways and visited by millions each year.

Could Chavez Ravine be the next big real estate play in town?

The new owner of the Dodgers, Guggenheim Baseball Management, is keeping tight-lipped about its plans for the parking lots and hillsides surrounding Dodger Stadium, which it will own jointly with departing team owner Frank McCourt if the sale closes as expected April 30.

INTERACTIVE: Breakdown of Dodger property

The Dodgers disclosed some details of the McCourt-Guggenheim land partnership in the team's bankruptcy case, but those documents were under seal — and the team quickly withdrew them after The Times asked the bankruptcy judge to release them publicly.

Real estate experts, however, say it's likely the new owner is looking to do more with the land than simply park cars. They point out that the rich price paid by Guggenheim — at $2.15 billion, a record for a sports franchise — suggests it will need to add new revenue streams in addition to what is expected to be a lucrative television contract.

"There is probably a media or a real estate play," said Stan Ross, chairman of the USC Lusk Center for Real Estate, who was quick to add that any development would likely take years to realize.

One doesn't have to scout far for a glimpse of potential development plans. Four years ago, McCourt proposed a $500-million plan to ring the stadium with restaurants, shops and a Dodgers museum. The surface parking spaces lost to new buildings would be replaced by twin nine-story garages.

The plans never went anywhere amid the economic downturn and the team's precarious finances, but it's clear that McCourt wasn't the only one to see new development possibilities.

Among those in the bidding for the Dodgers were real estate entrepreneurs Rick Caruso, Jared Kushner and Tom Barrack. And Magic Johnson, one of the nation's most prominent urban developers, has a minority stake in the Guggenheim partnership.

Developer Ken Lombard, a former business partner of Johnson, said the Dodgers property is ideally situated for an urban development.

"You could create a community up there," said Lombard, who runs the Baldwin Hills Crenshaw Plaza shopping center. "You have the chance to do something very interesting, probably a mixture of residential and retail."

There would be even more potential if the baseball stadium were to be relocated downtown, as many have suggested. AEG Entertainment President Tim Leiweke, who is leading plans to build an NFL football stadium downtown, said a downtown baseball stadium would be among other possible options if the football stadium were derailed.

Beverly Hills apartment developer Alan Casden, another unsuccessful bidder for the Dodgers, had made relocating the stadium a cornerstone of an earlier proposal to buy the team in 2003.

At that time, Casden criticized Dodger Stadium for convoluted parking lots, a poor seating plan and a location inconvenient for both fans and nearby residents who bear the brunt of traffic, noise and litter in their neighborhood.

Tearing down Dodger Stadium, the third-oldest major league ballpark, would likely draw opposition from preservationists. The Los Angeles Conservancy has not taken a position on the issue, but its executive director, Linda Dishman, has a soft spot for the 50-year-old stadium.

"My favorite thing is looking out from the top deck. It feels like you're so close you can touch the skyline of downtown," Dishman said.

At 50, Dodger Stadium is now eligible to be listed on the National Register of Historic Places. If it achieved such a designation, the owner would find it more difficult to get city approval to destroy it, make substantial changes or sell naming rights.

In 2004, Chicago's Wrigley Field was landmarked, a move the Cubs' ownership opposed. The team was sold in 2009 and the new owners have asserted that the status costs the Cubs $30 million a year in lost sponsorship opportunities.

Even if the stadium doesn't get official landmark designation, earning the backing to raze it or build additions on the parking lots such as condos or a shopping center would not be an easy feat, said Gail Goldberg, former city planning director.

Owners can be expected to look for "higher and better" uses for their property that will produce more financial rewards, she said. Their challenge is to convince local officials that their plans are good for economic development and to convince local stakeholders such as neighbors that the plan will improve their quality of life.

That the publicly unpopular McCourt is still involved is an added hurdle to building support for real estate development, she said.

"I think nobody wants to help him make more money," Goldberg said. "As long as his name is out there, the public benefit [of development] would have to be extraordinary."

Although the Boston native is giving up half his interest in the parking lots, Bankruptcy Court filings show that McCourt will retain complete control of five parcels comprising nearly 20 acres of land immediately adjoining them.

McCourt also owns an entire city block between College Street and Figueroa Terrace, just down the hill from the stadium. Purchased in 2008 for $9.1 million, the block holds a small house and a commercial building with the offices of the L.A. Marathon, which McCourt also owns.

The price McCourt paid is more than triple what the land sold for in 2004 and 2005; the block borders the 110 Freeway and its Sunset Boulevard exit, which could be an attractive feature should the city ever expand road access to Dodger Stadium.

Major roadwork and other large-scale improvements to ease ingress and egress to the ravine would probably be necessary for meaningful development to take place, architect and real estate advisor Ann Gray said.

"It's not an easy site to get in and out of," Gray said. "The paradox is that the only way to relieve traffic is to build more. It will alleviate the bottleneck at the start and end of games. Even great mass transit will not do that."

With the exception of the Figueroa Terrace properties, almost all of McCourt's holdings are zoned as agricultural or open space, as are the parking lots. To build on them, a potentially difficult rezoning would be required.

City Councilman Ed Reyes, whose district includes Chavez Ravine, is taking a wait-and-see approach to development around the stadium, though he did voice support for McCourt's plan in 2008.

"There is a critical path that we have to cross that speaks to our ability to create jobs while making it better for everybody, not just the people who come for three hours and then go," he said.

ELYSIAN HEIGHTS LOS ANGELES DEVELOPMENT

Everyone Betting on Dodger Stadium Land Development

36

By Adrian Glick Kudler | Apr 17, 2012, 12:45pm PDT | 36 comments

Decades after the last residents were cleared out of Chavez Ravine, development at the site is still a perennially hot topic. Now that the Dodgers and their Chavez Ravine stadium have sold to Guggenheim Baseball Management, the *LA Times* is speculating on what will happen to the 300 acre site (which includes many acres of parking lots, still partly owned by much-hated former Dodgers owner Frank McCourt). According to the paper, real estate experts "say it's likely the new owner is looking to do more with the land than simply park cars. They point out that the rich price paid by Guggenheim — at $2.15 billion, a record for a sports franchise — suggests it will need to add **new revenue streams** in addition to what is expected to be a lucrative television contract." Stan Ross of the USC Lusk Center for Real Estate guesses that "There is probably a media or a real estate play." And don't forget that new minority stakeowner Magic Johnson is a real estate investor (his Canyon-Johnson Urban Fund has worked with 940 East 2nd St., One Santa Fe, and Sunset & Vine).

During the few short good years, McCourt proposed a massive Chavez Ravine development around the stadium that would've added retail, restaurants, a Dodger museum, garages to replace lost parking, and open space and promenades. And practically since Dodger Stadium was built, people have been suggesting that it be relocated Downtown--now with the proposed South Park NFL stadium plan, those noises are getting a bit louder (NFL stadium developer AEG says that "a downtown baseball stadium would be among other possible options if the football stadium were derailed.") Of course, that would mean tearing down the MLB's third oldest ballpark, which is just old enough to be eligible for the National Register of Historic Places (And wouldn't that be a fun preservation battle to watch go down?).

According to the *LAT*, McCourt gave up half of his parking lot shares, but "will retain complete control of **five parcels comprising nearly 20 acres of land** immediately adjoining them." And it turns out that in 2008 he also picked up "an entire city block between College Street and Figueroa Terrace, just down the hill from the stadium," for $9.1 million. The site is right next to the 110 Freeway exit, so McCourt will be right in the way if the city ever wants to expand the access there--which it will probably need to do if Chavez Ravine gets redeveloped.

METROPOLITAN TRANSPORTATION AUTHORITY BOARD RULES
(ALSO APPLIES TO BOARD COMMITTEES)

PUBLIC INPUT

A member of the public may address the Board on agenda items, before or during the Board or Committee's consideration of the item for one (1) minute per item, or at the discretion of the Chair. A request to address the Board must be submitted electronically using the tablets available in the Board Room lobby. Individuals requesting to speak will be allowed to speak for a total of three (3) minutes per meeting on agenda items in one minute increments per item. For individuals requiring translation service, time allowed will be doubled. The Board shall reserve the right to limit redundant or repetitive comment.

The public may also address the Board on non agenda items within the subject matter jurisdiction of the Board during the public comment period, which will be held at the beginning and/or end of each meeting. Each person will be allowed to speak for one (1) minute during this Public Comment period or at the discretion of the Chair. Speakers will be called according to the order in which their requests are submitted. Elected officials, not their staff or deputies, may be called out of order and prior to the Board's consideration of the relevant item.

Notwithstanding the foregoing, and in accordance with the Brown Act, this agenda does not provide an opportunity for members of the public to address the Board on any Consent Calendar agenda item that has already been considered by a Committee, composed exclusively of members of the Board, at a public meeting wherein all interested members of the public were afforded the opportunity to address the Committee on the item, before or during the Committee's consideration of the item, and which has not been substantially changed since the Committee heard the item.

In accordance with State Law (Brown Act), all matters to be acted on by the MTA Board must be posted at least 72 hours prior to the Board meeting. In case of emergency, or when a subject matter arises subsequent to the posting of the agenda, upon making certain findings, the Board may act on an item that is not on the posted agenda.

CONDUCT IN THE BOARD ROOM - The following rules pertain to conduct at Metropolitan Transportation Authority meetings:

REMOVAL FROM THE BOARD ROOM The Chair shall order removed from the Board Room any person who commits the following acts with respect to any meeting of the MTA Board:

a. Disorderly behavior toward the Board or any member of the staff thereof, tending to interrupt the due and orderly course of said meeting.
b. A breach of the peace, boisterous conduct or violent disturbance, tending to interrupt the due and orderly course of said meeting.
c. Disobedience of any lawful order of the Chair, which shall include an order to be seated or to refrain from addressing the Board; and
d. Any other unlawful interference with the due and orderly course of said meeting.

INFORMATION RELATING TO AGENDAS AND ACTIONS OF THE BOARD

Agendas for the Regular MTA Board meetings are prepared by the Board Secretary and are available prior to the meeting in the MTA Records Management Department and on the Internet. Every meeting of the MTA Board of Directors is recorded and is available at www.metro.net or on CD's and as MP3's for a nominal charge.

DISCLOSURE OF CONTRIBUTIONS

The State Political Reform Act (Government Code Section 84308) requires that a party to a proceeding before an agency involving a license, permit, or other entitlement for use, including all contracts (other than competitively bid, labor, or personal employment contracts), shall disclose on the record of the proceeding any contributions in an amount of more than $250 made within the preceding 12 months by the party, or his or her agent, to any officer of the agency, additionally PUC Code Sec. 130051.20 requires that no member accept a contribution of over ten dollars ($10) in value or amount from a construction company, engineering firm, consultant, legal firm, or any company, vendor, or business entity that has contracted with the authority in the preceding four years. Persons required to make this disclosure shall do so by filling out a "Disclosure of Contribution" form which is available at the LACMTA Board and Committee Meetings. Failure to comply with this requirement may result in the assessment of civil or criminal penalties.

ADA REQUIREMENTS

Upon request, sign language interpretation, materials in alternative formats and other accommodations are available to the public for MTA-sponsored meetings and events. All requests for reasonable accommodations must be made at least three working days (72 hours) in advance of the scheduled meeting date. Please telephone (213) 922-4600 between 8 a.m. and 5 p.m., Monday through Friday. Our TDD line is (800) 252-9040.

LIMITED ENGLISH PROFICIENCY

A Spanish language interpreter is available at all Committee and Board Meetings. All other languages must be requested 72 hours in advance of the meeting by calling (213) 922-4600 or (323) 466-3876. Live Public Comment Instructions can also be translated if requested 72 hours in advance.

Copies of Agendas/Record of Board Action/Recordings of Meetings - (213) 922-4880 (Records Management Department)
General Information/Rules of the Board - (213) 922-4600
Internet Access to Agendas - www.metro.net
TDD line (800) 252-9040

NOTE: ACTION MAY BE TAKEN ON ANY ITEM IDENTIFIED ON THE AGENDA

Live Public Comment Instructions:

Live public comment can only be given by telephone.

The Committee Meeting begins at 9:00 AM Pacific Time on November 16, 2022; you may join the call 5 minutes prior to the start of the meeting.

Dial-in: 888-251-2949 and enter
English Access Code: 8231160#
Spanish Access Code: 4544724#

Public comment will be taken as the Board takes up each item. To give public comment on an item, enter #2 (pound-two) when prompted. Please note that the live video feed lags about 30 seconds behind the actual meeting. There is no lag on the public comment dial-in line.

Instrucciones para comentarios publicos en vivo:

Los comentarios publicos en vivo solo se pueden dar por telefono.

La Reunion de la Junta comienza a las 9:00 AM, hora del Pacifico, el 16 de Noviembre de 2022. Puedes unirte a la llamada 5 minutos antes del comienso de la junta.

Marque: 888-251-2949 y ingrese el codigo
Codigo de acceso en ingles: 8231160#
Codigo de acceso en espanol: 4544724#

Los comentarios del público se tomaran cuando se toma cada tema. Para dar un comentario público sobre una tema ingrese # 2 (Tecla de numero y dos) cuando se le solicite. Tenga en cuenta que la transmisión de video en vivo se retrasa unos 30 segundos con respecto a la reunión real. No hay retraso en la línea de acceso telefónico para comentarios públicos.

Written Public Comment Instruction:

Written public comments must be received by 5PM the day before the meeting.
Please include the Item # in your comment and your position of “FOR,” “AGAINST,” "GENERAL COMMENT," or "ITEM NEEDS MORE CONSIDERATION."

CALL TO ORDER

ROLL CALL

6. SUBJECT: MOBILITY LESSONS LEARNED FROM WORLD SPORTS EVENTS 2022-0770

RECOMMENDATION

RECEIVE oral report on Mobility Lessons Learned from World Sports Events.

Attachments: Presentation

7. SUBJECT: 2028 GAMES MOBILITY CONCEPT PLAN 2022-0781

RECOMMENDATION

APPROVE the 2028 Games Mobility Concept Plan - 2022 Prioritized Mobility Concept Plan Project List (Attachment A).

Attachments: Attachment A - 2022 Prioritized MCP Project List
Attachment B - Motion 42: 2028 Mobility Concept Plan
Attachment C - Comprehensive Project List
Presentation

SUBJECT: GENERAL PUBLIC COMMENT 2022-0773

RECEIVE General Public Comment

Consideration of items not on the posted agenda, including: items to be presented and (if requested) referred to staff; items to be placed on the agenda for action at a future meeting of the Committee or Board; and/or items requiring immediate action because of an emergency situation or where the need to take immediate action came to the attention of the Committee subsequent to the posting of the agenda.

2028 OLYMPICS COMMITTEE
NOVEMBER 16, 2022

SUBJECT: MOBILITY LESSONS LEARNED FROM WORLD SPORTS EVENTS

ACTION: RECEIVE ORAL REPORT

RECOMMENDATION

RECEIVE oral report on Mobility Lessons Learned from World Sports Events.

ISSUE

At its September 2022 meeting, Director Solis requested a report back on mobility lessons learned from previous world sports events.

EQUITY PLATFORM

Nearly 90% of the proposed venues in Los Angeles County for the 2028 Games are within Equity Focused Communities (EFCs). The lessons learned offer best practices to enhance mobility during the 2028 Games to keep the region moving and minimize the disruption of quality of life for all Angelenos, especially EFC populations. The lessons learned from this presentation provide insight into how to leverage infrastructure for the Games to create legacy benefits, such as enhanced mobility, accessibility, connectivity, workforce development, and economic opportunity.

Like in previous major events, parking restrictions and road closures at venues may impact high ridership lines during the 2028 Games. Staff is working on preparing demand data to understand the potential impacts of the Games. When data becomes available, Metro can identify and mitigate service impacts to riders along high-ridership lines during the Games. The lessons learned incorporate best practices for reducing the impact on disadvantaged communities and overcoming these mobility challenges, including accessibility parking, transit detours, and implementation of the Games Route Network.

Lessons Learned

Metro

Agenda

- LA 1984
- London 2012
- Rio 2016
- Super Bowl LVI
- LA Sports Equinox Day (Oct 28, 2018)
- MLS Cup Final & USC Game (Nov 5, 2022)

LA 1984: What's changed?

LA COUNTY	1984	2028 (anticipated)
Population	8M	12M
Employment	3.5M	5M
Average Delay per Vehicle/Commuter	60 hours	120 hours

GAMES

35% more sporting events

2X the amount of athletes

3X the amount of media coverage

Metro

LA 1984: What's changed?

MOBILITY	Miles in 1984	Miles in 2028 (anticipated)
Metro Rail	0	134
Metro BRT	0	74
Metrolink	0	538

LA 1984: Leveraging Strategies for Success

1984 Games

	SPECTATORS	GENERAL PUBLIC
HIGHLY EFFECTIVE	• Transit marketing • Express bus service • Event Scheduling • HOV system	• Encouraged vacations • Reduced non-essential travel
MODERATELY EFFECTIVE	• Dynamic traffic signal system (ATSAC)	• Flexible work schedules • Retimed truck traffic
LEAST EFFECTIVE	• One-way streets • Ramp closures	• Remote working

WHAT IS STILL APPLICABLE AND CAN BE SUCCESSFUL IN THE 2028 Games?

SPECTATORS	GENERAL PUBLIC
• Transit marketing • Express bus service • Dynamic traffic signal system	• Flexible work schedules • Retimed truck traffic • Remote working (proven during the COVID pandemic)

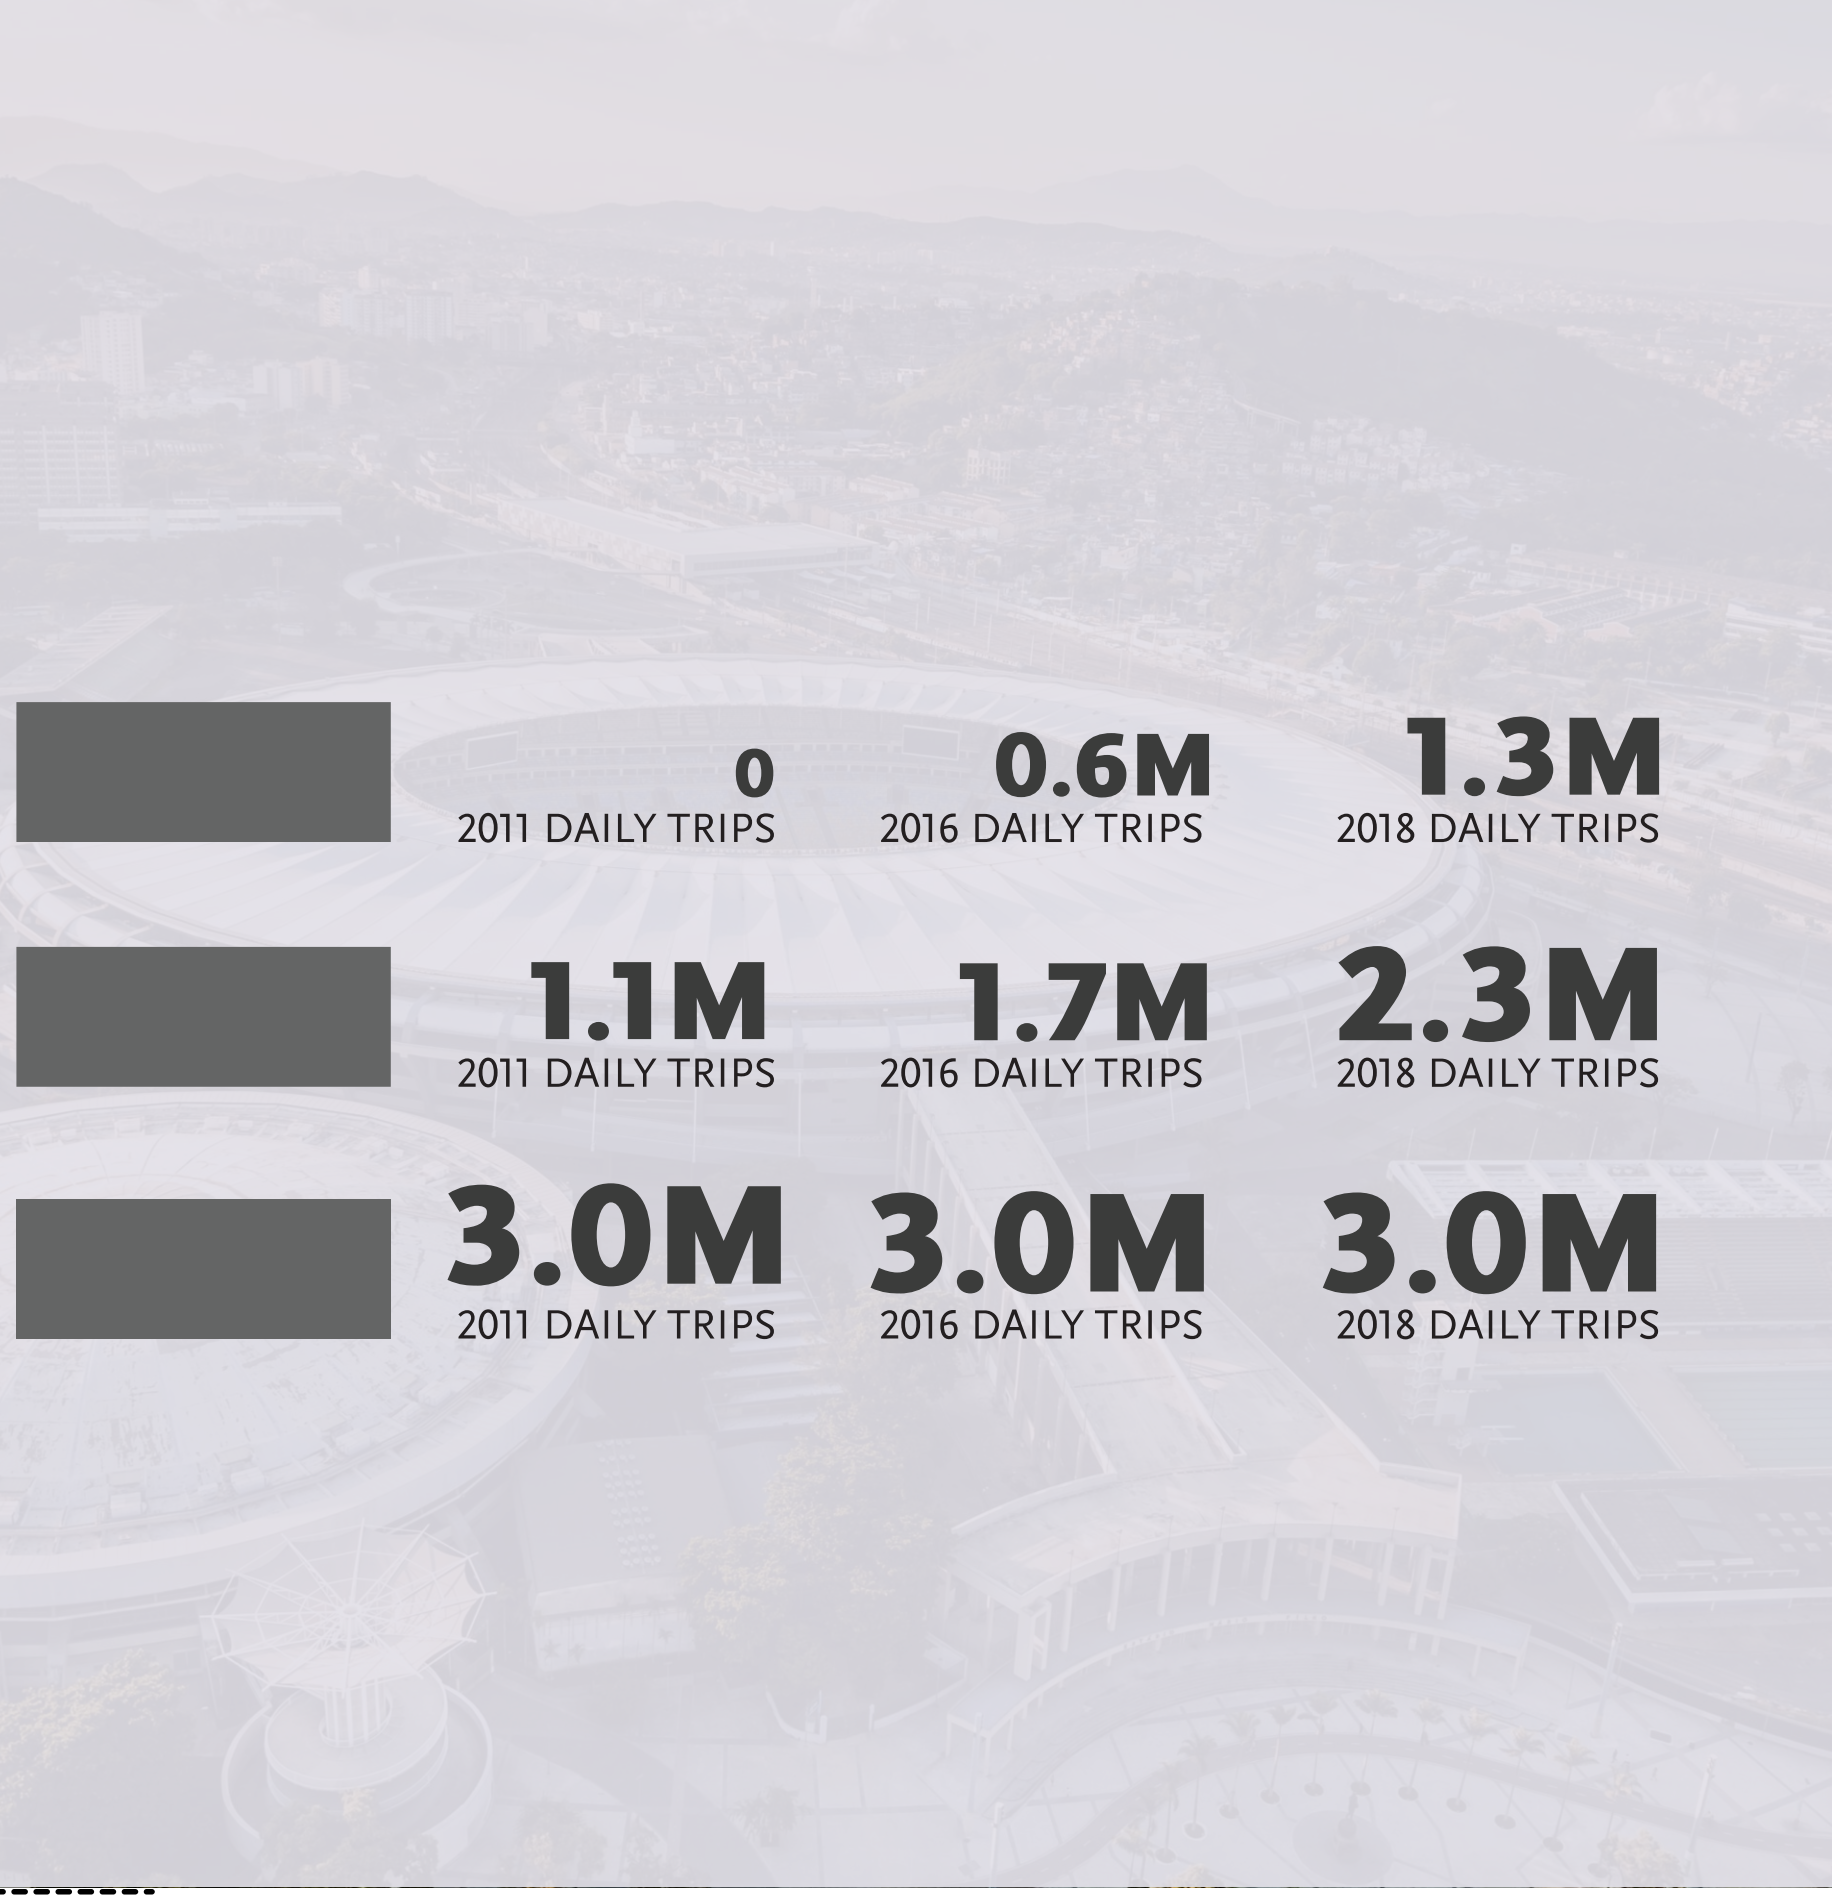
Metro

London 2012

- First car-free Games but has significantly more robust public transit system and culture
- UK government established the Olympic Delivery Authority to deliver venues and infrastructure
- London’s GRN was highly successful but used local arterials, not freeways like current LA proposal
- London had to coordinate with 40 transit operators, similar coordination effort is needed in LA

Rio 2016

- Focused on building BRT routes
- Used the Games as a catalyst/accelerator to deliver large transit projects
- Used the 2014 World Cup to test and pilot mobility strategies
- Multiple city centers and Games dispersed into four sports parks
- Rio encountered what Los Angeles will encounter:
  - Public health, safety and security issues
  - Construction cost issues
- The Games Route Network used Rio's arterial network; not urban freeways like Los Angeles



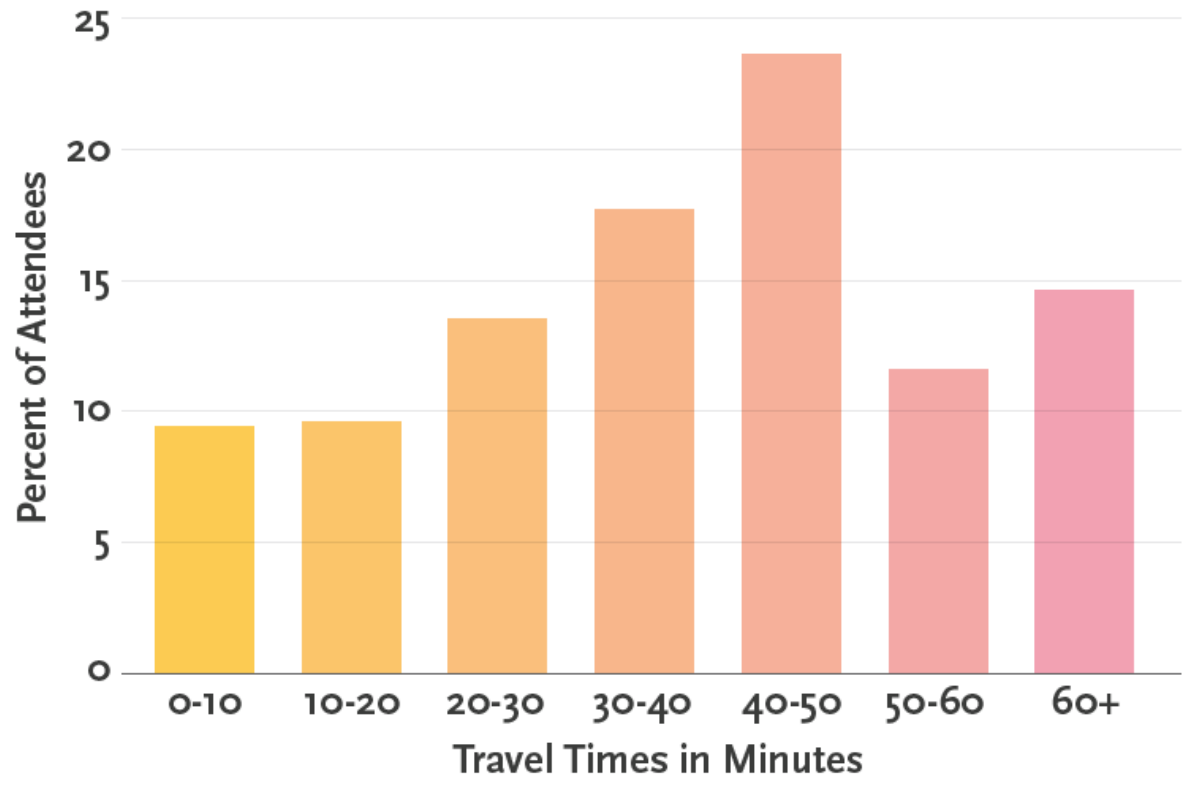
Common Roles & Responsibilities of Metro's Equivalent at other Major Events

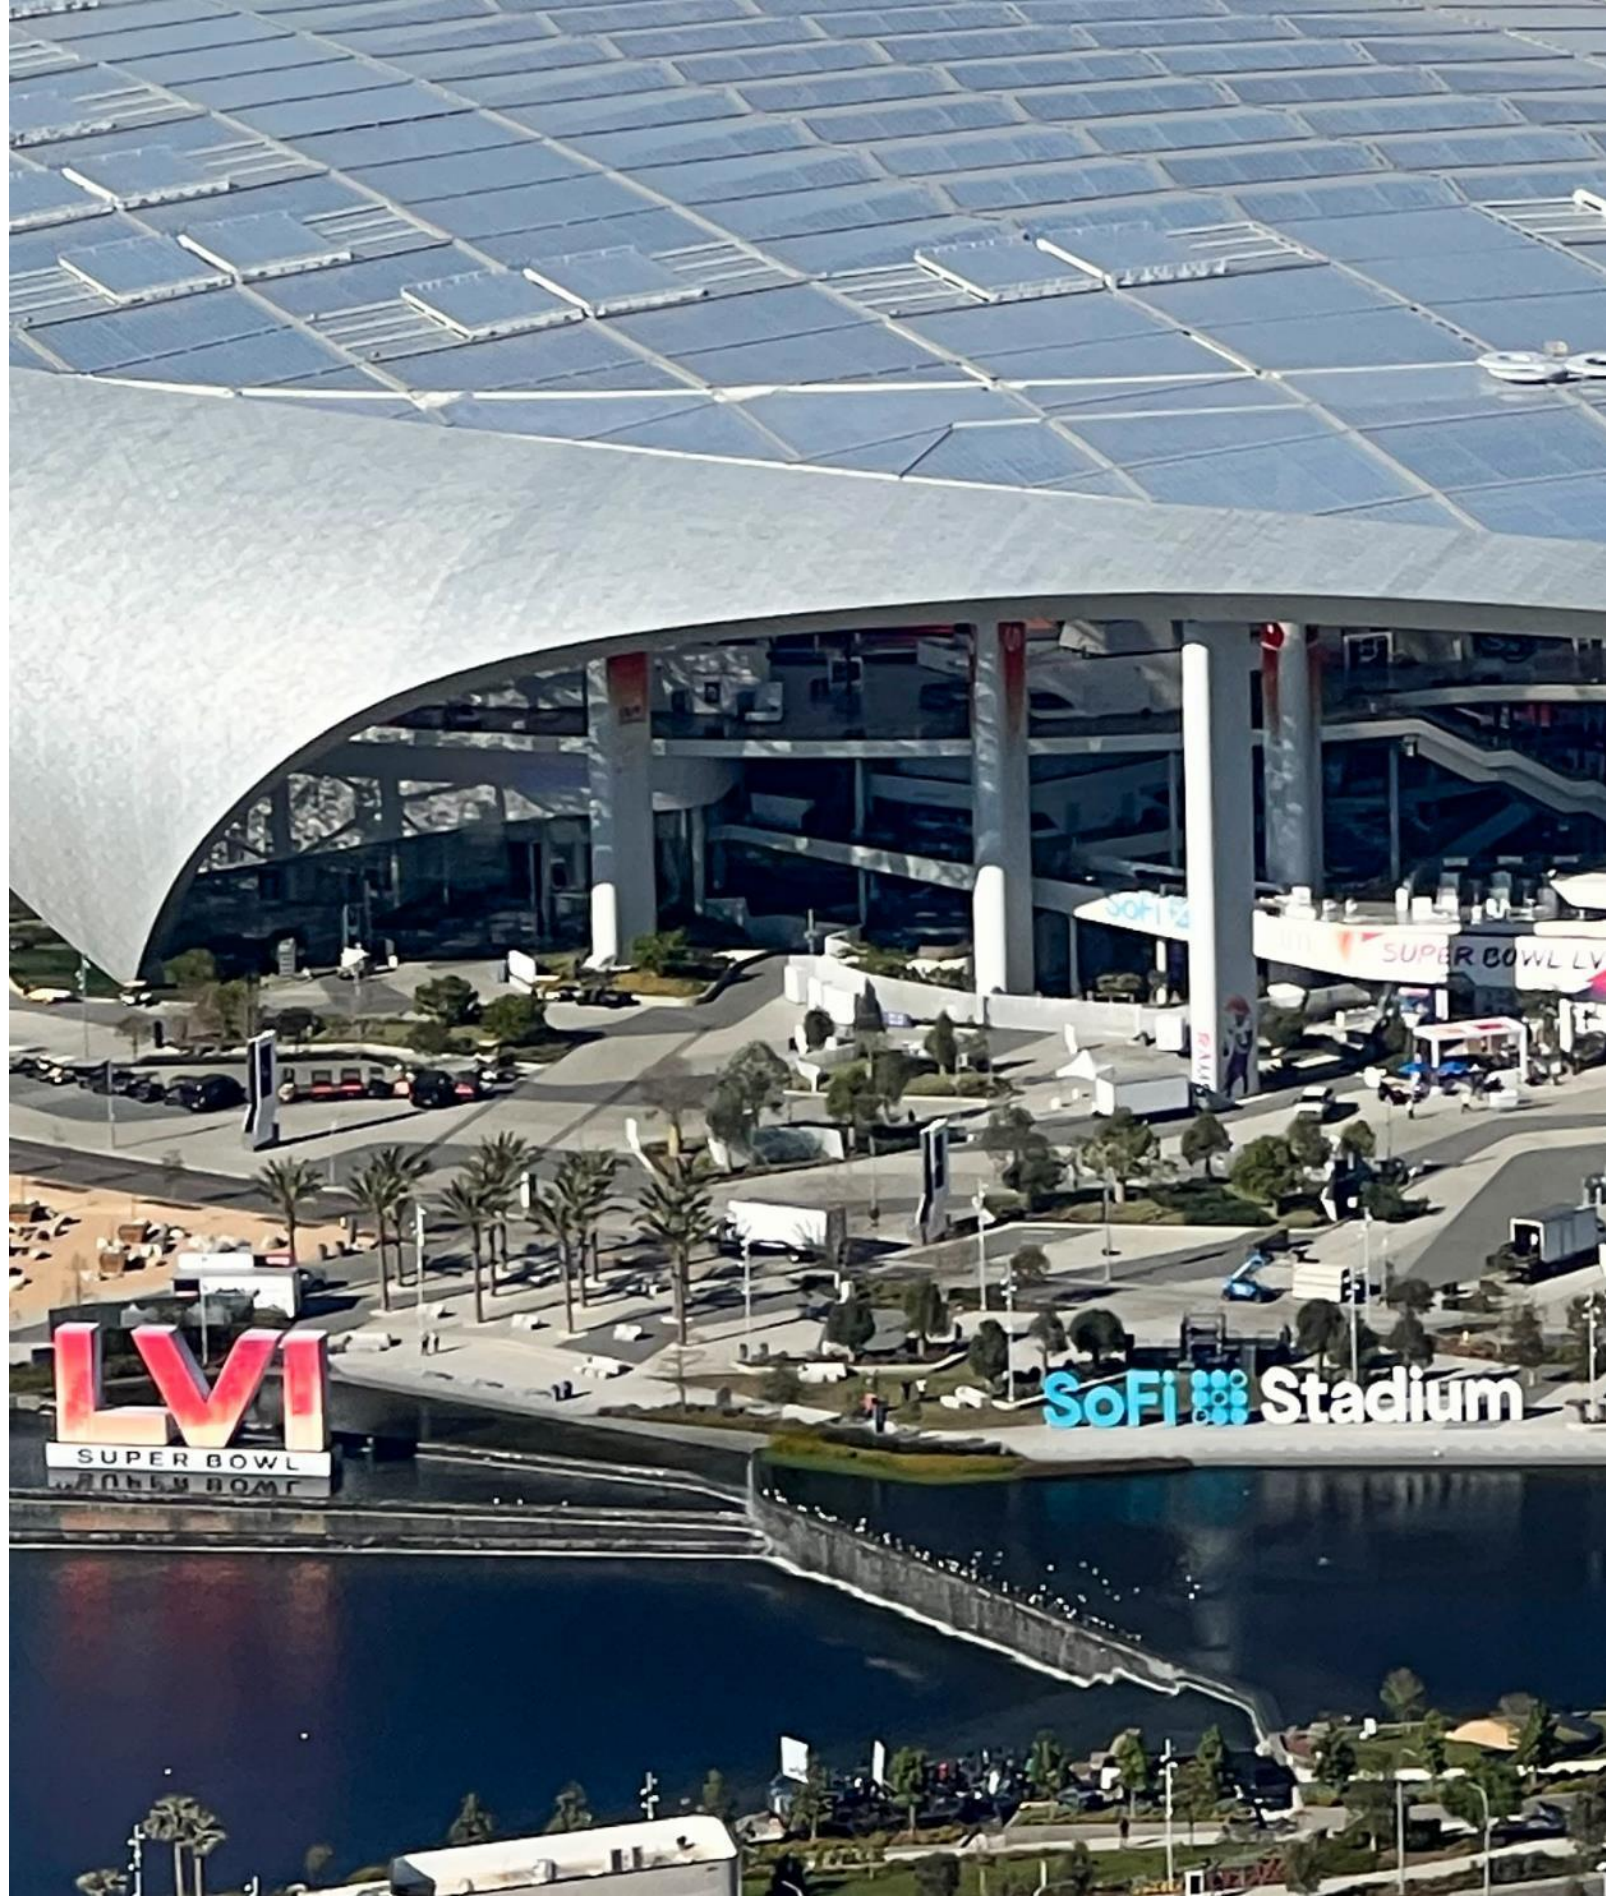
- Created and prioritized needs assessments for essential mobility investments
- Stewarded planning and delivery of mobility projects
- Conducted transportation modeling for demand on transportation systems including Games Route Network (GRN)
- Led TDM marketing, communications, strategies, and program
- Provided mobility services for spectators and general public

Super Bowl LVI

- Of the approximately 75,000 who attended, nearly half came from outside LA County
- Most out-of-town attendees stayed within 5 miles of SoFi Stadium on game day
- Trips within 5 miles that would take about 10 minutes on a regular day tripled to an average of 37 minutes

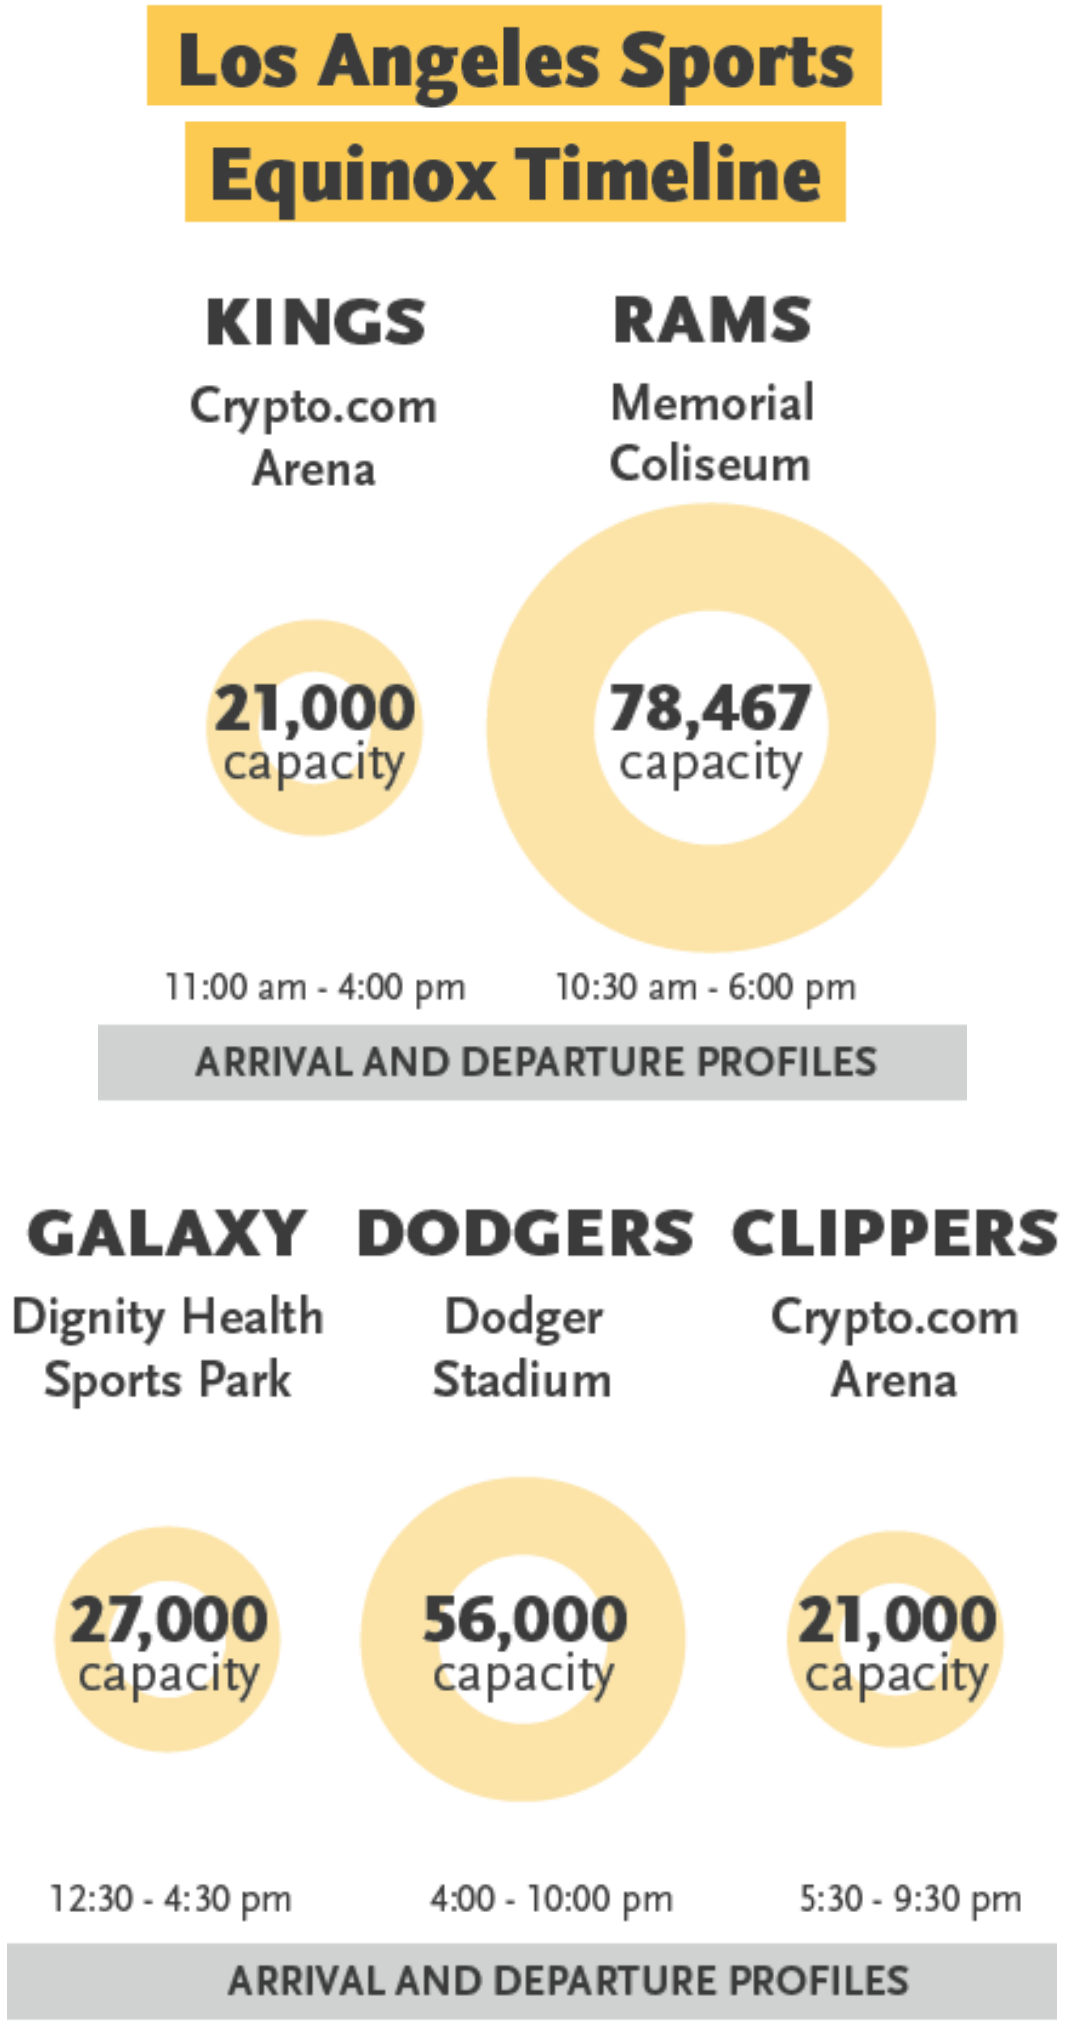
Super Bowl Attendee Travel Times within 5 Miles of SoFi Stadium





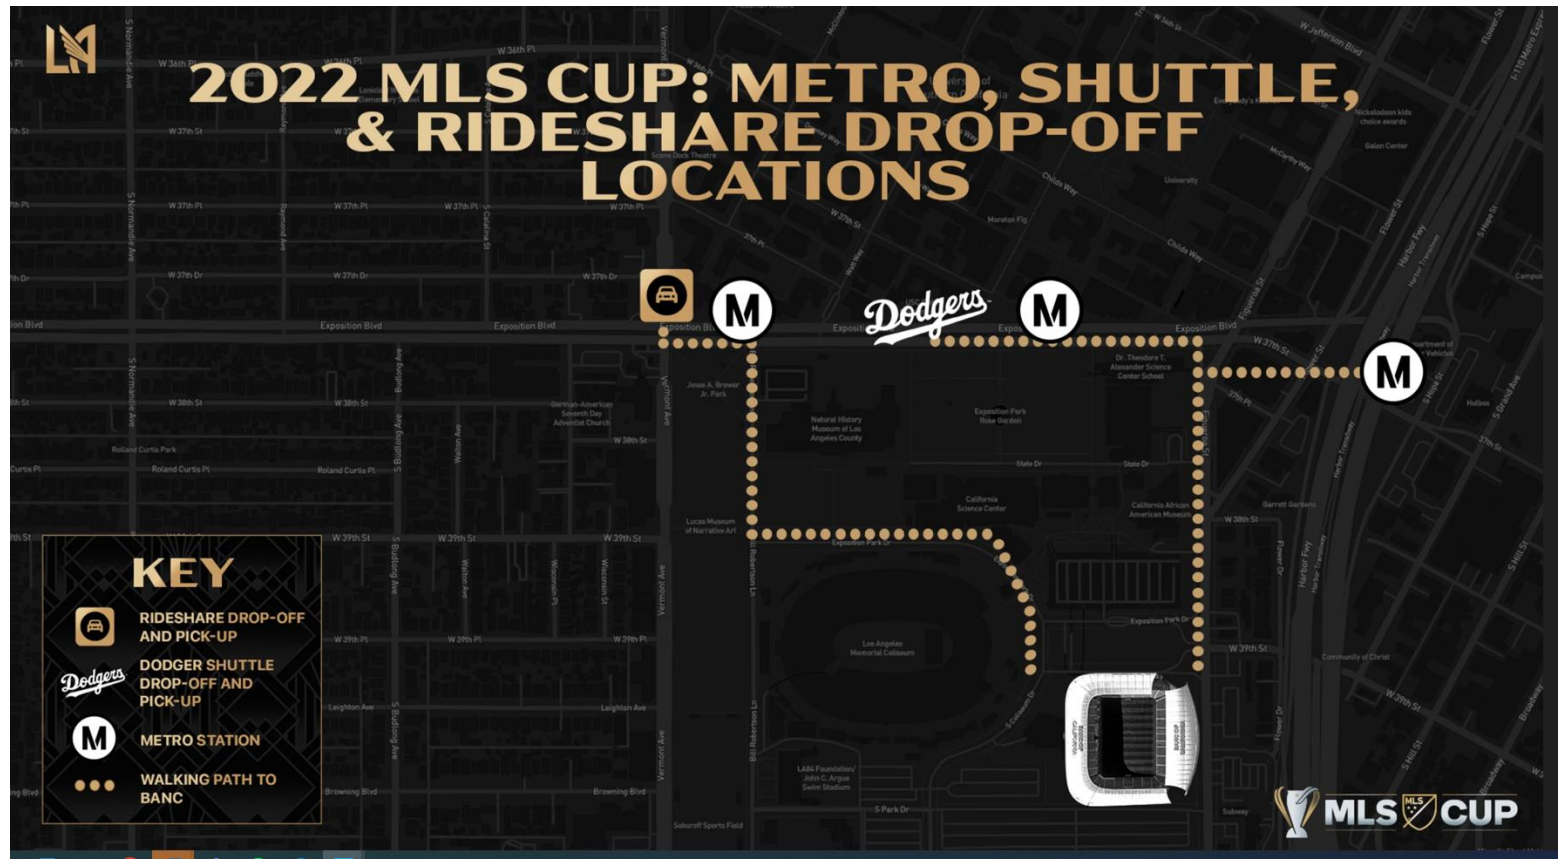
LA Sports Equinox Day

- First time all five major men's sports leagues hosted games in LA on the same day
- Provides insight into what a typical 2028 Games event day might be like, including travel patterns and congestion hot spots
- Top 5 most common corridors traveled to get the venues used during the LA Sports Equinox Day:
  - I-110/SR-110 Harbor Freeway
  - I-405 Santa Monica Freeway
  - I-5 Golden State Freeway
  - SR-60 Pomona Freeway
  - SR-91 Gardena Freeway



MLS Cup Final and USC Game Day

- MLS Cup Final scheduled for 1pm; USC Game scheduled for 7:30pm – no parking at USC/Expo Park for MLS Game
- *Private shuttle bus service* – provided by MLS from Dodgers Stadium, 9 am to 6 pm; 500 car and 1500 riders used this service.
- *Metro Rail* - E Line Service increased to 10-minute headway, 9AM to 7PM; 8 to 10-minute headway after 7PM w/ 3-car trains
- **3x more ridership compared to a non-event Saturday**
- *Metro Bus*
  - Silver Line service was promoted by Metro and LAFC.
  - Extra standby buses provided 10 am – 7 pm
  - **5x more ridership compared to a non-event Saturday**



Best Practices that Apply to Metro for 2028

- Use the Games as a catalyst to deliver high performing transit for all Angelenos
- Lead TDM program including freight policies
- Lead transportation modeling for demand on transportation systems including Games Route Network (GRN)
- Create integrated ticketing that includes venues and transit
- Implement trip planning applications with first-last mile strategies
- Increase ridership with permanent mode shift by improving customer experience and enhancing the existing network
- Develop a program management approach to deliver MCP prioritized projects
- Create a central, multiagency transportation operations center to manage all transport operations

EXHIBIT K

Exhibit K is related to Comment GO14-64. This Exhibit material was considered in the Response to Comment GO14-64.

Comprehensive MCP Project List

(Note: Some projects have been renamed, bundled, or re-scoped)

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Active Transportation/ First-Last Mile	A Line Station FLM Improvements and Mobility Hubs	Walking, biking, and mobility infrastructure within 1/2 mile radius of Artesia, Downtown Long Beach, Grand/ LATTC, and Pico stations.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	E Line FLM Improvements and Mobility Hubs	Walking, biking, and mobility infrastructure within 1/2 mile radius of Santa Monica, Culver City, Crenshaw, Vermont, and USC stations.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	Inglewood Transit Connector	Fully elevated, automated, fixed transit system with three stations connecting Metro K Line to Inglewood's new activity centers.	Draft Initial Project List	
Active Transportation/ First-Last Mile	K Line Station FLM Improvements and Mobility Hubs	Walking, biking, and mobility infrastructure within 1/2 mile radius of Fairview Heights, Downtown Inglewood, and Aviation/96th stations.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	Metro Active Transportation (MAT) Approved Projects	Corridor projects include Avalon-MLK-Gage, Randolph, Redondo Beach, 1st-Riggin-Potrero Grade, Huntington-Main/Fremont. FLM projects include Hollywood/ Highland, Hollywood/ Vine, East LA Civic Center, LAX/Aviation, Olympic/26th, Western/Slauson, Sepulveda, Downtown Long Beach, and Santa Monica/La Brea.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Metro Bike Share Expansion/ Subsidy / TAP Enhancements	Expansion of the Metro Bike Share systems/locations near venues and along the Games Route Network. Increased subsidy for 500,000 bike share rides. Develop free transfers and improved security for cash payments for bike share trips.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Protected Bike Lanes/Cycle Tracks Parallel to GRN	Installation of Class IV bike routes/paths that parallel the Games Route Network to promote biking to the venues.	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Active Transportation/ First-Last Mile	Stations/Venues Wayfinding and Circulation Improvements	Improved signage and communications system for navigation between mobility options and venues.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Countywide Safe Routes to School Program	Establish a countywide Safe Routes to School Program aimed at bringing safety improvements to streets connecting to the highest need schools.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Countywide Vision Zero Program	Establish a countywide Vision Zero program aimed at reducing the occurrence and severity of collisions, prioritizing highest need areas.	Draft Initial Project List	
Active Transportation/ First-Last Mile	D Line Station FLM Improvements and Mobility Hubs	Walking, biking, and mobility infrastructure within 1/2 mile radius of Westwood/VA and Westwood UCLA stations.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	Eastside Access Improvements	Project includes crosswalk improvements at 23 intersections, new bike lanes, sidewalk widening, and tree planting along 5 miles of city streets.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Metro Bike Hub Improvements	Enhancements to amenities and bike parking, and increased staffing at bike hubs. Implement Bike Hubs at key locations near Games venues.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	Figueroa Street Open Street	Open and car-free streets to create non-motorized mobility options between USC, LA Live, and Grand Park.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	G Line Station FLM Improvements and Mobility Hubs	Walking, biking, and mobility infrastructure within 1/2 mile radius of Balboa, Woodley, and Sepulveda stations.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	J Line Harbor Gateway Transit Center Mobility Hub/Park & Ride	Walking, biking, and mobility infrastructure with park and ride between Harbor Gateway Transit Center and South Bay Sports Park.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	L Line Station FLM Improvements and Mobility Hubs	Walking, biking, and mobility infrastructure within 1/2 mile radius of San Dimas, La Verne, and Memorial Park stations.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	LA River Path	Proposed walking/bicycling path to close an existing 8-mile gap in the active transportation network along the LA River.	Draft Initial Project List	
Active Transportation/ First-Last Mile	LA Union Station Forecourt and Esplanade Improvements	Reconstruct Alameda and Los Angeles Streets along the frontage of Union Station with widened sidewalks for pedestrian and bike paths.	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Active Transportation/ First-Last Mile	Metro Active Transportation (MAT) Waitlist Projects	Waitlisted projects include Florence, Van Nuys/Vanowen, Fountain (Hayworth-Harper), San Monica-Greenacre, Fairfax, Santa Monica-Poinsettia, and Santa Monica-Hayworth.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Metro Bike Share Subsidy	Increased subsidy for 500,000 bike share rides.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	Metro Bike Share TAP Enhancements	Develop free transfers and improved security for cash payments for bike share trips.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	Metro Micro Expansion	Expansion of existing Metro Micro program to the Games venues.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Rail to River ATC - Segment B	Proposed walking/bicycling path between the A Line Slauson Station to the LA River.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Bicycle Valet	Free and safe bicycle parking for events to encourage and enable cycling to events where parking for bikes is scarce, non-existent, and prone to theft.	Draft Initial Project List	
Active Transportation/ First-Last Mile	I-710 LA River Bike Path	Proposed walking/bicycling path along the LA River, specifically along I-710, which connects Maywood to Long Beach.	Draft Initial Project List	
Active Transportation/ First-Last Mile	LA River SFV Greenway	Proposed walking/bicycling path along the LA River in the San Fernando Valley.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Metro Bike Hub Expansion	Implement Bike Hubs at key locations near Games venues.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	Ocean Boulevard Open Street	Open and car-free streets to create non-motorized mobility options between Long Beach Civic Center and Long Beach Pier.	Draft Initial Project List	Bundled
Active Transportation/ First-Last Mile	Transit to Parks CBO Outreach and Partnership	Partnering with CBOs to increase awareness among park-poor communities of transit connections to the Games venues that are park facilities.	Draft Initial Project List	
Active Transportation/ First-Last Mile	Universal Station Mobility Hub	Dedicated mobility hub to provide residents additional options for accessing the B Line, bus lines, and other transit service	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Active Transportation/ First-Last Mile	Holly Garage Mobility Hub	Holly's proximity to the Memorial Park Station makes it an ideal candidate to be a mobility hub for the games. I'd like to find a way to add secure bike parking, potentially micromobility parking/ storage, and to serve as a location for TNC pick-up and drop off (potentially on Arroyo adjacent to the garage).	Agency	
Active Transportation/ First-Last Mile	Bike Lanes to the Bowl	Stripe bike lanes from Memorial Park Station to the Rose Bowl and back. Provide a dedicated and properly signed path to the Rose Bowl from the Memorial Park L Station and back. Would likely need a shuttle stop nearby in case the uphill ride back is not feasible.	Agency	
Active Transportation/ First-Last Mile	ArroyoLink	Multimodal connection between Arroyo Blvd/the Rose Bowl to Colorado Blvd providing a key connection between the pedestrian and bicyclist activity in the Rose Bowl area to Old Pasadena, and the transit network of the Metro L line, the proposed North Hollywood to Pasadena BRT, the existing Metro Rapid bus and the numerous local and regional bus transit lines served by Metro, Pasadena Transit and Foothill Transit. This project includes a new pedestrian and bike path along Arroyo Blvd, south of the Rose Bowl and between Arroyo Blvd to Colorado Blvd/ Orange Grove Blvd, which begins near the intersection of Arroyo Blvd and Arroyo Drive. The ArroyoLink also provides an opportunity to connect the Arroyo Seco Bike path (which currently extends as far north as South Pasadena) into Pasadena.	Agency	
Active Transportation/ First-Last Mile	East San Fernando Valley First Last Mile (ESFV FLM)	Walking, biking, and mobility infrastructure within 1/2 mile radius of the ESFV rail corridor	Agency	
Active Transportation/ First-Last Mile	Rail to River Segment A	Proposed walking/bicycling path between the Crenshaw Line and A Line Slauson Station.	Agency	
Active Transportation/ First-Last Mile	Car Free Streets	Open street or car free street projects around venues to support spectators, revelers, and local businesses near games venues.	Agency	Bundled

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Active Transportation/ First-Last Mile	Stress Free Connections	Targeted investments along neighborhood streets to support regional access to destinations. The network of local streets offers a 'stress-free' travel experience for people walking, biking, and rolling.	Agency	
Active Transportation/ First-Last Mile	Active transportation & Vision Zero	Support transportation via zero emissions and active modes	Agency	
Active Transportation/ First-Last Mile	Aerial Rapid Transit	Proposed project to connect Los Angeles Union Station to the Dodger Stadium via an aerial gondola system in Downtown Los Angeles	Agency	
Active Transportation/ First-Last Mile	Open Streets Program	Figueroa btw USC and 7th/Metro, Expo Blvd btw Vermont and Flower, MLK Blvd btw Vermont and Figueroa, Ocean Ave btw Wilshire and Pico, Flower btw Pico and 11th, Ocean Blvd btw Pacific and Shoreline, Balboa Blvd btw Burbank and Victory	Task Force	
Active Transportation/ First-Last Mile	Toro Hub	Mobility hub at the campus of Cal State Dominguez Hill	Task Force	Bundled
Active Transportation/ First-Last Mile	Transit Venue Ped/Bike Access Enhancements	Walking, biking, and active transportation street improvements on critical access streets, within the 1/4 mile radius of 10 venues: Long Beach Pier; Dignity Park; Sepulveda Basin, UCLA; LA Live; Grand Park; Dedeaux Field; USC; The Forum; and Downtown Long Beach.	Task Force	
Active Transportation/ First-Last Mile	Cabrillo Mole Intermodal Ferry Passenger Terminal	The Cabrillo Mole is a multimodal transportation hub used by cross-channel carrier passengers traveling between the mainland and Avalon and as a gathering place for residents and visitors.	Task Force	
Active Transportation/ First-Last Mile	BlueLA Expansion	Car sharing with new, fully-electric vehicles for everyday needs	Task Force	
Active Transportation/ First-Last Mile	USC Expo Park Pedestrian Bridges	Two Pedestrian bridges over Expo Blvd connecting USC and Expo Park and the E Line stations	Task Force	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Active Transportation/ First-Last Mile	Los Angeles Universities Mobility Hubs	New mobility hubs at the universities in Los Angeles will support the 2028 Games and students before and after the Games. This includes mobility hubs at UCLA to support the Athletes Villages, at USC to support the Media Village, at Cal State Long Beach to support park-and-ride to the Long Beach Sports Park, and at Cal State Northridge to support park-and-ride to the Valley Sports Park.	Task Force	
Bus	Broadway Bus Only Lane & TSP (NexGen Improvements)	This project provides improved speed, reliability, and frequency	Draft Initial Project List	
Bus	Bus Headway/ Frequency Management Program	Dynamic scheduling wherein the rider can expect a bus on a given line or corridor at a regular interval as opposed to arrivals at specific published scheduled times. Assume this would apply to Metro's top 20 corridors in terms of ridership.	Draft Initial Project List	Converted to recommendation
Bus	NextGen Bus Priority Enhancements and Improvements along GRN	Speed up service along key bus routes on Games Route Network by creating bus-only lanes, bulb-outs, and transit signal priority, including bus stop amenities like lighting, real-time info, and shelter/shade canopies.	Draft Initial Project List	
Bus	Connecting C Line and Metrolink Norwalk Station	New express bus service between the C Line Norwalk Station and Metrolink Norwalk Station to close the existing transit gap.	Draft Initial Project List	Bundled
Bus	G Line Improvements	Upgrade the G Line with two grade separations, better signal priority technology, electronic bus connectivity, and a four-quadrant gating system.	Draft Initial Project List	
Bus	J Line Electrification Project	Install 40 charging stations and infrastructure at Division 18 and 10 en-route charging stations to enable uninterrupted zero emission bus service.	Draft Initial Project List	
Bus	Local Municipal Operators Call for Projects	Placeholder for potential projects and operations for local municipal transit operators through a call for projects.	Draft Initial Project List	
Bus	NoHo to Pasadena BRT	New BRT Service that provides high-capacity, fast connection between the San Fernando and San Gabriel Valleys.	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Bus	North SFV Transit Improvements	This project provides improved speed, reliability, and frequency for San Fernando Valley transit riders, including CSUN.	Draft Initial Project List	
Bus	Vermont BRT	New BRT Service that provides high-capacity, fast connection between Koreatown and South LA. BRT to supplement and not preclude future rail corridor.	Draft Initial Project List	
Bus	Zero Emission Bus Master Plan - Phase 2	Procurement of Zero Emission Bus vehicles for local, rapid, shuttle, and express routes. Conversion of "dependent" Divisions (Divisions 1, 2, 3, 5, 7, and 13) from CNG to battery charging.	Draft Initial Project List	Cannot be done by 2028
Bus	Zero Emission Bus Master Plan - Phase 3	Procurement of Zero Emission Bus vehicles for local, rapid, and express routes. Conversion of Divisions 8, 9, 15, and 18 from CNG to battery charging.	Draft Initial Project List	Cannot be done by 2028
Bus	All-Door Boarding Expansion	All door boarding expansion along higher volume Games-impacted routes. If time permits conduct analysis to determine high volume routes near venues.	Draft Initial Project List	Converted to recommendation
Bus	Atlantic Bus Only Lane & TSP (NexGen Improvements)	This project provides improved speed, reliability, and frequency	Draft Initial Project List	
Bus	Camera Bus Lane Enforcement	Implement camera-based technology to enforce bus-only lane use along key BRT and bus-only lane corridors.	Draft Initial Project List	
Bus	Cesar Chavez/ Sunset to Glendale Bus Only Lane & TSP (NexGen Improvements)	This project provides improved speed, reliability, and frequency	Draft Initial Project List	
Bus	Frequent Bus Interior Cleaning	Increase routine cleaning for high-frequency buses with high ridership to improve cleanliness.	Draft Initial Project List	
Bus	La Cienega Bus Only Lane & TSP (NexGen Improvements)	This project provides improved speed, reliability, and frequency	Draft Initial Project List	
Bus	Games Route Network Bus Circulator	Enhanced and express bus service between LAX and the venues/hotels within the four sports parks during the Games.	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Bus	Lincoln Blvd BRT	New BRT service along Lincoln Blvd. consistent with Board-adopted standards & design guidelines, such as dedicated running ways & BRT stations.	Draft Initial Project List	Cannot be done by 2028
Bus	Bus Terminal Improvements	Implements speed and reliability improvements at terminal stations to ultimately allow buses to run every 5 to 10 minutes.	Draft Initial Project List	Bundled
Bus	San Gabriel Valley Transit	Depending on the result of the study, this assumes BRT service within the San Gabriel Valley to replace the Eastside Transit Corridor Route 60 Alternative.	Draft Initial Project List	
Bus	Systemwide Bus Layover Improvements	Bus layover improvements for faster turnaround time for improved service and reliability.	Draft Initial Project List	Bundled
Bus	Venice Boulevard Bus Only Lane & TSP (NexGen Improvements)	This project provides improved speed, reliability, and frequency	Draft Initial Project List	
Bus	Arbor Vitae Bus Lane	Add eastbound bus lane for dedicated route between I-405 and So-Fi Stadium.	Draft Initial Project List	Bundled
Bus	Bus Operator Backup Staff	Increases bus driver staffing levels to prevent missed assignments. Current labor shortages affect this estimate.	Draft Initial Project List	Bundled
Bus	Bus Stop Safety Relocation	Speed up service, increase pedestrian safety by relocating bus stops from nearside to farside of intersections along the Games Route Network.	Draft Initial Project List	
Bus	G Line Power & Communications Systems Upgrades	Upgrade critical systems (CTS, fiber, and UPS) to power and provide enough bandwidth for communication services for the G Line.	Draft Initial Project List	
Bus	Hawthorne/La Brea Bus Lanes	Add bus lanes on La Brea Avenue (from Market St. to Century Blvd.), and on Hawthorne Boulevard (from Century Blvd. to Hawthorne/Lennox Station).	Draft Initial Project List	Bundled
Bus	I-110 Freeway Bus Stops	Restore abandoned bus stops on I-110 freeway to avoid congestion in the downtown core.	Draft Initial Project List	
Bus	Prairie Avenue Bus Lanes	Add bus lanes on Prairie Avenue between the K Line and C Line.	Draft Initial Project List	Bundled

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Bus	Bus zone improvements	"Bus zone improvements in Central District and Northwest Pasadena, with a particular emphasis at transfer connection points, connections to the Metro L Line, and other heavily used bus stops serving the local feeder services that support the regional network, as well as those serving DACs. Improvements to include branding/ wayfinding, bus stop furniture enhancements, accessibility improvements, those that facilitate efficiencies of bus service (e.g., bus bulbs, etc.), security and comfort improvements (e.g., security devices, public art, etc.), upgrade Bus Finders to be able to push messaging out and to provide accessibility features; upgrades to bus stop lighting"	Agency	
Bus	Pasadena Integrated Central Transit Management System Upgrade	Upgrade Pasadena Integrated Central Transit Management System which is essential for all aspects of local transit operations, including AVL, connecting to the City's bus priority signal system, fare systems, dispatching, safety, routing, schedule adherence, data collection, communication to riders, and customer service. This system also enables the public to obtain real-time arrival information via smartphone apps, online, and by phone, as well as at displays at key bus stops throughout the City for the multiple transit agencies operating in Pasadena. For the Olympics, this project is essential in supporting the anticipated magnitude of transit demand and facilitating critical regional and local transit connections, including those to the Rose Bowl.	Agency	
Bus	LA Express Park	Expand LA Express Park to four new high demand parking areas in the city	Agency	
Bus	LADOT Transit Projects	Electrification of LADOT entire fleet	Agency	
Bus	Bus Priority projects	Support transportation via zero emissions and active modes	Agency	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Bus	Washington Blvd BRT	This project would construct bus rapid transit on Washington Blvd from Walnut Ave to Fairfax Ave. As a dedicated right-of-way bus rapid transit project, it qualifies as a Tier 1 Transit project.	Agency	
Bus	Culver CityBus Battery Electric Transit Buses Purchase and Facility Electrification	This project would replace Culver City's existing CNG-powered buses with vehicles powered by battery technology. As an electric bus purchase, it qualifies as a Tier 2 Transit project.	Agency	
Bus	Culver City Transit Center Expansion	Expansion of the Westfield Culver City Transit Center to provide increased capacity for buses, passengers, and create multimodal connections.	Agency	
Bus	Antelope Valley Access	Acquisition of facilities and construction of essential facilities to ensure quality, consistent ADA paratransit services are provided.	Agency	
Bus	Eastern Region Access	Acquisition of facilities and construction of essential facilities to ensure quality, consistent ADA paratransit services are provided.	Agency	
Bus	Northern Region Access	Acquisition of facilities and construction of essential facilities to ensure quality, consistent ADA paratransit services are provided.	Agency	
Bus	Southern Region Access	Acquisition of facilities and construction of essential facilities to ensure quality, consistent ADA paratransit services are provided.	Agency	
Bus	West/Central Region Access	Acquisition of facilities and construction of essential facilities to ensure quality, consistent ADA paratransit services are provided.	Agency	
Bus	Games Mobility Hub Strategy	Implement venue mobility and central mobility hub typologies	Task Force	
Bus	Sports Park Metro Zero Emission Bus Fleet	Acquisition of zero emission buses and implementation of charging infrastructure for Metro and LADOT for routes that serve the Downtown Sports Park	Task Force	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Bus	Supplemental Bus System	This project commissions a fleet for the Games to ensure a sufficient supply of buses is available to transport Games attendees. Recruit a temporary bus driver workforce to ensure there is no shortage during the Games and support them with accommodations, transportation, and meals. In addition, conduct Games-specific training of the public transit workforce to promote familiarity with the Games Route Network. Remodel existing bus depots to be Games-ready by installing cameras, fueling stations, fencing, and similar. Construct additional depots as necessary.	Agency	
Bus	Sepulveda BRT	Provide fast, frequent, reliable and accessible bus service along Sepulveda Blvd	Agency	Bundled
Bus	Event Parking and Fueling Facilities	Additional parking and fueling infrastructure for approximately 1,000 event buses during the games.	Draft Initial Project List	Bundled
Congestion Management	Arterial Network Traffic Signal Analytics	Implement location-based services to measure the performance of intersection traffic signals at locations throughout LA County including the Games Route Network	Draft Initial Project List	
Congestion Management	ATSAC/LARTMC Integration and Operations Enhancements	Improvements to the Automated Traffic Surveillance and Control (ATSAC) Center, which manages real-time detector loops between and at intersections, and changes the signal timing as traffic conditions change. ATSAC also supports LA Metro's ability to move its trains and buses faster.	Draft Initial Project List	
Congestion Management	Business Planning/ Promotion of TDM	This is a placeholder project to allow for stakeholder engagement directly with local businesses to help them plan for the games to help decrease traffic on the network.	Draft Initial Project List	
Congestion Management	Congestion Pricing Study	Study to explore a new approach to reduce traffic by managing travel demand through congestion pricing and providing more high-quality transportation options.	Draft Initial Project List	
Congestion Management	I-10 Extension ExpressLanes	Convert existing HOV lane to single HOT lane along I-10 between I-605 and the San Bernardino County line.	Draft Initial Project List	Cannot be done by 2028

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Congestion Management	I-105 ExpressLanes (Segment 1)	Add HOV lane and convert to dual HOT lanes along I-105 between I-405 and I-605.	Draft Initial Project List	
Congestion Management	I-405 ExpressLanes	Convert existing HOV lane to single HOT lane along I-405 between I-10 and US-101.	Draft Initial Project List	
Congestion Management	Incentives for Households to Drive Less During Games	Pay households to drive less during Games by depositing funds in mobility wallets if they agree to reduce car use with accountability.	Draft Initial Project List	Bundled
Congestion Management	Mega Event Customer Experience Analysis	Analysis to understand potential overcrowding and crush loads at stations and transit vehicles.	Draft Initial Project List	
Congestion Management	Games Park and Ride Strategy	Identify parking lots that link to major transit lines to encourage mode shift.	Draft Initial Project List	
Congestion Management	GRN Enabling Treatments and Spot Improvements	Study to investigate all minor GRN treatments (low cost/temporary) that enable more efficient games operations such as pavement, signage, traffic signals, and minor civil works.	Draft Initial Project List	
Congestion Management	Regional Incident Management Program and Tools	Implementation of a regional incident management program and associated tools to streamline, coordinate, and improve the management and handling of roadway incidents.	Draft Initial Project List	
Congestion Management	Regional Traffic Management Network & Information Exchange	Enhance multi-jurisdictional traffic signal operations by enhancing local traffic signal control system connectivity and interoperability.	Draft Initial Project List	
Congestion Management	TDM Campaign	Placeholder project to provide solutions and communication strategies using the following mechanisms: reduce the need to travel; re-mode using alternative transportation; reroute to avoid congestion; and re-time to avoid the peak hours.	Draft Initial Project List	
Congestion Management	Business-as-Usual Network Planning (Non-Games Routes)	Plan the non-games network, identify preferred routes and interventions/ upgrades needed, determine operational principles during the Games.	Draft Initial Project List	Bundled
Congestion Management	HOV 3+ Policy Implementation	Convert existing HOV lane occupancy to three or more persons per vehicle countywide.	Draft Initial Project List	Bundled

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Congestion Management	I-405 Aux Lanes	Adds segments of auxiliary lanes in each direction to improve traffic flow at on/off ramps for ten miles from Florence Avenue to I-110.	Draft Initial Project List	
Congestion Management	I-710 Integrated Corridor Management	Deploy multi-jurisdictional integrated corridor management solutions on I-710 between SR-91 to SR-60.	Draft Initial Project List	
Congestion Management	LAX Congestion Pricing Study	Study to explore a new approach to reduce traffic at LAX by managing travel demand through congestion pricing.	Draft Initial Project List	
Congestion Management	Sports Park Transportation Performance Monitoring Network	Traffic signal controller and cabinets upgrades and the installation of fiber optic communication infrastructure to provide a redundant high bandwidth network in LA, Long Beach, Inglewood, Santa Monica, Carson, & Pasadena.	Draft Initial Project List	
Congestion Management	SR-710 Mobility Improvements Program	Local mobility improvements between Alhambra and Pasadena on the existing transportation system to reduce traffic bottlenecks.	Draft Initial Project List	
Congestion Management	US-101 HOV Lanes between SR-134 and I-110	Adding HOV Lanes along US-101 that is part of the Games Route Network between the International Broadcast Center and Downtown Sports Park.	Draft Initial Project List	Cannot be done by 2028
Congestion Management	Arroyo Seco Safety and Operational Enhancements	Project to reduce collisions and improve reliability on SR-110 (Arroyo Seco Parkway) from I-5 to its terminus in South Pasadena.	Draft Initial Project List	
Congestion Management	Aviation/LAX Parking Study	Capacity analysis of parking at Aviation/LAX station.	Draft Initial Project List	
Congestion Management	Curbspace Management Projects	Coordination with SCAG's Curbspace Management Study to fund and implement recommendations to the most congested & complicated curb space locations.	Draft Initial Project List	
Congestion Management	I-110 ExpressLanes Extension to I-110/I-405 Interchange*	Extend existing I-110 ExpressLanes to I-405/I-110 interchange.	Draft Initial Project List	Cannot be done by 2028
Congestion Management	I-405 Active Traffic Management & Integrated Corridor Management Strategies	System management approaches to make best use of existing roadway capacity to improve operations on I-405 from Rosecrans Avenue to SR 90.	Draft Initial Project List	
Congestion Management	I-405/I-110 Interchange and HOV Ramps*	Operational improvements to the I-405/I-110 interchange with HOV ramps.	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Congestion Management	I-605 Hot Spots Projects	Projects to improve mobility and relieve congestion, capacity constraints, and other related deficiencies on I-605, which include Valley, Beverly, South, and SR-60/7th.	Draft Initial Project List	
Congestion Management	Metro Vanpool	Increased subsidy for 1,000 vanpools at $600 per van per month.	Draft Initial Project List	Bundled
Congestion Management	Games Autonomous Vehicles Demonstration	Deployment of autonomous vehicles to support transportation needs during Games.	Draft Initial Project List	
Congestion Management	SoCal 511 Multicounty Regional Trip Planning	Enhancements and elevate trip planning information, including carpool match.	Draft Initial Project List	
Congestion Management	SR-91 Improvements (Westbound SR-91 Connector, Atlantic to Cherry, Central to Acacia)	These projects are part of Metro's SR-91/I-605 “Hot Spots” Measure R Program in the Gateway Cities to reduce traffic congestion.	Draft Initial Project List	
Congestion Management	Station Parking Improvements**	Projects include parking facility valet assist for up to 20 facilities, parking guidance system enhancements, parking kiosks, and parking pre-sale reservation system.	Draft Initial Project List	Bundled
Congestion Management	“BRT-Light” Improvements for Rose Bowl-serving Transit Corridors (e.g., Fair Oaks, Lincoln, Lake, Mountain/Seco, etc.)	"Install/implement speed, capacity, and passenger trip experience improvements, concurrent with Vision 2028 goals, that result in providing higher quality and more efficient transit connections – moving more people, faster and more comfortably, to where they want to go in Pasadena – in this case, Olympic events. These improvements would be along regional and local transit corridors that are vital to supporting getting visitors to the Rose Bowl from throughout the region and the City. Including Signal priority/signal preemption & Bus Only Travel Lanes To improve travel time on listed corridors with improvement that would leave a legacy, implementation of bus only lanes and enhanced signal priority/ preemption would be deployed. These improvements are concurrent with the Nextgen Bus Plan.	Agency

Rail	7th/Metro Center Comprehensive Station Upgrade	Holistic station refurbishment including station finishes, lighting, wayfinding, audio/security systems, restroom installation and other customer amenities, and ADA improvements.	Draft Initial Project List	
Rail	Airport Metro Connector	New light rail station, bus plaza, bicycle parking, customer service center, passenger pick-up and drop-off area, providing a direct connection to the future LAX APM.	Draft Initial Project List	
Rail	Arcadia Power Substation Upgrade	Arcadia Substation improvements to allow A and E Line to operate with 5-minute service during the games.	Draft Initial Project List	
Rail	B Line Extension for NoHo to Burbank Airport	Extension of the B Line from North Hollywood to Burbank Airport.	Draft Initial Project List	Cannot be done by 2028
Rail	C Line Station Platform Extensions and Reliability Upgrades	Replace 25-year old high-voltage traction power substations and extend station platforms at Redondo Beach, Mariposa, Douglas, and LAX/Aviation stations to accommodate three-car trains.	Draft Initial Project List	
Rail	Comprehensive Union Station Improvements	Improvements include redundant elevator and stairways, ADA/ accessibility enhancements, wayfinding improvements to help visitors find their way through the station, new A Line operator restrooms, and general SOGR to the facility.	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Rail	Crenshaw/LAX Transit Corridor	New light rail transit service between the E Line at Expo/Crenshaw Station to merge with C Line at Aviation/LAX Station.	Draft Initial Project List	
Rail	Crenshaw Northern Extension	Project would fill a major gap in the Metro Rail network and create an important north-south link.	Draft Initial Project List	Cannot be done by 2028
Rail	East San Fernando Valley Transit Corridor	Project is a north-south street running light rail transit corridor in the middle of Van Nuys Boulevard between the G Line and San Fernando Road and includes 11 at-grade stations along with the maintenance facility.	Draft Initial Project List	
Rail	Eastside Transit Corridor Phase 2	Proposed 9-mile light rail transit extension of the L Line further east from its current terminus at Pomona Boulevard and Atlantic Boulevard. The proposed alignment includes at-grade, aerial, and below grade configurations.	Draft Initial Project List	Cannot be done by 2028
Rail	Flower Street A & E Line Improvements	Add pedestrian islands for pedestrian crossing at Flower Street, separate crossings into roadway crossing and track crossing.	Draft Initial Project List	
Rail	Foothill Gold Line Extension Phase 2B (Pomona)	Extension of the L Line beyond the current end point in Azusa, and add stations in the cities of Glendora, San Dimas, La Verne, and Pomona.	Draft Initial Project List	
Rail	K Line Traction Power Substation Enhancements	Add new traction power substations to accommodate three-car trains and more frequent service.	Draft Initial Project List	
Rail	Light Rail Speed Improvements	Reevaluate speed commands/block design, upgrade train control system to integrate with traffic signals, gate technology for pre-emption.	Draft Initial Project List	
Rail	Pico Station Improvements	Expand Pico Station with a second platform and prevent queuing issues at station.	Draft Initial Project List	
Rail	Regional Connector	New rail line that will provide riders a seamless journey from Azusa to Long Beach, and from East Los Angeles to Santa Monica, through the downtown LA core.	Draft Initial Project List	
Rail	Sepulveda Transit Corridor	High-capacity rail line that connects the San Fernando Valley, the Westside and LAX. Options being considered are heavy rail transit (HRT) and monorail transit (MRT) and is being pursued as a potential P3 through PDA contracts.	Draft Initial Project List	Cannot be done by 2028

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Rail	South Bay C Line Extension to Torrance	Proposed light rail transit extension of the C Line (Green) along a 4-mile segment of the Harbor subdivision corridor from the existing Redondo Beach Station to the under-construction Torrance Transit Park and Ride Regional Terminal in Torrance.	Draft Initial Project List	Cannot be done by 2028
Rail	Vermont Rail	New light rail corridor that provides high-capacity, fast connection between Wilshire/Vermont to 120th Street.	Draft Initial Project List	Cannot be done by 2028
Rail	Washington Wye Junction and Flower Street Operational Improvements	Restriction of certain traffic movements and limited redesign/modifications to the junction. Add pedestrian islands for pedestrian crossing at Flower Street, separate crossings into roadway crossing and track crossing.	Draft Initial Project List	
Rail	West Santa Ana Branch Transit Corridor	New 19-mile light rail transit corridor connecting downtown Los Angeles, Huntington Park, Bell, Cudahy, South Gate, Downey, Bellflower and Artesia.	Draft Initial Project List	Cannot be done by 2028
Rail	Westside Purple Line Extension Section 1	Section 1 of the D Line extension will add three new stations: Wilshire/La Brea, Wilshire/Fairfax and Wilshire/La Cienega.	Draft Initial Project List	
Rail	Westside Purple Line Extension Section 2	Section 2 of the D Line extension will add two new stations: Wilshire/Rodeo and Century City/Constellation.	Draft Initial Project List	
Rail	Westside Purple Line Extension Section 3	Section 3 of the D Line extension will add two new stations: Westwood/UCLA and Westwood/VA Hospital.	Draft Initial Project List	
Rail	D Line Extension from VA to Ocean Avenue	Extension of the D Line from end of Section 3 to Ocean Avenue in Santa Monica.	Draft Initial Project List	Cannot be done by 2028
Rail	Division 20 Portal Widening and Turnback Facility	Build a new turnback facility and readjust rail storage tracks to support the D Line extension and frequencies.	Draft Initial Project List	
Rail	Elevator and Escalator Improvements	Improve elevator and escalator operations without down time through improved monitoring and repair implementation of systems reaching failure modes prior to scheduled manufacturer recommended maintenance and replacements.	Draft Initial Project List	
Rail	Expo Park-Watt Way Roadway	Close off Watt Way across tracks and convert Watt Way entrance to right-in/ right-out to eliminate vehicle movement across tracks.	Draft Initial Project List	Bundled

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Rail	Expo/Crenshaw Transfer Station Improvements	Portal entrance on southwest side of Expo/Crenshaw Station and other improvements to better facilitate transfers between both lines. Walking and biking infrastructure improvements derived from Metro Board-adopted FLM Plan.	Draft Initial Project List	
Rail	Frequent Train Interior Cleaning	More routine cleaning of Metro rail vehicles with high ridership to improve cleanliness.	Draft Initial Project List	
Rail	Hawthorne/ Lennox Station Improvements	Station amenities and widen sidewalks to improve queuing and station access from buses.	Draft Initial Project List	
Rail	Memorial Park Station Improvements	Station amenities and improvements. Close off Holly Street at Arroyo Parkway in front of station.	Draft Initial Project List	
Rail	Metro Red Line Segment Traction Power Substation and Auxiliary Power Replacements	Replace 25-year old station power distribution system (MCCs) such as lighting, escalator/elevator power, public communication systems power, fire alarm power and similar, and replace 30-year old high voltage traction power substations.	Draft Initial Project List	
Rail	New L Line Interlocks	Add two new interlocks between Lincoln/Cypress and Heritage Square, and Memorial Park and I-210.	Draft Initial Project List	Bundled
Rail	New Siding and Crossover between Degan and 7th Avenue	Adding a new siding on the Track 4 side between Degan Ave. and 7th Ave. with a single crossover on the east to accommodate a three-car train.	Draft Initial Project List	Bundled
Rail	Rail Communications Systems Upgrades	State of good repair across the system to upgrade communications systems for the rail lines such as CTS, fiber, and UPS.	Draft Initial Project List	
Rail	Transit Passenger Information System Upgrades	Upgrade the existing transit passenger information system for seamless integration between public address and visual messaging signs.	Draft Initial Project List	Renamed
Rail	Video Management System Upgrades	Upgrade the existing video management system for better support for CCTV cameras, intrusion detection systems and access control systems.	Draft Initial Project List	
Rail	12th Street/Flower Street Closure	Permanently close off 12th Street to east/west traffic and prohibit left turns coming from southbound Flower Street on to 12th Street eastbound across the ROW.	Draft Initial Project List	Bundled

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Rail	Arts District/6th Street Station	New Metro rail station to serve the Arts District, Boyle Heights, and surrounding communities.	Draft Initial Project List	
Rail	Blue Light Call Boxes and Help Points	Add universal blue light call boxes at all rail platforms for passengers to summon police/fire/EMS. Upgrade existing emergency, passenger and gate telephones to Metro blue light help points.	Draft Initial Project List	
Rail	Centinela Grade Separation Project	Convert the at-grade crossing at Centinela and Florence to an above-grade crossing along the K Line.	Draft Initial Project List	
Rail	Downtown Long Beach Platform Optimization	Use 1st Street station as drop-off only, Downtown Long Beach Station as pick-up only during the games.	Draft Initial Project List	Converted to recommendation
Rail	E Line Expo Park/Vermont/ USC Station Improvements	Extend trench past Vermont; consolidate Vermont and USC stations to a single large multi-train center platform station with entrances at both ends. Construct pedestrian overpass or underpass to access station and/or cross over ROW.	Draft Initial Project List	
Rail	Fire Alarm Upgrades	Replace fire alarm system for rail lines.	Draft Initial Project List	
Rail	Foothill Gold Line Extension Phase 2B (Montclair)	Extension of the L Line beyond Pomona to Claremont and Montclair.	Draft Initial Project List	
Rail	I-210 Barrier Replacement	Safety improvements by increasing the barrier height between the L Line and I-210 freeway for Phases 1 and 2.	Draft Initial Project List	
Rail	L Line System and Reliability Upgrades	Replacement and upgrade of 20-year old OCS weight poles, air brake system, fire alarm system, and communications (CTS, fiber, UPS) systems along the Pasadena segment of the L Line.	Draft Initial Project List	
Rail	North Hollywood Maintenance-of-Way Access	Provide maintenance-of-way high-rail access ramp at North Hollywood Station.	Draft Initial Project List	
Rail	Platform Screen Doors (PSD) or Platform Edge Doors (PED)	Separate the platform from the tracks with PSD or PED at key stations to support the games.	Draft Initial Project List	
Rail	Radio Stations UPS Upgrade	Upgrade UPS systems to power all radio equipment for four hours as per MRDC.	Draft Initial Project List	
Rail	Rail Line Fencing	Reinforce and improve right-of-way fencing along at-grade rail lines for safety purposes.	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Rail	Safety Intrusion Detection Systems	A physical layer track level intrusion detection system to detect objects or people on the track and unauthorized areas.	Draft Initial Project List	
Rail	Station Emergency Coordination	Provide station maps for first responders via smartphone scan.	Draft Initial Project List	
Rail	Systemwide Emergency Tunnel Ventilation Fan and Damper Replacement	Replace existing emergency fans and dampers with new energy saving fans and dampers to enhance safety.	Draft Initial Project List	
Rail	Wilshire/Vermont Passenger Notification System	Create a passenger notification system of train arrivals, which is difficult given the split and stacked platform configuration at the Wilshire/ Vermont station.	Draft Initial Project List	
Rail	DTLA Streetcar	The 3.8-mile route will run approximately 18 hours a day to connect rides with places like South Park, Financial District, Staples Center, and LA Live. The LA streetcar improves connections Downtown and to the regional transit network. LA Streetcar will be the most frequent streetcar service in the entire country, with 7-minute headways during peak hours and frequencies of 10 to 15 minutes during off-hours.	Agency	Cannot be done by 2028
Regional Rail	Antelope Valley Line Improvements	The Antelope Valley Line (AVL) Capacity and Service Improvement will improve service frequency and reliability along the 76.6-mile long corridor between Lancaster and downtown Los Angeles.	Draft Initial Project List	
Regional Rail	Link US Phase A	The Link US project proposes the integration of new run-through tracks on an elevated viaduct over the US-101 freeway to improve operational flexibility and expand capacity at Union Station.	Draft Initial Project List	Cannot be done by 2028
Regional Rail	Link US Phase B	The Link US project proposes the integration of new run-through tracks on an elevated viaduct over the US-101 freeway to improve operational flexibility and expand capacity at Union Station.	Draft Initial Project List	Cannot be done by 2028

Systemwide	Metro Rail/BRT ADA Tactile Guidance Systems	Tactile guidance system for customers with blindness/visual impairments and other customers with disabilities.	Draft Initial Project List	Bundled
Systemwide	Mobility Wallet Development	Implementation of mobility wallet in TAPforce which allows users to pay for multiple public and private mobility services.	Draft Initial Project List	Renamed
Systemwide	Systemwide ADA Accessibility Improvements	Upgrade system accessibility elements as needed to meet current California Title 24 accessibility/MRDC.	Draft Initial Project List	Bundled
Systemwide	TDM Integration with Transit APP	Integration of TDM programs and Park & Ride into Transit APP.	Draft Initial Project List	Bundled
Systemwide	Transit Integrated Network Study	Study best approach to establishing transit network with Metro, Metrolink, and local municipal operators and games events.	Draft Initial Project List	
Systemwide	Universal Fare Integration	Improvements to fare integration technology to enable single source of payment among all municipal transit providers and shared mobility companies.	Draft Initial Project List	
Systemwide	ATMS2 Upgrade	Upgrade CAD/AVL system to improve, service quality, safety, and security.	Draft Initial Project List	
Systemwide	Data Management & Analytics	Secure, integrate new transportation data sets to support improve management of transportation to and from Games venues.	Draft Initial Project List	
Systemwide	HASTUS Upgrade	Upgrade HASTUS software to allow automated scheduling of single track, EV buses, deviations, restricting fallbacks, and managing delays.	Draft Initial Project List	
Systemwide	Multilingual Blue Shirts/ Ambassadors Expansion Program	Expansion of multilingual blue shirts/ ambassador staffing to assist Games travelers who are unfamiliar with the system.	Draft Initial Project List	
Systemwide	Open Loop Payment	Replace card scanners/readers with ones that are open loop in that they can accept payment from credit cards, debit cards, payment apps etc.	Draft Initial Project List	Bundled
Systemwide	Regional Special Event Data Exchange and Distribution (ATIS)	Implementation of a regional event management system to collect and distribute data/information.	Draft Initial Project List	
Systemwide	Rider Alert System	SMS text-based system that allows riders to subscribe for alerts on particular lines.	Draft Initial Project List	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Systemwide	Station Restrooms	Add restrooms at key stations near Games venues.	Draft Initial Project List	
Systemwide	Elevator Attendant Program	Attendants at select elevators in the Metro system to keep them clean and safe for seniors, people with disabilities and travelers with luggage.	Draft Initial Project List	
Systemwide	Temporary Systemwide Signage	Temporary signage and printed info at key bus stops and rail stations - welcome signs in multiple languages, wayfinding guidance to Games venues and lodging, etc.	Draft Initial Project List	
Systemwide	Ticketing Integration	TAP enhancements to integrate with the Games ticketing process for travel choices.	Draft Initial Project List	Bundled
Systemwide	Urban Ecosystem (Street Tree Replacement)	Increase LA's tree canopy in areas of greatest need by at least 50% by 2028.	Agency	
Systemwide	Essential Worker Assessment and Support Needs during Games	Assessment of LA County (and neighboring) populations that need to continue driving during the games due to the nature of their work as essential and/or vehicle based. Recommend strategies of supporting populations to ensure awareness of venue locations, avoidance, retiming of trips, continued transit service, etc.	Agency	
Systemwide	Asset Management Program	Account for needed investment in ensuring new (and existing) assets are documented and maintained over their lifespan.	Agency	
Systemwide	Digital Infrastructure	Digital tools to make infrastructure more dynamic.	Agency	
Systemwide	Gender Action Plan	Bundled together all GAP projects and strategies	Task Force	Bundled
Systemwide	Transportation Center of Excellence	Establish bus and rail car manufacturing in the county along with an innovation hub, proving ground, and testing center.	Task Force	

MODE/TYPE	PROJECT NAME	DESCRIPTION	ORIGIN	COMMENTS
Systemwide	Local Access Games Route Network	A network of temporary dedicated-lanes that serve active transportation users who are accessing Olympic venues, within the 1/4 mile radius of 10 venues: Long Beach Pier; Dignity Park; Sepulveda Basin, UCLA; LA Live; Grand Park; Dedeaux Field; USC; The Forum; and Downtown Long Beach. Dedicated lanes would allow for "Conversation Lanes" for bike riders, and would act as shared use pathways within the roadway for active transportation users.	Task Force	
Systemwide	Connections with airline passengers and air travel	Provide land side transit information to airline passengers as well as potentially offer promotions to airline ticket holders to travel by transit.	Task Force	
Systemwide	Customer feedback and reporting	Create systems for riders to deliver feedback easily, specifically developing a system to get customer feedback directly through the Transit app	Task Force	
Systemwide	Public Arts Program - Special Events and Appearances	Provide public art on and near transit stops and on transit vehicles to surprise and delight riders. Plan events and appearances from celebrities and athletes on and near transit as a way of creating special moments for tourists and locals to engage with LA culture and engage with alternative transportation options.	Task Force	
Systemwide	Transportation Communication Network Expansion	Expand TCN to rest of LA County	Task Force	
Systemwide	Universal Basic Mobility Expansion	Bring transit, e-bikes, shared electric vehicle (EV) cars and on-demand EV shuttle service using a mobility wallet that subsidizes transit fares for 2,000 pilot area residents who have historically lacked options for how to get to where they need to go safely.	Task Force

Motion 42 Update: 2022 Prioritized MCP Project List

Metro

November 16, 2022

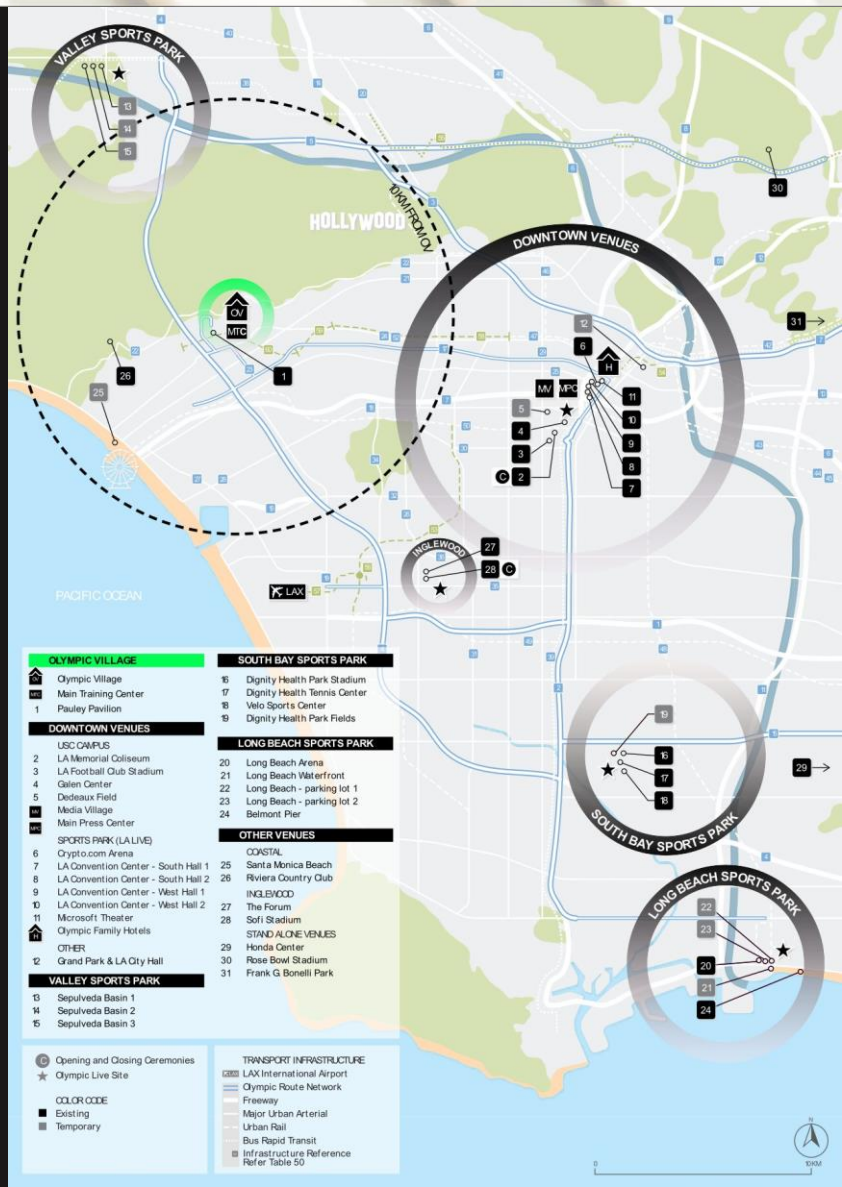
BACKGROUND – Motion 42

- Per Motion 42, develop a prioritized project list that helps to achieve the following:
  - Leaves a permanent legacy after the 2028 Games
  - Enables all spectators and workforce to get to the 2028 Games by public transit, walking, or rolling
  - Ensures accessibility for all
  - Creates an effective coalition of partners

Metro

BACKGROUND – 2028 Games

- Multiple sports parks across LA County
- Anticipate 10 to 15 million tickets across 800+ events
- Likely the largest sports event in US history
- Mobility considerations during the Games:
  - ***Games Route Network*:** Dedicated lanes for Games vehicles between venues
  - ***No venue parking*:** All spectators will need to arrive to the venues using public transportation
  - ***Supplemental spectator system*:** Temporary bus system to meet spectator demand during the Games



Metro

BACKGROUND – Games Mobility Executives

- Pursuant to the host city contract, LA28 (organizing committee for the 2028 Games) will convene the Games Mobility Executives (GME) to plan mobility for the 2028 Games and includes the following:
  - LA28
  - Metro
  - Caltrans
  - Metrolink
  - LADOT
  - City of LA Mayor's Office
- GME to endorse projects to jointly seeking funding

METRO'S ROLE

- Metro is the lead mobility partner in planning and delivery of mobility services during the Games
- Metro is the aggregator of the project list through the Mobility Concept Plan

Metro

Prioritization Process

- Finalized seven-step prioritization methodology
- Comprehensive Project List based on:
  - Draft Initial Project List presented to the Board in January 2022
  - Input from agencies and key stakeholders
  - Technical analysis and needs assessment
- Criteria used for scoring:
  - Provides legacy and permanent benefits after the Games
  - Provides significant value during the Games
  - Serves the needs of and enhances quality of life for disadvantaged communities

Metro

Prioritization Process

- **Probability of Funding**
  - Priorities: Does it align with federal and state priorities (disadvantaged communities, climate resiliency, safety, partnerships)?
  - Local: Is it consistent with local plans/policies?
  - Funding: What is the funding gap and what are potential funding sources?
- **Probability of On-Time Delivery**
  - Funding: Is funding in place and can new funding be secured?
  - Status: How far along is the project?
  - Duration: How long will it take to deliver?
  - Difficulty: What is the technical degree of difficulty?

Metro

Benchmarking Other World Games

- Each Games varied widely in terms of size, scope, and location, thus making it difficult to make comparisons
- DOT allowed deferral of local match requirement to receive the entire available federal share before spending any local funds
- Majority of federal funding received went towards transportation infrastructure
- DOT temporarily waived some federal requirements to build rapid transit system

Games Hosted in US Cities	Transportation Investments		Federal Share	
	Costs (in 2022 $)	# of Projects	Funding (in 2022 $)	Cost Share %
Salt Lake City 2002 Winter Games	$4B	40	$1.9B	49%
Atlanta 1996 Summer Games	$2B	35	$0.8B	41%

Recent Games	Transportation Investments (in 2022 $)
London 2012 Summer Games	$7.5B
Rio 2016 Summer Games	$10.5B

Metro

2022 Prioritized MCP Project List

- Screened unfunded and partially funded projects based on top scoring projects
- Prioritized projects based on:
  - 60% Criteria Score
  - 40% Probability of On-Time Delivery & Funding
- 2022 Prioritized MCP Project List is a living list and will be updated regularly
- Also identified projects in construction or fully funded projects already on track to be delivered by 2028

2022 Prioritized MCP Project List

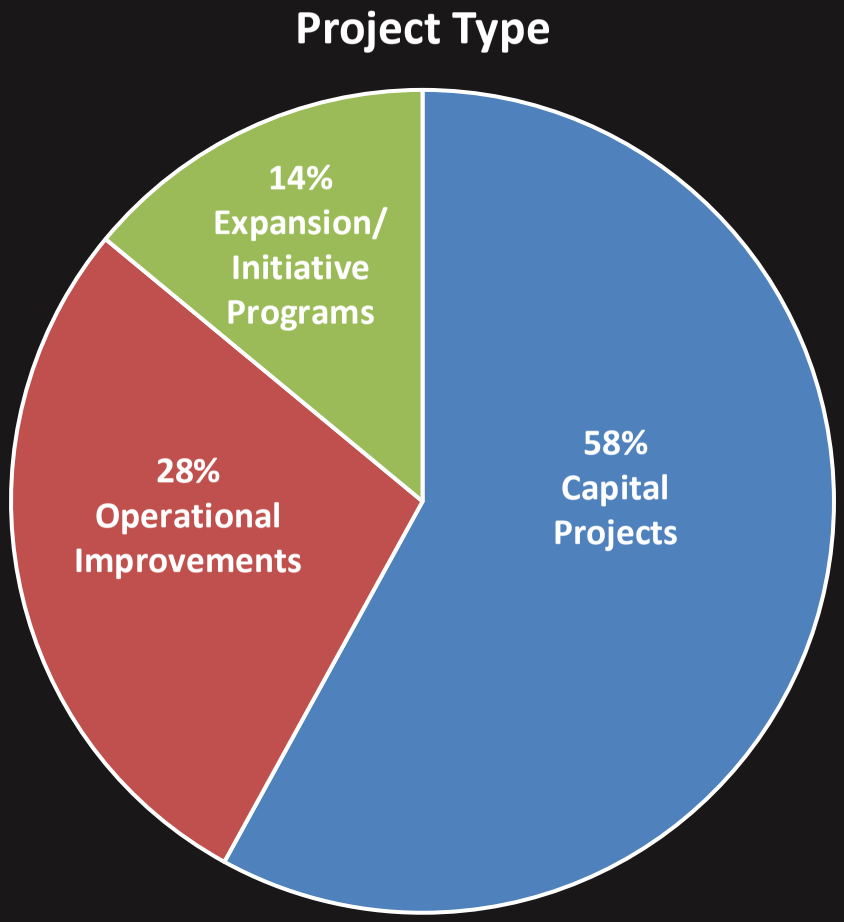
50 projects

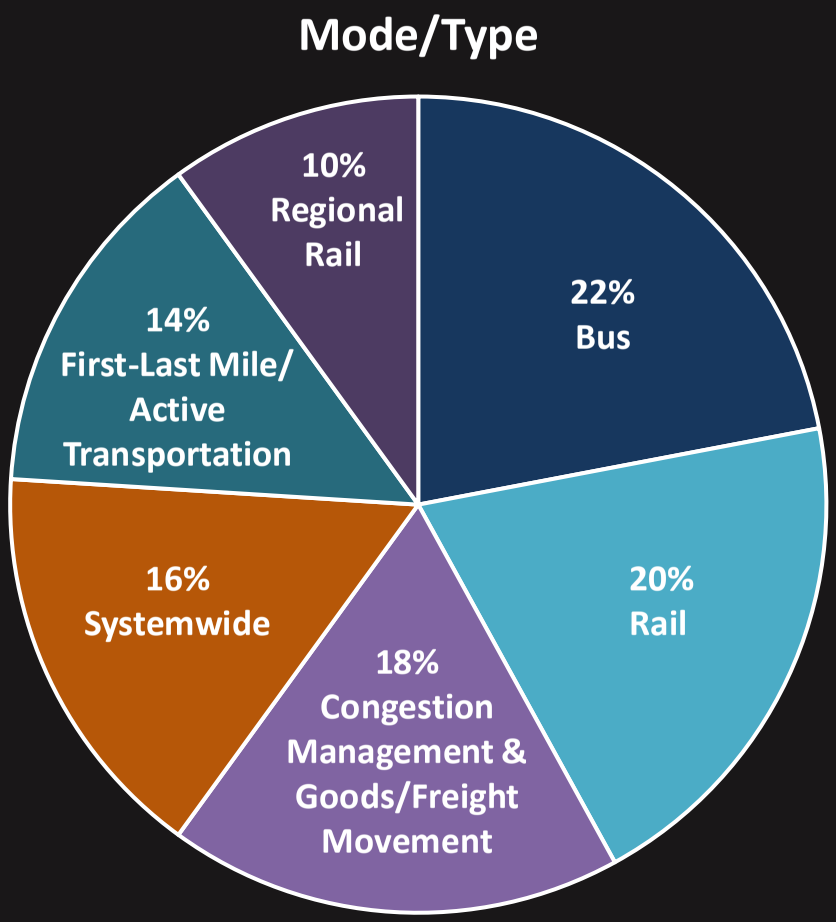
$10.9B total cost

$9.7B funding gap

Metro

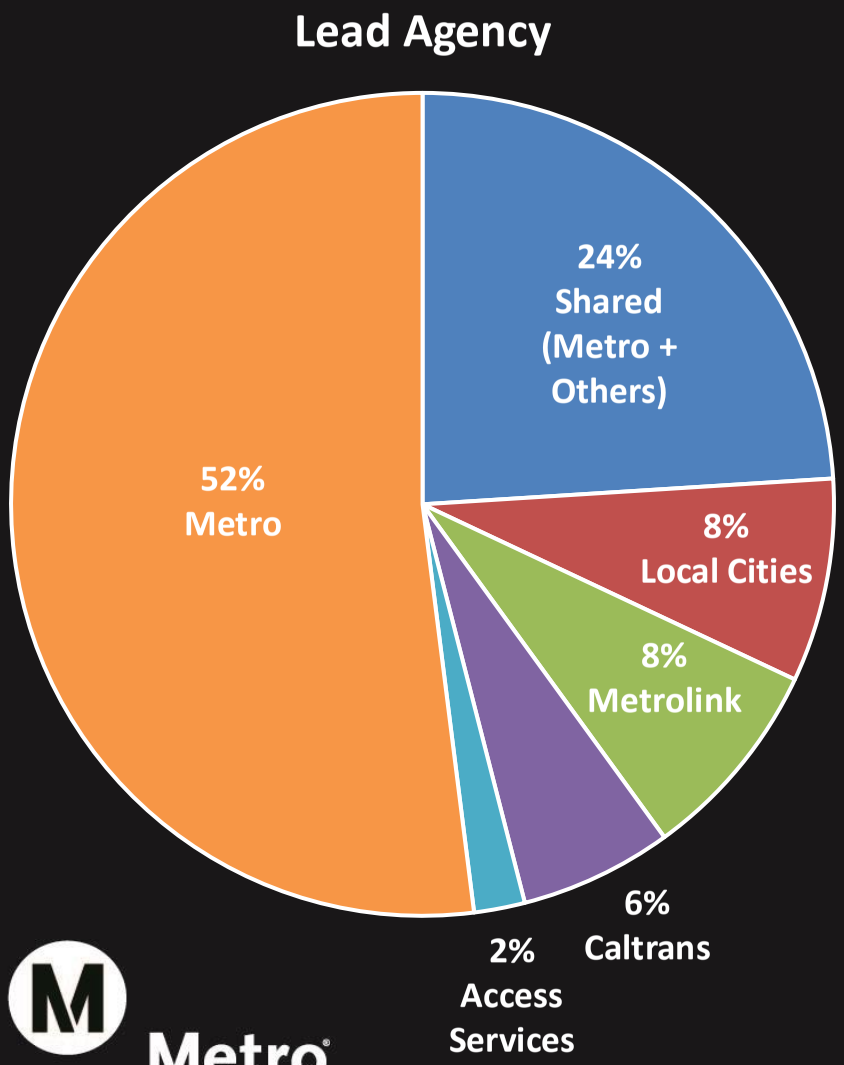
2022 Prioritized MCP Project List





Metro

2022 Prioritized MCP Project List



Equity Considerations

90% of LA County venues are within or near EFCs

92% of projects are located within EFCs

$320M specifically allocated for accessibility improvements

RR	Rosecrans/Marquardt Avenue Grade Separation	$175,000,000	2025

Next Steps

- **2022 Prioritized MCP Project List**
  - Submit Board approved project list to the Games Mobility Executives (GME)
  - GME to review list and determine which projects to jointly seek funding
  - Metro will seek funding for projects not selected for GME advocacy separately

Metro

SUMMARY

This report focuses on alternative connections that directly link Dodger Stadium and the planned Pasadena Line Rail Transit Station near the intersection of College and Spring Streets in Chinatown. Two key factors in the consideration of any such connection are: 1) steep grades surrounding the bluff top parking areas of Dodger Stadium and 2) the infrequent but high crowd peaking that occurs at major events.

Dodger Stadium is located on a bluff top that is elevated more than 200 feet above the Pasadena Rail Transit Line. Any connector option would need to be able to handle this steep grade. Secondly, before and after events at Dodger Stadium, large numbers of people entering and exiting the parking facilities cause congestion and delay for attendees. Any transit technology must accomodate a peak loading phenomenon where up to 56,000 persons enter or leave the Stadium within a brief period of time before or after events.

Because of these factors, the access study identified a selected group of representative route and technology alternatives that could function over a short (approximately one mile) route in which elevation changes of 225-275 feet are encountered. The technologies examined include shuttle buses, automated guideway transit, light rail transit, gondola tramways, walkways and escalators. Furthermore, each of the connector alternatives was developed with the goal of supporting economic development potential in and around the future Chinatown Rail Transit Station.

As shown on Table 1, the connector alternatives with the greatest system capacities are the automated guideway transit (AGT) and light rail alternatives. These alternatives could provide a maximum capacity of 18,000 passengers per hour for an AGT system such as a six-car monorail train or 14,000 passengers/hour for a 3-car LRT train. This represents approximately 25-30% of a sold out event exiting Dodger Stadium. Total travel time to College Street Station would be 3 minutes for AGT and 7 minutes for LRT. Waiting time following events at Dodger Stadium could add up to 18 minutes to these travel times. Costs for a light AGT system are estimated at $20-25 million. Costs for grade separated LRT are estimated at $50-55 million.

A gondola tramway alternative offered the lowest capacity of the technologies considered. Systems similar to the Palm

Springs Aerial Tranmway could carry up to 2,800 passengers/hour over the Dodger Stadium route. Travel time from Dodger Stadium to College Street Station would necessarily involve long waiting times during peak events due to the lower system capacities of gondola tramways. An average travel time following a Dodger game, including waiting time, would be well over one hour. Costs for a gondola tram system would be $12-15 million.

Shuttle buses, running as an extension of RTD and DASH systems, could provide a peak event capacity of 7,200 passengers/hour, assuming 30 second headways. Travel time to College Street Station would be 10 minutes, although waiting time following events at Dodger Stadium could add up to 33 minutes to trip time. Capital costs would be minimal, as existing RTD buses could be dispatched from the Downtown Central Bus Facility for Dodger Stadium events which generally occur outside of rush hour periods.

Pedestrian improvements, including escalators from the blufftop parking lots of Dodger Stadium to an existing pedestrian overcrossing of the Pasadena Freeway, could be linked to the College Street Station via pedestrian walkways. Capacities for a double-escalator, double-walkway configuration would be 16,000 persons/hour, or 29% of a sold out event at Dodger Stadium. The major advantage of this system is that there would be very little waiting for an escalator before or after an event, and walking time compares favorably with other technologies when waiting times are accounted for. Costs for this alternative would be $2 to 5 million.

A more detailed description of the alternatives is provided beginning on page 7 of this document. A more detailed comparison of the alternatives is provided beginning on page 25.

Route	Dodger Stadium Mode/Assumptions	Peak Exiting Capacity persons/hour* (% of Dodger Stadium capacity)	Exiting, Boarding, & Travel Time to Pasadena Line**	Route Length* (1-way: Stadium Mid-Station to Pasadena Line)	Order of Magnitude Costs	Notes
A	**Shuttle Bus** • DASH or RTD extension • 60 persons / bus • 30-second headway	7,200 / hour (13% of capacity)	43 minutes	A1 = 7,500' (1.4 miles) A2 = 8,500' (1.6 miles) A3 = 9,500' (1.8 miles)	minimal capital costs	Assumes use of RTD & DASH buses, personnel and maintenance facilities.
B	**AGT Shuttle** • grade separated • double guideway • 90-second headway • 6-car trains	18,000 / hour (32% of capacity)	17 minutes	B1 = 4,400' (.83 miles) B2 = 4,300' (.81 miles)	$20-25*** million	B1 requires guideway construction to flatten grades at freeway crossing.
C	**LRT Spur** • grade separated • double guideway • 3-minute headway • 3-car trains	14,000 / hour (25% of capacity)	25 minutes	7,500' (1.4 miles)	$50-55*** million	Some grading required to flatten grades along Stadium Way South.
D	**Gondola Tram** • 2 125-passenger cars	2,800 / hour (5% of capacity)	92 minutes	2,800' (.53 miles)	$12-15 million	Roosevelt Island Aerial Tramway costs escalated from 1975 costs of $6.25 million. The length of the Roosevelt Island tramway is 3,100 feet.
E	**Escalator/Walkway**	Escalator: 16,000 / hour (29% of capacity) Escalator + Stairway: 24,000 / hour (43% of capacity)	23 minutes	600' (escalator) 4,500' (.85 miles) (stadium to station)	$2-5 million	Length of escalator is 600 feet with 200 feet of elevation gain.

* See Chapter 2.0 for discussion of technology, capacity, and route length assumptions.

** Total time to move more than 4,000 riders from Dodger Stadium to Pasadena Line following an event. (See Table 3, Section 3.2 for discussion of exiting, boarding and travel times.)

*** Costs are typical per mile costs for aerial guideway systems. Costs are not included for stations, rail maintenance and storage. Such capital costs should be considered order-of-magnitude costs for initial comparison of alternatives only. Further engineering and route refinement study is required for more detailed cost estimates.

1.0 *PURPOSE AND NEED FOR THE PROJECT*

1.1 PROJECT BACKGROUND

Dodger Stadium is a nationally known 56,000 seat baseball and multi-function sports, concert and outdoor exhibition facility located in Chavez Ravine north of Downtown Los Angeles. The Stadium was opened in 1962, to provide a new home for the Los Angeles Dodgers baseball franchise, which had recently relocated to Los Angeles from New York and had been temporarily playing in the Los Angeles Memorial Coliseum at Exposition Park. Dodger Stadium plays host to at least 81 major league baseball games per year between April and October as well as numerous concerts and exposition events. Recent events, in addition to baseball, have included a rock concert by David Bowie, religious gatherings, and a Recreational Vehicle & Boat Show. Annual attendance for baseball is greater than 2 million spectators.

As shown in Figure 1, Dodger Stadium is located on a blufftop overlooking Downtown Los Angeles and is well served by highways (Pasadena, Hollywood and Golden State Freeways) and arterial roadways (Stadium Way, Academy Road). During events at the Stadium, the public is directed into parking lots at five different access points. Parking is provided for upwards of 20,000 vehicles in parking lots surrounding the Stadium.[1] Additionally, charter bus parking is provided at a central location within the parking lot area.

[1] Estimate is based upon ±175 acres of surface parking at 350 sq. ft./ vehicle.

GANNETT FLEMING

Transit service in the vicinity of Dodger Stadium is provided by SCRTD via surface bus routes in Chinatown and Elysian Park. As shown in Figure 2, this service is supplemented by DASH service (Downtown Area Shuttle) and three new rail transit projects scheduled for completion between 1990 and 1998.

Dodger Stadium is located one mile west of the adopted route of the Pasadena Light Rail Line. This project is scheduled for completion in 1998 with a station to be located in Chinatown, near the intersection of Spring Street and College Street. Since a Dodger Stadium Station was not possible along the Pasadena Line route, alternative means of connecting Dodger Stadium to the future Pasadena Line rail transit station have been analyzed in this report. In addition, the Metro Red Line, serving LA Union Passenger Terminal (LAUPT), Civic Center, 5th & Hill, 7th & Flower, and Wilshire & Alvarado is scheduled to open in 1993. Metro Blue Line service between Downtown Los Angeles and Downtown Long Beach opened for service in July 1990. RTD has recently commenced service on Line #635, which provides service between the Metro Blue Line Pico Station and Dodger Stadium. Direct connection by RTD buses is provided starting 2 1/2 hours prior to each game and 15 minutes following the end of a game.

DASH service has been expanded in the downtown area with two routes. Route B presently runs along Hill Street and North Broadway in the vicinity of Dodger Stadium.

Providing transit access to persons attending events at Dodger Stadium will be the primary purpose of the Dodger Stadium Connector. The connector would ease traffic congestion before and after events at the Stadium and could attract additional attendance to these events by providing convenient access from Chinatown, downtown and the rest of the metropolitan region for those who cannot or do not wish to drive to the ballpark.

GANNETT FLEMING

1.2 PROJECT ALTERNATIVES

A major constraint to the provision of transit service to Dodger Stadium is the hilly terrain surrounding the Stadium blufftop location. Dodger Stadium is located between 200-300 feet above the surrounding urbanized areas, and any connector route would need to negotiate the steep slopes on the south and east faces of the blufftop parking area. Several alternative routes and technologies were examined to determine their ability to serve as transit connectors between the Dodger Stadium and the Pasadena Line. As shown in Figure 3, five generic profile and technology options were identified for study:

Route A
Shuttle Bus Service: An at-grade bus shuttle that would provide service between the College & Spring Station and the loop road of the Dodger Stadium parking lots. Service would either be direct from downtown via DASH, or via the College & Spring Station where transit riders would change from LRT to shuttle buses.

Route B
AGT Shuttle: An automated guideway transit shuttle that would provide service between the College & Spring Station and Dodger Stadium via either Bernard Street or Cottage Home Street and Stadium Way East.

Route C
LRT Spur: An elevated spur track from the Pasadena Line that would allow LRT trains to be diverted from the Pasadena line in the vicinity of the College & Spring Station to provide service to a Dodger Stadium Station via an elevated guideway along Bernard Street and Stadium Way South.

Route D
Gondola Tramway: Similar to the Palm Springs Aerial Tramway, this alternative would utilize an aerial cablecar system that would travel from the future Central City North Area, via Radio Tower Hill in Elysian Park, to Dodger Stadium. Such a transit mode would tend to serve as a visitor attraction in itself because of views of downtown Los Angeles, Dodger Stadium and Elysian Park.

Route E
Escalator: A pedestrian connection from the College & Spring Station through Chinatown and above the Pasadena Freeway to an escalator and/or stairway that would provide vertical connection to the Dodger Stadium blufftop parking lots.

2.0 *ROUTE AND TECHNOLOGY ALTERNATIVES*

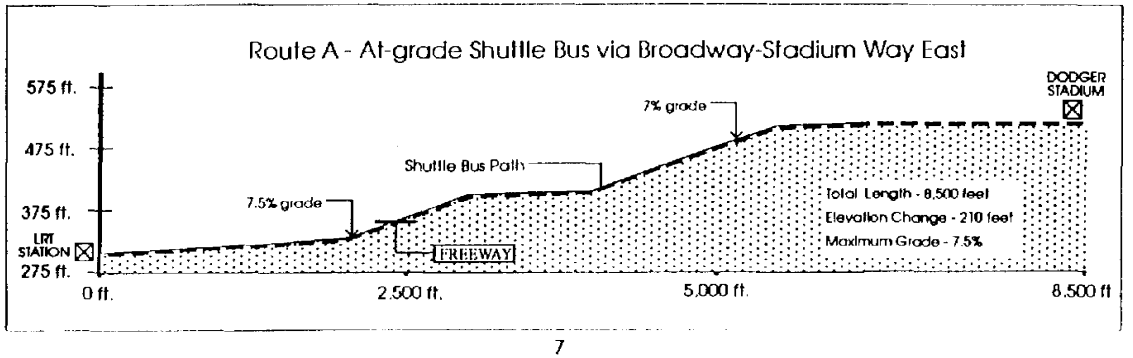
2.1 ALTERNATIVE A SHUTTLE BUS CONNECTORS

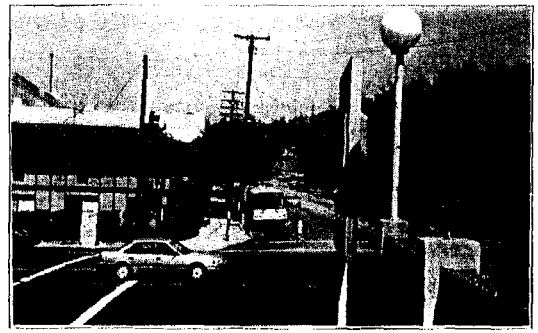
Shuttle bus service is currently provided from downtown Los Angeles to North Broadway and Hill Streets near Dodger Stadium via LA Department of Transportation DASH buses. These buses run approximately every ten minutes (more frequently in the midday hours) from 6:30am to 6:30pm Monday-Friday, and every 15 minutes from 10:00am to 5:00pm on Saturdays. The DASH shuttle fare is 25 cents. These buses run north bound on North Broadway, turn west on College Street to Hill, travel north on Hill to Bernard Street which is the end of the line. After layover along Bernard Street, DASH buses return to downtown via North Broadway.

As shown in Figure 4, extension of DASH shuttle service to include Dodger Stadium would be possible via a loop that would proceed up College Street to Stadium Way South, along the ring road of the Dodger Stadium parking area and back down Stadium Way East to North Broadway. Such a loop could provide service from the proposed College Street LRT Station on the Pasadena Line as well as direct service from downtown. During peak traffic periods at Dodger Stadium an alternate route down the hill could be utilized along Solano Avenue that would avoid heavy traffic congestion at Stadium Way East.

The one-way route length to the mid-point of the loop roadway is 7,500 feet via Stadium Way South, 8,500 feet via Stadium Way East and 9,500 feet via Solano Avenue. The steepest grades occur along the Stadium Way East segment where maximum grades of 7%-8% exist.

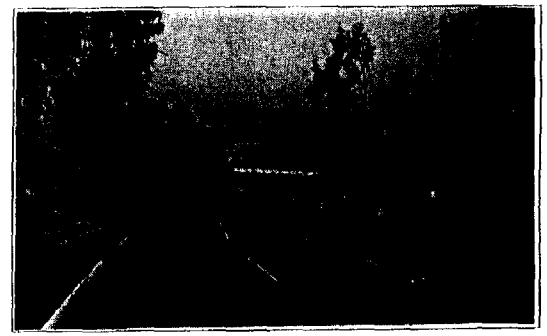
DASH Shuttle:
City Department of Transportation shuttles have been very successful in providing service to Downtown Los Angeles and other areas of the City.





North Broadway at Bernard Street:
DASH Shuttles currently layover on Bernard Street between North Broadway and Hill Streets.

Stadium Way East crossing of Pasadena Freeway:
Access to Dodger Stadium is currently provided via Stadium Way East. This view shows the undercrossing of the Pasadena Freeway.



Dodger Stadium principal entrance on Stadium Way East:
The principal entrance to Dodger Stadium is from the east at the Pasadena Freeway. Direct freeway ramps converge on this entry which is heavily used during the periods immediately before and after stadium events. The high-rise structures of downtown Los Angeles are seen at the upper center of this photo.

Dodger Stadium from parking lot #32:
Terraced parking is provided along a circular ring road surrounding Dodger Stadium. Transit buses could pick up/discharge passengers along this ring road, or conversely, a single transit stop could be provided at a central location in the parking area.

TRANSIT
ACCESS STUDY

LOS ANGELES COUNTY
TRANSPORTATION COMMISSION

•

GRUEN ASSOCIATES

•

GANNETT FLEMING

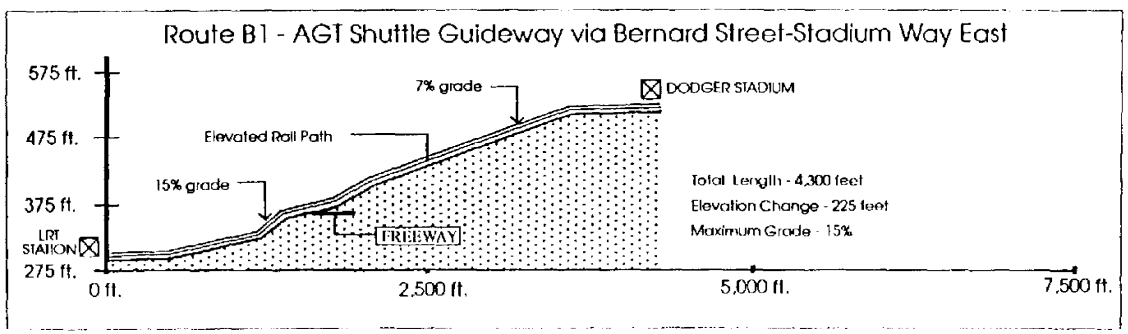
2.2 ALTERNATIVE B
AGT SHUTTLE

The most direct connector alternative between the Pasadena Line and Dodger Stadium would be via an Automated Guideway Shuttle that would run back and forth along Stadium Way East from the future College Street Rail Transit Station to Dodger Stadium.

Various types of AGT technologies are possible for this route including monorail systems, rubber tired people mover, and steel-wheel systems. A discussion of the various AGT technologies is included in Chapter 3 of this report. As shown in Figure 5, two alternative routes are possible; B1) from the College & Spring Street Station along Bernard Street to cross above the Pasadena Freeway, along the edge of Stadium Way East to Dodger Stadium; or B2) from the College Street Station along Cottage Home Street to cross above the Pasadena Freeway, along the edge of Stadium Way East to Dodger Stadium. Once inside the Dodger Stadium parking area, the AGT line would run along the loop roadway with several station stops to allow pick-up and drop-off.

Because of steep slopes along Stadium Way East, light rail transit technology, which is being used on the Pasadena Rail Line, could not be used for this route. Maximum grades for light rail are approximately 6% and grades below Dodger Stadium on this route exceed 7%. Other technologies however, such as certain types of monorail can accommodate steeper grades than light rail technology and would therefore be more appropriate if this route were selected. Light

AGT Shuttle:
The Disneyworld monorail in Orlando, Florida is a type of AGT technology that provides shuttle service between hotels and activity centers within the amusement park.



Note:
Smoothing of grades to reduce slopes for alternative B1 to less than 15% would result in a relatively high guideway structure on Bernard Street.

monorail and other AGT technologies can generally handle grades of up to 8%-10%, which would make it possible to climb the 225 feet from the College & Spring Street Station to Dodger Stadium over the 4,300 foot length of this route. Mag-lev technology, such as the M-Bahn, Magnetic Transit of America prototype vehicle, can handle slopes of up to 10%, although practical applications of this technology have not been made to date.

Under this alternative, the guideway would be totally grade-separated. The columns could be placed either in the middle or on the side of the street and would displace at least one traffic or parking lane from the street. Conversely, straddle bents would be utilized as the guideway support with no traffic lanes taken, but property displacements would occur on both sides of the street. The crossing of the Pasadena Freeway would require that columns be strategically placed resulting in a relatively high structure above the Chinatown segment of the route. Route B2 is slightly shorter and more direct than Route B1, however Route B2 is adjacent to Cathedral High School and numerous residential structures. Route B1 is slightly longer, however adjacent properties along Bernard Street are generally vacant or used for commercial purposes.

Route B1: This view looks west from North Broadway along Bernard Street. An elevated guideway would run along the center or side of Bernard Street where it would turn to the right to cross above the Pasadena Freeway. The bluff top parking lots of Dodger Stadium can be seen in the upper right of the photo.

Route B1:
At the intersection of Bernard Street and the Pasadena Freeway, the elevated guideway would turn to follow the northbound Dodger Stadium off-ramp, seen at the right of the photo. The guideway would climb at a 6% to 10% grade in order to gain 225 feet of elevation between North Broadway and Dodger Stadium.

Route B2:
This view looks toward Dodger Stadium from North Broadway along Cottage Home Street. The northbound Dodger Stadium off-ramp from the Pasadena Freeway can be seen against the bluff backdrop. An elevated guideway would run along the center or side of Cottage Home Street and would turn to the right to follow the freeway off-ramp up to Dodger Stadium.

At the intersection of Cottage Home Street and the Pasadena Freeway the elevated guideway would cross over the Pasadena Freeway (seen in the center of this photo) and join the northbound off-ramp, at the left of the photo.

FIGURE 6

ALTERNATIVE C
LRT SPUR

DODGER STADIUM
TRANSIT
ACCESS STUDY

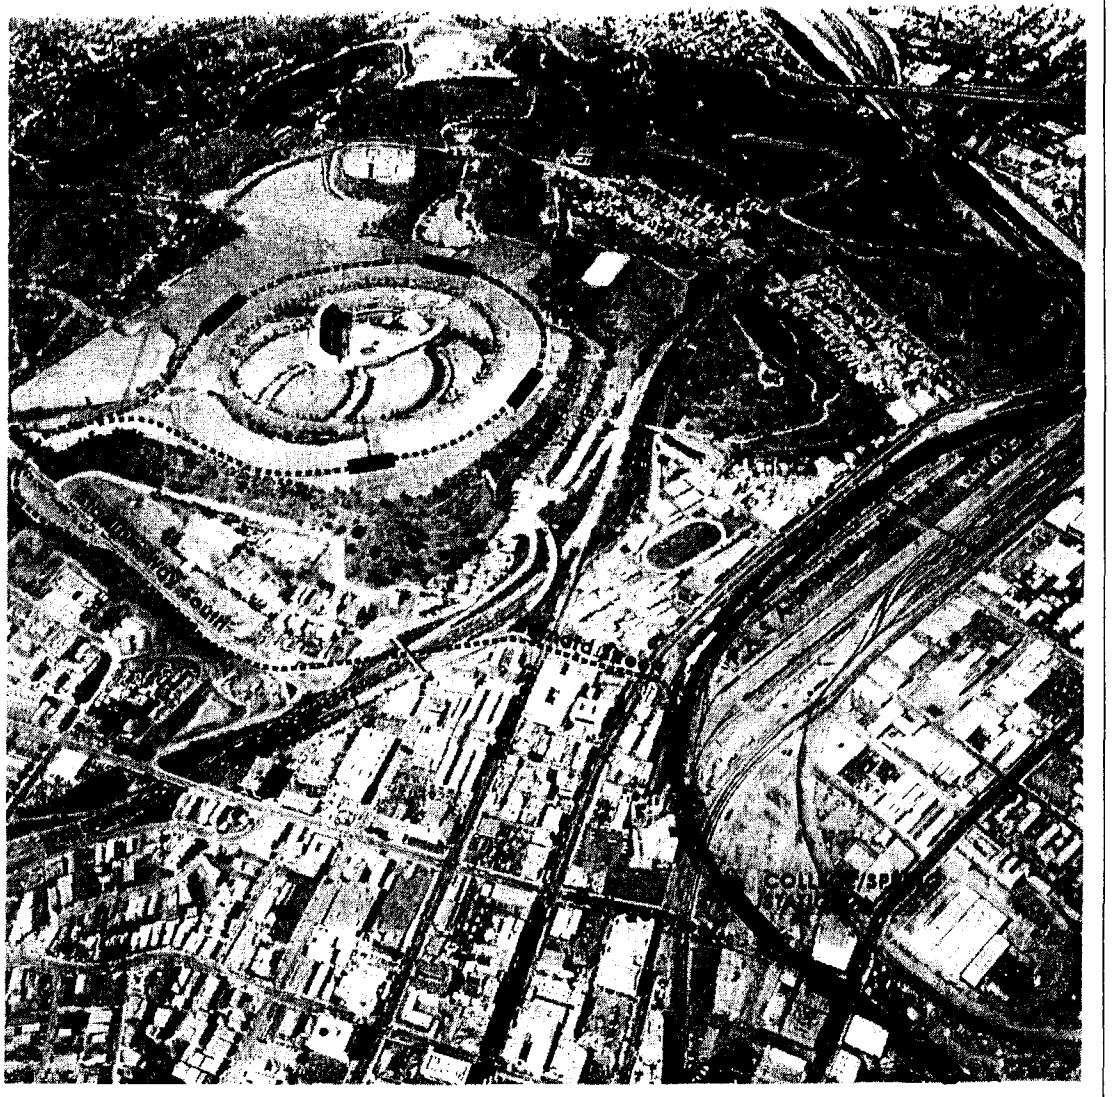
LOS ANGELES COUNTY
TRANSPORTATION COMMISSION

•

GRUEN ASSOCIATES

•

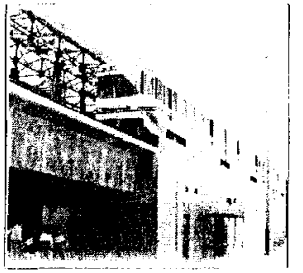
GANNETT FLEMING



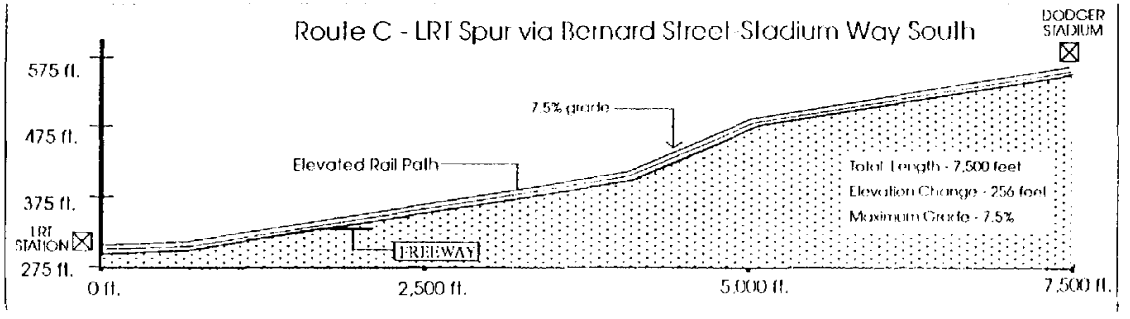
2.3 ALTERNATIVE C
LRT SPUR

A spur track from the Pasadena Line would be possible to serve Dodger Stadium. As shown in Figure 6, such a spur track would branch north of College Street to cross above North Broadway and run along Bernard Street. At the Pasadena Freeway, a long-span structure would be required. The aerial guideway would climb along the south side of Stadium Way South. Near the Sunset Boulevard entrance to Dodger Stadium, the structure would curve along the backside of the south parking lot and cross over Stadium Way obliquely, crossing into the Dodger Stadium parking area. Once inside the Dodger Stadium parking area, the LRT spur line would run along the loop roadway with several station stops to allow pick-up and drop-off.

At 7,500 feet in length, this alternative is among the longest of the alternatives considered in this report. The greater length is necessary to accommodate the climbing characteristics of light rail technology. While this greater length adds to costs for this alternative, the use of the same technology as is being used on the Pasadena Rail Transit Project provides efficiencies in the service and maintenance of vehicles. Additionally, operational flexibility is afforded whereby extra trains could be added to serve special events at Dodger Stadium. It would even be possible for special "express" trains to run directly to Dodger Stadium from various parts of the rail network.

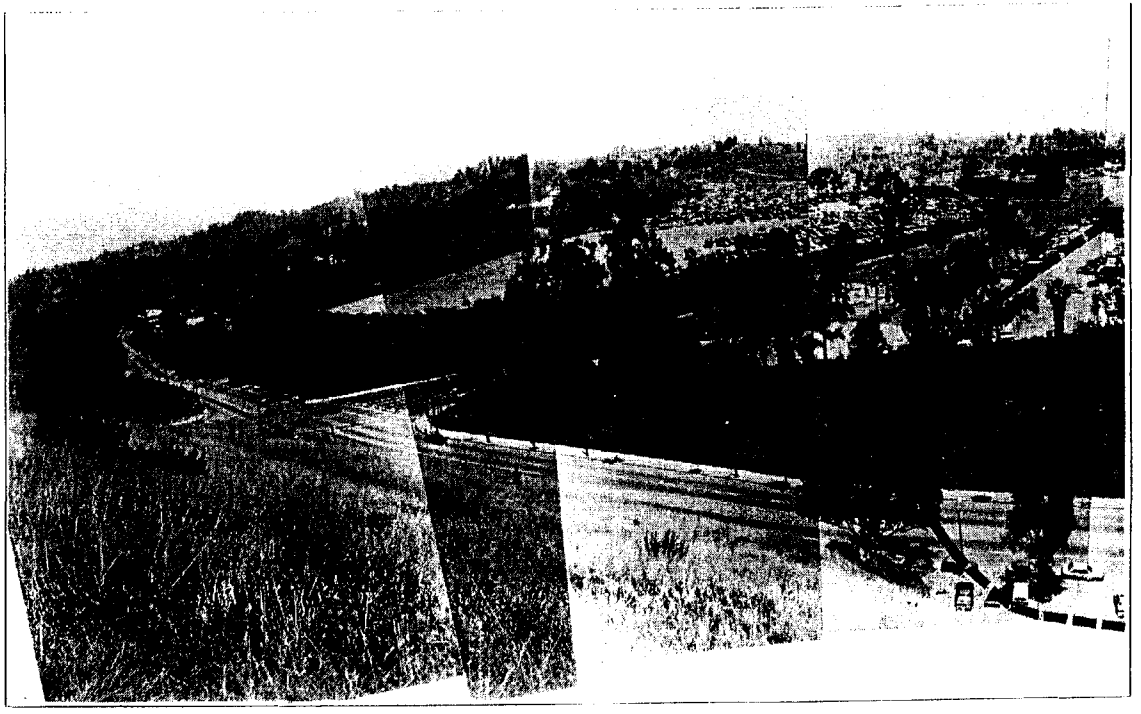


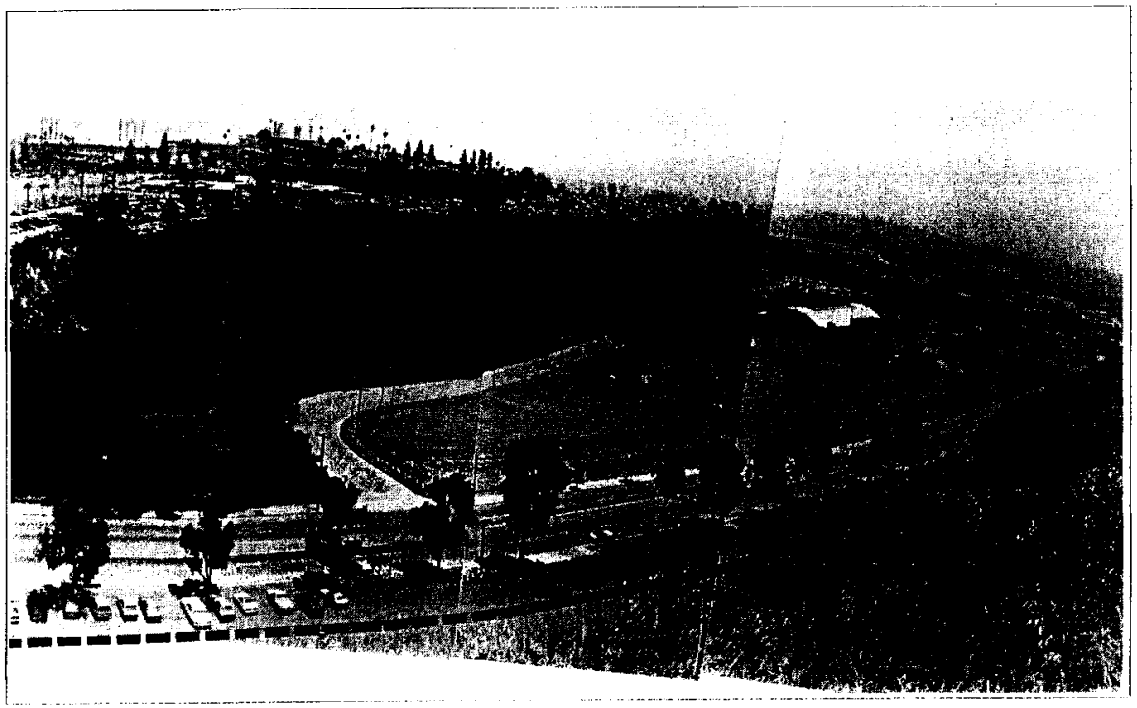
LRT Spur:
The Metro Blue Line which currently runs between Downtown Los Angeles and Long Beach has several grade separated stations and street crossings. Such grade-separation would be necessary along a spur track serving Dodger Stadium.



Note:
LRT technology can handle maximum slopes up to 6%. Therefore, some slope modifications would be required to maintain a constant grade of less than 6%.

Route C:
This view looks north at Dodger Stadium from the adjacent bluffs along Figueroa Terrace. Stadium Way West climbs toward the Stadium from the right of the photo where it passes the US Naval Armory complex and the Dodger Stadium ticket office.





Route C:
At the left of the photo, the Sunset Boulevard entrance to the Stadium parking lots can be seen. Route C would follow Stadium Way and would cross above the street to enter the Stadium parking lots.

GONDOLA TRAM

DODGER STADIUM
TRANSIT
ACCESS STUDY

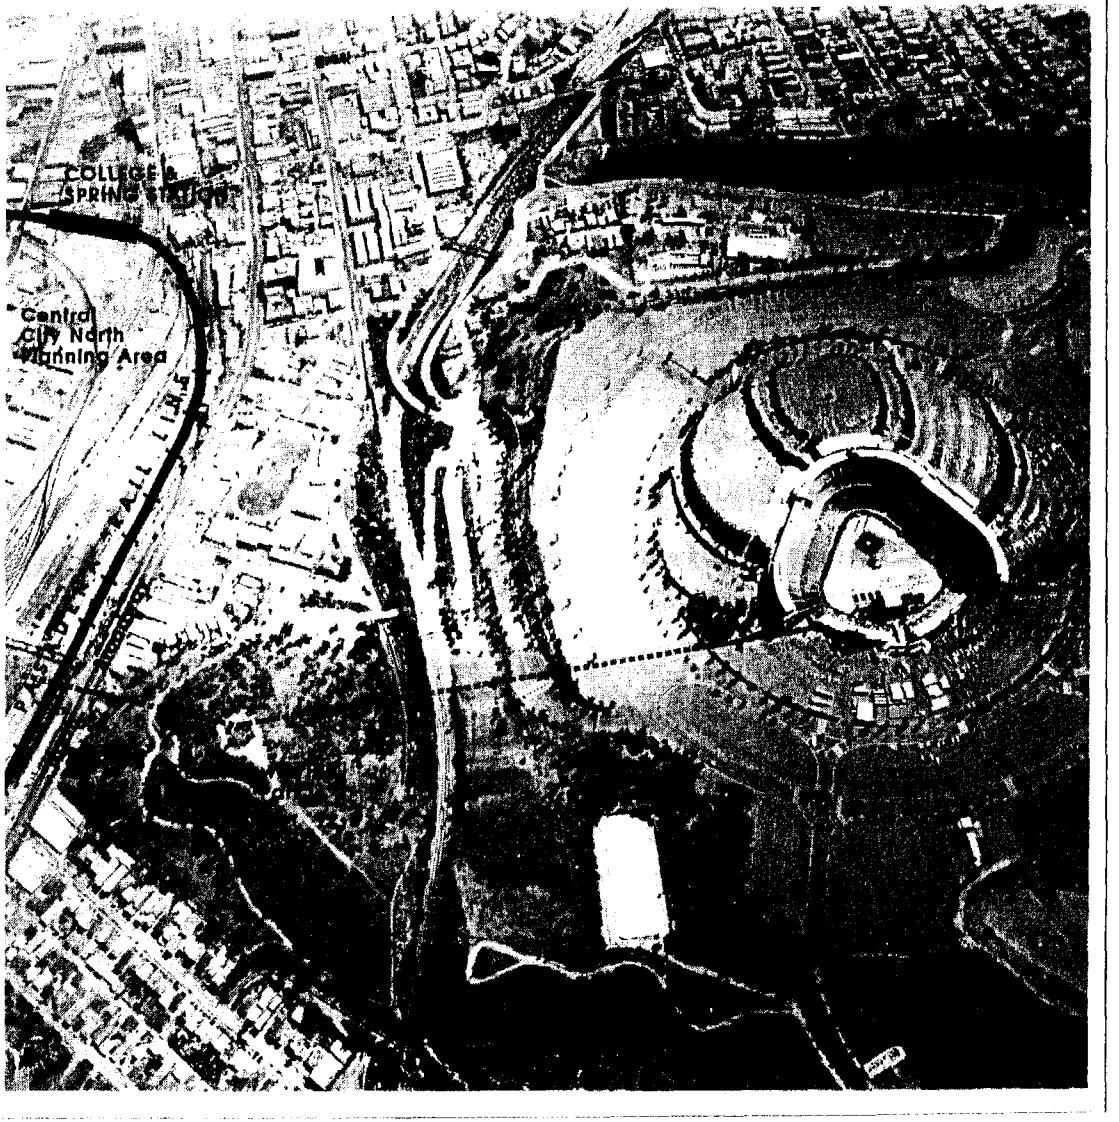
LOS ANGELES COUNTY
TRANSPORTATION COMMISSION

•

GRUEN ASSOCIATES

•

GANNETT FLEMING

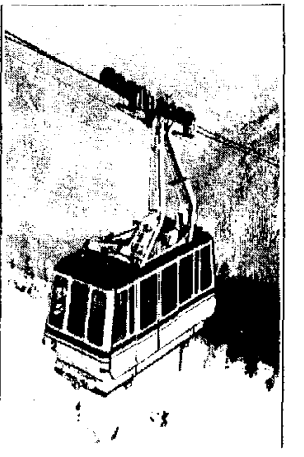


2.4 ALTERNATIVE D
GONDOLA TRAM

The City of Los Angeles Planning Department has identified major re-use potential in the "Cornfield" railroad storage yards adjacent to North Broadway, along the route of the planned Pasadena Rail Transit Project. As a part of initial planning for redevelopment of this area, conceptual sketches illustrating possible future scenarios for the area show a gondola tramway connecting the heart of this redeveloped area to Dodger Stadium.

As shown in Figure 7, such a tramway could run from a central location in the planned Central City North Development Area to the top of Radio Tower Hill in Elysian Park, and then across the valley formed between Radio Tower Hill and the bluffs of the Dodger Stadium Parking area. A mid-station stop at Radio Tower Hill would open up this little used portion of Elysian Park to greater public use and at the same time, provide a scenic view point, picnic and recreation area. The closest application of a technology such as this in Southern California is the Palm Springs Aerial Tramway at Mt. San Jacinto. This system utilizes cable cars accommodating up to 80 persons and move up to 400 persons per hour to the top of a 6,000 foot incline. A more urban application of this technology is the Roosevelt Island Aerial Tramway in New York City. This system was constructed in 1976 and moves 1,500 persons per hour between midtown Manhattan and Roosevelt Island in the middle of the East River. Many ski resorts utilize smaller, 4-8 person gondola cars than run in a continuous series. Systems such as the 8 person gondola at Steamboat Springs, Colorado can accommodate up to 2,800 persons per hour.

Two obvious problems are: 1) accessibil-



Gondola Tramway. *Ski resort technology has been adopted to amusement park and urban applications such as the Palm Springs Aerial Tramway and the Roosevelt Island Aerial Tramway in New York City.*

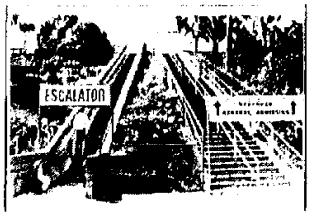
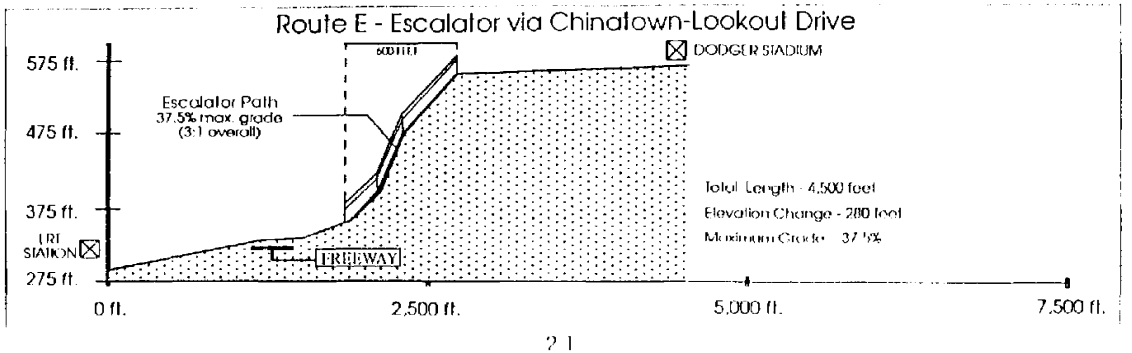
lity to the individual tower support locations, and 2) whether the soil bearing capacity and friction resistance will be great enough to support the tower foundations. Several towers and foundations will be required. Also, the structure at the beginning of the aerial tramway located in the existing rail yard will have to be a sizeable structure in itself to keep the maximum climbing grades to a minimum and provide adequate clearance over North Broadway. In order for this technology alternative to connect directly to the Pasadena-Los Angeles Rail Transit Project, a new station would need to be provided in the vicinity of North Broadway and the foot of Radio Tower Hill.

2.5 ALTERNATIVE E ESCALATOR /WALKWAY

Before and after events at Dodger Stadium, large numbers of people entering and exiting the parking facilities cause congestion and delay for attendees. A drawback with any transit technology is this peak loading phenomenon whereby up to 56,000 persons seek to enter or leave Dodger Stadium within a brief period of time before or after events. Any technology used will develop queues with people waiting to board trains, buses, or simply exit the parking lot in their cars. Because of this waiting time, many attendees would prefer to walk some distance rather than wait in lines. Because it is less than one mile from Dodger Stadium to the College Street Rail Transit Station, many people could reach the station on foot following major events faster than they could be conveyed by transit. For these reasons, this alternative provides high-capacity vertical circulation to assist pedestrians with the 280 foot grade change between Dodger Stadium and the Pasadena Line Station.



Dodger Stadium Escalator:
Escalators are presently used at Dodger Stadium to transport fans from different levels of the terraced parking lots. Additional use of such escalators would provide a high-capacity pedestrian route between the Pasadena Rail Line and Dodger Stadium.



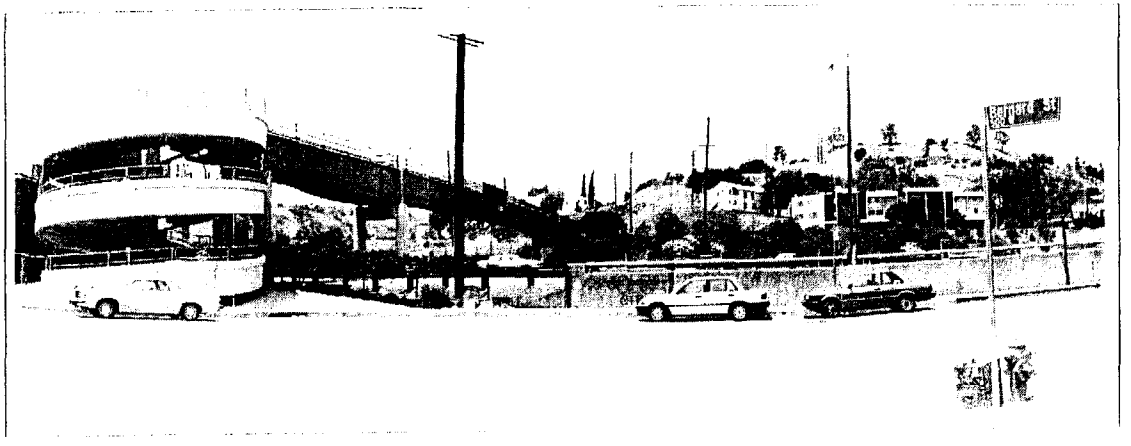
but allows them to walk or be conveyed on elevated moving walkways for the remainder of the route.

As shown in Figure 8, an existing pedestrian overpass above the Pasadena Freeway is provided at Bernard Street. It is less than 800 feet from this pedestrian bridge to the blufftop edge of Dodger Stadium parking lot #32, however there is a 200' rise in elevation over this same distance. Similar to the historic Angel's Flight inclined railway, an inclined escalator could provide automated pedestrian transport over this distance. Two 48" wide escalators would have a peak capacity of over 16,000 persons per hour. There is also very little waiting with this technology, thus allowing crowds to disperse quickly following events. At the foot of the Dodger Stadium hill, pedestrians would have a choice of routes between the pedestrian overcrossing and the College Street Rail Transit Station. An elevated walkway above Bernard Street could provide a automated walkway connecting directly to the rail transit station. Conversely, pedestrians could be directed through Chinatown where numerous restaurants, shops and pedestrian ammenities are provided. A further option would be to take a DASH shuttle from this point directly to downtown.

The total length from Dodger Stadium to the College Street Station would be 4,500 feet under this alternative, with an average walking time of 13 minutes. This is comparable to other alternatives such as LRT and AGT where waiting times during peak periods increase travel time. Also, passenger waiting following a game is

Perhaps the best views of downtown Los Angeles are to be had from Dodger Stadium. This view looks south from the edge of the blufftop parking lots, across the Pasadena Freeway and the existing pedestrian overcrossing, toward Chinatown and the Civic Center area. Alternative Route E would provide access up this hillside from the pedestrian overcrossing to allow pedestrian access from DASH shuttles and the Pasadena Line.

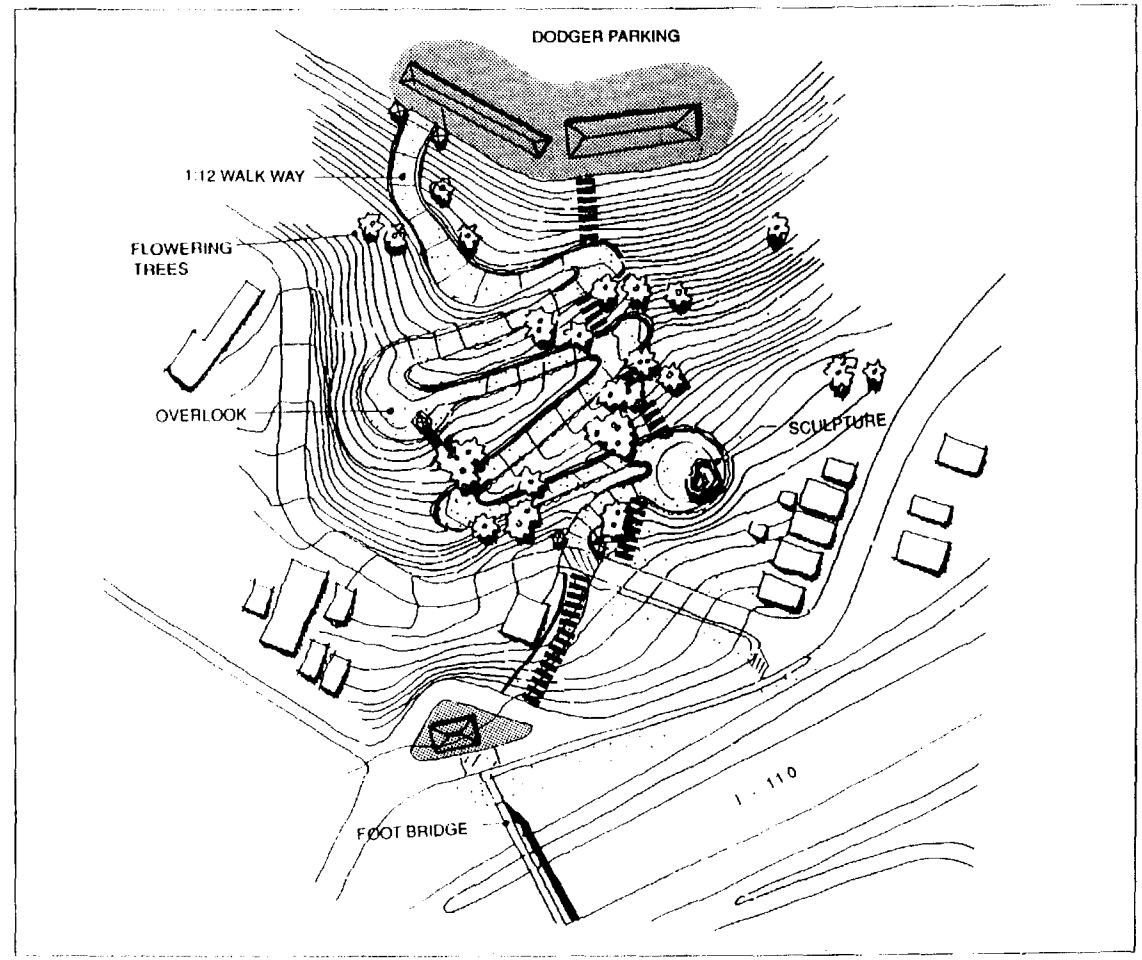
psychologically perceived as being three to four times longer than actual waiting time.



The existing Bernard Street pedestrian overcrossing of the Pasadena Freeway is seen in this view. The overcrossing could be improved to provide a better, more interesting walking environment that would connect to an escalator/parkway connection to Dodger Stadium on the opposite side of the Pasadena Freeway. The bluttop Dodger Stadium parking lots are seen at the upper right of the photo.

Route E:

From the pedestrian overcrossing of the Pasadena Freeway, an escalator similar to Angel's Flight on Bunker Hill could provide pedestrian access to the Dodger Stadium blufftop parking lots. A park-like landscaping theme would provide a walkway up the hill. Such a walkway could be designed with rest areas at viewpoints and picnic areas that could be used prior to Stadium events. The walkway shown has been designed to maintain handicapped-accessible slopes.



KEY

Escalators / Stairways

3.0 *DEVELOPMENT AND INITIAL SCREENING OF ALTERNATIVES*

The previous chapter described a selected group of technologies that can provide automated transit connection between Dodger Stadium and the planned Pasadena Rail Line. The alternatives presented were chosen to represent a range of possible solutions. This chapter broadens the discussion to discuss a family of transit technologies that would be possible to evaluate in future route refinement, environmental and engineering studies. The chapter also provides additional discussion of the key factors affecting the selection of a technology to serve Dodger Stadium.

3.1 TOPOGRAPHIC CONSTRAINTS & DOWNTOWN CONNECTION COMPATIBILITY

Perhaps the key factor in the selection of a technology to serve Dodger Stadium are the steep slopes surrounding the Dodger Stadium parking lots that would eliminate many types of transit technology from consideration at the outset. Any technology to be considered for further evaluation would need to be able to climb grades in excess of 8% over the shortest and most direct route to Dodger Stadium on Stadium Way East, or over 6% for the longer, more gradual grade along Stadium Way South.

A second important consideration in the selection of any technology for further evaluation is the ability of that technology to interface with other transit systems that are existing or are being planned for the downtown area. The ability to connect Dodger Stadium to downtown Los Angeles directly has been mentioned in several planning studies dating from the Downtown People Mover in the early 1980's through current planning for the Bunker Hill Transit Tunnel/Downtown Circulator transit system. Technologies currently being evaluated for Downtown range from simple sidewalk improvements and moving sidewalk facilities, through cable driven technologies, rubber-tired automated systems (as have been used in many airports), steel-wheeled systems and advanced technology such as monorail and mag-lev systems. The following table provides a summary of the key characteristics of these systems and their general suitability to the topographic requirements of the Dodger Stadium connection.

* Capacities based on 3-minute headways for applicable technologies.

Table adapted from *Bunker Hill Transit Study; Phase 2*, LADOT, LACRA, Schimpeler-Corradino Associates/Delon Hampton & Associates, June 1990.

TABLE 2

KEY CHARACTERISTICS OF TRANSIT TECHNOLOGIES

(UNDER CONSIDERATION FOR DOWNTOWN LOS ANGELES DISTRIBUTOR SYSTEM)

Technology	Typical Capacity* (Passengers / Hour)	Maximum Speed (mph)	Maximum Grades
Moving Sidewalk / Escalator	3,000 - 10,000	2	15% (Sidewalk) 50% (Escalator)
Rubber-tired	3,000 - 15,000	30 - 50	10%
Steel Wheel / Light Rail	20,000	50	6 - 8%
Monorail: Top-Riding Underslung	7,000 - 50,000 3,000	20 - 70 20	12%
Magnetic Levitation	9,000	50	8%
Cable-Driven	100 - 20,000	15 - 20	50% +

DODGER STADIUM TRANSIT ACCESS STUDY

LOS ANGELES COUNTY TRANSPORTATION COMMISSION

•

GRUEN ASSOCIATES

•

GANNETT FLEMING

Moving Sidewalks/Escalators: Moving sidewalks are used at major airports to convey passengers between the terminal and boarding gates. They are also used at the Hollywood Bowl and at shopping centers such as the Beverly Connection in West Hollywood to convey passengers from parking areas to shopping and activity areas. Escalators are used outdoors in Downtown Los Angeles along the skybridges and plazas near Arco Plaza, the Bonaventure Hotel and the new First Interstate Tower. They are also used at many transit systems throughout the world including the future Metro Red Line stations in Downtown Los Angeles. Outside escalators are also used at Dodger Stadium to convey fans from different levels of the terraced parking facilities. Such systems operate continuously at about 2 miles per hour and because of their continuous operation, can carry large numbers of people. The actual capacity depends on the width of the walkway installed but ranges between 3,000 and 10,000 people per hour for each walkway provided. Moving sidewalks have limited applications for climbing grades with a maximum slope of about 15%. Escalators routinely handle 2:1 slopes exceeding 50%. Such a system has been identified as Route Alternative E in this study.

Rubber-Tired: Typical rubber-tired systems run on a dedicated right-of-way that is usually elevated in urban areas. Vehicles range in size from small minibus size to streetcar size and can usually be linked into trains of several cars to increase carrying capacity. The most common application to date has been at airports to serve remote terminal and boarding areas. Capacities range from 3,000 to 15,000 passengers per hour at speeds of between 30-50 mph. Such a technology could be used under the Automated Guideway Transit Alternative B in this report.

Steel Wheel Rail: Both the Metro Blue Line and Metro Red Line are steel wheel systems. The Metro Red Line is defined as a heavy-rail system utilizing large, heavy vehicles running on full weight rails. Heavy rail systems would not be appropriate to serve Dodger Stadium because of slope limitations associated with this technology. Light rail systems, such as the Metro Blue Line currently running between Downtown Los Angeles and Long Beach, have lighter vehicles and lighter weight tracks. They run at slower speeds, and are capable of negotiating tighter turns than heavy rail systems. The future Pasadena Rail Line will be such a light rail systems. Maximum climbing grades for light and heavy rail systems are about 6% for practical applications. This would preclude the use of this technology along Stadium Way East at Dodger Stadium and would necessitate the longer route along Stadium Way South described as the Route C alternative in this report.

Monorail: Southern Californians are familiar with monorail technology as one of the earliest applications was at Disneyland

in the late 1950's. Since that time, monorail technology has progressed, and although only the Seattle World Fair and DisneyWorld monorail have been built in the United States, over 40 miles of urban route service is currently in operation in Japan. This technology requires approximately 1/3 of the structure of comparable LRT and rubber-tired elevated systems because of its relative light weight. Monorails can be configured as either top-riding or underslung. Top-riding monorails usually utilize a concrete or steel box beam, with a rubber-tired vehicle riding on top and guide wheels at the sides. Underslung monorail systems are similar in appearance to ski resort cable cars, with vehicles suspended below a single slender steel track. Vehicle size can range from small "personal" vehicles through heavy rail size cars. Train capacity ranges from 7,000 to 50,000 passengers per hour at speeds ranging from 20 to 70 mph. Medium capacity monorail systems can generally climb grades of 10-12% which would make them appropriate for use at Dodger Stadium along the shortest, most direct route along Stadium Way East. Such a system would be suitable as an Automated Guideway Transit (AGT) Alternative B in this report.

Magnetic Levitation: The "M-bahn" system in Germany is currently the only application of this technology although prototype systems have been demonstrated for several years. Mag-lev technology utilizes electromagnetic resistance to hold vehicles above the guideway, thereby providing smooth, frictionless travel. Mag-levs have high speed intercity application at speeds exceeding 300 mph, but have also been demonstrated to have lower speed downtown applications, such as the Japanese HSST urban maglev system. This system can handle grades of 8% which would be marginally acceptable for the route to Dodger Stadium.

Cable Driven: Two types of cable-driven systems exist for downtown urban applications. The first type can run on steel rails, rubber tires or other support mechanism and be pulled by cable. The second type is supported by an overhead cable and also driven by cable. These systems operate at relatively low speeds of 15-20 mph and have capacities that are generally limited to between 1,000 and 4,000 passengers per hour. Very few applications of this technology exist in the United States in urban areas, although the technology has been used extensively in ski resorts and amusement parks. Applications in downtown Los Angeles are generally being considered for the Bunker Hill Transit Tunnel over a distance of less than one mile. Because of the low speed, it would be difficult to achieve any effective linkage between Dodger Stadium and downtown Los Angeles using this technology. The Gondola Tram alternative D has been included in this study to provide a comparison with the other alternatives and because of its potential application

In providing an attraction in its own right for the City North Development Area, Elysian Park and Dodger Stadium.

3.2 STADIUM EXITING, BOARDING & TRAVEL TIME

A unique feature of transit service at Dodger Stadium that would not occur to the same degree at other locations in the Downtown area, is the peak loading of any transit system that would occur following baseball games and other major events. Any technology used will develop queues with people waiting to board trains, buses or simply exit the parking lots in their cars. Table 3 presents a comparison of the technologies to determine waiting and travel times for the alternatives. In order to develop the analysis, the following assumptions were made:

• Average waiting times and travel times were developed based on the assumption that approximately 10% of an average crowd (40,000 attendees) would use transit to exit the stadium in the peak period following an event at the Stadium. This would mean that 4,000 persons would arrive and queue up at approximately the same time to board whatever mode of transit was provided. Waiting times were then calcuated based on the time that it would take each different transit mode to move 4,000 riders to the Pasadena Line Station at College and Spring Street.

• Typical transit technologies were selected to estimate system loading capacities. The following typical technologies were used:

Route A- Shuttle Bus: Standard RTD buses were assumed that can handle up to 60 persons per bus. Maximum headways of 30 seconds were assumed yielding a peak hour exiting capacity of 7,200 passengers per hour.

Route B- AGT Shuttle: A medium-capacity monorail technology was assumed. Such technologies could theoretically accommodate 90 second headways during peak periods configured in standard 6-car trains. Up to ten car trains would be possible, although such a configuration would require larger station platforms over 400 feet in length. 6-car train configurations would more closely match station platform lengths used on the Pasadena Rail Line and would accommodate up to 450 passengers per train. Boarding of 4,000 passengers would therefore require 10 trains, or 15 minutes.

Route C- LRT Spur: The light rail transit vehicle being planned for use on the Pasa-

KEY

Existing and Boarding

Travel Time

* Travel time from Dodger Stadium to Pasadena Line at 4,000 passengers.

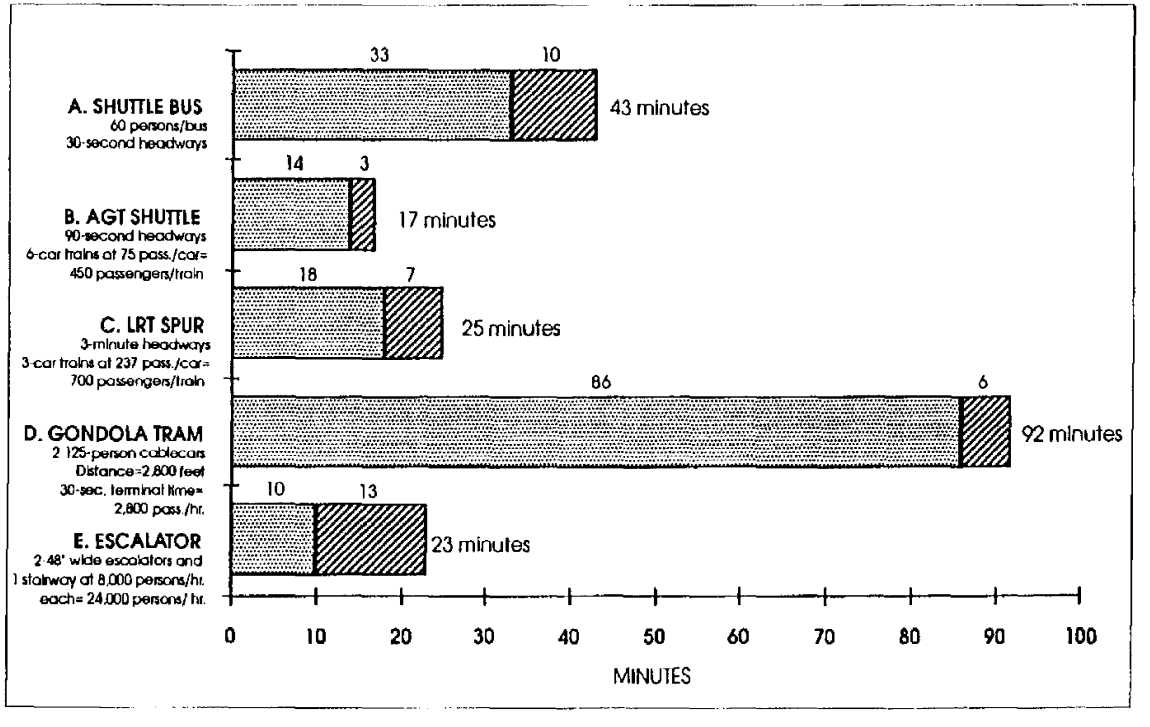


TABLE 3

BOARDING AND TRAVEL TIME BY ALTERNATIVE

DODGER STADIUM TRANSIT ACCESS STUDY

LOS ANGELES COUNTY TRANSPORTATION COMMISSION

•

GRUEN ASSOCIATES

•

GANNETT FLEMING

dena Rail Line was assumed. Such vehicles can accommodate up to 237 riders per car configured in three-car consists. At 3-minute headways, boarding of 4,000 passengers would require 6 trains, or 18 minutes.

Route D - Gondola Tram: The Roosevelt Island Aerial Tramway in New York City was used as a comparable model for the Dodger Stadium system. Roosevelt Island utilizes two cablecars that travel over a distance of 3,100 feet. The Dodger Stadium route would cover a distance of 2,800 feet under similar conditions. Capacity of the New York system is about 1,500 passengers/hour. By increasing the size of the cablecars and increasing speeds, a peak hour capacity of 2,800 persons per hour could be achieved. At this rate of boarding, it would take 86 minutes to board 4,000 passengers following an event at Dodger Stadium.

Route E - Escalator Walkway: Two 48" wide escalators would accommodate up to 8,000 passengers/hour each, or 16,000 passengers/hour total. A stairway would also be necessary that would accommodate a similar number of walkers going down the slope following an event at Dodger Stadium would increase the total capacity to 24,000 persons/hour. At this rate, 4,000 persons arriving at the top of the escalator/walkway could be accommodated in 10 minutes.

From this analysis, it can be seen that the waiting time and boarding time is more critical in the evaluation of a connector system to Dodger Stadium than the actual travel time required to cover the one mile to the College & Spring Station. The AGT shuttle is both the shortest transit route, and the one requiring the shortest wait. The Escalator/Walkway Alternative however, compares favorably with other alternatives in total travel time due to the short route length and the short waiting time involved.

3.3 ENVIRONMENTAL ISSUES

Each of the alternatives considered would have environmental impacts associated with the construction and operation of these systems. A summary of potential environmental impacts associated with each alternative includes the following:

Route A - Shuttle Bus: The provision of an increased number of shuttle buses serving Dodger Stadium would add to congestion in Downtown and Chinatown during PM peak hour periods when evening rush hour traffic overlaps with pre-game arrivals at the Stadium.

Route B - AGT Shuttle: The construction of an aerial guideway structure along either Bernard Street or Cottage Home Street would require the reconstruction and re-

configuration of a two-story parking structure located on the east side of North Broadway. The guideway structure would also require the displacement of one lane of traffic (probably a parking lane) on Bernard Street with Option B1 or Cottage Home Street with Option 2. Visual and noise impacts would be greater with Option B2 than with Option B1 due to the proximity of Cathedral High School and more residential structures along Cottage Home Street than along Bernard Street. Construction of the aerial guideway above the Pasadena Freeway could require some temporary lane closures during the construction period to allow for the placement of guideway beams. Depending upon the technology selected, and the type of grades that are possible, the height of the aerial guideway could potentially reach 30 to 40 feet in height due to clearance and grade requirements associated with the freeway crossing creating visual impacts for adjacent land uses in Chinatown.

Route C - LRT Spur: Environmental impacts of this alternative would be similar to Route B with regard to potential impacts along Bernard Street and at the crossing of the Pasadena Freeway. Additionally, this alternative would require some grading at the edge of the bluffs along Stadium Way South to allow for flattening of the grades of the LRT aerial guideway structure as it enters the Dodger Stadium parking lots.

Route D - Gondola Tram: This alternative would require the displacement of at least one home along North Broadway to allow for the cablecar right-of-way between the Central City North Development Area and Radio Tower Hill. The visual impact of the cablecars and their support towers would need to be evaluated for possible impacts to Elysian Park and adjacent residential properties on North Broadway.

Route E - Escalator Walkway: This alternative would require the displacement of one home on Lookout Drive to allow for the escalator/walkway right-of-way connection between the Dodger Stadium parking lot #32 and the pedestrian bridge crossing of the Pasadena Freeway.

3.4 NEXT STEPS

This initial feasibility study has presented several possible connector options between Dodger Stadium and the planned Pasadena Line Rail Transit Station at College and Spring Streets. Basic data involving technology, slopes, costs, and environmental factors have been reviewed.

Before further technical work can be undertaken, a review of the ideas presented herein should be undertaken between the Dodgers and affected local agencies. This would include the Los Angeles City Coun-

cil, the Department of Transportation, the Los Angeles City Planning Department, the Los Angeles Community Redevelopment Agency, and Caltrans.

The provision of a transit connection would benefit the Dodgers by providing increased access to Dodger Stadium. Additionally, the connector could benefit others and other sources of funding may be available. Peripheral parking for Downtown Los Angeles is one potential benefit of the connector that could occur on weekdays when no events are scheduled at the Stadium.

Figures 9 and 10 on the following pages illustrate two of the potential connector concepts that have particular merit following initial screening. In the short term, the escalator walkway would permit pedestrian access to Dodger Stadium coupled with park enhancements in Elysian Park. In the longer term, the AGT Shuttle connector would provide high capacity direct transit that would link Dodger Stdium to Downtown Los Angeles and the entire 150 mile rail transit system under construction by the LACTC. In tandem, these two alternatives could function together and provide an important urban link that would serve the Dodgers, the City, and the greater Los Angeles Region.

UCLA Mobility Lab

Study Finds Proposed Aerial Gondola to Dodger Stadium Will Do Little to Reduce Traffic and Emissions

October 24, 2022
University of California Los Angeles

Executive Summary

Los Angeles Aerial Rapid Transit (LA ART), a subsidiary of former Dodgers owner Frank McCourt's company McCourt Global, wants to build an aerial gondola to take people from Union Station to Dodger Stadium. Promoters of the gondola claim that it will take 3,000 polluting cars off neighborhood streets and the 110 freeway before and after Dodger games, leading to a net reduction in greenhouse gas emissions.

Transportation researchers from the University of California, Los Angeles (UCLA) examined these claims using a state-of-the-art transportation simulation model and found that the gondola could reduce traffic on major roads around Dodger Stadium on the night of a sold-out game, but the impact would likely be very limited. They found that the gondola likely would take only around 608 cars off the road. The gondola is thus unlikely to significantly reduce greenhouse gas emissions and traffic overall.

Methodology

The UCLA researchers — led by Dr. Brian Yueshuai He and Dr. Jiaqi Ma in the UCLA Mobility Lab at the UCLA Samueli School of Engineering — used the "LA Sim" model they created based on activity-based travel demand and agent-based simulation

models. The model is grounded in the theory of "discrete choice," for which Daniel F. McFadden won a Nobel Prize in economics in 2000. Based on real data about road network, traffic, public transportation, and other modes of moving around the city, including walking and bicycling, LA Sim simulates the individual choices that millions of travelers will make when something changes, such as adding another form of transportation, like a gondola to the Los Angeles transportation network.

The researchers caution that this simulation only models the probable use of the gondola for a sold-out night game and further research could reveal different scenarios for a day game or double-header, for example. But the research does model the most likely scenario for fans to choose the gondola — when traffic around the stadium is likely to be most heavy. Around 85% of baseball games played at Dodger Stadium are night games, starting at 7:10pm.

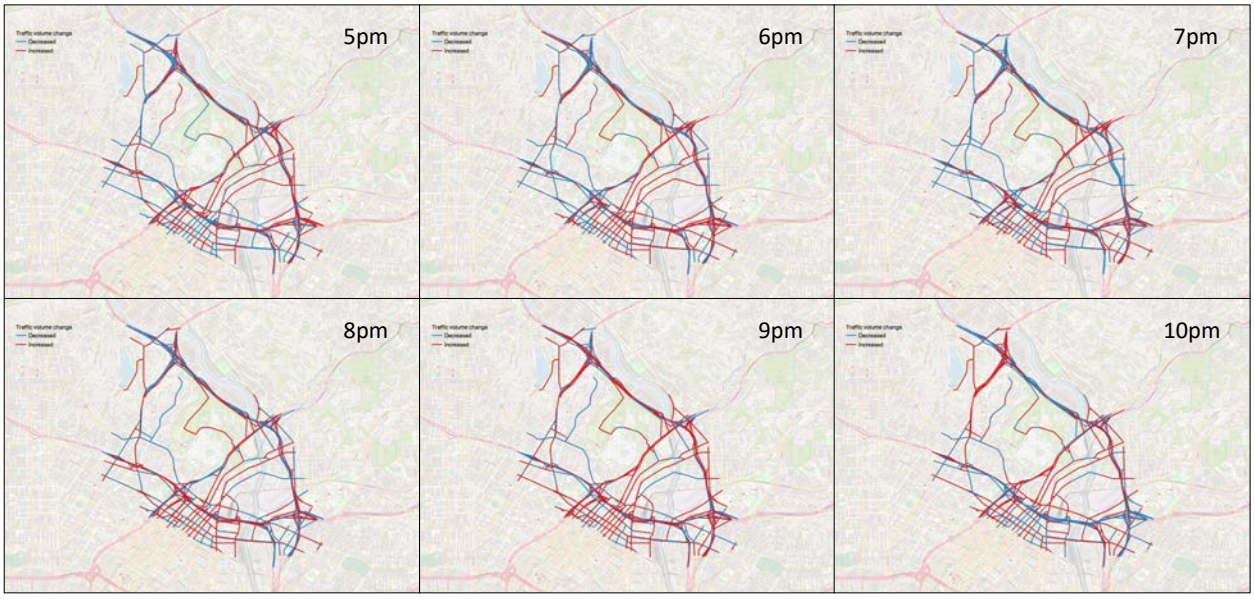

Figure 1: Traffic simulation results by the hour

Findings

- **Contrary to claims from LA ART, researchers found that the gondola would not significantly reduce traffic around Dodger Stadium.** Results showed the gondola would likely slightly reduce traffic on some roads around the stadium for a sold-out night game and increase traffic on others, leading to little

reduction in greenhouse gas emissions. The red lines in Figure 1 above indicate road segments that have a higher traffic volume after the proposed gondola is added to the traffic simulation. The blue lines indicate a decrease in traffic volume. According to the simulation, the total traffic volume would likely be reduced by around 0.9% (less than 1%) on the roads surrounding the stadium if the proposed gondola is built.

- **It's unlikely the gondola would contribute to a significant net decrease in greenhouse gas emissions.** Approximately 608 cars would be taken off the road, not nearly close to the 3,000 LA ART claims. Most of the people who choose the gondola in the simulation — 4,470 —board the gondola at Union Station, with another 220 passengers boarding at a station proposed to be located at Los Angeles State Historic Park near Chinatown. With only 4,690 people taking the gondola in total and of those 2,500 estimated to be regular users of the Dodger Stadium Express clean energy buses there would only be 2,190 new people taking public transportation to the game using the gondola. The average car parking at the stadium carries 3.6 people, which means that the approximate number of cars taken off the road would be around 608. The simulation only models the number of passengers connecting to the gondola via public transportation, on foot or by bike. It does not model people who would drive to Union Station or Chinatown to take the gondola. However, people who drive to those stations to take the gondola would not contribute to a net reduction in traffic or greenhouse gas emissions.

- **The gondola would carry fewer passengers than LA ART has claimed.** LA ART originally claimed that the gondola could carry up to 5,000 passengers per hour on game days. Researchers found that the gondola is likely to carry fewer than a total of 5,000 passengers to Dodger Stadium — 4,690 according to the simulation — even when the service is provided free with a game ticket for a sold-out night game like the playoffs. In a recent parking study, LA ART revised their claim, estimating that 6,000 would ride the gondola to games by 2026, with

4,350 arriving to the gondola via public transportation. The project's Draft Environmental Impact Report contains the same estimate, which corroborates the UCLA estimate of ridership if the gondola were in operation today.

- **Fewer people would take the gondola after the game – resulting in more traffic and emissions.** In the simulation, some fans — around 2,500 — seem to switch from the free Dodger Stadium Express buses to the gondola on the way from Union Station to a sold-out game, reducing the use of that service by close to half of the passengers it has carried to playoff games in the past. But about half of those passengers — more than 1,000 — seem to switch back to the Dodger Stadium Express on the way home, perhaps to avoid having to wait for a gondola car. Only 1,380 fans take the gondola on the way home in the simulation. This suggests that fans are unlikely to wait in line for the gondola after the game, instead taking the Dodger Stadium Express or perhaps opting for a ride-share, which would increase traffic and greenhouse gas emissions after the game.

- **Few people would use the gondola as a form of transportation other than to get to or from games.** The simulated use of the gondola during the daytime before the game suggests that very few people would use it as a form of transportation outside of getting to and from games: in the simulation, only 60 people — around one gondola carload — traveled to Dodger Stadium during the day, and only 140 passengers traveled from the stadium to Chinatown or Union Station during the day.

- **The model produced very similar results at different costs for a gondola trip.** LA ART previously announced that a gondola trip would cost $15. Later, they announced that game ticket holders could ride the gondola for free. They have also said that local rides could be purchased for a standard Metro fare. The researchers modeled two scenarios: 1) $10 for residents and free for game ticket holders, and 2) free to the public, and found very little difference in the results, indicating that residents are more likely sensitive to travel time rather

than cost. One key factor is that the service area of the gondola is limited and may not attract residents to choose it for daily travel.

About the Researchers

Dr. He is an Assistant Research Scientist at the UCLA Mobility Lab. He has extensive experience in big data analytics, transportation system analysis, and transportation policy evaluations. In the scope of cyber-physical systems, his research enables interactions between the physical infrastructure and virtual cyber systems by adopting data-driven techniques to support long-term urban system planning, management, and decision-making.

Dr. Ma is an Associate Professor in the UCLA Samueli School of Engineering and Associate Director of UCLA Institute of Transportation Studies. He has led and managed many research projects funded by U.S. DOT, NSF, state DOTs, and other federal/state/local programs covering areas of smart transportation systems, such as vehicle-highway automation, Intelligent Transportation Systems (ITS), connected vehicles, shared mobility, and large-scale smart system modeling and simulation, and artificial intelligence and advanced computing applications in transportation. He is an Associate Editor of the IEEE Transactions on Intelligent Vehicles and IEEE Open Journal of Intelligent Transportation Systems and Journal of Intelligent Transportation Systems. He is Member of the Transportation Research Board (TRB) Standing Committee on Vehicle-Highway Automation, Member of TRB Standing Committee on Artificial Intelligence and Advanced Computing Applications, Member of American Society of Civil Engineers (ASCE) Connected & Autonomous Vehicles Impacts Committee, Co-Chair of the IEEE ITS Society Technical Committee on Smart Mobility and Transportation 5.0.

Aerial Rapid Transit Technologies/Kilograph

A RENDERING of the proposed gondola to Dodger Stadium. The plan is opposed by some local critics.

Damaging a hard-won park

Re "Hurdles loom for gondola proposal," Jan. 10

Metro's opaque deal with former Dodgers owner Frank McCourt to build a gondola to Dodger Stadium through L.A. State Historic Park would severely compromise people's experience of the park, a taxpayer-funded green space that the area's historically underserved residents fought for decades to establish.

The gondola would take public park land, destroy 81 mature trees, permanently alter the park's thoughtfully designed vistas, jeopardize park event revenues and vital maintenance, and threaten the park's significant historic features.

These impacts on the park would be an environmental injustice. L.A. State Historic Park was born from an outpouring of community activism that transformed a rail yard into a green urban oasis, with all of the related health and community benefits. It is well used by residents, neighbors and visitors from throughout the city and has also become a vital, climate-resilient native landscape supporting local wildlife.

A project such as this would never be proposed over New York's Central Park, so why should the residents of Northeast L.A. be subjected to it?

KATHLEEN JOHNSON
Los Angeles

The writer is executive director of Los Angeles River State Park Partners.

::

In 2018, we visited La Paz, Bolivia, which has a gondola transit system. The gondolas were phenomenal — quiet and efficient. We learned that they are fast and comparatively inexpensive to put up and get running.

When we got home, we realized that this would be a great system for L.A. How much cheaper and faster would it be instead finishing the subway down Wilshire Boulevard, which will take years to be operational?

But looks like L.A. might not even put one up to Dodger Stadium because of environmentalists and people who "fear" gentrification, not to mention lawsuits and bureaucracy.

DAFNI BLACK
Culver City

::

The group Climate Resolve claims that this McCourt proposal will reduce traffic and pollution. A study conducted by my colleagues at the UCLA Mobility Lab found that the gondola will not reduce traffic significantly on the streets and highways around Dodger Stadium on game days and, therefore, will not reduce greenhouse gas emissions.

Furthermore, McCourt has not donated the project to Climate Resolve, according to county counsel. So why is Climate Resolve shilling for the project, while McCourt remains silent about his end game, a massive entertainment complex on the Dodger Stadium parking lots, which he has long touted?

This is greenwashing, pure and simple. We have better solutions. The existing Dodger Stadium Express from L.A. Union Station is 19 times more energy-efficient than the gondola would be per passenger trip. An individual electric vehicle is eight times more efficient.

JON CHRISTENSEN
Los Angeles

A bad look for the LAPD

Re "The big names behind private funding that fuels the LAPD," Jan. 8

Kudos to The Times for this important investigation about private donations to a foundation that supports the Los Angeles Police Department.

As a taxpayer, I don't necessarily have a problem with foundations raising money to support law enforcement. But there does seem to be something unseemly about a police chief giving special access to wealthy donors. And, naming rights for LAPD facilities seems odd at best.

Mr. Cory Zelmer
Deputy Executive Officer
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, California 90012

Re: Draft Environmental Impact Report: Los Angeles Aerial Rapid Transit Project

Dear Mr. Zelmer:

The Los Angeles County Metropolitan Transportation Authority ("Metro") has accepted an unsolicited project to build a private conveyance between Union Station and Dodger Stadium known as the Los Angeles Aerial Rapid Transit Project (the "Project"), has assumed Lead Agency status under dubious authority in that it is not the agency that has the principal responsibility for approving or carrying out the project, and has issued a Draft Environmental Impact Report ("DEIR").

The conclusions in an EIR must be based on substantial evidence, which is discussed in the California Environmental Quality Act as follows (Pub. Res. Code § 21080, subd. (c)):

> Argument, speculation, unsubstantiated opinion or narrative, evidence which is clearly inaccurate or erroneous, or evidence of social or economic impacts which do not contribute to or are not caused by, physical impacts on the environment, is not substantial evidence. Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts.

In the comments that follow we focus on the impacts to biological resources and identify that most of the conclusions and assertions in the DEIR are not supported by substantial evidence, and in fact substantial evidence supports the opposite conclusion from those assertions. As experts in environmental impact analysis of biological resources with decades of experience (see biographies below), we provide these comments as facts, reasonable assumptions predicated on facts, and expert opinion supported by facts.

1 Inadequate Biological Surveys

Biological surveys for the Project are described in Appendix E of the DEIR. The consultants purport to have surveyed the entire alignment on a single day (April 1, 2020), including a 500-foot survey buffer around the route. The methods do not describe how the biologist surveyed the entire three-dimensional project area, which extends up to 200 feet upward from the alignment. This third dimension is often ignored by biologists and its study requires appreciation of the speed at which animals move when aloft (Kunz et al. 2008). A 500-foot survey buffer is inadequate for assessing species that are moving through the air at a rate of 30 miles per hour (the speed of a typical songbird), thereby traversing the entire study area in less than 23 seconds. Furthermore, a single daytime survey in April cannot describe the volume and diversity of migratory birds that traverse the project location at night (most bird species migrate at night) during spring and fall migrations. In short, the survey effort on which the project biological assessment was made is inadequate to be considered substantial evidence regarding any impacts to wildlife and especially to birds that traverse the three-dimensional volume that would be impacted by the proposed project.

Published guidelines to reduce impacts of power lines identify many techniques to evaluate the bird use of areas in route planning (APLIC 2006). These include: daytime and nighttime visual observation using tools to measure distance and altitude of birds (clinometers and theodolites), closed circuit television recordings, night vision tools such as image intensifiers, forward-looking infrared devices, and radar. Radar techniques are well established and were developed in 1978 to detect birds specifically to evaluate the risk of new transmission lines (Korschgen et al. 1984). These tools can be used to develop a reasonable assessment of the quantity and general species composition of birds that might be at risk of collision. Examples of such efforts are available in the published literature. Williams et al. (2001) used radar, visual observations, and a ceilometer to describe birds migrating through a mountain pass. Mabee and colleagues have described bird numbers and altitude of flight using radar at proposed wind power sites (Mabee and Cooper 2004, Mabee et al. 2006). Others have used nocturnal flight calls to identify passing migrants (Farnsworth et al. 2004, Farnsworth and Russell 2007). Nocturnal flight calls have been used by community scientists in Los Feliz to document nocturnal migrants passing over the downtown Los Angeles area (see https://www.youtube.com/watch?v=B1RyBDnCqcg&t=1s).

2 Collision Risk

The DEIR acknowledges that installing large cables up to 195 feet in the air could pose a collision risk. The preparers' subsequent analysis of that risk, however, is replete with unsupported assertions and mischaracterizations of the literature.

The analysis of collision risk in the DEIR consists of the following statements in the main text and Biological Resources report (Appendix E):

- Ropeway cables would pose less danger than transmission lines because they are 1.75 to 2.5 inches in diameter compared with 1–2 inches for transmission lines and 0.5 inches for ground wires above transmission lines.

- The three ropeway cables would be spaced tightly in the vertical plane and so would pose less risk than if they were spread more broadly.
- The tight spacing of cables vertically would make them more visible.
- Cables would be made more visible by the moving cabins.
- Therefore avian collision risk from the cables would be less than for transmission lines.
- Concentrated avian activity is not expected near the project. Migratory movement is focused on prominent ridgelines, shorelines, and where favorable stopover habitat is located. The project is located "on a broad urbanized coastal plain, midway between the coast and the mountains, and lacks significant wetlands or similar habitats that might attract large numbers of migrants as stopover habitat."
- Grouse and ptarmigan have poor maneuverability in flight and collide with ski lift cables but no similar species are found in the project area.

We consider these claims in turn.

Cable size. The DEIR relies on the idea that birds will be able to see the ropeway cables during the day because they can be half an inch larger than transmission wires. This is a preposterous claim. Notwithstanding citations in the DEIR, current published sources indicate that there is no evidence to back this claim, which derives from experiments on transmission lines comparing the main power lines, which are always lower and larger, with the ground wires, which are always smaller and located higher than the main lines (Bernardino et al. 2018). Studies that remove the upper, smaller wires document a decrease in avian mortality but there is "no possibility of disentangling the effects of wire height and diameter" (Bernardino et al. 2018). There is some experimental evidence suggesting that it is the placement of the ground wire that is the important factor and that making it larger does not decrease collisions (Brown et al. 1987). The DEIR therefore errs in relying on the assumption that a tiny difference in cable diameter will mitigate daytime collisions. It also will not mitigate collisions at night, which is when most migratory birds will encounter the structure and cables. Nocturnal migrants do not see cables, even the guy lines that hold up 2,000-ft communication towers that are much larger than the proposed cables (Longcore et al. 2008), because they encounter them in the dark. There may be "general agreement" in the literature that larger cables are safer, but the most recent scientific review "found little scientific evidence that these recommendations [including to use larger diameter cables] are effective" (Bernardino et al. 2018).

Vertical spacing of cables. The DEIR argues that because the three cables would be packed tightly in the vertical plane, they would pose less of a risk than if they were spaced out vertically. First of all, this claim has no evidence to support it in the published literature. Second, it imagines that all birds move in a single vertical plane through the atmosphere, as if they were aircraft on a flight path at a cruising altitude. That is not how birds move in space. Because birds increase and decrease in altitude as they use the airspace, the packing of the wires vertically is not the substantial mitigation measure that is assumed in the DEIR.

Increased visibility of three cables. The DEIR argues that because there are three cables in close proximity, birds will see them more. Again, power lines often have several lines together and still result in avian collisions and mortality. There is no evidence to support this self-serving claim, and it similarly does not address nocturnal collision risk.

Risk relative to transmission lines. The DEIR presents its unsupported assertion that the cables would cause less mortality than a similarly situated power line as if it were evidence that is impacts would be less than significant. This is incorrect on two fronts. First, the DEIR provides no substantial evidence that the rate of avian collision and mortality would be less than power lines. The height of the cables and of power lines are similar. There is no support to claim that moving cars attached to the cables would increase visibility (Bech et al. 2012) and especially moving cars would not be a factor in the middle of the night when the wires would be encountered by nocturnal migrants. Second, the question that must be answered for environmental analysis is not one of relative impacts, but whether the impact itself would be significant. Based on collision rates with power lines, any analysis of the impacts from the proposed project should start from the assumption that the 1.9 km length of the cables will kill up to 152 birds per year, and given the variability in collision rates, an average value would be 75 birds per year (Jenkins et al. 2010). This would be true of any aerial cable system at the heights proposed in the project area. The birds that could collide with it might include sensitive species (given their presence in the surrounding park and along the Los Angeles River) and therefore this should be considered to be a significant impact, both through direct adverse effects on sensitive species and interference with migratory wildlife corridors. The DEIR, in contrast, asserts there will be no adverse effects because it asserts that there will be no concentration of avian movement intersecting with the site, which we consider next.

Concentrated avian movement. The DEIR makes the claim that the project site is in the middle of a broad coastal plain, lacking topography to concentrate migrants and lacking habitat that would attract birds as stopover locations. These assertions are flawed.

Significance of impacts depends not necessarily on the quantity of birds but on whether sensitive species are affected. Many sensitive bird species migrate through Los Angeles and could encounter the project site.

The assertion that there is no stopover habitat to attract birds ignores the presence of the Los Angeles River and Silver Lake Reservoir Complex, which is a significant stopover habitat for waterfowl, in close proximity to the site. An assessment of this question must look at a broader landscape context than the 500-ft buffer considered in the DEIR because, as noted, birds fly quickly through the air and major stopover locations are found within a few minutes flight from the project site.

There is another factor that concentrates avian migrants that is entirely ignored by the DEIR: artificial light at night. Nocturnally migrating birds can be tracked on weather radar and research has now shown that light at night escaping upwards is associated with greater numbers of birds present during the day, especially in the fall when juveniles are migrating south (La Sorte et al. 2017). As birds are migrating southward they are attracted to lights and then end up disproportionately using habitats in and around cities as compared with potentially better habitats elsewhere (McLaren et al. 2018). Lights can rapidly increase the density of migratory birds in an area at night. A study of the "Tribute in Light" installation in New York documented an increase from 500 birds within 0.5 km of the vertical light beams before they were turned on to 15,700 birds within 0.5 km 15 minutes after illumination (Van Doren et al. 2017). Downtown Los Angeles also attracts and concentrates birds, especially in the springtime, based on radar

measurements (Horton et al. 2019). Dodger Stadium itself creates one of these exceptionally bright points on the landscape and would itself attract and disorient birds, as was seen recently with a Greater White-Fronted Goose at a Dodgers playoff game. Therefore, contrary to the assertions in the DEIR, this location is associated with concentrations of avian migrants.

Species susceptible to collision found in project area. The DEIR references a study of grouse and ptarmigan collision with ski lifts (Bech et al. 2012) to conclude that no similar low maneuverability species vulnerable to collision are found in the project area. The DEIR ignores the big message from that paper, which is that searches for carcasses only reveal a small fraction of the birds killed at elevated wires. In that instance, a bird had collided with the wires and was found 600 m (1,969 ft) away, far outside the zone typically searched for mortality at wires. The steep topography of the site may have contributed to this distance, but the genetic linking of an individual bird to feathers underneath an obstruction 600 m away suggests that many current estimates of avian mortality at elevated obstructions are low (Bech et al. 2012).

The DEIR does not provide important information about what groups of species are more vulnerable to collision (Bevanger 1994, Savereno et al. 1996, Bevanger 1998, Janss 2000). Although all bird species are potentially exposed, the species that are typically at greatest risk are large, heavy, relatively small-winged birds with poor vision (Jenkins et al. 2010). The most susceptible groups tend to be waterbirds and in particular large ducks, geese and swans, pelicans, large herons and waders (Jenkins et al. 2010). Rails, coots, and cranes (Gruiformes) are most frequently recorded birds killed at power lines (Bevanger 1998). Other groups at risk include waterbirds and diving birds such as ducks (Anseriformes) and loons (Gaviformes), which also have high "wing loading," which means that their wings are small relative to their weight (Bevanger 1998). Records of mortality of species in these groups are common also because they are larger, more easily detected, less likely to be carried off by scavenger, and therefore more likely to be recorded. Other species that are theoretically prone to collisions based on their size, wing loading ratio, and vision are found less in surveys, probably because they are smaller and harder to detect (Drewitt and Langston 2008), or travel significant distances after being injured (Bech et al. 2012). These more sensitive groups would include pigeons (including native Columbiformes such as Band-tailed Pigeon and Mourning Dove), some passerines, and high-speed predators such as falcons (Jenkins et al. 2010). Aerial predators, such as swifts, many raptors, and even gulls, are at risk because they spend so much time in flight that have an increased probability of colliding with wires than other species that fly less (Bevanger 1998, Janss 2000).

In conclusion, the collisions analysis in the DEIR misrepresents the published literature and is not based on substantial evidence. The proposed aerial tramway will kill birds through collisions and the proximity of waterbirds attracted to nearby habitats at the Los Angeles River and Silver Lake Reservoir Complex, combined with the excessive light escaping from downtown Los Angeles (Pack et al. 2017), increases the probability of such collisions and the resulting annual fatality rate. From a CEQA perspective, this represents interference with a migratory pathway and adverse impacts on sensitive species, which are included in the migratory species that traverse Los Angeles routinely. It deserves mention that avian collisions with power lines (or by extension, the proposed aerial tram system) cannot be eliminated through mitigations (Alonso et al. 1994, Brown and Drewien 1995, Janss and Ferrer 1998).

3 Lighting

The DEIR does not fully describe all sources of lighting. It makes a vague mention of digital billboards (p. ES-11) as follows:

> [E]lectronic digital displays and/or changeable message light-emitting diode (LED) boards that include both transit information and other content, which may include off-site advertising that generates proceeds to support transit system costs and operations. Signage would be architecturally integrated into the design of the ART system including its stations, the junction, towers, and cabins.

The prospect of LED billboards festooning the towers, gondolas, and stations is not adequately accounted for in the environmental analysis of biological resources and in fact is not considered at all. The aesthetics analysis contains no renderings of the project at night, so decisionmakers are lacking critical information to understand the full impacts of the lighting from the project both for impacts on visual resources and for the impacts of light pollution on biological resources.

The proposed "project design feature" for lighting (AES-PDF-A) violates national standards set by the Illuminating Engineering Society for off-roadway outdoor signage (RP-39-19). The project proposes 10,000 candela per square meter during the day, when the highest allowable brightness by national standards is 3,500 candela per square meter. At night, the project design feature proposes 300 candela per square meter, while the highest allowable brightness for the lighting zone appropriate for a business district (LZ3) is 80 candela per square meter. The portion of the project in the State Park and heading up into Chavez Ravine should probably be classified as LZ2, where the maximum allowable luminance is 40 candela per square meter. LZ3 is defined as, "Areas of human activity (i.e., habitation, recreation and/or work) where electric lighting may be continuous and is required for safety and convenience at night. This is the recommended default zone for large cities' business districts)," and LZ2 is defined as, "Areas of human activity (i.e., habitation, recreation and/or work) where electric lighting *may* be required for safety and convenience at night. This is the recommended default zone for light-commercial business districts and high-density or mixed-use residential districts" (Illuminating Engineering Society, RP-39-19, Recommended Practice: Off-Roadway Sign Luminance: An American National Standard).

The lighting "project design feature" also defines brightness in terms of Watts, which is not useful. Lights have different efficiencies and the restriction that, "Building Lighting will not exceed 60 watts" is not useful unless the lamp type is specified. It should indicate the total lumens that can be produced per fixture rather than specifying energy consumption. The related limitation on light output for outdoor luminaires of 6,200 lumens is set unreasonably high. That is the equivalent of having ten 60-Watt incandescent bulbs in a single fixture. A "design feature" with this limitation will do nothing to mitigate the impacts of the proposed lighting infrastructure on visual resources or people who are exposed to the lights from their residences.

The Visual Impact Analysis in the DEIR does not evaluate whether any of the proposed lighting from the project would violate Los Angles Municipal Code Section 93.0117, which reads:

No person shall construct, establish, create, or maintain any stationary exterior light source that may cause the following locations to be either illuminated by more than two footcandles (21.5 lx) of lighting intensity or receive direct glare from the light source:

1. Any exterior glazed window or sliding glass door on any other property containing a residential unit or units.

2. Any elevated habitable porch, deck or balcony on any other property containing a residential unit or units.

3. Any ground surface intended for uses such as recreation, barbecue, or lawn areas on any other property containing a residential unit or units.

EXCEPTIONS: This subsection shall not apply to:

1. Any frosted light source emitting 800 lumens or less.

2. Any other light source emitting more than 800 lumens where the light source is not visible to persons on other residential property.

Given that much of the infrastructure proposed will be several stories in the air, it is highly likely that even if lights are shielded from being directed upward, they will result in direct glare on residences in violation of Municipal Code. The calculations provided in the technical appendix are focused on illuminance measurements, when the code allows no direct glare, regardless of the illuminance. None of the Lighting Design Report calculations show compliance with this code section.

Finally, it is unclear the extent to which the stations will remain illuminated at night and overnight and to what extent the shells of the large canopies are transparent. From the renderings it appears that they are somewhat translucent, and therefore would result in escaping light at night, appearing as large glowing masses in the sky at night.

The lighting report also illustrates several examples of uplighting of structures and landscape elements, which is inconsistent with the text in the DEIR claiming that lights will be "shielded," which normally implies that light would be directed downward (see pp. 3.1-8 and 3.1-9 of DEIR). Uplighting is always an adverse environmental impact and illuminating trees at night is harmful to their health (Briggs 2006, Bennie et al. 2016, Meng et al. 2022) and should be avoided.

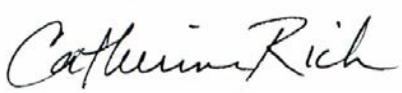
4 Structure Design Likely to Result in Large Rock Pigeon Roosts

Project designers do not appear to realize that a large open canopy as depicted in the project renderings in the Lighting Design Report, combined with exposed structural beams and girders, is likely to result in large Rock Pigeon roosts. Pigeons can be vectors of disease and their droppings would foul the surfaces in the stations. The DEIR should consider this eventuality and

disclose the chemical and/or physical methods that would be used to exclude pigeons from roosting from within these structures. The station design is setting up the operators to be under pressure to undertake ongoing, potentially inhumane, measures to control pigeon numbers.

Sincerely,

Travis Longcore, Ph.D.



Catherine Rich, J.D., M.A.

5 About the Authors

Dr. Travis Longcore and Catherine Rich are principals of Land Protection Partners. Dr. Longcore is Associate Adjunct Professor in the Institute of the Environment and Sustainability at UCLA. He has taught, among other courses, Bioresource Management, Environmental Impact Analysis, Field Ecology, and Ecological Factors in Design. He was graduated *summa cum laude* from the University of Delaware with an Honors B.A. in Geography, holds an M.A. and a Ph.D. in Geography from UCLA, and is professionally certified as a Senior Ecologist by the Ecological Society of America and as a GIS Professional by the Geographic Information System Certification Institute. He is a 24-year member of the Los Angeles County Environmental Review Board. Catherine Rich is Executive Officer of The Urban Wildlands Group. She holds an A.B. with honors from the University of California, Berkeley, a J.D. from the UCLA School of Law, and an M.A. in Geography from UCLA. She is lead editor of *Ecological Consequences of Artificial Night Lighting* (Island Press, 2006) with Dr. Longcore. Longcore and Rich have authored or co-authored over 60 scientific papers in top peer-reviewed journals such as *Auk, Biological Conservation*, *Conservation Biology*, *Environmental Management*, *Frontiers in Ecology and the Environment*, *Trends in Evolution and Ecology*, and *Urban Forestry and Urban Greening*. Longcore and Rich have provided scientific review of environmental compliance documents and analysis of complex environmental issues for local, regional, and national clients for 23 years.

STATE OF CALIFORNIA

QUITCLAIM DEED

Pursuant to the provisions of Chapter 1358, Statutes of 1987, the STATE OF CALIFORNIA, acting through its Director of General Services, hereby quitclaims to CITY OF LOS ANGELES, all its right, title and interest in and to the real property described in Exhibit A hereto, which Exhibit is incorporated herein by this reference, in the County of Los Angeles, State of California.

EXCEPTING AND RESERVING to the State of California all mineral deposits as defined in Section 6407 of the Public Resources Code below a depth of 500 feet, without surface rights of entry.

This deed is subject to the following express conditions subsequent:

1. The property shall be known as El Pueblo de Los Angeles Historic Monument and shall be used as a public park or monument.

2. The development and operation shall conform to the General Plan for El Pueblo de Los Angeles State Historic Park adopted April 11, 1980 pursuant to Section 5002.2 of the Public Resources Code. The Plan may be amended by the CITY in accordance with procedures for amendment set forth in Article 8 (commencing with Section 65450) and Article 9 (commencing with

3. The City of Los Angeles shall operate, improve, maintain, construct, remodel, and perform any and all necessary activities at the Historic Monument in compliance with the U.S. Secretary of the Interior's "Standards for Rehabilitation and Guidelines for Rehabilitating Historic Structures".

4. The State of California shall be allowed, at the STATE'S option, free occupancy of the existing STATE offices on the entire first and second floors of the Hellman Quan Building, located at 128 Paseo De La Plaza, Los Angeles, California (See Exhibit B, Sheet 1) incorporated herein by this reference, with the exception of the CITY Archives Room on the second floor (See Exhibit B, Sheet 2) together with four existing parking spaces located along Sanchez Street. Upon termination of parking along Sanchez Street, the CITY will provide four new parking spaces to be identified within future parking Lot No. 2 located on the corner of Main Street and Macy Street.

Should any of said express conditions be violated, the State of California shall have the right to reenter and take possession of the real property and upon such re-entry title thereto shall revert to the STATE.

EXHIBIT "A"

All that real property situate in the City of Los Angeles, County of Los Angeles, State of California, described as follows:

PARCEL 1

All those lands conveyed to the State of California by the McLaughlin Corporation by Corporation Grant Deed dated July 17, 1953 and recorded December 29, 1953 in Book 43478 at Page 430, Official Records of said County.

PARCEL 2

All those lands conveyed to the State of California by the Union Bank and Trust Company of Los Angeles, as Executor of the Estate of Constance D. Simpson, also known as Constance Doria Simpson, deceased, by Deed dated September 17, 1953 and recorded December 29, 1953 in Book 43481 at Page 359, Official Records of said County, and by Irving M. Walker, as Trustee, under the Will of Doria C. Lankershim, by Quitclaim Deed dated March 5, 1963 and recorded May 27, 1963 in Book D2043 at Page 496, Official Records of said County.

PARCEL 3

All those lands conveyed to the State of California by James A. Rimpau, Trustee, by Deed dated July 14, 1953 and recorded December 31, 1953 in Book 43498 at Page 295, Official Records of said County.

COURT PAPER
STATE OF CALIFORNIA
STD. 113 (REV. 8-72)

85 34769

PARCEL 4

All those lands conveyed to the State of California by Los Nietos, Company, a corporation, by Deed dated August 4, 1953 and recorded December 31, 1953 in Book 43498 at Page 287, Official Records of said County and by Final Order of Condemnation dated March 2, 1961 and recorded March 3, 1961 as Document No. 4201 in Book D1143 at Page 905, Official Records of said County.

PARCEL 5

All those lands conveyed to the State of California by Mae N. Lombardi, et al. by Deed dated November 4, 1953 and recorded February 1, 1954 in Book 43717 at Page 437, Official Records of said County.

PARCEL 6

All those lands conveyed to the State of California by Quon How Shing by Deed dated August 28, 1953 and recorded February 26, 1954 in Book 43939 at Page 247, Official Records of said County.

PARCEL 7

All those lands conveyed to the State of California by Audette Marie Garnier and Yvonne Garnier by Deed dated January 11, 1954 and recorded April 22, 1954 in Book 44389 at Page 74, Official Records of said County.

COURT PAPER

Re: SCH #2020100007 Los Angeles Aerial Rapid Transit Project

Dear Mr. Zelmer:

I am writing on behalf of Homeboy Industries in response to the Draft Environmental Impact Report (DEIR) issued by your agency for the proposed gondola from Union Station to the Dodger Stadium parking lots. GO15-1

Homeboy Industries stands to be one of the most heavily impacted community stakeholders if the gondola is allowed to proceed as proposed. We will be affected with significant unmitigated environmental impacts during construction and by permanent effects on our operations. GO15-2

We refer you to our letter to Metro dated November 16, 2020 for a detailed enumeration of our original concerns. While we concur generally with other community stakeholders in their current comments on the DEIR, we would like to point out the following areas of specific concern to Homeboy.

First of all, the document refers to Homeboy Industries as an "office building." The DEIR assesses potential environmental impacts against standards applicable to commercial structures. Homeboy Industries is, in fact, much more than an office; it is a highly-venerated, community-based non-profit that is the largest gang rehabilitation and re-entry program in the world. We provide training and support for thousands of formerly gang-involved and previously incarcerated people, allowing them to redirect their lives and become contributing members of our community. GO15-3

Many of our activities take place in and around our headquarters campus at 130 Bruno Street in Los Angeles. Any analyses of the potential impacts from the gondola should take into consideration the many community meetings, job training activities, spiritual counseling and other activities that take place at this location. It is truly a "sensitive receptor." In the near future we also hope to provide transitional housing for some of our clients on this site.

cont'd GO15-3

Following the outline of the DEIR, we note these areas of greatest concern:

1. **Project Description**

Because of the scale of drawings, it is difficult to ascertain whether the proposed project would require an aerial easement or easement buffer on Homeboy's current premises. Could you provide a larger scale drawing depicting where these zones might impinge.

GO15-4

2. **Hope Village - Housing & Service Expansion in Support of Alternatives to Incarceration**

Homeboy Industries is working to alleviate the housing crisis in Los Angeles and has plans to develop transitional and permanent supportive housing on land where the proposed Alpine Tower is located. Developing affordable housing and expanding our campus will support broader public and private partnerships to create "Hope Village" as an alternative to incarceration (ATI) anchored by a care first, jails last paradigm. Insofar as we can determine, the location of the gondola's Alpine Tower would significantly impair our ability to deliver housing to our clients and respond to the "State of Emergency" currently in place at the County and City levels in response to the homeless crisis; and serve as an impediment to "Hope Village" as a critical ATI strategy.

GO15-5

3. **Aesthetics**

Analyses in the DEIR of visual impacts from the gondola seem to completely ignore Homeboy Industries, which operates one of the key facilities in the gondola's path. There is no doubt that a 195-foot high, awkwardly-shaped concrete tower will have a serious and permanent - and most would say incompatible – visual effect on Homeboy Industries' operations. At the very least, your analysis of Landscape Unit 3 (page 3.1.22) should describe and discuss these impacts on Homeboy Industries in particular.

GO15-6

Further, most CEQA analyses include a Shade and Shadow study. One would be appropriate for this project as well.

GO15-7

4. **Noise and Vibration**

Analyses of these potential impacts correctly conclude that some significant impacts cannot be mitigated. We presume you will be seeking a Statement of Overriding Considerations to accept these impacts, at our expense.

With regard to noise, we are identified as NSR-7 in your analysis. We are projected to experience noise levels at 80.3 dBA during construction, 10.5 dBA higher than current ambient noise levels, described in your exhibit as sounding like a "garbage disposal at 3 feet." You deem this tolerable for an office building. As noted above, we conduct far more than just typical office activities, and invite many members of the public to our site. You note that even 75 dBA is "clearly unacceptable," even for office use, and that 65 dBA is "normally unacceptable" (page 3.13.48).

G015-8

In the analyses of potential vibration impacts, Homeboy Industries is VSR-11, but is not called out as a Measurement Location. Therefore, no specific information about the impacts of drilling (or driving) 120-foot deep (sic) piles adjacent to our training rooms, kitchen and restaurant is provided. Nonetheless, the DEIR concludes that Homeboy Industries would experience significant "annoyance" from vibration, even with mitigation, during construction (page 3.13.63). A more detailed and site-specific analysis of the vibration impact on our buildings and operations would be appreciated. GO15-9

5. Transportation

Perhaps the largest credibility gap in the DEIR concerns automobile access and parking. It seems inconceivable that the proposed project would have no significant impact on either. GO15-10

Clearly, potential construction period impacts would be manifold. We would like to see focused analyses of the impacts of proposed road closures on local streets including Alameda, Bruno, Alpine and Main. GO15-11

Also, there is no explanation in the DEIR about where visitors to the gondola might park in our neighborhood and what the impact of moving "game day" traffic to Chinatown and its environs might cause. The traffic study in the DEIR seems purposefully oblivious to potentially severe impacts on automobile access, circulation and parking. GO15-12

6. Impact on Our Business Revenue

Homeboy Industries operates several social enterprises from its Bruno Street Campus including the Homegirl Café, Homeboy Merchandise, and the Homeboy Bakery. We rely on these businesses to create jobs for our clients and generate revenues in support of our mission. Each of these businesses are dependent on customer foot traffic and unimpeded vehicular access. For reasons aforementioned we have significant concerns regarding the revenue impact on our businesses. GO15-13

7. Financing & Use of Public Funds

We remain unclear as to how the gondola project will be financed, including the use of public funding to support the gondola's construction. We will have significant concerns with any use of public funding that would defray resources from housing and other essential services for communities in need. As of the submission of this letter, transparency related to short and long term financing of the gondola project remains elusive. GO15-14

8. Other Considerations

In addition to these CEQA-related concerns, we would like to raise two additional points.

First, we are clearly concerned about the permanent effects that the gondola might have on our sensitive, human-serving operations at 130 Bruno Street and on our future growth – even on the viability of our operations at this location - if the project goes ahead as proposed. These longer-term operational and economic considerations should be discussed now, but the CEQA process may not be the best forum for resolving them. G015-15

Second, there is a perception in our neighborhood that the gondola is being proposed as a precursor – "pre-mitigation" perhaps – to larger plans for development on the stadium parking lots. While these GO15-16

plans are not in our purview to address now, we do believe that further development around the gondola end-station would exacerbate the environmental concerns we are considering at this time, and should be brought into play as part of this evaluation.

RE: Draft Environmental Impact Report for the Los Angeles Aerial Rapid Transit Project (LA ART)

Dear Mr. Cory Zelmer:

On behalf of the Los Angeles Conservancy, I am writing to comment on the Draft Environmental Impact Report (Draft EIR) for the proposed Los Angeles Aerial Rapid Transit (LA ART) Project. In reviewing this proposed Project, the Los Angeles Conservancy has serious concerns regarding its associated and cumulative impacts, both directly and indirectly. We strongly question the purpose and need for such an undertaking as there are environmentally superior alternatives readily available and appear to be dismissed without a clear substantiation. GO16-1

The Conservancy raises concern about Metro serving as the lead agency for the California Environmental Quality Act (CEQA) process. It appears that the City of Los Angeles is better equipped and appropriate to serve in this role, and analyze potential impacts, conflicts, and identify project alternatives and appropriate mitigation measures. GO16-2 Lastly, we strongly question if there is a need for Federal review as a companion for this proposed undertaking, including Section 106 of the National Historic Preservation Act (NHPA) and Section 4(f) of the U.S. Department of Transportation Act. GO16-3

If constructed, the LA ART Project would connect Los Angeles Union Station to Dodger Stadium property via an aerial gondola system. The proposed Project would include stations at Alameda and Cesar Chavez, the southernmost entrance to the Los Angeles State Historic Park, as well as at Dodger Stadium. The LA ART gondola system would be approximately 1.2 miles and consist of cables, three passenger stations, a non-passenger junction, towers, and gondola cabins. GO16-4

I. Purpose and need for LA ART is not fully demonstrated when environmentally superior alternatives are identified and available to be implemented

The Draft EIR analysis does not make a compelling case for the purpose and need for this Project, especially given there are other alternatives that may achieve similar results, while minimizing and avoiding the adverse effects (both direct and indirect). The stated purpose for the proposed Project is to "improve mobility and accessibility for the region by providing a daily, high capacity aerial rapid transit (ART) service connecting the regional transit system at LAUS, Dodger Stadium, the Los Angeles State Historic Park, Elysian Park, and surrounding communities via three new transit stations." However, the No Project Alternative and The Transportation Systems Management (TSM) Alternative are both found to be environmentally superior to the proposed LA ART Project. GO16-5

Overall there are three project alternatives identified. These include a No Build Alternative, the Spring Street Alignment Alternative, and the TSM Alternative. The Spring Street Alignment is similar to the proposed project in that it will construct an aerial transit system. However, instead of a station at the southern end of Los Angeles State Historic Park, it would construct a station on the western edge boundary near Sotello Street. This alignment would have the same impacts as the proposed Project and therefore the Conservancy holds the same concerns. GO16-6

The TSM Alternative would improve the already existing and popular Dodger Stadium Express (DSE) bus system, therefore requiring none of the aerial transit infrastructure. This alternative, as the environmentally superior alternative, would reduce all possible impacts tied to the construction and operation of an LA ART system. GO16-7

A key policy under the California Environmental Quality Act (CEQA) is the lead agency's duty to "take all action necessary to provide the people of this state with historic environmental qualities and preserve for future generations examples of major periods of California history."[1] To this end, CEQA "requires public agencies to deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects."[2] The fact that an environmentally superior alternative may be more costly or fails to meet all project objectives does not necessarily render it infeasible under CEQA.[3] Reasonable alternatives must be considered "even if they substantially impede the project or are more costly."[4] Likewise, findings of alternative feasibility or infeasibility must be supported by substantial evidence.[5]

Despite the analysis' failure to explore an electric bus system the TSM remains the environmentally superior alternative. It is likely that new regulations in the coming years will require electric bus systems allowing the TSM to meet the zero emissions goals for Project Objectives 5 and 12. We believe an enhanced bus route, especially on non-event days would better serve the surrounding GO16-8

FN GO16-8

neighborhoods and Elysian Park and therefore meet Objective 9. A more robust DSE is likely to resolve many last mile dilemmas for nearby residents and visitors.

The existing DSE is an incredible resource for Dodger fans, shuttling thousands of fans each game. The system is limited in its current ability to attract more fans because the route is underserved and busses are often packed to maximum capacity. Enhancing the system through the TSM Alternative, by offering more frequent departures and a zero emission fleet, would attract many more riders on event days and beyond. Additional stops during non-event periods provide greater access to Elysian Park and would further benefit the community by providing a more equitable mode of access. cont'd GO16-8

II. Historic and cultural resources and view sheds will be impacted and irreparably harmed by the LA ART Project

A visual intrusion as a result of the proposed project is clearly evident. If built, the LA ART will be clearly visible and obscure the view, setting, and future overall experience of various historic places and spaces, including Union Station, El Pueblo, Los Angeles State Historic Park, and Chinatown.

The Conservancy disagrees believes the proposed project would have significant impacts to numerous historic resources by altering their historic settings and overall feeling. At the southern terminus of the project, the proposed Alameda Station would significantly impact both Union Station and El Pueblo's historic setting and feeling. One of the most important character defining features of Union Station are the views of its primary façade along Alameda. As metro is aware, Union Station is the last major railroad station to be built in the United States. Its gardens and patios have welcomed countless travelers to sunny California for nearly a century. In 1972, the City of Los Angeles designated Union Station Historic-Cultural Monument #101 and it was added to the National Register of Historic Places in 1980. GO16-9

The imposing new LA ART station along Alameda, with passenger plazas shown extending into the National Register and HCM boundaries, would dramatically alter the visitor's experience of Union Station when walking or driving south from Cesar Chavez Avenue as well as when exiting the station. Should the project be constructed, the current setting would no longer exist. Views of Union Station's iconic palm tree lined motor court and rising clock tower would be prematurely shrouded from the north. Alameda would go from an open airy corridor to one that compresses the passerby below a massive structure that crowds the existing relationship between Union Station and El Pueblo. It is argued that the Mosaic Apartments already contribute to the erasure of this view shed, however the LA ART Project only exacerbates and amplifies this by making the impact much worse and more impactful as it encroaches onto the Public Right-Of-Way. Metro previously proposed acquiring Mosaic property and developed plans to redevelop this site and restore the full view shed to Union Station; this Project would completely foreclose this future opportunity. GO16-10

In 2015, when Metro approved the Connect US Action Plan, the restoration of the Forecourt and Esplanade improvements were contemplated, as a means to strengthen the connections and "front door" between Union Station, El Pueblo and Olvera Street. As we currently understand, this project is now on hold due to consideration of the proposed Project. Not only is this delay unfortunate, the LA ART station greatly undermines this opportunity and crowds the historic resources, greatly disrupting and indirectly interrupting the feeling and setting of these spaces and their relationships to one another. Further, queueing for the Alameda Station would occur within the planned Forecourt and Esplanade area and north of the Placita de Dolores, crowding these areas and again changing the GO16-11

ways in which these historic, public spaces have been, currently are, and could be experienced in the future.

cont'd GO16-11

The renderings provided in the Draft EIR do not fully depict and illustrate the visual impacts of the proposed new station on Union Station. The siting of the renderings provided are from locations that appear to diminish them. In consultation with project team consultants, the Conservancy has requested additional renderings from various points along Alameda south of East Cesar E. Chavez Avenue, and as a pedestrian will experience leaving the primary entrance of the station and the expanse of the pedestrian plazas proposed on either side of Alameda. Due to the holidays and the deadline to comment on Draft EIR, these have not yet been provided and are not included in the draft EIR. If adequately illustrated and included in the EIR, the Conservancy believes the full range and visual impacts of the proposal station will be evident. These images should be modified and accurately depicted to show the full extent of the undertaking and impact on the broader community view shed.

GO16-12

The Los Angeles Plaza Historic District, better known as El Pueblo, is a collection of some of Los Angeles's earliest historic resources dating to 1818. In 1970, the Los Angeles Plaza Park was designated as Historic-Cultural Monument (HCM) #64 and initially listed on the National Register in 1972. As shown in project renderings, the Alameda station with its wires and gondolas would be visible from various locations within the historic district.

From within the historic Avila Adobe's courtyard, constructed in 1818 and the oldest extant building in the City, the new station stands looming overhead. The project team has stated that this view shed was already compromised by the One Gateway Plaza at Patsaouras Transit Plaza. However, this tower is not immediately adjacent to the adobe. Even with One Gateway Plaza in the far distance, visitors are allowed the ability to spatially visualize how the vista appeared at the time of its construction. Without question, the LA ART's Alameda's station's proximity and scale impact this historic site much more heavily than that of the tower roughly 1,500 feet away. Today's Avila Adobe successfully transports visitors to a time passed. With the new station, the Conservancy is confident that this would no longer be a possibility.

GO16-13

In Addition to the impacts at Avila Adobe, the project would be seen from other vantages including the north entrance to Olvera Street and from La Plaza. As stated previously, the station looming above the historic district would significantly impact the setting and feeling of Los Angeles's oldest historic built environment.

Overall, the Conservancy believe the various (sighting, proximity, signage, lighting, noise and construction) and cumulative (taken as a whole) impacts to the historic view shed, including greatly altering the feeling and setting of this historic area, are highly problematic and detrimental to the overall vitality of these historic resources. We believe this requires LA ART to reconsider other locations for placement of this station, and, more importantly, viable and environmentally superior project alternatives that do not require the need for this station nor LA ART as currently envisioned.

GO16-14

III. Draft EIR does not adequately address the proposed use and transfer of public rights-of-way and lands, applicable general plans, permitted legal use, and is in conflict with Public Resources Code 5019.59

As described in the Draft EIR, the project would construct towers on the Alpine Parcel and Alameda Triangle. The former parcel being owned by the City of Los Angeles and latter being a Public right-of-way. With tower footprints at approximately 900 square feet, construction would occur on a sizeable portion of the parcels. Further, queueing for the Alameda Station would require the permanent use of public spaces for private use, including the Placita de Dolores and Union Station's planned Forecourt and Esplanade area.

The Conservancy is concerned about the use of publicly-owned parcels for private use, as detailed in the Draft EIR. We believe the project does not adequately describe the legal authority and process by which LA ART is required to attain such rights, and makes inaccurate assumptions that the City and other public entities would give up their rights to these pieces of land. When looking at the Alpine Parcel in particular, other uses such as housing would better suit this site. With close proximity to City services and employment opportunities, the site is a good candidate for new, affordable housing construction. Given the need for affordable housing and limited land by which to build, as detailed in the City of Los Angeles' recently adopted Housing Element of the General Plan and stated Regional Housing Needs Assessment (RHNA) priorities, why then should the City give up this land for LA ART?

GO16-15

As mainly a new tourist attraction, LA ART will attract an influx of visitors that will impact the authentic, lived experience of these historic spaces and places, not just in the area of Union Station and El Pueblo, but also Chinatown and the Los Angeles State Historic Park. As part of this concern, the Conservancy also questions the wisdom, appropriateness, and process by which various public right-of-ways and lands are to be granted for permanent use (for stations, towers, air rights, and queuing) to a private LLC and undertaking of this type.

How will these specific decisions take place and when, and does Metro, the City of Los Angeles, and/or the State Park and Recreation Commission (SPRC) have the legal authority to grant this type of commercial use to a private LLC in all the proposed locations? Our understanding is this project scope does not conform to the General Plan for El Pueblo Los Angeles State Historic Park[6] nor the Los Angeles State Historic Park[7]. Specifically the statute for El Pueblo states, "[a]ny proposed demolition, alteration, or encroachment on historic structures must have approval from the State Department of Parks and Recreation." Commercial, privately-built and operated uses are generally excluded from approved activities. Therefore, the Draft EIR fails to fully identify or address this land use conflict that appears to make the preferred Project infeasible if access to these public lands (a necessity to build the Project) is not granted.

GO16-16

The statute establishing the Los Angeles State Historic Park, for instance, is clear in stating exceptions in how private development can occur within the boundaries of the park, such as providing access, parking, sanitation, etc. Per the Draft EIR, the project would require an amendment to the State Historic Park General Plan which does not currently allow for transit on its grounds or within its air rights. The amendment would use "access" as defined in PRC 5019.59 to

GO16-17

FN GO16-16

[6] Public Resources Code § 5002.2.
[7] Public Resources Code § 5019.50; 5019.59;

justify said amendment. However, the proposed private-public operating agreement would limit operation to "as needed" when no events at Dodger Stadium are being held. Therefore the proposed agreement offers no definitive access to the park beyond scheduled Dodger Stadium events.

Because there is no guarantee that the gondola will run on days when no events are held at the stadium, the SPRC is not likely to and should not approve the amendment. With a combined land and air use of over an acre, the SPRC would be giving up a sizeable piece of the Historic Park's property to the project

cont'd GO16-17

To reiterate, claims stating the LA ART Project will provide critical public access (thus allowing the construction of towers and a station within the park and on park lands) is not substantiated within the Draft EIR. Detailed analysis is not provided that states a clear or reliable level of service (Draft EIR states "based on demand" and "as needed") that will be provided in the future vs. only on game or special event days. The Draft EIR suggests limited access from a privately funded and operated LLC warrants the removal of public park lands. The Conservancy disagrees, and would like to see greater documentation and evidence provided to the public that can support the Draft EIRs conclusions on this issue.

GO16-18

IV. Should the proposed project anticipate federal funding, Section 106 and Section 4(f) would be triggered and additional environmental review would be required

The Conservancy would appreciate greater clarity regarding the funding of this project. Particularly, if any federal dollars will be used in any way for LA ART's planning, development or construction. Should the applicant or lead agency access funding from these entities, the project would trigger Section 106 of the National Historic Preservation Act (NHPA) and Section 4(f) of the Department of Transportation Act. Generally federal environmental review occurs in tandem with CEQA reviews.

Section 106 of the NHPA requires federal agencies to consider the impact of their actions on historic resources. Because of this section, public agencies must assume responsibility for the consequences of their actions on historic resources and be publicly accountable for their decisions.

Furthermore, Section 4(f) states:

GO16-19

> "The Secretary shall not approve any program or project which requires the use of any land from a public park, recreation area, wildlife and waterfowl refuge, or historic site unless (1) there is no feasible and prudent alternative to the use of such land, and (2) such program includes all possible planning to minimize harm to such park, recreational area, wildlife and waterfowl refuge, or historic site resulting from such use."

Given the projected ridership, size of the station platforms, extension into the Union Station parking lot, and use of Los Angeles State Historic Park property for the Chinatown/State Park Station, it is foreseeable that additional government funds and those at the federal level will be accessed. Additionally, the Union Station forecourt and esplanade project, located in the same vicinity as the Alameda Station, had previously been granted federal funding for the future project. Should that funding contribute to the pedestrian plazas for the station in any way, it would trigger the above code sections and need for federal environmental review.

V. Transfer CEQA lead agency authority to the City of Los Angeles

The LA Conservancy believes the City of Los Angeles is better suited to serve as the Project's lead agency. As planned, the City of Los Angeles would be responsible for granting the majority of the Project's discretionary and ministerial permits and therefore is better suited for the lead agency role.

As shown in the Draft EIR, the 1.2 mile long Project is to be built and operated predominately on or above the City's public right-of-ways. Furthermore, the plan states that the private LLC developer would enter into a public-private operating agreement with the City of Los Angeles.

Given the numerous historic resources in the area, the City of Los Angeles is better equipped to evaluate impacts and conflicts, including those on historic resources for which is assigned the primary jurisdiction, such as El Pueblo and various Historic-Cultural Monuments (HCM). As previously stated, the historic resources within the project area are some of the oldest and most important within the City. Therefore, a lead agency with this experience is more appropriate.

GO16-20

VI. Conclusion

The Conservancy has serious concerns regarding the construction and operation of the proposed LA ART project. To state again, we raise the following concerns regarding the Draft EIR and the proposed Project:

GO16-21

I. Purpose and need for LA ART is not fully demonstrated when environmentally superior alternatives are identified and available to be implemented

GO16-22

II. Historic and cultural resources and view sheds will be impacted and irreparably harmed by the LA ART Project

GO16-23

III. Draft EIR does not adequately address the proposed use and transfer of Public rights-of-way and lands and their permitted legal use, and is in conflict with Public Resources Code 5019.59

GO16-24

IV. Should the proposed project anticipate federal funding, Section 106 and Section 4(f) would be triggered and additional environmental review would be required

GO16-25

V. Transfer CEQA lead agency authority to the City of Los Angeles

About the Los Angeles Conservancy:

The Los Angeles Conservancy is the largest local historic preservation organization in the United States, with nearly 5,000 members throughout the Los Angeles area. Established in 1978, the Conservancy works to preserve and revitalize the significant architectural and cultural heritage of Los Angeles County through advocacy and education.

GO16-26

Please do not hesitate to contact me at (213) 430-4203 or afine@laconservancy.org should you have any questions or concerns.

City of Los Angeles, Department of City Planning, Office of Historic Resources

The Old Warehouse. This five-story concrete building was originally constructed with an east-west axis in 1924 for use as a laboratory by the Brunswig drug company. Acquired by the Los Angeles County in 1930 its axis was changed to the north-south direction when Spring Street was widened. It is currently used by the County as a center for Indo-Chinese refugees and other purposes.

The Plaza and the East Side

(Bldg. #43) Plaza probably laid out between 1825 and 1830 in a rectangular shape with the corners at the cardinal points of the compass. It was landscaped and the shape changed to a circle shortly after the Pico House was built. It has been relandscaped several times and is paved with brick and concrete. It contains a "kiosko" built in 1962 which houses restroom facilities. The plaza is owned by the city of Los Angeles.

(Bldg. #46) Father Serra Park, on the east side of the Plaza is at the site of the old Lugo House (razed in 1951); contains lawns, trees, shrubs, and a statue of Father Serra.

(Bldg. #47) Placita de Dolores, 1979, a triangular lot containing a semi-circular tiled mural depicting "El Grito", a stage and a replica of the Bell of Dolores. Owned by the Department of Public Works, it was constructed on top of the old Zanja Madre.

A significant aspect of the cultural resources of El Pueblo exists as subsurface archeological remains. These values have not been systematically explored for the entire park; however, archeological excavations near the Avila Adobe and in other areas have revealed that significant remains are present. Such remains may be expected to include at least the following: foundation or structural remains from the span of history of the pueblo; remains of the Zanja Madre and other utility-related features; early road surfaces; and artifacts discarded as debris around older structure or over the bluff known to have existed along present-day Los Angeles Street.

Recent restoration work associated with archeological investigations along the foundations of older structures, and development work near the Biscailuz Building, indicate that such materials do exist, and are probably distributed throughout the historic park. Test excavations have been done recently in the area of El Pueblo Parking Lot #1; these have also revealed significant resources. Based on the investigations, it is clear that significant cultural resources are to be found below the surface.

Natural and Scenic Values

The natural resources of El Pueblo consist entirely of plant and animal species introduced after the appearance of Euroamericans and the founding of the pueblo. Thus, no native species exist today, except for some plants in the Avila Adobe patio, introduced for interpretive purposes. The most predominant of the exotic forms present are the large Moreton Bay fig trees (Ficus macrophyilla), planted ca. 1877 in the Plaza. Ornamental shrubs and trees are interspersed in parking lots and next to structures. Some garden species are regularly planted in the courtyard of the Avila Adobe. Besides the usual urban assortment of pigeons and house sparrows, the very rare grey ring-necked dove occurs in the park. This bird is found only in Florida and on Olvera Street, in the United States.

The park was originally part of the Southern Oak Woodland biotic community, although the congested urban environment of which El Pueblo is a part has long since supplanted this community. The only natural element left is the climate, although today's weather conditions have been modified by persistent atmospheric pollution.

El Pueblo possesses some scenic values. The taller structures of the Pico-Garnier Block are easily visible landmarks from the surrounding surface streets; the Pico House (a hotel) is probably the most notable. The plaza area presents a green relief from the surrounding grey of government buildings and freeways. In the historic park, both Olvera Street and the Pico-Garnier Block can be appreciated from the vantage of the Plaza. For many, the stalls and shops of Olvera Street present a colorful and bustling scene. Many areas of the park, however, are not visible from the outside. The Main Street side of the Olvera Street block presents a blank wall, relieved only by the ornamental facade of the Sepulveda House.

Recreation

El Pueblo de Los Angeles SHP offers many forms of recreational activities. The park offers yearly cultural events, including: Mardi Gras; The Blessing of the Animals; Cinco de Mayo festivities; a summer concert series in the Plaza; celebration of the city's birthday in September; and La Posadas, a nine-day celebration preceding Christmas. Numerous other events dot the yearly calendar, as well as special "once-only" events. "Las Angelitas del Pueblo," an active support group, offers guided walking tours of the historic park, Tuesday through Saturday.

Additional activities that can be considered recreational revolve around the daily activities of the park. The shops and puestos (stalls) along Olvera Street offer a chance for visitors to take leisurely strolls. This is often combined with lunch or dinner at one of the many restaurants along the street. Bands often play in the Plaza at the noon hour, and many visitors relax there.

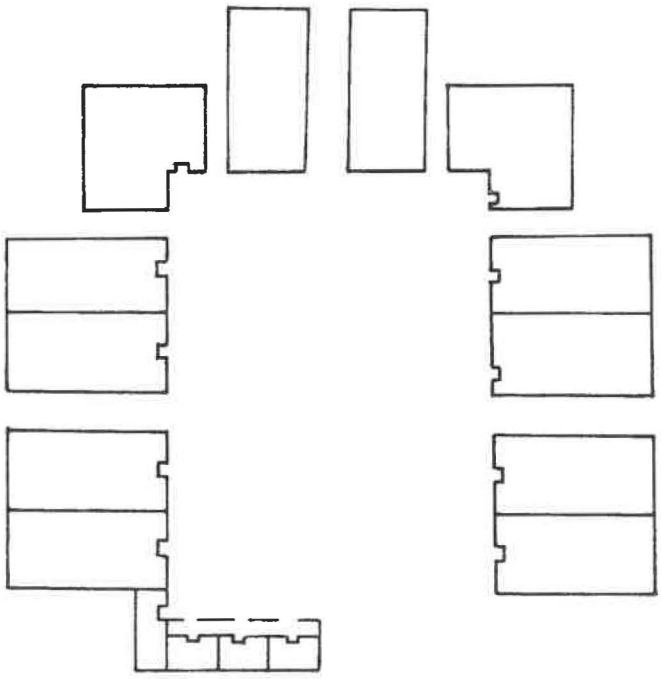
Resource Relationships to the Environment

The resources of El Pueblo de Los Angeles SHP are inextricable from the busy urban environment which surrounds them. This has affected, and will continue to affect, management and interpretation of these important resources. The presence of downtown Los Angeles is inescapable in most areas of the unit. The horizon to the south is dotted with massive government structures, and busy throughfares surround and divide the unit, with the attendant problems of noise and atmospheric pollution. As a result, the boundaries of the historic park are all but unrecognizable to first-time visitors, and the specter of parking and crossing the busy streets may discourage some visitor use.

The location of the park has many positive aspects. The presence of surface streets and freeways makes it easily accessible from anywhere in the Los Angeles basin. The unit is convenient to pedestrians from the government buildings to the south, and has traditionally been a favorite spot for lunch. The park, especially the Plaza and Olvera Street, presents a relief from the surrounding landscape.

At present, it does not appear that the surrounding environment presents an imminent threat to the historic structures. Several conditions will, however, have to be considered and monitored in the future. Traffic and vibration may, to some degree, affect the structures. Weather conditions and smog may affect the integrity of some building exteriors and the remains of the Siqueiros mural. Historic buildings also face the danger of earthquake damage.

Plaza - 1857, showing the Lugo House Adobe and other buildings surrounding the Plaza before major changes took place (background is site of Union Station)



Derived from a map of the suggested plan of the first plaza. On file, H. H. Bancroft Collection, Bancroft Library, Berkeley.

Resource Deficiencies and Recommendations

Certain phases of El Pueblo's historical span are poorly represented in the park. This is partially acceptable, since it would be infeasible to interpret, in depth, the entire historic period. In some instances, however, these deficiencies should be corrected by augmenting the present resources of the park through state acquisition, or transfer of jurisdiction of adjacent parcels of land (see Figure 1). Specifically, these theme-related deficiencies and possible corrective measures are:

Early Hispanic (Spanish) Era. El Pueblo de Los Angeles (1781) is the second of only three official pueblos established by the Spanish in Alta California. Although it has been at its present location only since about 1818,[1] the site relates significantly to the Early Spanish period. This period is physically represented by the Avila Adobe, the church, and the site of the Plaza, although the latter two have been heavily altered through the years, and are not state-owned.

It is important, therefore, to make every effort to augment the resources of this era. Specifically, increased archival research should be ongoing for the era. A comprehensive archeological recovery program must be instituted and applied at every opportunity, throughout the park. Equal consideration must be given to reconstruction of period adobe structures wherever an appropriate lot becomes available.

Late Hispanic (Mexican) Era. This period (1822-1848) was an important one in the pueblo, and to California as well. It was a time of turmoil, when Mexico broke away from Spain and imposed new regulations on the colony of California. It was an important period of development in El Pueblo. Unfortunately, only two structures have survived from this period, the Avila Adobe and the church, both built in the earlier (Spanish) period. Measures similar to those outlined above must be undertaken to correct these deficiencies.

American Era. This historical period (1848-present) is well represented, especially the span from 1850 to 1900. The physical resources of this period dominate all others in the park. Some significant structures that lie outside state ownership, yet within the ultimate boundary, need to be acquired to ensure adequate interpretation and rehabilitation. Specifically, these include the Vickery- Brunswig and Plaza House structures. A significant problem is the lack of knowledge concerning historical ethnic populations, which were very important to development of El Pueblo. Every effort must be made to acquire this understanding, through archival, oral historical, and archeological investigation.

1 *A plaza, near the location of the present one, was apparently laid out sometime after the intensive rains of 1815 forced relocation of the pueblo to higher ground from its original location in the nearby flood plain (see plan of first plaza, bottom of page 28). The actual layout of the relocated plaza may have occurred between 1815 and 1825 (cf. Appendix B). It is said that the pueblo's second plaza location (1814-1825) overlaps a portion of the third (and present) plaza--its northwestern corner. The third plaza may have been laid out by 1825-1830; it is known that the second plaza was abandoned by 1832. The 1818 date is used in the text, and for the initial date of the park's "prime period," as a convenience, because the date that is being generally accepted for construction of the Avila Adobe (the earliest state-owned structure in the historic park) is 1818. Contrary to what many believe, early Alta California settlements were informal, in contrast to the inset of the planned plaza; in fact, Sola, in an 1818 communication, complained of the "casual" arrangements of the Los Angeles and San Jose pueblos (Mason, 1979: personal communications).*

Allowable Use Intensity

All areas now within El Pueblo de Los Angeles SHP will sustain high use intensity, assuming that all currently existing hazards associated with unstabilized or unrestored structures are corrected. It is conceivable that some restrictions might be placed on particular structures, based on local health and safety regulations or on the needs of specific structures or other resources.

Theme Identification

The California History Plan has identified the major themes and periods of California history. El Pueblo de Los Angeles SHP contains elements that represent two major eras (Hispanic and American), as well as suberas, themes, and subthemes.

The park, when viewed as an archeological site, represents aspects of the Hispanic Era, including both the Spanish and Mexican suberas. Specifically, the Avila Adobe, the Plaza, and the church were established before ca. 1825. Also, many areas in the park were initially developed during the Mexican subera, including many adobe structures located around the Plaza. Although these structures are not standing, their locations may yield significant archeological resources.

Construction and development boomed around the Plaza, and in the surrounding area as well, during the American Era. Many of the historic structures now in the park are dated from the period 1850 to 1900. All of the Pico-Garnier block falls roughly in this period, as do many of the buildings along Olvera Street. An important component of this period is the general development of the Los Angeles urban area, as it is reflected in El Pueblo. This development was accompanied by a change in the national and ethnic population of the area. A large Chinese population occupied buildings on all but the west side of the Plaza. Many other national groups are represented by residences and businesses throughout the pueblo area.

Many resources in the park reflect the later period of the American Era. After 1900, El Pueblo began to decline; by the 1920s, it could be characterized only as a slum. Some construction did take place, however, along Olvera Street and next to the Plaza. The Biscailuz Building (1926), the Methodist Church (1926), and the Plaza Substation (1904), which served the urban electric railway system, are from this period. One of the most significant resources of El Pueblo is David Alfaro Siqueiros' mural, Tropical America, painted in 1932 on the south face of the second story of the Italian Hall. Although this work was condemned at the time and the wall whitewashed, remnants of the mural are visible from many areas of the park.

In summary, the resources of El Pueblo represent a significant span of California history. The park contains resources worthy of preservation and interpretation that date from 1818 to 1932.

Theme Statements

Numerous themes and subthemes identified in the California History Plan are represented at El Pueblo. Within the Spanish period of the Hispanic Era, applicable themes include: Spanish exploration and settlement; political and religious affairs, specifically colonization; and economic and material growth, specifically agriculture, adobe architecture, and energy and water transmission. For the Mexican period of the Hispanic Era, the following themes are pertinent: military affairs; economic and material growth, specifically agriculture and architecture; and social history, including lifestyles and recreation.

Themes relevant during the American Era include: political and military affaris; economic and material growth; population growth and patterns; transportation; architecture, including adobe, Victorian, and later styles; cultural development, especially drama; and social history, with an emphasis on ethnic populations and interethnic relations.

These themes are more fully delineated in the Interpretive Prospectus. The prospectus and this general Plan will serve as guides for development of an interpretive plan for El Pueblo.

The following table lists the specific interpretive periods and themes that were derived from the Interpretive Prospectus. These are divided into primary and secondary interpretive categories.

Table 1

INTERPRETIVE PERIODS AND THEMES

Primary Interpretive Periods

1818 - 1822	Spanish Period
1822 - 1848	Mexican Period
1848 - 1932	American Period

Secondary Interpretive Periods

	Pre-history - Indian Lifestyles
1781 - 1818	Pueblo Founding; First Plaza
1932 - Present	Recent History

Primary Interpretive Themes

El Pueblo De Los Angeles - Then and Now
- --Settlement
- --Religion
- --Agriculture
- --Energy and Water Transmission
- --Political
- --Commerce and Trade
- --Social History
- --Military Affairs
- --Ethnic populations
- --Christine Sterling
- --Recent History

Secondary Interpretive Themes

- Native Americans
- Portola Expedition
- San Garbiel Mission
- People Important to El Pueblo

Declaration of Resource Management Policy

Preservation, Restoration and Reconstruction of Cultural Values

Maintenance of the historical resources at El Pueblo through preservation, restoration, and reconstruction is the most important aspect of development in the park. Most resources in the park are historic structures, and the sites of past structures of historic importance. Resource Management Directive #64 creates guidelines for this work:

> "AS FAR AS POSSIBLE, HISTORIC FEATURES IN HISTORICAL UNITS, OR IN HISTORICAL ZONES OF OTHER UNITS, SHALL INCLUDE ALL PHYSICAL EVIDENCES OF SIGNIFICANT HUMAN ACTIVITY AT THE SITES AND BE DEALT WITH AS FOLLOWS:
>
> a. WHEN STRUCTURES OR OTHER FEATURES OF HUMAN ORIGIN ARE INCLUDED IN A HISTORICAL PRESENTATION, IT IS THE DEPARTMENT'S OBJECTIVE: FIRST, TO PRESERVE WHAT EXISTS: SECOND, TO RESTORE WHAT EXISTS: THIRD, TO RECONSTRUCT ON ORIGINAL SITES: AND FOURTH, TO RECONSTRUCT ON OTHER THAN ORIGINAL SITES. NO RESTORATION OR RECONSTRUCTION SHALL BE UNDERTAKEN UNLESS THERE IS SUFFICIENT INFORMATION TO ASSURE ACCURATE AND AUTHENTIC WORK. IN EVERY CASE, SUFFICIENT HISTORICAL AND ARCHITECTURAL RESEARCH SHALL BE ACCOMPLISHED TO ESTABLISH ACCURACY AND AUTHENTICITY.
>
> b. EXISTING FEATURES OF HISTORICAL AGE WILL ALWAYS BE PRESERVED AND/OR RESTORED (1) UNLESS THEY ARE NOT HISTORICALLY IMPORTANT WITHIN THE PRIMARY PERIOD FOR THE UNIT; (2) UNLESS THEY OCCUPY SITES REQUIRED FOR RECONSTRUCTION OF OTHER FEATURES OF OVERRIDING IMPORTANCE IN INTERPRETATION OF THE UNIT; (3) UNLESS THEY EXERT A NEGATIVE INFLUENCE ON THE UNITS, AND SHOULD BE REMOVED.
>
> c. FOR HISTORIC FEATURES THAT FALL WITHIN THE PRIMARY PERIOD OF A UNIT, AND ARE IMPORTANT FOR PRESENTATION AND INTERPRETATION, THE DEPARTMENT SHALL PRESERVE, RESTORE, OR RECONSTRUCT, AS MAY BE NECESSARY.
>
> d. FOR EXISTING HISTORIC FEATURES OUTSIDE THE PRIMARY PERIOD FOR A UNIT, THE DEPARTMENT SHALL PRESERVE, AND RESTORE AS REQUIRED TO PRESERVE, BUT WILL NOT RECONSTRUCT.

In accordance with these guidelines, all structures constructed during the prime period (1818-1932) shall be preserved. These structures will be stabilized where necessary, to preserve the integrity of the resources. Such work has been ongoing in some areas of the park, notably on the Pico-Garnier Block and the Avila Adobe on Olvera Street. In other areas of the park, structures have not been dealt with; in these areas, stabilization action will be taken. Particularly important are: The Sepulveda House; the Pelanconi House; the Plaza Substation; and other structures along the northwest side of Olvera Street.

Restoration will be necessary in many structures in the park, both for purposes of stabilization and to reestablish historical authenticity with respect to the prime period. Almost all of the buildings have been modified since the time of their construction, and a decision regarding the prime period for each structure will have to be made before restoration work. This period shall reflect the date of construction and/or the period when the structure reached the ultimate expression of its purpose. For example, the Pico House, constructed in 1869, may be said to have reached its zenith in ca. 1875-6. Thus, this later date may, in fact, be the best guide for restoration work, leading to the fullest possible interpretation of the place of the building in the history of the area. Such a decision will be made for each structure when restoration begins, based on more indepth research to be guided by the information in this plan.

All restoration work shall follow the above-listed guidelines of the department. Historical authenticity shall be sought on exterior restorations. Authenticity shall be sought on any interior restorations that will be open for public viewing, or that will serve any public function, such as museum facilities, support group facilities, or office space. Interior adaptive use restorations shall conform to the period emphasized in the exterior restoration of any building. Thus, no single structure shall be used to represent multiple periods, but rather shall be preserved, restored, and interpreted as a whole, with internal integrity in respect to theme and period.

Extensive archival and other historical research shall be done before restoration work, to insure complete accuracy. These endeavors shall be oriented toward gathering information on the architectural styles, as well as the history of the uses of the buildings. This information shall form the basis of the interpretive efforts undertaken in each structure.

Serious consideration shall be given to reconstruction of specific buildings in the park. Reconstructions offer the opportunity to mitigate resource deficiencies in reference to specific historical periods. Priority shall be given to reconstruction of adobe buildings from the Spanish and Mexican periods. These reconstructions shall be based on complete historical and archeological research, and shall not proceed until a sufficient body of information regarding the structures has been compiled. In all reconstructions, complete authenticity shall be sought. Reconstructions shall take place on the original building sites, whenever possible.

Generic or period structures that do not reflect actual dwellings that existed shall not be acceptable. Reconstructions shall occur on property that is currently occupied by structures outside the primary historical period, and/or on unoccupied land.

Historical archeology shall be employed wherever necessary to ensure the authenticity of restoration and reconstruction work. Archeological testing and monitoring shall also be employed whenever surface or subsurface disturbance associated with any work in the unit occurs, as delineated in Resource Management Directive 59. Any proposed demolition, alteration, or encroachment on historic structures must have approval from the State Department of Parks and Recreation.

Objectives for Interpretation

In accordance with the approved Declaration of Purpose, interpretation at El Pueblo shall emphasize history during the prime period, 1818-1932, but shall also include the flow of history from the Hispanic Era to the present, so as to depict the diverse populations of the area and the development of Los Angeles. Efforts will concentrate on general themes from the California History Plan that pertain to El Pueblo. Specific themes and methods of interpretation shall be determined by this plan and the Interpretive Prospectus.

Interpretation of Cultural Values

The department is committed to communicating to park visitors the historical significance of El Pueblo, and the history of Los Angeles from its founding in 1781 to the present. This must be done with a well-planned interpretive program that will provide continuity for the flow of history from the Spanish era through the Mexican and American eras, and will act as a strong unifier of the diverse facilities offered at El Pueblo.

Activities such as concessions, house museums, interpretive displays, tours, and special events will be appropriate to the historical integrity of the park, and will contribute to visitor enrichment and understanding of the resources of El Pueblo.

Adaptive Use

While the department seeks historical authenticity in state historic parks, it is recognized that from time to time, visitor services must be provided through concessions. In the case of historical parks, adaptive use in the historic preservationist's sense is an appropriate means of providing visitor services. Such use is covered in part by Resource Management Directive 68, which states:

> "BUSINESSES ESTABLISHED UNDER CONCESSION AGREEMENTS IN HISTORIC STRUCTURES COMMITTED TO AUTHENTIC PRESENTATIONS MUST BE COMPATIBLE WITH THOSE BUSINESSES THAT OCCUPIED THE STRUCTURES DURING THE HISTORIC PERIOD, AND MUST BE CONSISTENT WITH THE APPLICABLE RESOURCE ELEMENTS..."

El Pueblo offers an unique opportunity to interpret the story of the development of a city. This interpretation shall include the facts associated with the founding of the pueblo and the events of the Hispanic and American Eras, and shall impart to the public, wherever possible, a deeper sense of the relationship between events, and a concept of the flow of history. It is important that the public understand that the events, and especially the cosmopolitan makeup of the population of El Pueblo, are exemplary of the development of the City of Los Angeles. This emphasis will heighten the awareness of the citizens of Los Angeles, and will allow visitors a broader understanding of the processes of urbanization.

Subject: Comments against LAART's Gondola Project and Cathedral High School Meeting

Dear Mr. Zelmer,

Incidentally, Metro records show that the LAART related meeting at Cathedral High School took place on January 12, 2023.

Respectfully,

Thomas R. Savio
Executive Director, LAUSHS

Re: Comments on the Draft Environmental Impact Report for the Los Angeles Aerial Rapid Transit Project, SCH No. 2020100007

Dear Mr. Zelmer:

On behalf of The California Endowment ("TCE"), we submit the following comments on the Draft Environmental Impact Report ("DEIR") prepared for the project ("Project") proposed by Los Angeles Aerial Rapid Transit ("ARTT"). GO17-1

Summary and Statement of Position.

We provide the following summary of our position, followed by a table of contents and the remainder of our letter.

Introduction & Overview: We oppose the Project and request that it be terminated immediately.

Metro should not be supporting this unsolicited private project proposed at the behest of Frank McCourt and his companies because it is not a public transportation project, but rather, a common carrier tourist attraction. Because it is a private carrier for private benefit which Metro will not own, operate, or control, this private project should not benefit from public land, air rights, or taxpayer resources—all of which will be necessary for this estimated $300 million behemoth to become a reality. As the DEIR itself acknowledges there is a superior way to achieve the outcomes allegedly GO17-2

sought by this proposed project that involves public transportation—electric buses. If the Project is to be pursued, Metro should not be the lead agency - because the City of Los Angeles ("City") is in a much better position and is more properly designated as the lead agency.

cont'd GO17-2

The DEIR is Deficient and Must be Revised and Recirculated: The DEIR is seriously deficient. It fails to fulfill its function of informing both the public and the decisionmakers of the impacts of the Project, potentially feasible mitigation measures, and alternatives to the Project. As a result, it cannot provide the basis for reasoned decision-making as required by the California Environmental Quality Act ("CEQA").

If it is pursued further, the DEIR must be corrected and recirculated. An EIR is not supposed to be a sales brochure or advertisement for a project. It is supposed to be an unbiased full disclosure document that advises the public and decisionmakers of the impacts of a project and how any negative impacts can and will be reduced. The DEIR presented by ARTT and Metro falls woefully short of those legal requirements for full and accurate disclosure.

GO17-3

The DEIR is Misleading: Sadly, omission of critical information and use of analytically misleading half-truths is a common theme throughout the EIR. Mitigation measures for the Project's negative impacts are ineffective and explicitly deferred. It remains unclear what any unspecified future mitigation measures will entail, but the certainty and effectiveness of any proposed mitigations remain in question because the project proponent has not committed to funding any portion of the project other than initial environmental review and permitting.

GO17-4

The Financing Plan is Missing: To date, the Project does not have a financing plan, a plan that is critical to understanding how negative impacts identified in the DEIR will be mitigated by the Project's proponent, if they will be mitigated at all.[1] The Project's financial plan- which the Metro board

[1] Newspaper accounts reported that the gondola project was transferred to a newly-created entity named Zero Emissions Transit (ZET), which is apparently a subsidiary of Climate Resolve. However, in court documents, Metro representatives stated under perjury that the transfer had not yet occurred, and was just a non-binding statement of future intention. (Declaration Of Ronald W. Stamm In Support Of Respondent's And Real Party's Joint Opposition To Motion To Augment The Record And File A First

GO17-5

was promised would be made available before the end of September 2022- is missing altogether. Since the proponent- Frank McCourt's company, ARTT/ McCourt Global- has only committed to funding about 3% of the entire project budget, the shortfalls in construction and operating revenues will need to be made up somewhere and it is most likely that some if not all will come from public transit funding sources- better used for public projects. The DEIR should have discussed who is responsible for the Project, its implementation, and its mitigation measures both in the short range and the long range terms. We could discern no mention of Climate Resolve or ZET in the EIR at all. In this way, the EIR fails as a full disclosure document.

cont'd GO17-5

Unavoidable Impacts Cannot be Mitigated: Mitigation of identified negative impacts will be expensive but are critical to protect the neighborhoods and people living and working near the Project route. Traffic, air pollution, parking, noise and recreation will all have a significant impact on the local community and historic nearby landmarks. The Noise section of the DEIR identifies that there will be significant and so-called unavoidable impacts from construction equipment. This noise and vibration will affect the neighborhoods around El Pueblo and in Chinatown. The vibration will threaten the physical integrity of the El Grito Mural and the Avila Adobe. TCE offices, which are less than 100 feet from the proposed site of the Alameda tower support over 400 office workers which in addition to TCE staff include over 11 non-profit orgs in addition to another dozen groups in various stages of incubation and their staff members, as well as hundreds of non-profit and governmental visitors who participate in conferences on site on a daily basis. Homeboy Industries is also a sensitive receptor in this area and would be similarly impacts by noise and vibration. These impacts can be avoided by denying the project altogether, or choosing the environmentally superior alternative, which in the EIR is called "Transportation Systems Management" but comes down to enhancement of the Dodger Express Buses system.

GO17-6

Instead of promoting a private gondola to a private sports stadium (an amusement park ride, not actual public transit), Metro should focus on enhancing actual public transit options with its limited resources and staff and Board time.

GO17-7

FN GO17-5 Amended Petition in Los Angeles Superior Court case no. 22STCP01030, filed October 6, 2022, paragraph 10.)

The City of Los Angeles is the Appropriate Lead Agency:

Because the Project is a private project and not a public transportation project, we ask that the Project review process be terminated immediately. In the alternative, Metro should transfer lead agency status to the City to complete review and processing of the gondola Project. Because decisions about this development will have profound impacts on the City and the future the quality of life of City residents, the City, not Metro, is the proper lead agency. GO17-8

As discussed below, some impacts are disclosed by the DEIR as significant and unavoidable (noise and vibration). Still other impacts are reported to be mitigated below the level of significance, but because the impact was understated, or the mitigation measure is uncertain or vague, the impacts will be significant (traffic, local air quality, cultural resources, recreation and parks, and land use). Together, these impacts are unacceptable. Projects proposed through our public entities, whether Metro or the City, should maintain and improve, not degrade, the quality of life in Los Angeles. GO17-9

Conclusion: Outright denial of this Project is appropriate in view of the numerous significant, unavoidable environmental impacts of the Project and the existence of a superior, emission free, less costly and less community impactful method of achieving the stated goal of this project. GO17-10

Denial of the Project is also appropriate because Metro has no ability to approve this project because it is wholly private- not a public-private project or other type of project that may be approved by Metro for joint development with ARTT. Instead of reviewing the Project as lead agency, Metro should transfer lead agency status to the City of Los Angeles, which is required to approve a greater number of Project related actions and has a greater ability to monitor and control Project implementation in the future if it is implemented. GO17-11

The California Endowment's complete DEIR Comment Letter follows. GO17-12

To assist in review of this Comment letter, we provide the following Table of Contents:

TABLE OF CONTENTS

Page No.

I. PRELIMINARY STATEMENT AND LEGAL FRAMEWORK: THE PROJECT SHOULD BE REJECTED OUTRIGHT 9
A. Preliminary Statement On Gondola Proposal and Processes 9
1. Impacts on TCE and the Community 9
2. The Private Use of Public land, Public Rights of Way and Eminent Domain Power is Indefensible 10
3. Secretive Sole Source determination should be Voided.....11
4. Sweetheart deal through Metro's Office of Extraordinary Innovation (OEI) 12
5. Frank McCourt's Interest Would Be Improperly Promoted Above Everyone Else 12
6. An environmentally superior alternative of Electrified buses is available and should be chosen.....13
7. Precedent set by gondola would be bad public policy of Private Interest Appropriation of Public Functions 13
8. The Public May be Interested in Alternative Use of the Union Station Forecourt 14
9. SB 44 Streamlining Does not Apply Because the Gondola is not a Public Transit Project. (EIR Section 1.4.3.) 15
10. The EIR Must Address Environmental Justice Impacts Including Possible Affirmative Actions to Redress Past Discrimination..... 15
11. Elected Officials' Clearly Expressed Concerns Must Be Seriously Considered.....17
12. A Final Decision in TCE's Procurement Lawsuit Against Metro May Render the Project Impossible..... 17
B. Metro is not the Appropriate Lead Agency.....18
1. The Statute Cited by Metro as its Authority to Approve Or Supervise the Project Does Not Give Metro Such Authority 18
2. The CEQA Guidelines Do Not Support Metro's Claim to Be the Lead Agency 20

cont'd
GO17-12

3. Metro Does Not Have Appropriate Authority Over the Project 22
4. Metro Lacks Intention to Enforce Mitigation Measures Adopted for the Project. 24
C. The DEIR Must Be Revised And Recirculated 26
D. Denial of The Project Is Appropriate Because Of Unavoidable Adverse Impacts. 26
E. Outright Rejection Of The Project Is Appropriate Because Metro Has No Authorization To Pursue The Gondola Proposal 26
F. The DEIR is Inadequate 27
G. Legal Framework and Overview 27
1. The Project Description Is Defective (Chapter 3) Because The Entire Project Has Been Piecemealed, And Reasonably Foreseeable Impacts Have Not Been Analyzed Or Disclosed 27
2. Land Use/ Anticipated Uses Are Not Disclosed. 35
3. All Reasonably Foreseeable Impacts Of The Project Are Not Analyzed Or Mitigated. 36
4. There Is No Reliable Estimate Of The Gondola's Lifespan. 36
5. The Project Has Adverse Impacts That Cannot Be Mitigated Below the Level of Significance 37
6. Some Impacts That Have Been Understated. 37
7. Failure to Analyze Some Impacts. 38
8. Failure to Analyze all Feasible Mitigation Measures to Reduce Acknowledged Impacts. 38
9. Reliance on Vague, Unenforceable, or Deferred Mitigation Measures Violates CEQA 38
10. Failure to Consider a Reasonable Range of Alternatives 40
11. The Project Is Inconsistent with the General Plan and Other Applicable Plans 40
II. MAJOR SUBSTANTIVE CONCERNS: THE EIR IS FAULTY AND DEFICIENT 40
A. Aesthetic Impacts, Section 3.1 40
1. The DEIR Does Not Disclose the Full Extent of the Aesthetic Impacts 41
2. There Are Mitigation Measures Available for Impacts

cont'd
GO17-12

to Privacy..... 42
B. Air Quality Impacts (Impact 3.3) Will Be Significantly, Adversely Impacted by Traffic Drawn by the Gondola Project 42
1. Existing Air Quality in Downtown Los Angeles Is Already Degraded 42
2. Construction Emissions Would Be Significant and Must Be Mitigated to a Far Greater Extent than Currently Proposed 43
a. More Detailed Disclosure of the Timing of Construction Emissions Is Required 43
b. Additional Mitigation of Construction Equipment Nitrogen Oxide Emissions is Required.....43
3. Various Air Quality Analysis and Assumptions are Unsupported..... 44
a. Gondola Movement Assumptions are Overstated 45
b. Air Quality Analysis is Flawed 45
i. Baseline Assumptions are Incorrect.....45
ii. Haul Route Air Quality Impacts Are Inaccurately Analyzed 46
iii. Gondola Operation Benefits Are Overstated...46
iv. Battery Backup Should Be a Mitigation Measure 46
v. The EIR Uses an Outdated AQMP 46
c. Energy Usage is Inappropriately Analyzed and 46
C. Historical and Cultural Resource Impacts (Section 3.5) Must Be Avoided 49
D. Parks and Recreational Facilities (Section 3.16) Impacts Must be Avoided.....49
1. The Permanent Construction of Gondola Facilities Will Negatively Impact the Park Experience..... 49
2. Non-Permanent Impacts On The State Historic Park that May Be Significant Are Not Adequately Analyzed In The DEIR 49
E. Transportation/Traffic Impacts (Section 3.17) Are Understated..... 50
1. Dodger Stadium Access Study For Los Angeles County Transportation Commission 51
2. Metro Board Executive Management Committee Report 51
3. Draft Environmental Impact Report –

cont'd
GO17-12

Executive Summary- Project 52

5. Draft Environmental Impact Report Chapter 3.17 – Transportation 55
6. FEHR & Peers Ridership Modeling (Appendix N of Draft EIR) 57
7. FEHR & Peers Draft Parking Study September 2022 57
8. Shuttle Busses and the Coachella Festival Illustrate Better Alternatives Are Feasible. 58
9. Shuttle Busses and Coachella Festival Illustrate Better Alternatives Are Feasible 59
10. Summary and Conclusion 60
F. Impact: 3.13 Noise and Groundbourne Vibration Impacts Will Be Significant and Must Be Further Mitigated 60
1. Construction Noise is identified as Significant and Unavoidable 60
2. Groundbourne Vibration Impacts Will be Significant 61
3. Effects of Noise Pollution on Health Are Extensive 62
4. The DEIR Must Evaluate Sleep Disturbance 62
5. The DEIR Fails to Disclose Conflicts with the Los Angeles Municipal Code Noise Regulations 63
6. The DEIR Fails to Implement All Feasible Mitigation for Construction Impacts 63
G. The Potential for Blight Is Not Sufficiently Analyzed 64
H. Land Use and Planning Impacts (3.11) 65
1. City of Los Angeles General Plan Conflicts 65
2. The Surplus Land Act Requires Primary Consideration of Affordable Housing, Educations, and Recreation Before Private Development 66
3. Use of the Union Station Forecourt Would Conflict with the Union Station Master Plan 66
4. The Discussion of the Conditional Use Permit Modification for Dodger Stadium is Uninformative 67
5. The Park Preservation Act Requires Replacement Land 67
6. Metro's Identification of Possible Federal Funding Makes Federal Requirements Relevant and Applicable, but the EIR Fails to Discuss Them 68
7. Approval from the PUC is Needed 71

cont'd
GO17-12

I. Geology and Soils (Section 3.7) is Inadequate in its Analysis..... 71
J. The Analysis of Alternatives (Section 4.0) is Grossly Inadequate 72
1. The Project Cannot be Approved if There Are Feasible Alternatives that Would Reduce Adverse Impacts 72
2. A Reasonable Range of Alternatives Must Be Considered, and Was Not 73
3. Alternatives Proposed in the LACTC Study Were Summarily Rejected Without Valid Evidence..... 73
4. The Environmentally Superior Alternative of Expanded Dodger Express Bus Usage is Feasible 74
III. CONCLUSION 74

cont'd GO17-12

I. PRELIMINARY STATEMENT AND LEGAL FRAMEWORK: THE GONDOLA PROJECT SHOULD BE REJECTED OUTRIGHT.

A. Preliminary Statement On Gondola Proposal and Processes.

1. Impacts on TCE and the Community.

The Endowment—who will be directly impacted by this Gondola Project and its use of the surrounding land-- seeks to protect the interests of its community, and to ensure that local agencies (like Metro) comply with their own laws. (See Notice of Preparation Letter Submitted by The Endowment and Homeboy in EIR Appendix A.)

GO17-13

TCE's Building Healthy Communities Initiative is focused on empowering local communities to change the conditions, policies and practices that create racial, health and opportunity disparities in communities.[2] TCE is partnered with fourteen communities across California to engage in place based community change initiatives to build healthy and safe neighborhoods for children to grow up in. Much of this work is accomplished by creating spaces for collaboration by nonprofit service providers. The Center for Healthy Communities on Alameda is such a space. TCE's Center for Healthy Communities campus has become an anchor pillar of the region's nonprofit community, annually hosting thousands of conference attendees to work on the wellness gaps in our community.5 Every

FN GO17-13

2 The California Endowment <https://www.calendow.org/the-center-for-healthy-communities/los-angeles/>

year TCE welcomes over 150,000 guests to its campus. For example during 2019, the Center for Healthy Communities Campus hosted an average of 8 conferences per day for community stakeholders such as the City of Los Angeles, the County of Los Angeles, and LA Metro. This includes over 500 Grantee conferences, 700 Government conferences, and 800 non-profit conferences annually. At TCE, we strive to continue to expand these programs and are actively planning on adding additional programming space, that will increase our daily visitor count and help to complete the vision of the campus. Completing the TCE campus will foster the development of additional community leadership, civic engagement, and transitional housing support in the community. The California Endowment's Center for Healthy Communities represents opportunities for civic engagement and participation by the nonprofit sector in improving community well-being in the region. Completing the TCE campus is also complementary to the shared vision of a establishing a "Hope Village" for the further advancement of the community. cont'd GO17-13

Over the last several years, The Endowment has reached out to the City to discuss the possibility of using the triangle park immediately adjacent to TCE for the benefit of the community and has regularly supported its maintenance and upkeep. This park and adjacent street were anticipated to be part of the expanded TCE campus envisioned in the Hope Village project. Given the proximity of the Project along Alameda Street to the TCE campus, it would be a significant impediment to completing the campus and expanding these community service uses. GO17-14

The Gondola Project would impact historic cultural resources such as the Avila Adobe, Olvera Street, and the State Historic Park with aesthetics and noise associated with its operations and with noise and ground vibration associated with its construction. It will have aesthetic impacts as its towers and stations literally tower over neighborhoods and gondola cars transport hundreds of people past the windows and over the yards of houses. It will have traffic and transportation impacts as game attendees will drive to and park in Chinatown and Union Station neighborhoods in order to board the gondola and save on expensive Dodger parking lots. It will have recreational impacts on the State Historic Park as it takes a portion of the land and prevents use portions of the park for such beloved activities as kite flying during kite festivals. GO17-15

2. The Private Use of Public land, Rights of Way and Eminent Domain is Indefensible. GO17-16

The project would involve use of aerial gondolas to transport individuals from the Forecourt of Union Station, over a public right of way, a

metro line, Chinatown, a freeway, and over multiple communities, to Dodger Stadium. It would require the extensive use of public land including Metro's Forecourt and parcels of property owned by the City of Los Angeles along Alameda Street near Olvera Street, and state-owned property at the State Historic Park of Los Angeles. It would require use of air rights over private property, over State owned highway, and over Metro rail lines, and Los Angeles public streets. cont'd GO17-16

If private property owners do not agree to allow their property to be used for the Project, Metro might use condemnation proceedings. The use of public power, such as eminent domain by Metro to assist a private carrier is expressly contemplated in correspondence between Metro and ARTT. (AR 199- Sept. 26 2018 Letter, p. 9 ["…it is anticipated that Metro would utilize the power provided…" including "condemnation"]). GO17-17

The Surplus Lands Act and similar provisions of law prioritize affordable housing, educational, open space and recreational use of public land above private use. The Park Preservation Act, California Public Resources Code section 5400-5409, requires that any usage of designated public park land, such as would occur at the State Historic Park, must be compensated for by replacement of equal land. The EIR fails to address the Park Preservation Act. GO17-18A GO17-18B

3. Secretive Sole Source determination should be Voided.

Following ARTT's submission of a proposal in April 2018, Metro made a sole source determination in 2018- that ARTT would be the only possible provider of the gondola- without public disclosure and/or involvement or Metro Board of Directors input or approval. Metro entered a Memorandum of Agreement ("MOA") in 2019 that restricted its ability to examine competitive proposals through an exclusive negotiating agreement ("ENA") clause. Such sole source approval and ENA restrictions were taken in violation of Metro's own stated policies and procedures in its internal acquisition and contracting manuals, which in turn implement state competitive bidding laws. Competitive bidding requirements are normally necessary- and required by law- for all significant public transportation projects. GO17-19

All of these critical actions in matters of vital public interest, were taken administratively, without public knowledge, oversight and/or

involvement—and all in direct violation of Metro's own procurement policies.

If left unchecked, these determinations—which set the course for a major investment of tax-payer funds and direct impacts on the local community, service providers, and property owners (including The Endowment)—will proceed to the entitlement/construction phase.

cont'd GO17-19

4. Sweetheart deal through Metro's Office of Extraordinary Innovation (OEI).

While some members of the public may have heard about the Gondola Project in December 2019, Metro's sole source determination through the Office of Extraordinary Innovation ("OEI") was not disclosed to the public. The Endowment itself was unaware of its existence until September 2021 and only after The Endowment and other organizations sought records regarding the Gondola Project. The Gondola Project, therefore, appears to have all the earmarks of a clandestine, sweetheart deal, carefully sidestepping the significant public engagement, outreach and transparency required of all Metro public transportation projects

GO17-20

It simultaneously avoids the scrutiny and competitive bidding required of private projects. By fast-tracking and sole-sourcing a multi-million-dollar aerial tram through Metro's OEI Metro deprived the public of knowledge and input regarding the Gondola Project as it proceeded through Metro's internal review process. OEI was meant for smaller, more genuinely innovative projects- not a gondola which is not extraordinary or innovative technology in any way.

5. Frank McCourt's Interest Would Be Improperly Promoted Above Everyone Else.

This project would promote the interests of a single person- Frank McCourt- over the interests of the public, which would be better served by a genuine public transportation project. Gondola Project is proposed by ARTT. ARTT was created by McCourt Global which is, in turn, controlled by Frank McCourt, the former owner of the Los Angeles Dodgers before their bankruptcy filing. McCourt continues to hold at least a half- interest in the parking lots surrounding Dodger Stadium. In 2008, he proposed extensive commercial and retail development of the parking lots in a plan called the Next 50, but those plans went nowhere when he was unable to raise the financing for them. The plans are apparent on the website of the architect

GO17-21

who designed them for the McCourt Company. (See https://johnsonfain.com/projects/architecture/commercial/la-dodgers-stadium-next-50/; Enclosure 10.)

TCE has taken a stand on behalf of the broader public interest, and the interests of the local community, to ensure that community voices are heard, and that if true public transportation is needed, that Metro adhere to its own policies that seek to develop transportation with and for the public, not simply push forward an unsolicited private transportation project through a now faulty Metro process in the Office of Extraordinary Innovation. cont'd GO17-21

6. An environmentally superior alternative of Electrified buses is available and should be chosen.

A better, public serving transportation project might be, for example, enhancement of the Dodger Express buses with electrified buses. This possibility is identified as the Environmentally Superior Alternative in the EIR. (4-75.) Such electric buses would be available not just during the 182 days on which there is a game or event at Dodger stadium, but also available to serve the public on other days and to other destinations throughout the rest of the year. McCourt's private gondola project line serves no other interest than conveying Dodger game ticketholders to the Stadium from Union Station and back again. This will not alleviate but will exacerbate greater traffic, pollution and congestion in the community in an around Union Station (UCLA Study) as riders drive to Union Station to take the Gondola, thereby displacing cars from the Dodger parking lot to Chinatown and the surrounding area around Homeboy and The California Endowment. GO17-22

7. Precedent set by gondola would be bad public policy of Private Interest Appropriation of Public Functions.

If Metro continues to participate in this gondola proposal with Frank McCourt and the companies he controls, it will undercut public confidence in Metro and in local government generally. The gondola project demonstrates that a single rich and powerful individual such as Frank McCourt can coopt the instruments of public government- and an agency as large as Metro- that is supposed to serve the public generally- and enlist that agency in meeting his private interests of building a private transportation project to the GO17-23

parking lots he owns at Dodger stadium.[3] Metro has committed to use eminent domain—the taking of private land and air rights away from individual owners-- to help him achieve his goal. The former homeowners of Chavez Ravine had their homes and land taken by eminent domain. Will history repeat itself? If McCourt and the gondola project are not stopped now, it would set a precedent for further use of public agencies by private individuals to serve their private interests and enrich themselves at the expense of the public.

cont'd GO17-23

GO17-24

This project has been recognized by Metro staff as unprecedented. It is unprecedented for a reason: it is not legally authorized and is not within Metro's jurisdiction to pursue. Billionaire Elon Musk sought to promote similar private transportation to Dodger Stadium in the guise of a public transportation project but he abandoned that effort. (https://ballparkdigest.com/2021/04/16/musk-boring-to-dodger-stadium-dead/). Similarly, the ARTT project should be rejected and abandoned before it progresses further with Metro.

GO17-25

8. Alternative Use of the Union Station Forecourt.

The proposal assumes the Union Station Forecourt would be used for the gondola project. There are much better uses possible for this public land, including continued use as public open space. If the land is available for lease, members of the public may be interested in exploring its use as

GO17-26

[3] Even if the Project allegedly will not require Metro monetary expenditures, Metro itself identified opportunity costs and other costs in its Request for Information. Metro stated that the Project would "have a cost to Metro and the people of Los Angeles County These may include the social and political cost of acquiring property; the impacts of construction on local communities; acting as the face of the project and mediating opposition; the opportunity costs of expending limited resources and capacity; and the impact of allowing for an additional transit use on the Union Station property given the myriad of projects, both transit and commercial, in early stages of development. To the extent that Metro will be environmentally clearing the project, claiming property, and substantially involved in other ways, the reputational risks of problems that arise on the project, such as delays, mismanagement, or operational incidents, also reflect on Metro even if Metro is not paying for the project." (Request for Information, p. 3.)

FN GO17-23

supportive housing, community recreational, or educational space. The Surplus Land Act requires a prioritization of uses ahead of private interest.

If there is to be a lease of the Forecourt land, we would like notification of any Requests for Proposals or other bidding processes whether required by local, state and federal competitive bidding laws and regulations or otherwise.

cont'd GO17-26

9. SB 44 Streamlining Does not Apply Because the Gondola is not a Public Transit Project. (EIR Section 1.4.3.)

The DEIR contains a section asserting that SB 44 applies to the gondola project. (EIR, pp. 1-5 to 1.9). However, this is wrong and misinforms the public. As explained below and in TCE's lawsuit and confirmed in ARTT's application, the gondola project is not public transportation; it is a private project. As such, it is not entitled to the streamlining benefits that SB 44 provides for "public transit" projects.

GO17-27

The hearings held in an attempt to comply with SB 44 were not true public hearings, at which members of the public could make remarks in a public forum. Instead, they were in "science fair" format that isolated commenters and caused many members of the public to object in frustration. (https://www.sgvtribune.com/2023/01/14/opponents-of-aerial-gondola-to-dodger-stadium-take-over-meeting-in-chinatown/.)

10. The EIR Must Address Environmental Justice Impacts Including Possible Affirmative Actions to Redress Past Discrimination.

An EIR must analyze the environmental justice impacts of a project proposal. (*Golden Door Properties, LLC v. County of San Diego* (2020) 50 Cal.App.5th 467, 555.) In *Golden Door Properties*, the trial court ruled that an EIR "failed to address environmental justice" by making "no attempt to disclose the increased health damage that could occur to the more vulnerable County residents (children, the ill, and disadvantaged communities) from the project 'increasing nonattainment criteria pollutants' ..., or from not requiring GHG offsets to be obtained in-County." Similarly in the present case, the significant effects such as from construction noise and vibration (EIR, 3.13-63) will be felt most forcefully and most immediately by the nearby vulnerable communities, including many elderly non-English-speaking

GO17-28

residents of Chinatown.

cont'd GO17-28

The Court of Appeal in *Golden Door* cited Ramo, Environmental Justice as an Essential Tool in Environmental Review Statutes: A New Look at Federal Policies and Civil Rights Protections and California's Recent Initiatives (2013) 19 Hastings W.Nw. J. Envtl. L. & Pol'y 41, 42 [noting that "[t]he California Attorney General's recent litigation involving ... global warming emissions[ ] affecting minority communities has sparked renewed interest in the relationship between environmental review laws and the doctrine of environmental justice."].)

When the City of Los Angeles analyzed expansion of the Los Angeles International Airport, the EIR/EIS included an entire section devoted to environmental justice impacts. (https://www.lawa.org/-/media/lawa-web/lawa-our-lax/final-environmental-impact-statement/final-environmental-impact-statement--part-i/feis_eir_part1-13_040403_environmentaljustice.ashx.) Metro should do no less with regard to the gondola project.

GO17-29

A legacy of discriminatory actions by government officials against minority communities was evident in the forceful eviction of people from their homes in Chavez Ravine in the 1950's in order to make room for Dodger Stadium and its parking lots. Every action Metro and the City of Los Angeles takes today must be informed by efforts to be especially sensitive to the City's diverse communities, especially in light of the discrimination of the past. Translating documents into appropriate languages, especially when they discuss possible physical damage to treasures of Hispanic heritage in Los Angeles such as Avila Adobe and El Grito Mural, is a bare minimal step that Metro should undertake.

GO17-30

GO17-31

A legacy of discriminatory actions by government officials against minority communities was also evident in the eviction of residents from ancient Chinatown near Union Station. (Encl. 4 [Administrative Civil Rights Complaint regarding Cornfields, p. 14 stating "The City and the railroads forcibly relocated the Chinatown community to its present location to build Union Station in the 1930's."; also https://californiahistoricalsociety.org/blog/old-chinatown-and-the-present-union-station-transportation-land-use-race-and-class-in-pre-wwii-los-angeles/ .)

GO17-32

The injustice families suffered in the 1950's era eminent domain

seizures of their homes and property by local government has been extensively documented. (See https://www.latimes.com/entertainment-arts/books/story/2020-03-31/dodgers-stealing-home-eric-nusbaum; https://www.zinnedproject.org/materials/chavez-ravine; https://laist.com/news/la-history/dodger-stadium-chavez-ravine-battle; copies of these articles are enclosed. Encl. 3.)

cont'd GO17-32

The use of eminent domain[4] to take private property from minority community members in a way that enhances private gain is similar to the historic injustice that occurred at Bruce's Beach in Manhattan Beach. With regard to Bruce's Beach, however, the County of Los Angeles has sought to correct the historic wrong that occurred by returning property to the Bruce family. (https://mitchell.lacounty.gov/los-angeles-county-completes-landmark-return-of-bruces-beach-to-the-rightful-heirs-of-charles-and-willa-bruce/.) The wrongs done to families who lost their homes and properties through discriminatory government actions in Chavez Ravine have yet to be redressed.

GO17-33

11. Elected Officials' Clearly Expressed Concerns Must Be Seriously Considered.

On September 15, 2022, the Metro Executive Committee met to receive a staff report on the status of the Gondola project. At this hearing, Los Angeles City Councilmember Hernandez who took office on December 12, 2022, reiterated concerns previously expressed at the September 15, 2022 Executive Committee hearing which were to ensure the genuine involvement of the community in a public and transparent review process for the gondola. Among her requests were for translation of relevant documents.

Additionally, Director Solis raised a number of questions and concerns at the September 15, 2022 Metro Executive Committee hearing. We have provided a transcript of the remarks of Director Solis and of Councilmember Hernandez. (Enclosure 1.)

Finally, the Board of Directors of Metro itself passed a Resolution in 2021 seeking answers to questions to avoid Unintended Consequences. A copy of that resolution is attached. (Enclosure 2.) Despite the passage of time, the Board's questions have not completely been addressed.

GO17-34

FN GO17-33

4 The use of eminent domain/condemnation power by Metro to assist the gondola is expressly contemplated in the correspondence between Metro and ARTT.

12. A Final Decision in TCE's Procurement Lawsuit Against Metro May Render the Project Impossible.

The California Endowment, brought a lawsuit (a Petition for a Writ of Mandate) in March 2022, seeking to set aside Metro's determination to proceed with ARTT's unsolicited proposal for a multi-million dollar gondola project. This lawsuit was heard on January 6, 2023. A decision on this lawsuit was issued on Monday, January 9, 2023 denying the writ of mandate but that may not yet be a final decision. GO17-35

B. Metro is not the Appropriate Lead Agency.

1. The Statute Cited by Metro as its Authority to Approve or Supervise the Project Does Not Give Metro Such Authority.

The applicable statute, Public Resources Code section 21067, defines a lead agency as a public agency having the principal responsibility for carrying out **or** approving a project. Metro simply assumes in the DEIR that it is the lead agency, asserting that Metro has the "responsibility for supervising or approving the project as a whole" without showing under what statutory authority it has that responsibility or authority. (DEIR, p. ES-1) The truth is that because this is not a public transportation project, a public/private Metro project, or a project that Metro intends to acquire, other than possibly leasing its forecourt, Metro has no control, responsibility or authority over the project, therefore, Metro is not the proper lead agency for the Project. GO17-36

The list of permits set out in the DEIR as required for the ARTT does list Public Utilities Code (PUC) section 130252 as requiring "submittal, review, and approval of proposed plans for design, construction, and implementation of the Project", which is Metro's responsibility. (DEIR, p. 2-61.) However, this statute does not grant Metro the degree of authority to authorize, or any authority to supervise the Project, that it claims.

PUC section 130252 applies only to "public mass transit systems or projects, including exclusive public mass transit guideway systems or projects, and federal-aid and state highway projects." (PUC § 130252(a).) However, the Project was *not* proposed or approved as a *public* mass transit

project; instead, it would be a privately owned and operated (MAR5 220) transportation system primarily serving a small fraction of the public (Dodger baseball game or event ticket holders) on a limited number of days per year. We note that ARTT itself stated in its response to Metro's RFI that Public Utilities Code section 130252 does **not** apply to the Project. (MAR 207.) ARTT's proposal to Metro for approval of the ARTT explicitly says that the gondola would be *privately owned and operated*." (*Id*, emphasis added.) As a private transportation project, the ARTT would be outside the ambit of PUC 130252; Metro's authority to approve it at all has not been shown.

cont'd GO17-36

Even if this were a public mass transit project, Metro would have no or only very limited authority to "supervise" the Project, as shown by both PUC sections 130252 subd. (a) and subd. (c). Subdivision (a) provides that:

> All *plans* proposed for the design, construction, and implementation of public mass transit systems or projects, including exclusive public mass transit guideway systems or projects, and federal-aid and state highway projects, shall be submitted to the commission [here, to Metro] for approval.

(Emphasis added.) In addition, PUC 130252, subdivision (c), provides:

> As used in this section, "plan" means a project description and *not* the detailed project plans, specifications, and estimates.

GO17-37

(Emphasis added.) Hence, even if Metro did have statutory authority to approve the Project, that authority would only cover approval of the overall plan for the ART, not over the myriad individual design and specifications or estimated costs; supervision of the actual construction, let alone operation, of the Project is not vested in Metro. The emphasis in the statute is on Metro ensuring that proposed transportation project plans are consistent with the Regional Transportation Plan adopted by the regional transportation planning agency (here, the Southern California Association of Governments [SCAG]), *not* on Metro evaluating the merits of any individual project or supervising any individual project. (PUC § 130252(a).) Metro provides no citation to authority that it may "supervise" the Project. Instead, Metro would have only such contractual rights as Metro and ARTT negotiate between

FN GO17-36

5 The Metro Administrative Record ("MAR") and Supplemental Administrative Record ("SAR") are included with a flash drive submitted with this letter. (Enclosure 8.)

them (completely out of sight of the public) to control or modify the thicket of design and construction details, features, and operational performance of the ART, details crucial to the nature and extent of the Project's impact on the environment.

cont'd GO17-37

Metro itself has repeatedly noted that the Project will not cost Metro a dime, based on ARTT's repeated statements that it will reimburse Metro for all costs involved in acting as lead agency for the Project, and exercising eminent domain to acquire property or air rights if needed for the Project. (MAR 15.) None of ARTT's assurances have covered post-approval actions. Obviously, Metro cannot supervise the Project's construction or operation, or enforce mitigation measures imposed as part of the CEQA process, if it does not spend money; Metro's insistence that it will not spend public funds on the gondola is a tacit admission that it will not – that it cannot - supervise the gondola. Since enforcement of mitigation measures is a crucial part of the role of lead agency (*Friends of Kings River v. County of Fresno* (2014) 232 Cal.App.4th 105, at 116)), and since Metro has effectively disabled itself from being able to enforce such measures, Metro cannot properly serve as lead agency.

GO17-38

2. The CEQA Guidelines Do Not Support Metro's Claim to Be the Lead Agency.

The CEQA Guidelines provide guidance on determining the lead agency for a project at section 15151. That guidance disfavors Metro. Subsection (a) provides that if a public agency will carry out the project itself, that agency will normally be the lead agency. Metro has been very clear that the agency will *not* carry out the gondola Project (MAR 198 ["Metro does not envision taking a hands-on, prescriptive, or performance minded approach to this project"]), and both ARTT's Proposal and its responses to Metro's Request for Information (RFI) repeatedly emphasize that ARTT, not Metro, will handle the design, construction, and operation of the Project. (MAR pp. 2, 15, 189, etc.) Metro does not qualify as lead agency on this count. Since Metro has also stated that it will not take a "prescriptive" role regarding the Project, it also has admitted that it will not supervise the Project.

GO17-39

Guidelines section 15051 provides guidance for assigning the lead agency role where one agency will not carry out the project itself. Where two or more public agencies will both have a role in approving or supervising a project, Guidelines section 15051 subd. (b) provides:

(b) If the project is to be carried out by a nongovernmental person

> or entity, the lead agency shall be the public agency with the greatest responsibility for supervising or approving the project as a whole.

Subsection (b)(1) further provides that:

> (1) The lead agency will normally be the agency with general governmental powers, such as a city or county, rather than an agency with a single or limited purpose, such as an air pollution control district or a district which will provide a public service or public utility to the project.

Again, Metro itself has disavowed any role in supervising the Project; in addition, it is the very kind of agency the Guidelines disfavor: Metro is a single-purpose public transportation agency that does not have "general governmental powers," e.g., land use and zoning powers (except for land it owns).

In *Center for Biological Diversity v. County of San Bernardino* (2016) 247 Cal.App.4th 326, the Court of Appeal had to determine which of two agencies, the local water agency or the County, should be the lead agency for a project to pump, transfer, distribute, and store groundwater. The Court of Appeal set out the degree of participation in approving and supervising a project that was required for the single purpose water agency to claim the lead agency role. The opinion lays out in great detail the water agency's proposed role in carrying out the project: it would obtain financing for the pumping and transfer, approve the design and construction of the wells, approve the design and construction of the pipelines and conveyance facilities, manage and oversee the project's operation, control and operate the joint powers agency that would distribute the water, and oversee compliance with the overall plan, among several other functions. (*Id*. at 340-343.) In short, the court held that the water agency had the most active and extensive role in carrying out the project, and therefore was the proper lead agency. (*Id*., at 343.) Here, Metro's role does not encompass planning, designing, operating, or managing the Project. It simply cannot justify its self-designation as lead agency. Instead Metro has explicitly disavowed such an active role in carrying out or supervising the Project. (MAR 198.) Almost the only function it will carry out that the water agency in *CDB v. County of San Bernardino* performed is acquiring land.

cont'd
GO17-39

The designation of the lead agency is vital to the EIR process, particularly due to the lead agency's role in certifying the EIR and choosing among alternatives to the project. (*Kings County Farm Bureau v. City of*

*Hanford (*1990) 221 Cal.App.3d 692, at 736-737.) A court has taken the necessary step of ordering a completed EIR to be decertified and redone, where an improper lead agency had prepared and certified it. In *Planning and Conservation League v. Department of Water Resources* (200) 83 Cal.App.4th 892 ("*PCL v. DWR*"), the project was the implementation of an agreement among several water districts and the state Department of Water Resources (DWR) as to how State Water Project water would be allocated among water districts statewide in the face of serious water shortages. The EIR had been prepared and certified by one of the local water districts that would itself receive water under the agreement. The court directed that the certification of the EIR prepared by this local agency be vacated, and that a new EIR be prepared with DWR as lead agency, because DWR had primary responsibility for managing the state's water resources, and only the statewide agency, with its statewide view of the water situation and its power to enforce the water allocations, was the appropriate agency to prepare the EIR. (*Id*. at 926.) Should Metro proceed to certify the ARTT EIR as lead agency, a similar remedy would be appropriate.

cont'd GO17-39

Guidelines section 15051, subd. (d) provides if more than one agency "equally meet the criteria" to perform as lead agency, the agencies may designate the lead agency by agreement.[6] Here, ARTT requested that Metro take the lead agency role in the CEQA process and Metro agreed. This Guideline subsection does not authorize a private party and an agency to agree on a lead agency in this fashion, and they were "not at liberty to anoint" Metro as lead agency when it does not meet the regulatory criteria. (*PCL v. DWR,* 83 Cal.App.4th at 906.) The agreement, and Metro's claim to be lead agency, are invalid.

3. Metro Does Not Have the Appropriate Authority Over the Project.

As discussed above, Metro does not have principal authority for approving or supervising the Project. Other agencies have considerably more specific approval authority, and would exercise considerably more supervisory authority over the Project, than Metro. Looking at the list of permits required for the Project at DEIR pp. 2-57 to 2-62, approval/supervisory authority over the Project is split among several different state and local agencies. Caltrans must issue an encroachment

GO17-40

FN GO17-39 6 Of course, that Guideline subsection does not apply here, since Metro does not meet the criteria.

permit before the Project can cross any state highway or freeway (as it must do to link Union Station with Dodger Stadium); the California Department of Parks and Recreation must issue four separate easement/approvals/permits/plan amendments to allow the Project to build and operate the Chinatown Station that will be located partially on State Park land, and to allow it to cross the airspace over the Park; and the CalOSHA Amusement Ride and Tramway Division must examine the Project's safety and issue a Certificate allowing construction of the ropeway before the Project can operate, as well as having responsibilities to ensure safe working conditions in various aspects of the Project, including periodic tests of the operational safety of the ropeway system (DEIR, p. ES-12), emergency evacuation plans (DEIR, p. 2-47), construction activities (DEIR, p. 3.9-1), and any other phase of the Project involving worker safety.

cont'd GO17-40

Finally, the City of Los Angeles has direct authority over all streets in the City (DEIR, p. 3.17-1: "All the streets in the Project study area are under the jurisdiction of the City of Los Angeles.") This gives the City the authority to execute a franchise agreement enabling the Project to "operate, over, or along any street, highway, or other place in the City of Los Angeles," without which agreement the Project cannot operate at all (since it travels over City streets or "other place[s]" for its entire length); and approve the design of for the Project components located within the public right-of-way. The City's Planning Department would also be required to approve the creation of a Specific Plan to provide for consistent application of Project design standards, limitations, and operational measures, would need to approve the creation of a Sign District to impose a comprehensive set of sign regulations on the Project site and to permit signage consistent with applicable City requirements.

GO17-41

Most importantly, the City must both issue permits for the Project to be built partially on City-owned land (DEIR, p. 2-61), and approve modification of the existing 1960 Dodger Stadium Conditional Use Permit ("CUP") to allow the Stadium Tower and the Dodger Stadium Station to be built and to operate. (CUP Condition 4, at SAR 3102, provides for collaboration by "the operators of the Stadium" and municipal officials "in devising mass transportation service to the Stadium site which will be sufficiently efficient to encourage patronage thereof and thus reduce the number of private automobiles driven to the Stadium events.")

The Project will also be built on or cross over land that is within the Alameda District Specific Plan, the Central City North Community Plan, the

GO17-42

DTLA Community Plan (current or updated), the Central City North Specific Plan, the Silver Lake-Echo Park-Elysian Valley Community Plan, and the Chinatown Redevelopment Plan (DEIR, pp. 3.11-8 through 3.11-137), all of which are encompassed within the City's General Plan (P. 3.17-5) and the City will be responsible for ensuring compliance by the Project with each such plan. For example, the City would be asked to waive provisions of the River Implementation Overlay District to allow the construction and operation of the Alameda and Alpine Towers and waive provisions of the Cornfield/Arroyo Seco Specific Plan to allow construction and operation of the Chinatown Station. (DEIR, p. 2-62.)

cont'd GO17-42

The final requirement listed in the DEIR as needed from the City of Los Angeles for the Project to go forward is the execution of a Development Agreement between the Project sponsor and the City that will remain in effect for *twenty years.* [8] (DEIR p. 2-62.) As described in Government Code sections 65864 through 65869.5, in addition to specifying various terms and conditions binding each party, such a development agreement must "require periodic review at least every 12 months" wherein the applicant must "demonstrate good faith compliance with the terms of the agreement." (Govt. Code § 65865.1.) While Metro has disavowed oversight of the Project, the terms that must be included in the development agreement provided for in the DEIR guarantee that the City *will* continue to monitor the Project at least yearly for the next twenty years. The City will also have statutory authority to enforce the development agreement, pursuant to Government Code section 65865.4 (absent specified conditions, "a development agreement shall be enforceable by any party thereto. . . .")

GO17-43

4. Metro Lacks Intention to Enforce Mitigation Measures Adopted for the Project.

GO17-44

7 See, particularly, the map at DEIR, p.3.11-8, showing only some of the varied plans and requirements to which the Project would be subject. Metro does not have the authority and expertise to evaluate and balance the requirements of all these plans, and the other plans described above, with respect to the Project. The City does.

FN GO17-42

8 The requirements of the Government Code sections cited by the DEIR for development agreements are not discussed in the list of required permits; the reader is left either to guess or to ferret out the information for him/herself. This compromises the DEIR's function both as an informative document and as a document of political accountability. (*Laurel Height Improvement Assn. v. Regents of the University of California* (1988) 47 Cal.3d 374, 392.)

FN GO17-43

Finally, a lead agency under CEQA may not approve a project that will have significant environmental impacts unless it also adopts mitigation for those impacts or adopts an alternative project that would avoid them. (PRC § 21001, 21081.) The lead agency is responsible for adopting and enforcing mitigation measures for all significant environmental impacts that will be caused by a project, and must adopt a mitigation monitoring process to ensure that the mitigation is carried out. (CEQA Guidelines, § 15097.) The mitigation measures listed in the DEIR for the Project include a multiplicity of plans (e.g., Construction Traffic Management Plan [DEIR, p. ES-14], Construction Monitoring Plan (Built Resources) [DEIR, p. ES-40], Cultural Resources Monitoring and Mitigation Plan (DEIR, p. ES-41], Archeological Testing Plan for Alameda Station (DEIR, p. ES-45], Archaeological Testing Plan for LAUS Forecourt [DEIR, p. ES-47], Archaeological Testing Plan for Los Angeles State Historic Park [DEIR, p. ES-48], Paleontological Resources Mitigation and Monitoring Plan [DEIR p. ES-52], Soil and Groundwater Management Plan [DEIR, p. ES-53], Construction Noise Management Plan [DEIR, p. ES-58, Vibration Monitoring Plan [DEIR, p. ES-67, Temporary Disaster Route Plan [DEIR, p. ES-76], Utility Relocation Plan [DEIR, p. ES-79], and a Fire Protection Plan [DEIR, p. ES-80]. In addition, ARTT will need to prepare a Site-Specific Final Geotechnical Report. (DEIR, p. ES-50.) Metro, again, has stated that it "does not envision taking a hands-on, prescriptive, or performance minded approach to this project."] (MAR 198.) It can be presumed that Metro does not plan to monitor/enforce all these various mitigation plans.

cont'd
GO17-44

The DEIR appears to assume that ARTT will prepare all these plans. (See, e.g., DEIR 3.13-68 [Construction Noise Management Plan to be prepared by "Project Sponsor."] Presumably, it is the City, with its direct construction permitting responsibilities, local ordinances regulating such impacts as excessive construction noise and expertise in overseeing such plans and mitigation measures, that will perform the required oversight and, if necessary, enforcement. (See, e.g, DEIR's reliance on LA Municipal Code [i.e., the City] to enforce stormwater runoff prohibitions, pp. 3.10-6.) The DEIR leans on the City of Los Angeles to enforce many, if not most of its plans to mitigate the adverse impacts of the Project.

Metro does not meet the statutory or regulatory requirements to be the lead agency for this Project, nor does it commit to performing the oversight necessary to carry out mitigation measures that will supposedly protect the environment from degradation and damage by the Project. Instead, Metro

appears to have defaulted to the City to perform oversight and enforcement activities. Metro has abdicated so many of the responsibilities of a lead agency that it cannot be designated as the lead agency.

cont'd GO17-44

C. The DEIR Must Be Revised And Recirculated.

The DEIR must be recirculated after information is added to make it legally adequate. It will not be possible to rely upon the response to comments because the DEIR is so deficient as to render public comment "in effect meaningless." (*Laurel Heights I, supra*, 6 Cal.4th at 1130.) The purpose of an EIR is to provide the public with detailed information about a project before it is approved. (Pub. Resources Code §§ 21002.1; 21003.1.) "[W]hen significant new information is added to the EIR after public notice is given of the availability of the DEIR, but before certification, the EIR must be recirculated for public review. . . ." (CEQA Guidelines § 15088.5; Pub. Resources Code § 21092.1.) After the information to address the deficiencies identified here and by other public comments is added, a revised DEIR must be recirculated.

GO17-45

D. Denial Of The Project Is Appropriate Because Of Unavoidable Adverse Impacts.

Under California law a proposed project with adverse impacts must be denied if there are feasible alternatives or mitigation measures available that would reduce the project's significant adverse environmental impacts. (Pub. Resources Code § 21002.) Such is the case here. Thus, because a denial is appropriate under CEQA, and would allow study of better alternatives.

E. Outright Rejection Of The Project Is Appropriate Because Metro Has No Authorization To Pursue The Gondola Proposal.

Metro has no jurisdiction to proceed with the gondola project at all. No environmental review is required at all for a project that a public agency rejects outright. The Project must be rejected outright. As a private project[9] to a single destination, this Project is a common carrier,

GO17-46

9 A "private project" is defined as "a project which will be carried out by a person other than a governmental agency, but the project will need a discretionary approval from one or more governmental agencies" for a

FN GO17-46

similar to the Palm Springs Tram which is a tourist ride and does not does not meet the statutory requirements for a public transportation project [49 U.S.C. § 5302 subd. (15)]. In order to confer upon this wholly private project the benefits of non-competition, use of public land, access to eminent domain powers, and fast-track project approval consideration it must be a true public transportation project primarily benefitting the taxpaying public. The mere proximity and potential coordination between a private project and an existing public transportation hub such as Union Station does not turn a private transportation project into public transportation For example, if the private funicular, Angel's Flight, happened to abut a Metro stop, that would not be sufficient for that private transportation project to be considered a public transportation project—the Gondola Project is no different.

cont'd GO17-46

F. The EIR is Inadequate

There are numerous major concerns TCE has with the document that has been released for public review. "The EIR is intended to furnish both the road map and the environmental price tag for a project, so that the decision maker and the public both know, before the journey begins, just where the journey will lead, and how much they--and the environment--will have to give up in order to take that journey." (*Natural Resources Defense Council, Inc. v. City of Los Angeles* (2002) 103 Cal.App.4th 268, 271.) In this case, critical information is missing from the analysis of numerous impacts. In too many ways, the DEIR understates the impacts that are analyzed, apparently for no other reason than to avoid imposing the cost of mitigating them on the developer. Further, the mitigation measures that are proposed are often deferred and unenforceable, and many feasible mitigation measures have not been considered.

GO17-47

G. Legal Framework And Overview.

1. The Project Description Is Defective (Chapter 3) Because The Project Has Been Piecemealed, And Reasonably Foreseeable Impacts Have Not Been Analyzed Or Disclosed.

GO17-48

FN GO17-46 contract or lease. (Cal. Code Regs. Tit. 14 section 15377.)

ARTT was formed by McCourt Global, which is controlled by Frank McCourt (McCourt). (SAR 2992-92; AR 806, 3116, 3152.) McCourt Global also owns or controls a 50% interest in the parking lots around Dodger Stadium, an interest he kept when he sold interests in them to the Guggenheim Partners, and that McCourt Global holds through the Chavez Ravine Land Company (hereafter, "Landco." (The California Endowment v. Metro, Los Angeles Superior Court case no. 22STCP01030, First Amended Petition, ¶ 32.)

The land surrounding Dodger Stadium, known as Chavez Ravine, represents a large financial opportunity for the owner if the land is developed for more profitable businesses than its current use. Currently, it is used for surface parking, chiefly for Dodger games and events at Dodger Stadium. The company proposing the gondola — Los Angeles Aerial Rapid Transit — makes no mention of future development plans. However, the Covenants, Conditions and Restrictions (CCR) agreed to by the Dodgers' owners and Landco in 2012 (SAR 3054) explicitly provide for development of the parking areas wholly or partially owned by Landco. Article IV of the CCRs is entitled "Regulation of Development," and is wholly devoted to setting parameters for the eventual development of the Landco lands. (SAR 3026-3207) Section 4.1 of the CCRs provides:

cont'd
GO17-48

> The Parties acknowledge that Landco, in the future, may apply for governmental approvals for future development on the Landco Parcels (the "Development"), which Development may include, but shall not be limited to, (i) office buildings, (ii) hotel and exhibition facilities, (iii) residential buildings, (iv) medical buildings, (v) academic buildings, (vi) parking structures, and/or (vii) retail, dining and entertainment facilities.

(SAR 3026.) The remainder of Article IV is devoted to placing restrictions on the future development as to design, signage, preservation of access to the Stadium, etc. (SAR 3026-28.))

Article V of the CCRs is solely devoted to specifying the ownership, permissible use, and potential ownership transfer of parking capacity at and around Dodger Stadium. In Section 5.1.1, Landco grants to the Dodgers an easement to use not less than 16,500 parking spaces on Landco's land (called "Required Parking Spaces") for the benefit of the Stadium. Section 5.1.1 also recognizes that the existing parking at the Stadium contains approximately 19,000 spaces, with the spaces in excess of the required 16,500 called

"Additional Parking Spaces." The CCRs provide that the Dodgers may use the Additional Spaces, subject to six-months' notice from Landco that it wants some or all of the Additional Parking Spaces back.

Section 5.1.2 provides that Landco may also reclaim ownership and use of some of the 16,500 Required Parking spaces, but only if some form of "mass transportation, including, without limitation, a subway or light rail" is built. If this mass transportation is constructed, Landco will have the right to provide fewer than the 16,500 Required Parking Spaces for use by the Dodgers. (SAR 3028-29.) The maximum amount of that reduction is not specified in the CCRs, but the Conditional Use Permit for the entire parcel (Stadium and surrounding land) specifies that one parking space should be provided for every 3.6 seats in Dodger Stadium. (SAR 3101.) Since the Stadium is capped at 56,000 seats, at least 15,555 parking spaces must be made available. (56,000÷3.6 = 15,555.56.) Since the parties to the CCRs provided for 16,500 of Required Parking Spaces with the possibility of diminution, there is flexibility for reduction below the Required Parking Spaces number.

cont'd
GO17-48

The upshot is that at least 2,500 existing parking spaces in excess of the 16,500 Required Parking Spaces (19,000 – 16,500 = 2,500) are available to Landco upon six months' notice, and more could be available ***if*** some form of mass transit is built to serve Dodger Stadium. Landco's owner, Frank McCourt, long had plans for an ambitious retail and entertainment complex around the Stadium. Those plans are evident in Mr. McCourt's "Next 50" plan, which was unveiled in 2012 when he owned the Dodgers, and in court documents during the bankruptcy proceedings that forced him to sell the team. (SAR 3189-91.) Mr. McCourt publicly stated that he planned to create a plaza with shops and restaurants, and to create a Dodger museum. (SAR 3183-85.) Mr. McCourt failed to secure funding for "Next 50," but the agreements revealed in the bankruptcy proceeding (still in force) provide insight into the relationship between the proposed gondola and McCourt's plans to develop the parking lots around Dodger Stadium. The various public statements made by Mr. McCourt, together with the meticulously drafted CCRs that allow his Landco to free up hundreds of acres of land now used for parking if a mass transit service is created that could potentially move thousands of persons per hour to and from Chavez Ravine, make it reasonably foreseeable that development will occur around Dodger Stadium. (*Banning Ranch Conservancy v. City of Newport Beach* (2012) 211 Cal.App.4th 1209 ["The California Supreme Court set forth a piecemealing

test in Laurel Heights. 'We hold that an EIR must include an analysis of the environmental effects of future expansion or other action if: (1) it is a reasonably foreseeable consequence of the initial project; and (2) the future expansion or action will be significant in that it will likely change the scope or nature of the initial project or its environmental effects.' (*Laurel Heights*, *supra*, 47 Cal.3d at p. 396.) Under this standard, the facts of each case will determine whether and to what extent an EIR must analyze future expansion or other action."

The specific facts of this case make it not only reasonably foreseeable, but reasonably likely that the proposed Project is a mechanism to allow Landco to take full possession of a large chunk of what are now parking lots around Dodger Stadium. The gondola project makes little or no economic sense without a major development at Dodger Stadium, which a gondola, as a mass transit project, could facilitate. There are only 81 home games in the regular baseball season. Even adding a maximum of 12 post-season games, a couple of exhibition games, a maximum of four special events a month permitted under the Conditional Use Permit issued by the City of Los Angeles for the stadium (SAR 3104), and the Los Angeles Marathon, at most the gondola is likely to be used at or near capacity on only 144 days per year. Unless, that is, the Dodger Stadium parking lots are developed as the entertainment, retail, and hospitality district like L.A. Live as Frank McCourt has long envisioned. GO17-49

In 2004, Frank McCourt bought the Los Angeles Dodgers from Newscorp for $430 million. The purchase was financed primarily with loans, with over a third of the purchase price lent directly from Newscorp. At the time of Mr. McCourt's purchase, no specific plans for development of the parking lots surrounding the stadium were made public. However, on April 25, 2008, Mr. McCourt unveiled a sprawling development plan for the stadium itself and the surrounding parking lot areas. Marketed as the "Next 50" plan, the proposed development was slated to include a Dodger museum, a Dodger retail store, office space, and two new parking structures. (SAR 3189-91.) In addition, the project was advertised as a green initiative, including the addition of 2,000 trees in the area around the stadium. The development was expected to cost $500 million, more than McCourt's purchase price for the team. GO17-50

The "Next 50" plan would have turned the stadium into a retail and entertainment venue to attract customers outside of game times and game days, and expanding the use of Chavez Ravine beyond baseball. Photographs

of Mr. McCourt presenting a scale model of development plans at a press conference beside then Mayor of Los Angeles Antonio Villaraigosa showed the proposed changes, including large, terraced plazas lined with trees and new buildings outside of the stadium. Mr. McCourt's planned development was designed to make use of the parking lots surrounding the stadium to increase the economic productivity of the land and turn Chavez Ravine into a year-round destination.

As part of his plans for the "Next 50" development, Mr. McCourt discussed a desire to connect Dodger Stadium to public transit, saying he "hoped local leaders would 'tweak and adjust subway lines' to add a Dodger Stadium stop and provide 'bus access in the interim.'" Then-city- council member Ed Reyes further endorsed connecting the development to new public transit lines, saying that the "renovation 'hopefully can stimulate a whole new transit system that gets us in and out of this great place.'" In developing plans for additions to Dodger Stadium and the surrounding land, Mr. McCourt clearly identified expanded public transit options as increasing potential visitors as well as revenue in new retail and entertainment destinations. This, again, makes his very public development plans for Chavez Ravine reasonably foreseeable if the gondola is built.

cont'd
GO17-50

Under Mr. McCourt's ownership the Dodgers fell deep into debt, ultimately filing for bankruptcy on June 27, 2011. In addition to bankruptcy court conflicts with Major League Baseball, Mr. McCourt was ordered to pay $150 million in a divorce settlement. The "Next 50" development never materialized, as Mr. McCourt failed to secure funding.

After several rounds of negotiations, a group led by Magic Johnson and financed by Guggenheim Partners won the bid to purchase the Dodgers for $2 billion. As part of the deal, Guggenheim Partners entered into a venture with a McCourt entity to jointly own the stadium parking lots.

The terms of the parking lot sale and any potential future development of the land around the stadium were filed under court seal as part of the supplement to the Dodger's chapter 11 bankruptcy plan on April 6, 2012 in United States Bankruptcy Court for the District of Delaware, case number 11-12010 (KG). With nine sections totaling 139 pages, the exhibit is titled the "Declaration of Covenants, Conditions, Restrictions, and Easements for Chavez Ravine," consisting of 93 pages of terms and agreements relating to the current usage and future development of Chavez Ravine. The exhibit was subsequently recorded by the Los Angeles County Recorder's Office, so it runs

with the land at Dodger Stadium.

The bankruptcy exhibit shows that Guggenheim Partners pays $14 million a year to the McCourt entity Blue Landco LLC to rent the stadium parking lots. The document also details possible future developments that "may include, but are not limited to (i) office buildings, (ii) hotel and exhibition facilities, (iii) residential buildings, (iv) medical buildings, (v) academic buildings, (vi) parking structures, and/or (vii) retail, dining, and entertainment facilities." The document includes a provision stating that Guggenheim Partners agrees "to cooperate with Landco, and to take all steps reasonably requested by Landco, in connection with the general plan of improvement and development of the Landco Parcels," and "not to oppose, or to interfere in any fashion (including, without limitation, by speaking out at public hearings) with any efforts by Landco to complete development of the Landco Parcels."(SAR 3049) The CCRs also state at Article II, section 2.1.1 that "[t]he Parties hereby acknowledge and agree that it is contemplated that portions of the Landco Parcels will be developed for other purposes, including potentially in connection with other sports-related development opportunities." This provision effectively grants Landco the sole discretion to attempt to develop the stadium parking lot lands, including with such projects as the Gondola Project station at Dodger Stadium. ARTT which did not exist at the time of the Declaration of Covenants, Conditions, Restrictions, and Easements for Chavez Ravine (CCR's), has no role and no rights in these CCR's.

cont'd
GO17-50

Further, the use of "will be developed", rather than "may be developed" in Article II, section 2.1.1 (as cited above) indicates that this development is more than hypothetical; it is already contemplated and planned for. As *Whitman v. Board of Supervisors* (1979) 88 Cal.App.3d. 397 held concerning a permit for an oil pipeline:

> The record before us reflects that the construction of the pipeline was, from the very beginning, within the contemplation of [the project proponent] should its well prove productive. Although admittedly contingent on the happening of certain occurrences, the pipeline was, nevertheless part of [the] overall plan for the project and could have been discussed in the EIR in at least general terms.

GO17-51

(*Id*. at pp. 414–415.)

Here, the facts clearly show that construction of retail or entertainment facilities at Chavez Ravine was kept as an option for future development. It

was, and is, reasonably foreseeable, and should be analyzed in the EIR.

cont'd GO17-51

An additional section of the CCRs states that "in connection to any Mass Transportation… Landco shall have the right to provide less than the 16,500 Required Parking Spaces." This would allow for developments in the parking lots that could significantly reduce the number of parking spaces if the developments were completed after or concurrent with the addition of a mass transit connection to Dodger Stadium. Under this agreement, construction of the proposed Project, connecting the stadium to the transit hub at Union Station could enable Mr. McCourt's vision for additional development in Chavez Ravine to be realized. In *John R. Lawson Rock & Oil* (21018) 20 Cal.App.5th 77, at 98, the Court of Appeal held that "agency action approving or opening the way for a future development can be part of a project and can trigger CEQA even if the action takes place prior to planning or approval of all the specific features of the planned development." [Citation omitted.] Here, the gondola would open the way for development of Landco's parking lots by satisfying the CCRs' condition that parking requirements could be significantly reduced if mass transit were in place at Dodger Stadium. See, also, *Bozung v. LAFCo*, where our Supreme Court held that the removal of an obstacle to contemplated development – in that case, annexation of land to a city – rendered the development a reasonably foreseeable impact of approval for the annexation of the land. Here, construction of the gondola would remove an obstacle to additional development at Chavez Ravine.

GO17-52

As the facts show, construction of the gondola is intimately connected to the future development at Chavez Ravine and is therefore one unified project. McCourt Global's website at one point trumpeted its ownership interest in the 260-acre Chavez Ravine land as a "*current* real estate project" (emphasis added) during the pendency of Metro's consideration of the gondola proposal. That statement appeared on the website through at least October 2021, although it appears to have been removed from the website once the company began facing significant opposition to its proposed gondola project.

On April 26, 2018, Aerial Rapid Transit Technologies LLC (ARTT) submitted an unsolicited proposal to Metro for an aerial gondola from Union Station to Dodger Stadium that it calls Los Angeles Aerial Rapid Transit or "LA ART." ARTT was founded by Drew McCourt, Frank McCourt's son. The company at one time claimed that the estimated $125 million project, which estimate is now $300 million (https://www.dailynews.com/2023/01/10/controversial-proposed-aerial-

GO17-53

gondola-to-dodger-stadium-wins-a-court-victory/), will be privately funded by Frank McCourt's investment firm and others.

The Gondola Project as proposed seems intended to function a loss-leader for the future development of parking lots at Dodger Stadium. The proposed Project makes no economic sense on its own merits, but it does make sense as a necessary part of a larger development scheme. The economic infeasibility of the gondola as a stand-alone project is highlighted both by the utter failure of ARTT to provide a proforma or other economic data for the proposed Project after the CEQA process would be complete; there is no evidence that the gondola would generate enough revenue to support its own maintenance and operation, let alone to service any debt incurred to finance it. While the original proposal stated that "farebox revenue can finance the Project," no proof was advanced or exists in the current record to show that this is true. Moreover, the current website claims that the Gondola will be free for those attending Dodger games—which further supports the idea that the Gondola is part of a larger project not included in this EIR. We note that in the original gondola proposal, fares were not specified, but "ARTT LLC envisions that a round trip ride on ART will cost less than the average parking costs at the stadium." (MAR 226.) Now, however, ARTT's website states in its FAQ: cont'd GO17-53

> Just like the Dodger Stadium Express [Metro's bus service from Union Station to Dodger Stadium on game days], the aerial gondola will be free to ride for anyone attending a game at Dodger Stadium, which will maximize the air quality benefits from the project and encourage transit ridership.

The FAQ also states:

> In June 2021, LA ART announced that it had proposed to Metro the creation of a Community Access Program for local residents and businesses to use the LA ART system. This encourages daily use of this zero-emission project by local community members, in addition to the event-day periods when ridership will be prioritized for Dodger game attendees. Outside these times, local residents and employees of businesses in the LA ART vicinity could utilize the aerial gondola using an individual Metro fare or their Metro system access pass at no additional cost.

(https://www.laart.la/faq/; last accessed 11/28/22.) GO17-54

These new plans show that the farebox will probably not be a source of significant revenue, since so many, probably most, riders will ride at no additional cost to their Dodger ticket or the usual Metro fare. ARTT's original proposal also made vague suggestions that sale of naming rights and of advertising would provide revenue (MAR 226 ["In-cabin and in-station advertising opportunities are a part of ARTT LLC's business model and may or may not be packaged with an overall system sponsorship agreement"]), but no figures are given or even hinted at. The plain truth is that the gondola has never been shown to be self-supporting. Because the gondola Project did not pencil out on its own economics when proposed, it did not qualify for a sole source determination from Metro. ARTT has produced no substantial evidence in the DEIR to justify the assumption that it will be self-supporting now. The logical conclusion is that the proposed Project's losses will be compensated for by other, future development. In short, it is a loss-leader. Such future development is reasonably foreseeable, even if not actually proposed yet, and must be examined by the DEIR as part of the proposed Project.

cont'd GO17-54

Finally, the DEIR does not appear to examine the impacts of transferring ownership of the ARTT to a non-profit organization. The change of Project sponsor from a for-profit company that claims to have access to private capital that would fund construction of the gondola to a newly-formed non-profit entity, Zero Emission Transit (https://www.climateresolve.org/climate-resolve-launches-new-nonprofit-focused-on-zero-emission-transit-dodger-stadium-aerial-gondola-to-be-first-project/#:~:text=LOS%20ANGELES%20%E2%80%93%20Leading%20environmental%20nonprofit,in%20the%20Los%20Angeles%20region; last accessed 11-28-22) for which no such access to private capital has been shown, radically alters the nature and qualities of the proposed Project and must be fully disclosed and analyzed. For one thing, the transfer of the proposed Project to a non-profit with no track record and unknown resources will materially change the level of deferred mitigation that can be considered feasible for the significant Project impacts. How will a non-profit organization, or whoever takes over the Project from ARTT, pay for the deferred mitigation?

GO17-55

In all the above aspects, the Project Description is inadequate.

GO17-56

2. Land Use/ Anticipated Uses Are Not Disclosed.

GO17-57A

The EIR states the City of Los Angeles will need to enter into a 20 year development agreement pursuant to Government Code sections 65864 through 65869.5 (EIR, p. 2-62.) Such a development agreement may not be approved because it would not be consistent with the City of Los Angeles General Plan. The proposal of the gondola requires far more input from the City of Los Angeles as the brief listing in the anticipated uses section makes clear. cont'd GO17-57A

The DEIR should address the handling of ARTT end-of-life and dismantling. If the project proponent or its successors go bankrupt, which is a real possibility given the history of the funder of the project proponent, the City of Los Angeles and Metro may be saddled with the responsibility for either continuing to operate the gondola system, or dismantling the towers and stations. To guard against this eventuality, a performance bond should be posted by the project proponent, to the benefit of the City of Los Angeles and Metro, which may be used in the event project cleanup or winding down falls on the shoulders of the public. GO17-57B

3. All Reasonably Foreseeable Impacts Of The Project Are Not Analyzed Or Mitigated.

CEQA requires that all reasonably foreseeable impacts of a project must be identified, analyzed, disclosed, and if they are significant, mitigated. (*Laurel Heights*.) Both direct and indirect impacts must be addressed. (Guidelines § Guidelines § 15382.) Here, the Project description has been artificially truncated to limit the potentially significant impacts the DEIR discloses and for which it offers mitigation. GO17-58

4. There Is No Reliable Estimate Of The Gondola's Lifespan.

The truncation begins with an assumption of a 30-year lifespan for the proposed Project, backed with no engineering or commercial data, but seemingly based solely on the South Coast Air Management District (SCAQMD)'s draft threshold for significance on GHG emissions recommendations for amortization of GHG emissions from construction of industrial projects by spreading such emissions over an assumed life of 30 years.10 (DEIR, pp. 1-5, 1-6.) There is no further justification for use of a 30-year lifetime for the gondola in the DEIR. The SCAQMD letter to Metro GO17-59

FN GO17-59 10 SCAQMD's Board did not formally adopt this draft proposal.

responding to the NOP did not specifically recommend use of this lifespan for the proposed Project, nor does TCE believe that such use is justified. The gondola's lifespan was not estimated in the original proposal; there is only a vague statement that "[o]ur goal is for the system to operate for the full useful life of the mechanical system and it will be replaced with a comparable system of the latest state of the art at that time." (MAR [p.41 of RFI.) No information on the "full useful life of the mechanical system" is provided.

The SCAQMD guidance does not explicitly apply to transportation projects, only to industrial, residential, and commercial projects. (See Guidance at p. 3-18. Nor does the DEIR justify using the 30-year project life for the gondola. Since the operational life of the gondola will determine the extent and magnitude of its public benefits and its environmental impacts, the DEIR should provide a fully justified estimate of the gondola's useful life, supported by substantial evidence. As *Pfieffer v. City of Sunnyvale City Council* (2011) 200 Cal.App.4th 1552, at 1561-62 holds: "'The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured that those consequences have been taken into account. [Citation.] For the EIR to serve these goals it must present information in such a manner that the foreseeable impacts of pursuing the project can actually be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made." The public does not yet have that opportunity here.

cont'd GO17-59

5. The Project Has Adverse Impacts That Cannot Be Mitigated Below the Level of Significance.

The EIR admits that vibration impacts of construction of the project will be significant and unavoidable. The best way to avoid these impacts is to deny the project altogether, and to choose the environmentally superior alternative.

GO17-60

6. Some Impacts That Have Been Understated.

"CEQA is essentially an environmental full disclosure statute, and the DEIR is the method by which this disclosure is made." (*Rural Landowners Assn. v. City Council* (1983) 143 Cal.App.3d 1013, 1020.) "In many respects the EIR is the heart of CEQA." (*County of Inyo v. Yorty* (1973) 32 Cal.App.3d 795, 810.) The purpose of an EIR "is to provide public agencies and *the public*

GO17-61

in general with detailed information about the effect which a proposed project is likely to have on the environment, . . .” (Pub. Resources Code § 21061; emphasis added.) Contrary to these principles, numerous of the impacts that are analyzed in the DEIR are understated. For example, the DEIR dramatically understates the traffic impacts of the Project.

cont'd GO17-61

7. Failure to Analyze Some Impacts.

An EIR must analyze all potentially significant impacts of a proposed project on the environment. (Public Resources Code § 21082.2(a).)

8. Failure to Analyze all Feasible Mitigation Measures to Reduce Acknowledged Impacts.

GO17-62

Many potential mitigation measures are not even considered. For example, the DEIR assumes State Historic Park Impacts will be mitigated by amendment of the Park Masterplan. However, the EIR does not address mitigation by creating additional park space elsewhere or expanding the Park to compensate for lost acreage and usage or other feasible mitigation measures since the EIR incorrectly assumes State Historic Park impacts will be mitigated below a level of significance.

9. Reliance on Vague, Unenforceable, or Deferred Mitigation Measures Violates CEQA.

Mitigation measures must be required in, or incorporated into, a project. (Pub. Resources Code § 21081 (a)(1); *Federation of Hillside and Canyon Assoc. v. City of Los Angeles* (2000) 83 Cal.App.4th 1252, 1261.) Deferral of the analysis of the feasibility and adoption of mitigation measures violates CEQA. (*Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 306-308.) Again and again, the DEIR relies upon deferred mitigation and mere compliance with regulations.

GO17-63

The mitigation measures listed in the DEIR for the Project include a multiplicity of plans, for example the following:

> Construction Traffic Management Plan [DEIR, p. ES-14], Construction Monitoring Plan (Built Resources) [DEIR, p. ES-40], Cultural Resources Monitoring and Mitigation Plan (DEIR, p. ES-41], Archeological Testing Plan for Alameda Station (DEIR, p. ES-45],

Archaeological Testing Plan for LAUS Forecourt [DEIR, p. ES-47],
Archaeological Testing Plan for Los Angeles State Historic Park [DEIR, p. ES-48],
Paleontological Resources Mitigation and Monitoring Plan [DEIR p. ES-52],
Soil and Groundwater Management Plan [DEIR, p. ES-53],
Construction Noise Management Plan [DEIR, p. ES-58,
Vibration Monitoring Plan [DEIR, p. ES-67,
Temporary Disaster Route Plan [DEIR, p. ES-76],
Utility Relocation Plan [DEIR, p. ES-79], and a
Fire Protection Plan [DEIR, p. ES-80]. In addition, ARTT will need to prepare a Site-Specific Final Geotechnical Report. (DEIR, p. ES-50.)

cont'd
GO17-63

However, these plans should already be prepared and available for public review now with the EIR, not deferred to a non-public process after project review. The archeological testing plans for the Forecourt, Alameda Station, and the State Historic Park in particular must not be deferred. In 1999, when archeological investigation was conducted on land that would eventually become the State Historic Park, following the City's attempt to claim there would be no archeological impacts, extensive evidence of historic resources was found including bricks from the original Zanja Madre. (See "History Buffs' Find May Threaten Plans for Plan for Site"; https://www.latimes.com/archives/la-xpm-2000-apr-27-me-24078-story.html.)

In 2011, when archeological testing was conducted at La Plaza construction site at Main Street and Republic, near Olvera Street, an entire cemetery was found that had not been known before. (See "Cemetery found under L.A. construction site" https://abc7.com/archive/7890955/.)

GO17-64

Deferring archeological investigation of the Forecourt, the State Historic Park, and the Alameda Station until after Project approval in this context, where prior underground construction activity has nearly destroyed important evidence of history, would be unconscionable and would violate CEQA.

Mitigation measures are ineffective where they rely on the Project proponent to take various steps or ensure measures are carried out. The Project Proponent, ARTT, has committed to funding no more than 3% of the Project budget related to environmental review and permitting. So without funding commitment to implementation of the Project's mitigation measures,

GO17-65

none of them are likely to be carried out or effective. cont'd GO17-65

10. Failure to Consider a Reasonable Range of Alternatives.

The alternatives section has been described as the "core" of the EIR (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564), and an adequate EIR must describe a reasonable range of alternatives. (*Laurel Heights Improvement Association v. Regents of the University of California* (1993) 47 Cal.3d 376.) Unfortunately, the DEIR fails miserably in this regard. The DEIR rejects, without substantial evidence, the feasibility of alternatives such as enhanced bus service or a system of escalators or people movers. This is so, even though the DEIR acknowledges that the enhanced bus service is the environmentally superior option. GO17-66

11. The Project Is Inconsistent with the General Plan and Other Applicable Plans.

A general plan is the "constitution for future development." (*DeVita v. Napa* (1995) 9 Cal.4th 763, 773.) "[T]he requirement of consistency is the linchpin of California's land use and development laws. It is the principle which infused the concept of planned growth with the force of law." (*Debottari v. City of Norco* (1985) 171 Cal.App.3d 1204, 1213.) GO17-67

As discussed in more detail below, the proposed Project impermissibly conflicts with the State Historic Park Master Plan and the LA Union Station Development Plan, and other plans of general applicability. For example, the Project is within the jurisdiction of the Santa Monica Mountains Conservancy, but the applicable plan is not even mentioned or analyzed.

II. MAJOR SUBSTANTIVE CONCERNS: THE EIR IS FAULTY AND DEFICIENT.

The following comments are listed in the order in which the subject appears, rather than the priority given to them by TCE. GO17-68

A. Aesthetic Impacts, Section 3.1 Is Misleading and Uninformative.

The Project will have numerous aesthetic impacts, including impacts to views of the historic SHP and surrounding hills. These impacts must be GO17-69

properly analyzed and all feasible mitigation measures should be imposed or alternatives should be adopted to lessen this significant impact.

"[A]ny substantial, negative effect of a project on view and other features of beauty could constitute a "significant" environmental impact under CEQA." (*Quail Botanical Gardens Foundation, Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1604.) According to the California Court of Appeal, lay opinions that articulate the basis of the opinion can constitute substantial evidence of a negative aesthetic impact. (*Ocean View Estates Homeowners Assoc., Inc. v. Montecito Water District* (2004) 116 Cal.App.4th 396, 402.) Expert testimony on the matter is not required because the overall aesthetic impact of a project is a subjective matter for which personal observations are sufficient evidence of the impact. (*Id.; Oro Fine Gold Mining Corp. v. County of El Dorado* (1990) 225 Cal.App.3d 872, 882.)

cont'd GO17-69

1. The DEIR Does Not Disclose the Full Extent of the Aesthetic Impacts.

In its discussion of aesthetic impacts, the DEIR focuses faraway simulations. Appendix C does not present a reasonable disclosure of the impacts that will occur and instead provides a document of advocacy attempting to present gondola tower and station impacts in the best light possible.

The DEIR fails as an informational document for using images that seem intended to minimize impacts. Some examples include:

GO17-70

Figure 2-6 (DEIR, p. 2-16), where a background 195-foot tall gondola tower looks modest in height compared to foreground telephone poles and buildings;

Figure 2-7 (DEIR, p. 2-20), where even zooming in the overhead image it is impossible to tell the real impact and conflicts between the project easement and buffer;

Figure 2-8 (DEIR, p. 2-21), where the proposed alignment doesn't differentiate between public right-of-way and LASHP when discussing public and private property, completely minimizing park impacts;

Figure 4-7 (DEIR, p. 4-34), where the image diminishes the nature of the visual impact on LAHSP, but still shows the downtown view is almost completely obscured (note that the LASHP General Plan protects that view).

cont'd GO17-70

The Key Observation Point locations seem to have been chosen in order to minimize visual impacts rather than fully disclose them.

Of course, more troubling are the depictions that were not included. The Aesthetic Impact section fails to address the foreseeable use of gondola cars as mobile and possibly electronic billboards advertising on behalf of any purchasers of such flying billboard space. The foreseeable use of gondola tower and station inside and outside space for advertising signage is not addressed or limited in any way.

GO17-71

2. There Are Mitigation Measures Available for Impacts to Privacy.

As discussed above, when there are available mitigation measures or alternatives that would lessen the impacts of a project. There are several aesthetic impacts the DEIR should be viewed as significant but the EIR does not acknowledge these impacts.

GO17-72

B. Impact 3.3: Air Quality Will Be Significantly, Adversely Impacted by Traffic Drawn by the Gondola Project.

1. Existing Air Quality in Downtown Los Angeles Is Already Degraded.

As a court has noted in connection with a proposed commercial development project in the Central Valley:

> It is well known that air pollution adversely affects human respiratory health. (See, e.g., Bustillo, *Smog Harms Children's Lungs for Life, Study Finds,* L.A. Times (Sept. 9, 2004).) Emergency rooms crowded with wheezing sufferers are sad but common sights in the San Joaquin Valley and elsewhere. Air quality indexes are published daily in local newspapers, schools monitor air quality and restrict outdoor play when it is especially poor and the public is warned to limit their activities on days when air quality is particularly bad.

GO17-73

(*Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1219.)

The entire air basin surrounding Los Angeles is designated as a federal-level extreme nonattainment area for ozone, meaning that federal ambient air quality standards are not expected to be met for more than 17 years, and as a serious nonattainment area for CO and PM10. The area is also a federal-level nonattainment area for NOx and PM2.5, as designated by the U.S. EPA. The Basin is a state-level extreme nonattainment area for ozone, and is a state-level nonattainment area for PM2.5 and PM10.

In addition to the impacts that unhealthy levels of pollutants will have on the general population, this Project will cause particularly severe damage to the health of sensitive receptors such as children, the sick, and the elderly within a quarter mile from new traffic patterns in the area.

A Health Risk Assessment ("HRA") should be done because of the new traffic that would be attracted to the area of the Chinatown Station and Union Station.

Local CO2 hotspots from localized congestion could be created and must be analyzed.

cont'd GO17-73

2. Construction Emissions Would Be Significant and Must Be Mitigated to a Far Greater Extent than Currently Proposed.

a. More Detailed Disclosure of the Timing of Construction Emissions Is Required.

The DEIR fails to address the significant truck traffic that will be required to haul dirt. It also fails to address the additional noise and pollution that would be associated with that traffic.

GO17-74

There should be a disclosure of the length of the anticipated construction period. The EIR fails to describe mitigations to reduce the concentration of emissions, noise, trash and pollution during construction.

b. Additional Mitigation of Construction Equipment Nitrogen Oxide Emissions is

GO17-75

Required.

Every feasible mitigation measure possible must be taken to reduce construction emissions.

cont'd GO17-75

The DEIR should require use of Best Available Control Technology for the construction phase. Further, measures that should be analyzed and adopted if feasible include:

- Prohibit construction vehicles from idling in excess of five minutes.
- Construction contractors should be required to use alternative clean fuel, such as electric or compressed natural gas-powered construction equipment with oxidation catalysts, instead of gasoline- or diesel-powered engines.
- Where diesel equipment has to be used because there are no practical alternatives, the construction contractors should use low-sulfur diesel, as defined in SCAQMD Rule 431.2, i.e., diesel with a sulfur content of 15 ppm by weight or less. The low-sulfur diesel has the potential to reduce NOx emissions by 50 percent.
- Use aqueous or emulsified diesel fuel for construction equipment. Aqueous diesel fuels have received interim verification by the California Air Resources Board and show a reduction of 16 percent in NOx and 60 percent in PM10 from diesel exhaust.
- Require the use of electricity from power poles instead of temporary diesel- or gasoline-powered generators.
- Require the use of newer, lower-emitting trucks to transport construction workers, equipment and material to and from construction sites.
- Limit the hours of operation of one or more pieces of construction equipment.
- Metro should require the Project proponent to investigate the availability of construction equipment retrofitted with particulate filters and give preference to contractors with relatively modern construction equipment that are or could be retrofitted with diesel particulate filters.

GO17-76

3. Various Air Quality Analysis and Assumptions are Unsupported.

GO17-77

Air Quality experts EAI have reviewed the DEIR and have the following comments. (A copy of the EAI analysis is attached- Enclosure 6).

a. Gondola Movement Assumptions are Overstated.

The Draft EIR indicates that the tramway will move 5,000 people per hour, with 30-40 people per gondola. If that is correct, a total of approximately 143 gondolas per hour would be needed (35 people x 143 gondolas = 5,005 people). To transport that many gondolas, a gondola would need to arrive, load and leave every 20 to 30 seconds. Each time a gondola arrives at Dodger Stadium, it would also have to empty every 20 to 30 seconds. This timing does not allow for the additional time required for children, the elderly or persons with disabilities who may need more time and assistance. Consequently, the numbers stated in the DEIR, are wildly overstated and likely impossible to achieve. These overly aggressive assumptions lead to an overestimate of the number of people that would use the ARTT as an alternative to driving vehicles or using other forms of transportation. Even at this highly unlikely maximum utilization rate, Dodger patrons who leave the game at its conclusion may have to wait as long as an hour or more for their return trip to Union Station—leaving many patrons stranded and possibly calling for an Uber or Lyft rather than waiting for the Gondola—essentially undercutting the "emission-free" claims of the proponents. Compare this to the Hollywood Bowl that has busses waiting in the wings to immediately transport thousands of guests to parking lots throughout the city and county as opposed to just one fixed location.

cont'd GO17-77

b. Air Quality Analysis is Flawed.

i. Baseline Assumptions are Incorrect.

The air quality and GHG emission benefits of the project have been overstated. The mobile emissions take credit for non-Project (regulatory) related emissions reductions for future years. This misrepresents the actual impacts of the proposed Project. It mistakenly credits the proposed Project with emissions reductions that are not created by the proposed Project. Instead, the analysis should have used the same basis (emissions factors) to show the real impacts from the proposed Project, without influence from external sources (e.g., unrelated regulations).

GO17-78

ii. Haul Route Air Quality Impacts Are Inaccurately Analyzed.

The haul trips to move soil during construction activities were based on 20 miles per trip. If any hazardous soil is encountered during the excavation, the mileage could be grossly inadequate since contaminated soil needs to be hauled to a hazardous waste facility, the closest of which is Clean Harbors in Buttonwillow, California approximately 140 miles from Union Station. Further, it is likely that the project construction team would know the distances to the landfills that will be used for clean soil so these should be disclosed. The likely landfills for clean soil in the area are the Azusa (21.7 miles from Union Station), Chiquita Canyon (40 miles from Union Station), and Simi Valley Landfills (42 miles from Union Station). The air quality impacts associated with these construction activities must be revised and updated with accurate assumptions. GO17-79

iii. Gondola Operation Benefits Are Overstated.

Emissions for the gondola operations are shown as a negative number (Table 4-8 of Appendix J), which is disingenuous. It would be understandable to calculate the potential emissions from the electricity use then apply GHG credits for a mitigation measure, but showing the value as a negative number implies the proposed Project is generating the GHG credits, which is false. GO17-80

iv. Battery Backup Should Be a Mitigation Measure.

Emissions for the backup battery system are shown as a negative number (Table 4-10 of Appendix J). The same logic applies. The proposed Project is not generating GHG credits for using backup batteries. Using battery power instead of diesel should be a required mitigation measure. GO17-81

v. The EIR Uses an Outdated AQMP.

The DEIR relies on the 2016 AQMP, which is outdated. The 2022 AQMP has been approved by the SCAQMD Governing Board on December 2, 2022. (Appendix D). GO17-82

c. Energy Usage is Inappropriately Analyzed and GO17-83

Mitigated.

Appendix H Energy Technical Report (page 22). The Draft EIR indicates that electricity will be supplied using the LADWP's Green Power Program, indicating that the primary electricity for the project would come from renewable energy sources. As this is one of the primary ways the project is minimizing increases in GHG emissions, an enforceable mitigation measure must be provided to ensure this project assumption is enforced. cont'd GO17-83

Section 3.0 of the Draft EIR indicates that the environmental setting is the physical conditions in the vicinity of the proposed project at the time of publication of the Notice of Preparation (NOP), which was October 1, 2020. However, data used to calculate baseline conditions varies. For example, 2019 was considered to be the baseline conditions for the energy analysis (see page 3.6-13). The Draft EIR must explain the appropriate environmental setting and why the impact analysis for different resources used different years. Further data regarding the existing fuel consumption was based on 2016 data, which is at least 8 years old (see page 3.6-13) and not consistent with the release of the NOP. GO17-84

The DEIR indicates that construction would result in a demand of approximately 864,544 kWh of electricity. (Page 3.6-15.) Please provide the assumptions used to calculate the electricity use during construction. GO17-85A

The DEIR states that the Project's construction electricity use represents a small percentage of regional estimates for the LADWP. (DEIR page 3.6-15 and Appendix H.) It further states that: "The CEC estimates that energy demand in the LADWP planning area will increase to approximately 27,000 to 28,000 GWh in the 2024 to 2026 timeframe, meaning the proposed "project's demand contribution in that period would be approximately 0.002 percent of the projected demand." (see DEIR page 3.6-15). According to the footnote, the peak demand for LADWP is based on a CEC reference from 2016 and used data from 2015. With the move toward renewables and the problems that the electricity grid had maintaining electricity during peak demand periods in 2022, more recent data should be used. Further, for the same reason, the DEIR should explain whether the LADWP has excess RENEWABLE electricity available for the proposed project. Per the DEIR assumptions, it is assumed that all electricity use associated with the operation on the project will be renewable. A mitigation measure should be developed to enforce this assumption. GO17-85B

Further, the DEIR indicates that the peak demand in the LADWP planning area is expected to reach 6,400 to 6,500 MW in the 2024 to 2026 timeframe. Please note that the LADWP reports that the record peak demand was 6,502 MW on August 31, 2017.[11] Therefore this peak demand has already been reached and the data provided in the DEIR is not valid, likely because the information used for the baseline is outdated. The potential energy impacts are significant as LADWP does not currently have the excess electrical supply capacity to provide electricity to the proposed project. GO17-85C

Further evidence of the use of an inappropriate baseline is the Proclamation of a State of Emergency signed by Governor Gavin Newsom on August 31, 2022. The Proclamation declared that immediate action was required to reduce the strain on the energy infrastructure and increase energy capacity during the Extreme Heat Event (late August through early September, 2022). The California Independent System Operator (CASIO) forecasted high electric demand due to the extreme heat event with peak load projected to exceed 48,000 MW and which would exceed the available electricity.[12] Further, this event was classified as an "emergency event" which allowed existing portable generators (including diesel generators) to operate under emergency conditions, regardless of any permit conditions. GO17-86

The DEIR indicates that the proposed project would result in electricity demand of approximately 6.9 GWh/year and dismisses the impact because the electricity increase would be 0.002 percent of the projected statewide demand in 2026. (Page 3.6-16.) However, currently the electricity production is not sufficient to meet current demands during peak electricity use periods (e.g., hot summer months). The DEIR should compare the proposed project's electricity use with the current electricity generation by LADWP, since LADWP will supply electricity to the project beginning in 2026 first. There is currently not sufficient electricity to power the grid during high or extreme heat periods. The impacts on the electricity system should not only be compared to the projected electricity production in 2042 (which may or may not actually occur). GO17-87

FN GO17-85C [11] LADWP Facts and Figures. https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-power/a-p-factandfigures?_adf.ctrl-state=10n9mool8q_4&_afrLoop=494270252036354

FN GO17-86 12https://www.gov.ca.gov/wp-content/uploads/2022/08/8.31.22-Heat-Proclamation.pdf?emrc=78e3fc

C. Historical and Cultural Resource Impacts (Section 3.5) Must Be Avoided.

The impacts to the State Historic Park, El Pueblo, and Los Angeles Union Station must be avoided. We agree with comments from the California State Parks Rangers Association (CSPRA), the Los Angeles Conservancy, the California State Parks Foundation, and Los Angeles Union Station Historical Society (LAUSHS) on these issues. GO17-88

D. Parks and Recreational Facilities (Section 3.16) Impacts Must Be Avoided.

1. The Permanent Construction of Gondola Facilities Will Negatively Impact the Park Experience.

The State Historic Park serves as a rare refuge in the urban environment for relaxation and recreation. The Gondola associated facilities will physically intrude on this refuge space. No portion of the State Historic Park should be taken for gondola facilities. The gondola lines should not be planned to pass over the State Historic Park airspace. GO17-89

2. Non-Permanent Impacts On The State Historic Park that May Be Significant Are Not Adequately Analyzed In The DEIR.

CEQA requires that every significant environmental impact from a proposed project must be identified, analyzed, reported to the public, and mitigated to the extent feasible. (Pub. Resources Code § 21002, 21081.) The Guidelines make clear that an impact does not have to be permanent to be significant; Guidelines § 15065(d)(1) cites "dust, noise, and traffic of heavy equipment" from construction as potentially significant, and construction is by definition temporary. GO17-90

Here, the DEIR acknowledges that "[c]onstruction of the Chinatown/State Park Station would require the temporary closure of approximately 1.59 acres of the southern entrance to Los Angeles State Historic Park during the approximately 19 months for the construction of the

Chinatown/State Park Station." (DEIR, p. 3.16-16.) The DEIR also admits that "Construction of the Chinatown/State Park Station would temporarily fence off portions of the park, generate dust and noise, and introduce heavy construction equipment into the area, which may potentially discourage people from using certain portions of the park, disrupt events occurring at the park, or increase the use of the open portions of the park." (*Id.*) The DEIR finds such impacts to be less than significant, on grounds that park visitors already experience disruption from special events at the State Historic Park, such as concerts and festivals; also, visitors could still use 30 acres of the Park during construction of the Station, and will only have to put up with the condition for nineteen months. (DEIR, p. 3.16-17.) No mitigation for the loss of park space is proposed or even explored.

cont'd GO17-90

The DEIR's reasoning is flawed and inconsistent with CEQA's requirements. When it suggests that park patrons will just take the loss of Park space in stride, the DEIR effectively places the responsibility for mitigating this impact on the park visitors themselves and their fully justifiable expectations for a park, not on the proposed Project. The DEIR has already found construction noise levels to be significant and unavoidable at the State Historic Park. (DEIR, p. 3.3-18, 3.13-75). It now equates the disruptions of a few days-long festivals each year with *over a year and a half* of partial Park loss. Park visitors who are already suffering significant noise levels should also simply adapt and make do with the Park area that is not lost to them, the DEIR implies. But the Guidelines provide that dust and noise may constitute significant impacts; by analogy, the deprivation of park acreage to the public may also be significant, and the DEIR must analyze and report this impact instead of minimizing and dismissing it.

GO17-91

It is a fundamental principle of CEQA that the significance of an impact may depend upon the setting, that "an activity which may not be significant in an urban area may be significant in a rural area." (Guidelines § 15064(b)(1).) Here, the extended loss of even a part of the State Historical Park, one of the few oases of green and peace in the bustle and pollution of downtown Los Angeles for nineteen months (or more) may be significant, even if losing an equivalent portion of the urban landscape elsewhere in downtown might not be. This is especially true when one considers that this is a private project that the public is being asked to sacrifice public land, resources and airspace for, and now even state park property. The DEIR must analyze this impact and mitigate it at this site, for this impact.

GO17-92

E. Transportation/Traffic Impacts (Section 3.17) Are

GO17-93

Understated and Not Sufficiently Mitigated.

Traffic expert Tom Brohard has examined certain portions of the EIR and made the following observations.

1. Dodger Stadium Access Study For Los Angeles County Transportation Commission

Over 30 years ago in August 1990, the Los Angeles County Transportation Commission, the County transportation agency that preceded Metro, retained Gruen Associates with Gannett Fleming to evaluate alternative connections to move people efficiently to and from Dodger Stadium. The enclosed "Dodger Stadium Access Study" evaluated various technologies including shuttle buses, automated guideway transit, light rail transit, gondola tramways, and walkways and escalators.

Six different characteristics were evaluated and compared for the five different technologies as shown in Table 1 of the Study. Table 3 compared boarding and travel time for the different alternatives, with the gondola tram taking an average of 92 minutes and 60-person shuttle buses taking about 43 minutes per passenger, less than half of the time required per passenger for the Gondola trams. The capacity of the shuttle bus system was estimated at 7,200 passengers per hour, over 2.5 times greater than what the gondola system could provide. The aerial gondola system was found to take more than twice as long as the shuttle buses, and shuttle buses were found to move more than double the number of people.

cont'd GO17-93

Of the different alternatives evaluated, the gondola was found to have the lowest capacity of any of the systems considered and would have the least positive impact on traffic and congestion. The gondola system then and now is more for sightseeing and entertainment and is not an effective way to move people between places that are 1.2 miles apart.

2. Metro Board Executive Management Committee Report

The September 15, 2022 Metro Board Executive Management Committee Informational Report, Los Angeles Aerial Rapid Transit Project Update, discussed various topics including the traffic studies to be prepared for the Proposed Project. Page 4 states "A separate Project Access, Circulation and Construction Transportation Study will be prepared in accordance with the non-

GO17-94

CEQA analysis required by the City of Los Angeles Transportation Assessment Guidelines. This separate technical report will evaluate the Project's potential effects on the intersection level of service."

This study was to be prepared as required and in accordance with the LADOT Transportation Assessment Guidelines issued in August 2022, including potential impacts on intersection level of service. The contents of the analysis are found in Section 3.3, Project Access Safety and Circulation Evaluation. This report was not included in the Draft EIR or Appendix N. Furthermore, this analysis has not been shared with the public. It should have been made available for review and comment.

cont'd GO17-94

3. Draft Environmental Impact Report - Executive Summary

The Project Purpose on Page ES-1 states "The proposed project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit service connecting the regional transit system at LAUS, Dodger Stadium, the Los Angeles State Historic Park, Elysian Park, and the surrounding communities via three new transit stations… The Proposed Project is needed to alleviate existing congestion and associated air pollution… as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways…"

GO17-95

Both of these statements, as well as many others throughout the Draft EIR, are made without foundation and/or documentation to support them in the Draft EIR or in the technical Appendices. They exaggerate even a best-case scenario that could most optimistically occur.

Access to State Historic Park: Such access is already available via Metro's Gold line which is just one stop from Union station on an already existing line—so the Gondola does not provide any additional benefits, in fact, Metro riders will have to leave the station (instead of just transferring within the station) walk to the Gondola station, potentially pay an added fare (note Metro would have to negotiate this with the private owners of the Gondola) to get to the State Historic Park which they can already reach via Metro or by walking.

GO17-96

Access to Elysian Park: The proposed Gondola Stop is at the furthest end of the Dodger Stadium parking lot which is far from Elysian Park. Families seeking to picnic at the park will not likely be taking their chairs, equipment and coolers on the Gondola to the park. As with most of the rest of this project,

the claim that the Gondola will serve park goers is a red herring to deflect from the sole purpose of the Gondola which is to benefit Mr. McCourt's plans for the development of Dodger Stadium as previously discussed. cont'd GO17-96

Page ES-16 provides a listing of comments from various public agencies. Interestingly enough, no comments are listed as being from the City of Los Angeles Department of Transportation. This lack of response from LADOT is unique in my extensive experience in peer reviews of transportation aspects of various projects in the City of Los Angeles over the last several decades.

With direction from LADOT and as outlined in the LADOT Transportation Assessment Guidelines, a detailed Memorandum of Understanding outlining the methodology and approach to the transportation analysis is typically developed by the Draft EIR transportation consultant. This document is then reviewed, approved, and signed off by both LADOT and the Draft EIR transportation consultant before the transportation analysis begins. There is no evidence that such a Memorandum of Understanding was ever developed, reviewed and approved by both LADOT and by the Draft EIR transportation consultant. GO17-97

Transportation Mitigation Measure TRA-A on Page ES-72 recommends "visibility enhancements for the Alameda Tower and Chinatown/State Park Station" but then states "visibility enhancement features could include high visibility crosswalk treatments, advance crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls such as traffic signals and all-way stops and right turn on red restrictions and channelization of pedestrians to marked crosswalks via fencing. The mitigation measure would be implemented during the construction phase and would be completed prior to proposed Project operations." GO17-98

The laundry list provided gives many different possible mitigation measures, but no study or analysis has been conducted to determine which may be appropriate or inappropriate. For example, it is not possible to install traffic signals and all-way stops at the same intersection. The possible mitigation measures must be analyzed now to determine what is needed and warranted. Waiting until some future time to decide what will or will not be done constitutes deferred mitigation, and any such mitigation will not be timely or effective. Deferred mitigation is contrary to professional traffic engineering and transportation planning principles as well as CEQA, the California Environmental Quality Act.

Transportation Mitigation Measure TRA-B on Pages ES-73 to Page ES-76 provides more of the same deferred analyses in its discussion. The Construction Traffic Management Plan offers several possible measures but then defers to City of Los Angeles approvals before implementation. The City of Los Angeles always requires a Construction Traffic Management Plan and there is nothing special or unique here.

As one of several examples, "Existing yellow crossings… shall be evaluated in coordination with LADOT to determine if crossing guards should be assigned on days/times when detours are active, the proposed Project shall fund crossing guards during morning school arrival and afternoon school departure periods… If school crossings along detour routes are unsignalized, temporary traffic signals will be evaluated in coordination with LADOT and would be implemented by the proposed Project if deemed necessary." Once again, possible mitigation measures are proposed but no measures are actually studied or planned. TCE will be particularly affected by construction—as stated in TCE's NOP comment letter in Appendix A of the EIR. TCE provides free public conference meeting space to non-profit and governmental organization throughout the County. This Project would seriously and severely disrupt TCE's operations as well as those of tenants in the building and visitors. GO17-99

The Draft EIR must analyze potential mitigation measures now and determine which are needed and warranted rather than publish yet another laundry list of possible measures which have not been studied or evaluated.

4. Draft Environmental Impact Report - Chapter 2 – Project Description

The Purpose and Need Section beginning on Page 2-10 states the Dodger Stadium Express buses carry approximately 1,850 riders on average per game. Page 2-12 states "Within two hours prior to the start and after a game or event at Dodger Stadium, more than 10,000 people could be transported to the stadium by the Proposed Project. The average attendance at a Dodger game was approximately 49,000 for the 2019 season. Given the capacity of the system, approximately 20 percent of the fans could take aerial transit connected to Metro's regional transit system." GO17-100

This statement is theoretical at best for conditions after a game since very few fans will be willing to wait more than one hour with other transportation options available including Dodger Express Bus as well as Uber/Lyft/Taxi. The UCLA Mobility Lab Study discussed further below found that the Proposed

Gondola Project would carry only about 2,200 passengers at most and would transport only 1,380 people after a baseball game. cont'd GO17-100

The loading and unloading of gondola cars are briefly discussed on Page 2-17. However, there is no description or illustration of how passengers would access the gondola cars from the Metro L Line (Gold), how passengers would access the gondolas from ground level, or how passengers would cross Spring Street. Each of these omissions raises significant traffic safety concerns for pedestrians trying to reach and use the proposed gondola system. GO17-101

Figure 2-27 on Page 2-54 illustrates the location of the proposed gondola support tower within the Alameda Triangle just south of Alhambra Avenue. From that illustration, it does not appear to be possible to provide adequate stopping sight distance through the tower supports for the westbound dedicated left turn lane and the westbound left turn/right turn lane. The Draft EIR must describe how potentially conflicting motorists will be able to see each other through the solid tower support framework. GO17-102

Page 2-61 does not indicate the requirements to coordinate with and obtain approval from LADOT during construction as well as during operation of the proposed project. The City of Los Angeles has jurisdiction over the roadways that will be impacted, and the Proposed Project must work closely with the City's Department of Transportation by obtaining all required permits and following each of the permit requirements. GO17-103

5. Draft Environmental Impact Report - Chapter 3.17 – Transportation

Page 7 repeats that the City of Los Angeles Transportation Assessment Guidelines as noted in the Board memo would be followed. The current edition of the LADOT TAG was issued in August 2022. However, the required level of service analysis and comparisons were not included in either the Draft EIR or Appendix N, and this study has not been made available for public review and comment. GO17-104

The estimates of neighborhood riders and walkers on Page 26 do not appear to consider the topography vertical rise of 200 to 300 feet up to Dodger Stadium in the walkable and bikeable forecasts. The steep slopes of the streets and pathways discourage walking and biking. The estimates of neighborhood GO17-105

riders of the gondola are significantly overstated and must be reduced to account for the steep topography. cont'd GO17-105

Page 27 states that the vehicle miles traveled (VMT) calculations are based on data collected in Year 2019, but there is no evidence or cross-checking to support that these values are "current" or correct. GO17-106

Page 32 indicates the Proposed Project will result in only one change to intersection geometrics by shortening the northbound left turn lane from Alameda Street to Cesar Chavez Avenue by 150'. Shortening of this left turn lane by almost half, from 320 feet to 170 feet, which will result in traffic waiting to turn left backing out of the shorter left turn lane, stopping in the through lane, and significantly increasing the potential for rear end collisions. This left turn lane is also signed as a primary route to reach Dodger Stadium. The capacity of this left turn lane will be cut in half, creating the need for other mitigation to accommodate the high northbound left turn demand. GO17-107

Page 40 incorrectly states that the 35 MPH posted speed limit on Alameda Street equates to 250 feet of stopping sight distance at the marked crosswalk at Alameda Station.

The 7th Edition of "A Policy on Geometric Design of Highways and Streets 2018 The Green Book" published by the American Association of State Highway and Transportation Officials (AASHTO) is the definitive resource of stopping sight distance. This publication is used by Caltrans as well as all local jurisdictions in California. Traffic engineers and transportation planners understand that stopping sight distance is based upon the design speed of the roadway under review, a speed which is typically 10 MPH higher than the posted speed limit. Stopping sight distance for a 45 MPH design speed is 360 feet, not 250 feet, as shown in Table 3-1 on Page 3-4, Stopping Sight Distance on Level Roadways. Other measures to provide 360 feet of stopping sight distance are required. GO17-108

All other discussions of stopping sight distance must be modified to reflect the use of the design speed which is typically 10 MPH higher than the posted speed limit and that requires additional stopping sight distance accordingly.

Page 41 recommends prohibiting right turns on red at the Alameda Tower as a mitigation measure. "No Right Turn On Red" is not an effective mitigation measure as it does not guarantee safety for pedestrian crossings as vehicles may GO17-109

violate the posted right turn on red prohibition and they are then faced with a condition involving inadequate stopping sight distance. cont'd GO17-109

Page 67 states that Mitigation Measures TRA-A will provide visibility enhancements at Alameda Tower and Chinatown Station but does not discuss what mitigation measures are recommended at these locations. The discussion should be expanded to describe the mitigation measure as has been done for Mitigation Measure TRA-B immediately following. GO17-110

Other mitigation measures are deferred and may not be timely as required. To be effective and complete, potential mitigation measures identified on the various laundry lists must be studied and evaluated in the Draft EIR, with specific mitigation measures identified. GO17-111

6. FEHR & Peers Ridership Modeling (Appendix N of Draft EIR)

Table 5 on Page 21 of Ridership Modeling in Appendix N of the Draft EIR estimates 6,000 game attendees would ride the gondola in 2026. Daily tourist riders on the gondola are estimated to be 1,270 per day on game days and 2,575 per day on non-game days. These forecasts are significantly higher than those presented in the other reports such as the Dodger Stadium Access Study discussed earlier in this letter and in the UCLA Mobility Lab Study discussed later in this letter. GO17-112

7. FEHR & Peers Draft Parking Study September 2022

Page 1 states "Detailed analysis of traffic associated with the proposed project are separately being evaluated in a non-CEQA transportation assessment in accordance with the City of Los Angeles Transportation Assessment Guidelines. This would involve calculation of level of service and delay at intersections (pre VMT), but these calculations and results are not found in the Draft EIR or in Appendix N. GO17-113

Pages 2 and 3 indicate that the Chinatown/State Park Station "could" include pedestrian improvements between Metro's L Line (Gold) Station and the Chinatown/State Park Station as well as support for the future Los Angeles State Historic Park bike and pedestrian bridge." Specific improvements need to be identified now (see Page 42 of Chapter 3.17) and included within the mitigation measures proposed in the Draft EIR. GO17-114

Page 10 states that a parking management plan will be developed before operation of the Proposed Project. Doing this at some future time rather than during the Draft EIR constitutes deferred mitigation by stating "Parking management strategies and specific implementation steps will be further detailed in a parking management plan prepared in the future in collaboration with the City of Los Angeles, who would be the implementor of any on-street parking management strategies... However, because the detailed parking management implementation plan will be reliant on completion of construction documents and the final operating plan, it will follow the completion of the environmental process for the proposed project." Parking management is critical to understanding the impacts of this project, the failure to clearly articulate how Mr. McCourt and ARTT intends to manage the displacement of cars from Dodger Stadium to the Chinatown community must be clearly articulated and a mitigation plan provided for comment. This is a matter of environmental justice as stated previously. The fact that no plan for parking mitigation was presented is yet another reason why this Project may not go forward. GO17-115

8. UCLA Mobility Lab – October 24, 2022 Study

A study using current modeling techniques recently completed by two UCLA researchers found that the gondola system could slightly reduce traffic on major roads around Dodger Stadium on the night of a sold-out baseball game, but that impact would likely be very limited. The study found that the gondola would likely take only around 608 cars off the road and that minor change would be unlikely to significantly reduce greenhouse gas emissions and traffic overall. GO17-116

Other findings of the UCLA Mobility Lab Study are as follows: GO17-117

a) Contrary to the Draft EIR, the gondola system would not significantly reduce traffic or greenhouse gas emissions around Dodger Stadium.

b) The gondola system would carry fewer passengers than the Draft EIR claims. About 4,690 passengers would take public transportation on game days. Of these, the model predicted 2,500 would use the Dodger Stadium Express buses, meaning that only 2,190 new passengers would take the gondola system. Doubling the number of buses would more than accommodate passengers that could be expected to ride the gondola. GO17-118

c) Fewer people would take the gondola after the game resulting in more traffic and emissions. The model disclosed about 2,500 passengers switching from the free Dodger Stadium Express buses to the gondola to the stadium, and about 1,000 fans switched back to the shuttle buses after the game. Only about 1,380 fans were forecast to use the gondola after the game as they would have to wait in long lines to use the gondola. GO17-119

d) Very few people were predicted to use the gondola for transportation other than getting to or from the games. Only 60 people, about one gondola carload, were forecast to travel to Dodger Stadium during the day, and only about 140 passengers would travel from Dodger Stadium to Chinatown or Union Station during the day. GO17-120

9. Shuttle Busses and the Coachella Festival Illustrate Better Alternatives Are Feasible.

Many large destination venues choose to use shuttle buses because of the flexibility of expanding or contracting according to need. The fixed catenary system is limited both as to capacity and to location. As City Transportation Engineer for the City of Indio for 15 years, Tom Brohard was deeply involved in getting patrons to and from the Coachella Festival over two weekends in April each year. Shuttle buses from across California and adjoining states were contracted to travel various pre-planned routes throughout the Coachella Valley to and from the festival grounds each of the three days. Coachella successfully used shuttle busses to transport one-third of 250,000 festival attendees—with pre-planned routes and dedicated lanes on festival days—such a public system could also be developed for Dodger stadium games and events. GO17-121

The successful transportation program developed by the festival promoter, Goldenvoice, split the attendees into three separate but approximately equal groups. These included those who arrived the day before and camped at the site until the day after the festival ended, those who commuted daily to and from the site using Uber/Lyft/taxi, and those who rode Festival provided shuttle buses from hotels to and from the venue each day.

About one-third of the 250,000 daily festival attendees used the shuttle buses, with separated priority lanes on City streets for the shuttle buses near

the festival site leading to a designated area within the festival site for shuttle bus loading and unloading. This system involved rapid turnover within the Festival shuttle bus lot with buses quickly filling empty bus parking stalls, loading/unloading passengers, and departing. cont'd GO17-121

10. Summary and Conclusion

When it was evaluated over 30 years ago, the gondola finished last in comparison with five other transportation alternatives to serve Dodger Stadium. Such a comparison today ends up with similar results. GO17-122

The proposed Gondola is better suited for sightseeing rather than being an effective transportation measure to move large volumes of people in short periods of time. Shuttle buses together with Uber/Lyft/taxi services now serve Dodger Stadium well at a fraction of the cost. An expansion of the shuttle bus operation between Dodger Stadium Express in lieu of the proposed gondola system would efficiently meet the demand to transport people in a cost-effective manner on game days and on special event days. GO17-123

The omissions and errors summarized and detailed throughout this letter require that each of these issues and items be reanalyzed and reevaluated through additional study before the Proposed Project is considered further by Metro. GO17-124

F. Impact 3.13: Noise and Groundbourne Vibration Impacts Will Be Significant and Must Be Further Mitigated.

1. Construction Noise is Identified as Significant and Unavoidable.

The EIR identifies the fact that construction equipment noise impacts on sensitive receptors will be significant and unavoidable. (EIR, p. 3.13-31). Such impacts can be avoided by disapproving the Project.

It is not sufficient for purposes of CEQA that the DEIR merely acknowledge the significant impacts. Rather, the DEIR must propose meaningful mitigation measures and alternatives that would avoid or reduce the impact as much as possible. GO17-125

The construction of noise barriers is one mitigation measure that should be considered and incorporated as appropriate. Other possible noise abatement measures include traffic management measures, creating buffer

zones, planting vegetation, and installing noise insulation in buildings.

Insulating buildings can greatly reduce construction noise, especially when windows are sealed and cracks and other openings are filled. Such measures must be adopted to reduce impacts on adjacent buildings.

cont'd GO17-125

2. Groundborne Vibration Impacts Will be Significant.

The DEIR states that groundborne vibration impacts are significant and unavoidable. (EIR, p. 3.13-62.)

The EIR proposes to require non-vibrating equipment or hand tools if operations occur within 26 feet of the Avila Adobe, El Grito Mural, or The Old Winery structure. (EIR, p. 3.13-73) There is no showing these measures are feasible or would effectively reduce the vibration impacts.

GO17-126

The DEIR thus fails to propose effective mitigation measures for noise and vibration impacts.

Metro must seek to approve a Statement of Overriding Considerations to accept these impacts but cannot do so when there are feasible mitigation measures that have not been adopted and an environmentally superior alternative (enhanced Dodger Express Buses) that is feasible. With regard to noise, Homeboy Industries is identified as NSR-7 in your analysis. Projected noise levels would be 80.3 dBA during construction, 10.5 dBA higher than current ambient noise levels. The EIR notes that even 75 dBA is "clearly unacceptable," even for office use, and that 65 dBA is "normally unacceptable" (page 3.13-48).

GO17-127

In the analyses of potential vibration impacts, Homeboy is VSR-11, but is not called out as a Measurement Location. Therefore, no specific information about the impacts of drilling (or driving) 120-foot deep (sic) piles is provided. Nonetheless, the DEIR concludes that Homeboy would experience significant "annoyance" from vibration, even with mitigation, during construction (EIR, page 3.13-63). TCE, whose property is less than 100 feet from the proposed Alameda triangle tower, would also be affected by noise and vibration but is not even identified in the table of sensitive receptors. (EIR, p. 3.13-20.) The Alameda Triangle parcel would be less than 100 feet from TCE's compound but TCE is not recognized at all. This omission must be rectified. Calling such significant impacts mere "annoyance" impacts understates the severity of such impacts. A more

GO17-128

detailed and site-specific analysis of the vibration impact on these buildings and operations is required.

cont'd GO17-128

3. Effects of Noise Pollution on Health Are Extensive.

"[T]hrough CEQA, the public has a statutorily protected interest in quieter noise environments." (*Berkeley Keep Jets Over the Bay Committee v. Board of Port Com'rs* (2001) 91 Cal.App.4th 1344, 1380.) ***Despite this clear mandate to analyze noise impacts, the DEIR omits a discussion of the extensive health impacts of noise exposure***, as required by CEQA (Cf. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 521).

Excess noise pollution can cause hearing damage and loss. Loud noise, either experienced as a single event or continuously over time, can damage cells in the inner ear that detect sound and help transmit information on sound to the brain. (https://www.cdc.gov/nceh/hearing_loss/how_does_loud_noise_cause_hearing_loss.html, incorporated by reference.) Damage to these receptor cells is permanent and cannot be repaired. (*Ibid.*) Such damage can make it difficult to hear, including causing difficulties in understanding speech. (*Ibid.*)

GO17-129

Sound level is measured in dBA. (https://www.nonoise.org/library/suter/suter.htm#physical, incorporated by reference.) In 1974 the EPA recommended that the equivalent A-weighted sound level over 24 hours ($L_{eq(24)}$) be no greater than 70 dBA to ensure an adequate margin of safety to prevent hearing loss and damage. (https://nonoise.org/library/levels74/levels74.htm, incorporated by reference.) To prevent interference with activities and annoyance, the EPA recommended a day-night average sound level no greater than 45 dBA for indoors and 55 dBA for outdoors.

The DEIR must relate these health impacts of excessive noise exposure to the Project's significant noise impacts.

4. The DEIR Must Evaluate Sleep Disturbance.

Excessive sound level can have a profound health impact by disturbing sleep. Sleep disturbance is considered "the most deleterious non-auditory effect of environmental noise exposure . . . because undisturbed sleep of a sufficient length is needed for daytime alertness and performance, quality of

GO17-130

life, and health." (Basner et al., *Auditory and Non-Auditory Effects of Noise on Health* (2014) 383 Lancet 1325, 1329.) Repeated sleep disturbance can change sleep structure, including "delayed sleep onset and early awakenings, reduced deep (slow-wave) and rapid eye movement sleep, and an increase in time spent awake and in superficial sleep stages." (*Id.* at 1330.) The short-term effects of sleep disturbance include "impaired mood, subjectively and objectively increased daytime sleepiness, and impaired cognitive performance." (*Ibid.*) Exposure to noise during sleep "may increase blood pressure, heart rate, and finger pulse amplitude as well as body movements." (Stansfeld and Matheson, *Noise Pollution: Non-Auditory Effects on Health* (2003) 68 Brit. Med. Bull. 243, 244.) In 1974, the EPA observed that a nighttime portion of a day-night average sound level of approximately 32 dB should protect against sleep interference. (https://nonoise.org/library/levels74/levels74.htm, p. 28.)

cont'd GO17-130

Despite the potential for these harmful impacts, the DEIR fails to sufficiently analyze sleep disturbance and disclose the Project's risks of sleep disturbance to the public and decisionmakers. The DEIR is required to analyze and disclose "the nature and the magnitude" of the Project's potential impact on sleep disturbance and must connect the potential health impacts of sleep disturbance to the noise impacts from the Project. (*Friant Ranch, supra*, 6 Cal.5th 502, 519–21.) The Project will be running for sporting events that will run as late as midnight or later, and with spectators filing out afterwards, may not clear out until much later. The DEIR provides no analysis of single event nighttime noise levels to evaluate these impacts. (*Berkeley Keep Jets, supra*, 91 Cal.App.4th 1344, 1372-82 [EIR that failed to study impacts of single event noise levels was inadequate].)

5. The DEIR Fails to Disclose Conflicts with the Los Angeles Municipal Code Noise Regulations.

Section 111.00 of the Los Angeles Municipal Code states, "[i]t is hereby declared to be the policy of the City to ***prohibit*** unnecessary, excessive and annoying noises from all sources subject to its police power. At certain levels noises are detrimental to the health and welfare of the citizenry and in the public interests ***shall be systematically proscribed.***" (Emphasis added.) Despite this strong policy, the Project will have significant impacts related to construction noise. If Metro were to approve the Project without mitigating these noise impacts, the Project would certainly run counter to this policy.

GO17-131

6. The DEIR Fails to Implement All Feasible

GO17-132

Mitigation for Construction Impacts.

The DEIR is required to consider and adopt all feasible mitigation measures. (*King & Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 852, 866, 869.) The following mitigation measures must be considered:

- Locating or parking all stationary construction equipment as far from sensitive receptors as possible, and directing emitted noise away from sensitive receptors.

- Verifying that construction equipment has properly operating and maintained mufflers.

- Limiting operation hours to daytime hours on weekdays.

- Replacing gas- and diesel-powered equipment with electric equipment to reduce the noise impacts associated with operation of that equipment.

cont'd GO17-132

G. The Potential for Blight Is Not Sufficiently Analyzed.

The DEIR was required to analyze the potential for the creation of blight. In reviewing the sufficiency of two EIRs for shopping center projects in Bakersfield, a court stated:

> [E]xperts are now warning about land use decisions that cause a chain reaction of store closures and long-term vacancies, ultimately destroying existing neighborhoods and leaving decaying shells in their wake. . . . . We . . . agree that CEQA requires analysis of the shopping centers' individual and cumulative potential to indirectly cause urban decay.

GO17-133

(*Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1204.)

ARTT has committed only to funding the environmental review portion of the gondola project.

What happens if the gondola is constructed but there is insufficient funding for operations and maintenance of the gondola?

The possibility that the gondola would be left standing idle, thus contributing to blight must be addressed. For example, a bond should be required to be posted for removal of gondola equipment in the same way mine operators are required to post cleanup bonds to ensure their operations are not abandoned and thrown upon the public to be cleaned up.

cont'd GO17-133

H. Land Use and Planning Impacts (Section 3.11) Will Be Significant But are Not Acknowledged.

1. City of Los Angeles General Plan Conflicts.

The City of Los Angeles will not be able to approve requested entitlements because they conflict with various policies of the City of Los Angeles General Plan. The EIR identifies the Los Angeles General Plan (EIR, p. 3.11-5) but fails to identify the conflicts with this plan. The proposed Project impermissibly conflicts with General Plan policies. State law requires that, because a general plan is the "constitution" for the City's future development, any decision affecting land use and development must be consistent with the General Plan. (*Citizens of Goleta Valley v. Board of Supervisors*, *supra*, 52 Cal.3d at 570-71 ["[T]he propriety of virtually any local decision affecting land use and development depends upon consistency with the applicable general plan and its elements."].) As the "'constitution for future development' . . . [the General Plan is] 'located at the top of 'the hierarchy of local government law regulating land use' . . ." (*DeVita v. Napa* (1995) 9 Cal.4th 763, 773.) A General Plan is more than an "exhortation", it is a "commandment." (*Debottari v. City of Norco* (1985) 171 Cal.App.3d 1204, 1211.) "[T]he requirement of consistency is the linchpin of California's land use and development laws. It is the principle which infused the concept of planned growth with the force of law." (*Id*. at 1213.)

GO17-134

The Project would also be built on or cross over land that is within the Alameda District Specific Plan, the Central City North Community Plan, the DTLA Community Plan (current or updated), the Central City North Specific Plan, the Silver Lake-Echo Park-Elysian Valley Community Plan, and the Chinatown Redevelopment Plan (DEIR, pp. 3.11-8 through 3.11-1313), and

GO17-135

[13] See, particularly, the map at DEIR, p.3.11-8, showing only some of the varied plans and requirements to which the Project would be subject. Metro does not have the authority and expertise to evaluate and balance the requirements of all these plans, and the other plans described above, with

FN GO17-135

the City of Los Angeles will be responsible for ensuring compliance by the Project with each such plan. For example, the City would have to waive provisions of the River Implementation Overlay District to allow the construction and operation of the Alameda and Alpine Towers and waive provisions of the Cornfield/Arroyo Seco Specific Plan to allow construction and operation of the Chinatown Station. (DEIR, p. 2-62.) However, there is no indication that the City would be amenable to such waivers. Therefore, these conflicts must be identified as significant and avoided.

cont'd GO17-135

While CEQA permits a responsible agency to rely on a lead agency's CEQA document, the City of Los Angeles and other responsible agencies must comply with CEQA "by considering the EIR or negative declaration prepared by the Lead Agency and by reaching its own conclusions on whether and how to approve the project involved." (14 CCR § 15096(a).) The City of Los Angeles will retain responsibility for mitigating or avoiding the direct or indirect environmental impacts of the portions of the project that it approves. (14 CCR § 15096(g)(1).)

GO17-136

The EIR may not assume that the City of Los Angeles will waive these conflicts or override these policies. Therefore, the EIR must analyze these as significant impacts within the jurisdiction of another agency.

2. The Surplus Land Act Requires Primary Consideration of Affordable Housing, Education, and Recreation Before Private Development.

Metro and the City of Los Angeles must comply with the Surplus Lands Act (SLA) in any potential disposition of publicly owned land. The Department of Housing and Community Development (HCD) has stated the SLA (Government Code sections 54220-54234) "is a 'right of first refusal' law that requires all local agencies to offer surplus land for sale or lease to affordable home developers and certain other entities before selling or leasing the land to any other individual or entity…. Any time a local agency disposes of land, it must follow the SLA unless the land qualifies as exempt surplus land. Dispositions include both sales and leases." All dispositions of surplus land must be approved by HCD before the sale or lease can be finalized. (Gov. Code, § 54230.5, subd. (b)(1).)

GO17-137

HCD is not listed among agencies where approval is required, but it

FN GO17-135 respect to the Project. The City does.

should be. It should have been consulted as a Responsible Agency. cont'd GO17-137

3. Use of the Union Station Forecourt Would Conflict with the Union Station Master Plan.

The EIR Land Use section (Section 3.11) completely fails to identify the Los Angeles Union Station Master Plan. See https://www.laconservancy.org/issues/union-station-master-plan. This Master Plan "encompasses approximately 38 acres, including the 161,000 square-foot terminal building, outdoor patios, and railroad tracks. In 1996, the approved Alameda District Specific Plan established development rights that now allow Metro to build up to 5.9 million square feet of new construction." (Ibid.) "In 2018, Metro released its Final Environmental Impact Report and its Final Environmental Impact Statement in 2020 for the Union Station Master Plan. Construction of the future high-speed rail concourse, planned to begin at the end of the decade, will occur at the rear of the property without significant adverse impacts to the historic train station. The Los Angeles Conservancy has advocated for preserving Union Station's integrity since 1995 and was involved with the current Master Plan process." GO17-138

As identified in the Los Angeles Union Station Historical Society letter sent to Metro on November 22, 2022, which we incorporate by reference, ARTT's "proposed 'futuristic-style' Union Station Terminal on Alameda Street and LA Metro's supporting 'Esplanade' project will blight the historic and architecturally significant west façade of Union Station…"

4. The Discussion of the Conditional Use Permit Modification for Dodger Stadium is Uninformative.

The CUP for Dodger Stadium will have to modified. GO17-139
The EIR mentions the CUP, but no copy is provided nor sufficient information about its current baseline requirements, such as how many parking spaces are required to be provided, is given.

5. The Park Preservation Act Requires Replacement Land.

The Park Preservation Act- which is not mentioned in the EIR- GO17-140
requires the replacement of land that is taken from park use. Any land used by the Project that is part of the State Historic Park must be replaced with parkland elsewhere.

6. Metro's Identification of Possible Federal and State Funding Makes Federal Requirements Relevant and Applicable, but the EIR Fails to Discuss Them.

Metro has placed the gondola project on its comprehensive list of projects to consider for state and federal funding for the Olympics. (http://metro.legistar1.com/metro/attachments/b8e94467-6e56-4687-b2bc-3d0bb08fb2fa.pdf, page 5).) If federal funding is sought for the gondola, Metro must comply with federal requirements, many of which are relevant and would prevent approval of the Project.

Furthermore, federal funding requires compliance with the National Environmental Policy Act (NEPA), the National Historic Preservation Act, including requirements for section 106 consultation for impacts to historic resources, and compliance with section 4(f) of the Department of Transportation Act, which prohibits usage of historic property or park land for transportation projects. Metro must also comply with the Civil Rights Act, which prohibits approval of projects that have discriminatory impacts. Metro must also comply with California's Government Code section 11135.[14] GO17-141

Section 4(f) of the Department of Transportation (DOT) Act is one of the most stringent federal environmental and historic preservation statutes ever enacted by Congress. The statute explicitly prohibits the Secretary of Transportation from approving any project that requires the "use" of historic

---

14 Government Code section 11135 provides:

> "(a) No person in the State of California shall, on the basis of sex, race, color, religion, ancestry, national origin, ethnic group identification, age, mental disability, physical disability, medical condition, genetic information, marital status, or sexual orientation, be unlawfully denied full and equal access to the benefits of, or be unlawfully subjected to discrimination under, any program or activity that is conducted, operated, or administered by the state or by any state agency, is funded directly by the state, or receives any financial assistance from the state."

The gondola Project would disparately impact the communities along the gondola route so its unavoidable impacts may not be overridden and approved without violating section 11135.

sites, unless (1) there is no "prudent and feasible" alternative to the use of the sites, and (2) "all possible planning" has been taken to minimize harm to the sites. (28 U.S.C. § 138; 49 U.S.C. § 303(c).) Section 4(f) imposes a substantive constraint on the exercise of agency discretion. Section 4(f) operates as a "plain and explicit bar to the use of federal funds" for transportation projects that would use historic sites or parkland; "only the most unusual situations are exempted." (*Citizens to Preserve Overton Park v. Volpe*, 401 U.S. 402, 411 (1972).) Indeed, the language of Section 4(f) shows that Congress intended the protection of historic sites and parkland to be given "paramount importance" in the planning of transportation projects. (*Id*. at 412-13.)

cont'd GO17-141

Metro should prepare a combined EIR/EIS to satisfy both state and federal environmental review requirements. Such and EIR/EIS could potentially be used for federal approvals that are or become necessary such as a federal conformity determination by EPA (the Project must be consistent with the Regional Transportation Plan), an approval of non-interference with airport traffic by FAA (the LAUSHS has asserted the Project is within close proximity of a heliport which is considered an airport for purposes of FAA review), or a determination of absence of impacts to historic/cultural properties of federal significance.

GO17-142

Additionally, stakeholders in the National Historic Preservation Act section 106 process such as the Los Angeles Union Station Historic Society (LAUSHS) must be identified and coordinated with to avoid section 106 impacts.

Under the National Historic Preservation Act, a project may not be approved if feasible alternatives will avoid historic resource impacts.

GO17-143

The National Historic Preservation Act (NHPA) states the policy of the United States is to "provide leadership in the preservation of the historic property of the United States." (54 U.S.C.A. § 300101.) Section 106 of the NHPA requires federal agencies to take into account the effects of their undertakings on historic properties and to afford the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment. The four-step Section 106 review process set forth in the ACHP's regulations, "Protection of Historic Properties" (36 CFR Part 800) outlines a four step process that ensures that the federal agency considers effects, including: (1) establishing the undertaking, (2) identifying and evaluating historic properties, (3) assessing effects, and (4) resolving any adverse effects. These steps are to be carried out sequentially and ensure that consulting parties

GO17-144

consider alternatives to avoid adverse effects on historic properties. Consultation with all consulting parties is necessary to develop avoidance alternatives.

cont'd GO17-144

Section 4(f) of the Department of Transportation (DOT) Act is one of the most stringent federal environmental and historic preservation statutes ever enacted by Congress. The statute explicitly prohibits the Secretary of Transportation from approving any project that requires the "use" of historic sites, *unless* (1) there is no "prudent and feasible" alternative to the use of the sites, and (2) "all possible planning" has been taken to minimize harm to the sites. (28 U.S.C. § 138; 49 U.S.C. § 303(c).) Section 4(f) imposes a substantive constraint on the exercise of agency discretion. Section 4(f) operates as a "plain and explicit bar to the use of federal funds" for transportation projects that would use historic sites; "only the most unusual situations are exempted." (*Citizens to Preserve Overton Park v. Volpe*, 401 U.S. 402, 411 (1972).) Indeed, the language of Section 4(f) shows that Congress intended the protection of historic sites to be given "paramount importance" in the planning of transportation projects. (*Id*. at 412-13.)

The circumstances under which an avoidance alternative can be rejected as not "feasible and prudent" have been very narrowly defined by the Supreme Court in the *Overton Park* case. The Secretary is not permitted to "engage in a wide-ranging balancing of competing interests." (*Id*. at 413.) An avoidance alternative is "infeasible" only if it cannot be built "as a matter of sound engineering." (*Id*. at 411.) And in order to find an avoidance alternative "not prudent" under Section 4(f), the Secretary must find that "truly unusual factors" are present, or that "alternative routes present unique problems," or that the "cost or community disruption" resulting from the avoidance alternative would reach "extraordinary magnitudes." (*Id*.) Without such a showing, even the asserted "need" for the project cannot suffice to rule out alternatives that would avoid using protected sites. (See *Stop H-3 Ass'n v. Dole*, 740 F.2d 1442, 1450-58 (9th Cir. 1984), *cert. denied,* 471 U.S. 1108 (1985).)

GO17-145

Code of Federal Regulations Title 23 section §774.3 regarding Section 4(f) approvals states:

> The Administration may not approve the use, as defined in §774.17, of Section 4(f) property unless a determination is made under paragraph (a) or (b) of this section.
>
> (a) The Administration determines that:

> (1) There is no feasible and prudent avoidance alternative, as defined in §774.17, to the use of land from the property; and
> (2) The action includes all possible planning, as defined in §774.17, to minimize harm to the property resulting from such use;
> (23 C.F.R. §774.3.)

As courts have explained the historic review process created by NHPA and its implementing regulations:

> Under NHPA, a federal agency must make a reasonable and good faith effort to identify historic properties, 36 C.F.R. § 800.4(b); determine whether identified properties are eligible for listing on the National Register based on criteria in 36 C.F.R. § 60.4; assess the effects of the undertaking on any eligible historic properties found, 36 C.F .R. §§ 800.4(c), 800.5, 800.9(a); determine whether the effect will be adverse, 36 C.F.R. §§ 800.5(c), 800.9(b); and avoid or mitigate any adverse effects, 36 C.F.R. §§ 800.8(e), 800.9(c).

(*Muckleshoot Indian Tribe v. U.S. Forest Service* (9th Cir. 1999) 177 F.3d 800, 805.)

Therefore, prioritizing *avoidance* of impacts to historic properties is not only a regulatory requirement but a statutory requirement of NHPA and Section 4(f).

cont'd GO17-145

7. Approval from the PUC is Needed.

ARTT has apparently taken the position that PUC approval is not needed. The gondola project crosses over the Gold Line in two places- near the Alpine Tower and near the State Historic Park. The Public Utilities Commission (PUC) would be a responsible agency because the Project would cross over and above railroad tracks. Thus, PUC review and approvals are required, with proper public notice and full public hearing processes must be provided.

GO17-146

I. Geology and Soils (Section 3.7) is Inadequate in its Analysis.

The EIR states that the project and stations and towers "would be in an area mapped as potentially subject to liquefaction. " (EIR, p. 3.7-17.) The

GO17-147

mitigation for this is adherence to emergency plan protocols but that is inadequate in an earthquake zone.

This is important to TCE as portions of the Project, with its multi-ton gondola cars suspended on wires on a proposed tower the Alameda triangle adjacent to TCE, could buckle during an earthquake—placing the lives of passengers and TCE office staff, grantees, and visitors in danger.

cont'd GO17-147

J. The Analysis of Alternatives (Section 4.0) is Grossly Inadequate.

The EIR admits that the environmentally superior alternative is the Transportation Systems Management Alternative. (EIR, p. 4-75 to 4-76.) However, the EIR than asserts that it would create more Vehicle Miles Traveled and not provide the same level of benefits. (EIR, p. 4-75.) The Transportation Systems Management Alternative can be augmented to reduce Vehicle Miles Traveled and to provide the benefits that would allegedly be lost. The Dodger Express bus fleet could be expanded and converted to electric buses with more pickup and dropoff locations throughout the County and near the Stadium such as at the Los Angeles Zoo.

GO17-148

1. The Project Cannot be Approved if There Are Feasible Alternatives that Would Reduce Adverse Impacts.

CEQA prohibits approval of projects with adverse environmental impacts if there are feasible alternatives. (Pub. Resources Code § 21002; Guidelines § 15021(a)(2).) The CEQA Guidelines require an agency to "Disclose to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved." In order to implement this policy, the Guidelines specify that:

GO17-149

> A public agency may approve a project even though the project would cause a significant effect on the environment *if* the agency makes a fully informed and *publicly disclosed decision* that:
>
> > (a) There is no feasible way to lessen or avoid the significant effect..."

(Guidelines § 15043, emphasis added.) More specifically, the Guidelines provide:

> If the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR.

(Guidelines § 15126.6(f)(2)(B).)

cont'd GO17-149

2. A Reasonable Range of Alternatives Must Be Considered, and Was Not.

Metro has a duty under CEQA to evaluate a reasonable range of alternatives to the Project. (*Laurel Heights I*, *supra*, 47 Cal.3d at 400.) As the California Supreme Court has stated:

> Under CEQA, the public agency bears the burden of *affirmatively demonstrating* that . . . the agency's *approval* of the proposed project *followed meaningful consideration of alternatives* and mitigation measures.

(*Mountain Lion Foundation v. Fish and Game Commission* (1997) 16 Cal.4th 105, 134, emphasis added; accord *Village Laguna of Laguna Beach v. Board of Supervisors* (1982) 134 Cal.App.3d 1022, 1035.) As the Court has said, while an EIR is "the heart of CEQA" the "core of an EIR is the mitigation and alternatives sections." (*Citizens of Goleta Valley v. Bd. Of Supervisors* (1990) 52 Cal.3d 553, 564 ("*Goleta II*").) Preparation of an adequate EIR with analysis of a reasonable range of alternatives is crucial to CEQA's substantive mandate to Aprevent significant avoidable damage to the environment when alternatives or mitigation measures are feasible. (Guidelines § 15002(a)(3).)

GO17-150

3. Alternatives Proposed in the LACTC Study Were Summarily Rejected Without Valid Evidence.

Alternatives were raised in the Los Angeles County Transportation Commission (LACTC) study but are rejected as infeasible or not studied at all (EIR, p. 4-9), without substantial evidence to support those conclusions. Other alternatives are rejected for failing to meet the unduly specific and narrow Project objectives. When the public offers reasonable alternatives to the proposed Project, Metro should provide a meaningful analysis of them. (Pub. Res. Code § 21091(d)(2)(B); Guidelines § 15088(c); *Berkeley Jets, supra*, 91 Cal.App.4th at 1367.)

GO17-151

An EIR cannot define the Project objectives in a manner that essentially is limited to the proposed Project. Further, with the exception of the mandatory "no project" objective, the alternatives that are considered appear designed to be rejected.

While "An EIR need not consider every conceivable alternative to a project, 'it must consider 'a reasonable range of *potentially* feasible alternatives...'" (Guidelines § 15126.6(a), emphasis added.) "The range of feasible alternatives [for an EIR] shall be selected and discussed in a manner to foster meaningful public participation and informed decision making." (Guidelines ' 15126.6 (f).) "[T]he discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly." (Guidelines § 15126.6(b).)

cont'd GO17-151

4. The Environmentally Superior Alternative of Expanded Dodger Express Bus Usage is Feasible.

The EIR attempts to argue that most project objectives cannot be met through expanding Dodger Express bus service because of alleged difficulties with expanding bus service. (EIR, pp. 4-60 to 4-62.) This view is unsupportable. Alleged difficulties with expanding bus service can be overcome with flexible alternative locations rather than relying entirely on locations such as using Division 13 maintenance facility (p. 4-61) or Patsaouras Plaza and the West Portal (p. 4-60). Other sites for possible bus service connections should be identified and utilized. The Dodger Express bus already transports game attendees directly from the South Bay. Other service lines can be added.

GO17-152

III. CONCLUSION.

Metro should reject the Project to focus resources on true public transportation such as electric bus service. If the Project is pursued it should be transferred to the City of Los Angeles for review.

GO17-153

The DEIR is so deficient that Metro must prepare a new DEIR and recirculate it for public and public agency comments if it wants to proceed

with consideration of the Project.

Please notify us of any hearing or the issuance of any findings or permits related to this matter. We also ask that you preserve all records and communications related to development of any property related to the Project in accordance with the requirements of *Golden Door Properties, LLC v. County of San Diego*, (2020) 50 Cal.App.5th 467.

Kathryn Barger: Thank you. Thank you, Mayor.

Ara Najarian: Very good. Thank you, Directors. And now, the time you've all been waiting for, let's take public comment.

UNKNOWN MALE 1: As a reminder, if you would like to make a comment, please press pound two to raise your hand.

UNKNOWN FEMALE 1: First caller, please.

UNKNOWN MALE 1: Moving onto our first caller in queue. Caller, and again, 8677, please state your name. You have one minute to state your comment.

Eunisses Hernandez: Hi, good morning. My name is Eunisses Hernandez. I'm the Councilmember Elect for LA City Council's 1st District. And just like to add, we knocked on thousands of doors in Chinatown and Solano neighborhoods. I really want to just thank you all for the opportunity to speak today. I have some concerns about the Frank McCourt project, the LA ART project, and LA's Metro proposal that looks like it'll cost about $300 million dollars. Um, there hasn't been enough community input and I'm glad that you all are talking about having forums. I hope that it's more than two. I hope that it's also out of the holidays because a lot of the folks who have been here have been motivated through work by community outreach. That doesn't happen a lot during the holidays and I hope there's appropriate language translation. Um, Metro and LA ART should allow every community member an opportunity to engage and to be a part of the process with some transparency. I would also like assurance from the Metro that this project will not use any taxpayer dollars in the future. The recent gift of this project to a nonprofit does give me pause that tax dollars will be utilized to pay for a project that is mostly a tourist attraction. For every public dollar should be used – Uh, every public dollar should be used for projects that decrease traffic and make it easier for working class people to travel around our vast city, including the bus shuttle that takes people from Supervisor Hahn's district all the way up to Dodger Stadium. To that end, I would like to see plans that address potential cost overruns and a project budget. I would like to ensure that

there's a robust financial fiscal management, uh, robust fiscal management to ensure that taxpayer dollars are used wisely and judiciously. I was elected to represent the interests of the people of the district who will be most impacted by this project. And let me be perfectly clear, when I take office I will demand transparency and accountability from governmental agencies and developers who want to build in the First District because we've been impacted by gentrification severely. I will insist that projects have a demonstrable benefit and are informed by communities that are most directly impacted. There are legitimate questions and concerns about this gondola project that require answers. And I will use every tool at my disposal to protect the best interest of the residents of the First District. Thank you.

Ara Najarian: Thank you.

UNKNOWN MALE 1: All right, moving onto our next caller.

TRANSCRIPT OF VIDEOTAPE PROCEEDINGS

Executive Management Committee

Los Angeles, California

Thursday, September 15, 2022

Transcribed by: Madiha Dudley

Ara J. Najarian: Director Solis.

Hilda Solis: Yes, thank you, Mr. Chairman. And thank you to Holly Rockwell for her presentation. I think we have come a long way since these discussions started almost two or three years ago. And I realize this took place under a different CEO. And obviously we were always looking to see how we could improve services and ridership, people getting out of their cars and what have you. And it sounds very lucrative that the owners of this project want to make it successful and are willing to pay for just about everything. But I will have to say that this is a project that I do have concerns about and it does impact my district most immediate. And I do believe that because we are a governmental agency it's a bit different because we are the ones that are going to have to vote on the final project itself. So, while a private entity is undertaking this, we will be the ones that will be making a public decision. And one of the concerns that I've had is with respect to public transparency and the fact that I do want to see that there are more public hearings before the EIR. And I don't think that's setting a precedent because we've done so with the BRT that we just approved a couple of months back and that was – That took a long time and I know our Chair was very much involved, I was, and many of us were. And I think that we did the right thing. And sometimes it's about making sure that you are accessible, transparent, and you're allowing for public comment. And sometimes we win, sometimes we lose but I think for us on the board, it's very important to be transparent. And I'm very, I'm still very concerned that I've heard from residents repeatedly, especially in Chinatown, and I'm talking about residents as well as in the Solano Canyon community who have not been made fully aware of what the impacts are going to be, including some of the small businesses. I think that people are understanding that there may be benefits. And of course, there may be, that's speculative, but in fact what we do know what's happening there in the area is that there is a large number of people who are being displaced already in this area. There's a lot of gentrification. We know that the property values will go up once this project, if it is approved, goes into place. That will also impact those mom and pop businesses, many that are immigrant and many people, as you know, that have been impacted because of the pandemic and are just living paycheck to paycheck. That is one of my concerns. The other is that parking and the fact that we are undertaking major restorative care village opportunities which is to build housing for the unhoused, both interim and permanent

around this area, we know that we have partners right now, the City of LA, as well as Homeboys, as well as the California Endowment. They're preparing, we're preparing to build out more housing because we don't want people to have to be displaced. And so, I believe this may have a disruption in terms of what our plans are moving forward and will have implications, I believe, even for Metro because Metro owns property around the village that currently exists there now. So, I do want to ask, if at all possible, and I would strongly encourage our staff to do this, that we look at providing for more hearings before the EIR is presented to us and that we do – And that we wait until December. I'm not saying postpone any vote on this but I'm saying, can we at least slow it down to allow for more public comment? I think that we are going to have, as a result of November, some elections. We may see a change and we are going to see a change in the councilman representative that represents the district and I don't believe that it's fair to just allow for a project to move forward that's going to impact her district so dramatically without having her have a full purview of what is going on and hearing from all sides and understanding the project herself. Having said that, I just want to remind the board that we have undertaken extensive outreach for other projects. Again, outlining the North Hollywood BRT as well as the Gold Line extension and asking that we continue to make available any public comment. I think it would be irresponsible for the ART team to release the EIR without additional community engagement. So, I just want to say that and hope that the board will also support that notion. It's more about making sure that we continue the momentum of having public comment. Thank you, Mr. Chair and look forward to hearing from the audience. Thank you.

Aja Najarian: Thank you.

51. SUBJECT: LA AERIAL RAPID TRANSIT PROJECT 2021-0456

APPROVED Motion by Directors Solis, Kuehl, Mitchell, Butts, Sandoval, and Garcetti that the Board of Directors direct the Chief Executive Officer to report back in July 2021 with an update via Board Box and again in August 2021 with a final report that includes the following:

A. Analysis of Metro's duties and available authority to impose conditions when acting as the lead agency for non-Metro projects with regards to environmental clearance;

B. Recommendations for community benefits developed in collaboration with the project owner to be included as part of the project scope. Recommendations should consider, but not be limited to:

- Mitigations for potential parking impacts
- Local job creation
- Workforce training
- Small business support and partnerships
- Affordable housing, and
- Housing/business preservation.

C. Any completed studies that can be made publicly available as part of the LA ART Project, including any preliminary traffic analyses and demand modeling that estimate how many car trips will be taken off the street as a result of the Project; and

D. List of all public agencies that must provide approvals for the LA ART Project as well as a map detailing right-of-way needs and properties owned by public agencies.

LA HISTORY

The Ugly, Violent Clearing Of Chavez Ravine Before It Was Home To The Dodgers

By Elina Shatkin

Published Oct 17, 2018 11:00 AM

May 8, 1959: "Several Chavez Ravine residents fought eviction, including Aurora Vargas, who vowed that, 'they'll have to carry me [out].' L.A. County Sheriffs forcibly remove Vargas from her home. Bulldozers then knocked over the few remaining dwellings. Four months later, ground-breaking for Dodger Stadium began."

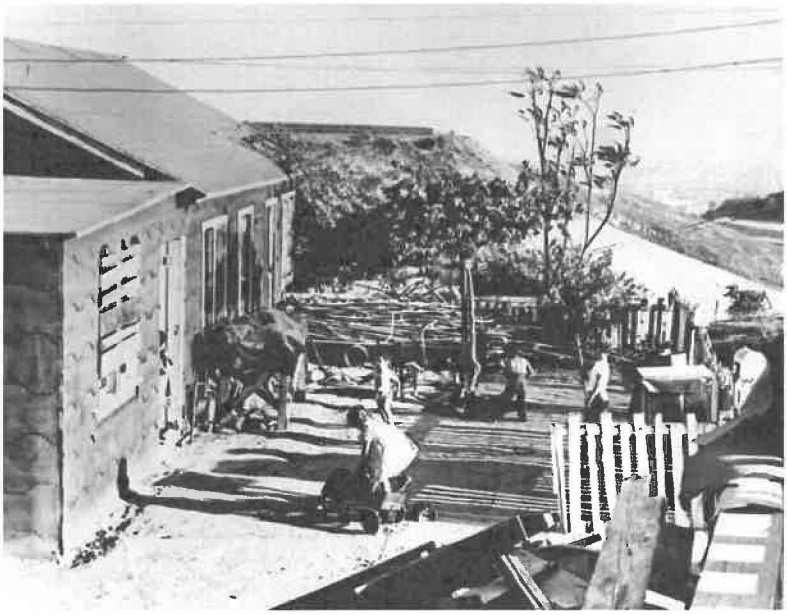
As the Dodgers gear up for Game 5 of the National League Championship Series — once again, on their home turf — it's worth remembering that before Dodger Stadium was a legendary baseball venue, it was known as Chavez Ravine.

The area was home to generations of families, most of them Mexican American.



"View of children playing in a fenced yard of a very dilapidated house."

After the Dodgers made the deal to ditch Brooklyn, Los Angeles officials used eminent domain and other political machinations to wrest that land away from its owners.

Support for LAist comes from

(Security Pacific National Bank Collection/Los Angeles Public Library Collection)

It was ugly. It was violent. It remains the sort of living history that Los Angeles residents don't like to remember.

May 9, 1959: "Los Angeles County Sheriffs forcibly evict Mrs. Aurora Vargas, 36, from her home at 1771 Malvina Avenue in Chavez Ravine. Media representatives record the event. The family put up a fight and reported they had only received a written eviction notice, causing criticism of the government's methods."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

Chavez Ravine was named after Julian Chavez, a rancher who served as assistant mayor, city councilman and, eventually, as one of L.A. County's first supervisors. In 1844, he started buying up land in what was known as the Stone Quarry Hills, an area

with several separate ravines. Chavez died of a heart attack in 1879, at the age of 69.

"A group of children play on hills above the ravine, with a smoggy downtown skyline visible in the background."

(Don Normak/Housing Authority Collection/Los Angeles Public Library Collection)

By the early 1900s, semi-rural communities had sprung up on the steep terrain, mostly on the ridges between the neighboring Sulfur and Cemetery ravines.

"Two young and happy residents of Chavez Ravine."

(Leonard Nadel/Housing Authority Collection/Los Angeles Public Library Collection)

(Shades of L.A.: Mexican American Community/Los Angeles Public Library Collection)

What eventually came to be called Chavez Ravine encompassed about 315 acres and had three main neighborhoods — Palo Verde, La Loma and Bishop.

1948: "Panoramic view of the housing in Chavez Ravine. Mostly Mexican American families lived in this area. Children are at play in the foreground."

(Housing Authority Collection/Los Angeles Public Library Collection)

Support for LAist comes from

Become a sponsor

It had a grocery store, a church and an elementary school. Many residents grew their own food and raised animals such as pigs, goats and turkeys.

1949: "An older woman carrying a bucket crosses an unpaved road with a small child and a dog. Buildings in the background are quite run-down. Chavez Ravine is towards the left of photo."

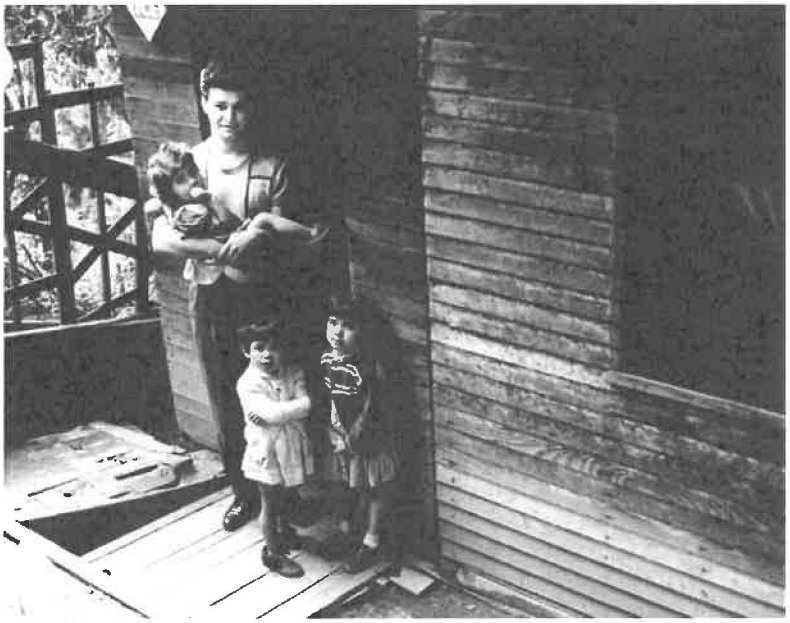
(Housing Authority Collection/Los Angeles Public Library Collection)

Many Mexican American families, red-lined and prevented from moving into other neighborhoods, established themselves in Chavez Ravine.

1951: "The Navarro family pose at their Chavez Ravine home before their relocation to the William Mead Homes Housing Project. Blasito Navarro (divorced) lived with her 3 children in this 5 room house, which rented for $25 per month."

(Housing Authority Collection/Los Angeles Public Library Collection)

Residents of the tight-knit community often left their doors unlocked.



"Veteran William Nickolas and three of his children stand in the door of the home in the rear of his father-in-law's house at 942-1/2 Yola Drive, Chavez Ravine, Los Angeles. The home had two rooms for sleeping quarters and toilet, no bathing facilities, no gas or hot water. The family is to move into Basilone Homes Housing Project. The wife is Emily Nickolas. There are six children in the family, ages 8, 6, 5, 4, 3, and 3 months."

(Leonard Nadel/Housing Authority Collection/Los Angeles Public Library Collection)

Outsiders often saw the neighborhood as a slum. City officials decided that Chavez Ravine was ripe for redevelopment, kicking off a decade-long battle over the land.

1950: "View of the hillside in the Chavez Ravine area in Elysian Park Heights depicts a country-like setting. The housing in the foreground is fenced and has several animal cages."

(Housing Authority Collection/Los Angeles Public Library Collection)

They labeled it "blighted" and came up with a plan for a massive public housing project, known as Elysian Park Heights.

Designed by architects Robert E. Alexander and Richard Neutra and funded in part by federal money, the project was supposed to include more than 1,000 units — two dozen 13-story buildings and 160 two-story townhouses — as well as several new schools and playgrounds.

May 11, 1959: "Cruz Cabral, 39, ex-Marine war hero of World War II, gives moral support to relatives evicted from their house in Chavez Ravine. His aunt, Mrs. Abrana Arechiga, 72, shows his medals. He was wounded four times in South Pacific battles. She reared him on this site."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

In the early 1950s, the city began trying to convince Chavez Ravine homeowners to sell. Despite intense pressure, many residents resisted.

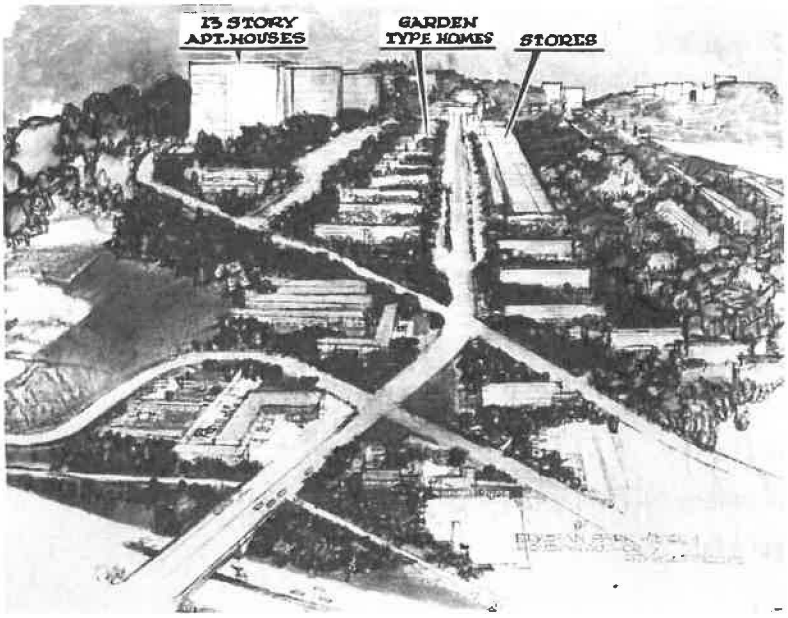
Developers offered immediate cash payments to residents for their property. They offered remaining homeowners less money so residents feared that if they held out, they wouldn't get a fair price.

In other cases, officials used the power of eminent domain to acquire plots of land and force residents out of their homes. When they did, they typically lowballed homeowners, offering them far less money than their land was worth.

July 20, 1953: "Home owners from Chavez Ravine, Rose Hills and Pacoima tell Mayor Norris Poulson (left) to fight on for abandonment of housing projects."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

Chavez Ravine residents were also told that the land would be used for public housing and those who were displaced could return to live in the housing projects.



Circa 1952: "Artist's sketch of Chavez Ravine, one of the three proposed projects in Elysian Park that the mayor is expected to ask to be abandoned."

(Leonard Nadel/Herald-Examiner Collection/Los Angeles Public Library Collection)

One way or another, by choice or by force, most residents of the three neighborhoods had left Chavez Ravine by 1953, when the Elysian Park Heights project fell apart.

May 14, 1951: "New projected housing project is forcing many oldtimers like Julian, on wagon, to move from Chavez Ravine to new quarters. Later the area became part of the baseball stadium of the Los Angeles Dodgers instead."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

Norris Poulson, the new mayor of Los Angeles, opposed public housing as "un-American," as did many business leaders who wanted the land for private development.

The city bought back the land, at a much lower price, from the Federal Housing Authority — with the agreement that the city would use it for a public purpose.

1951: "400 sign-waving residents of Chavez Ravine, protesting a proposed housing project that would take the sites of their homes, appeared April 26, 1951, at the City Planning Commission's final hearing on the matter. Sporadic booing and hissing swept over the crowd when a speaker suggested immediate approval of the project."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

By 1957, the area had become a ghost town. Only 20 families, holdouts who had fought the city's offers to buy their land, were still living in Chavez Ravine.

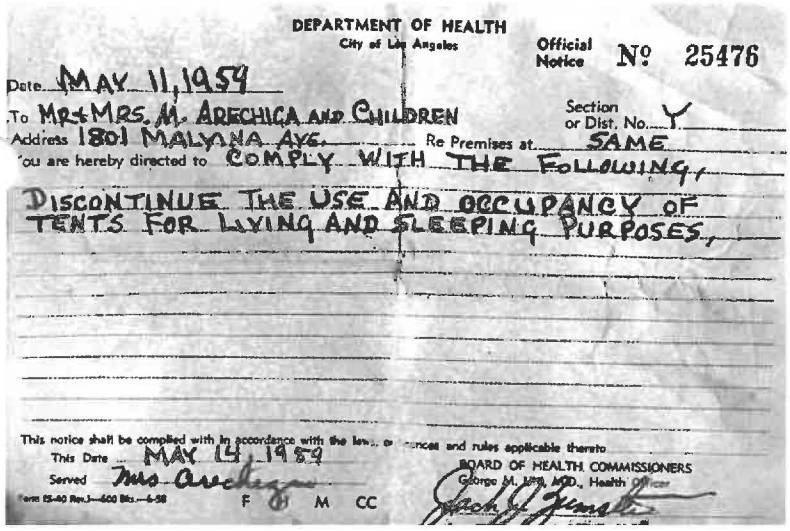
In June of 1958, voters approved (by a slim, 3% margin) a referendum to trade 352 acres of land at Chavez Ravine to the owner of the Brooklyn Dodgers, Walter O'Malley.

May 1959: "Some, ready to move out of Chavez Ravine, and others not, members of the Manuel Arechiga family listen to the advice of attorney Phil Silver (left) as new developments transpire in the Chavez controversy."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

The following year, the city began clearing the land for the stadium.

On Friday, May 9, 1959, bulldozers and sheriff's deputies showed up to forcibly evict the last few families in Chavez Ravine. Residents of the area called it Black Friday.



DEPARTMENT OF HEALTH
City of Los Angeles
Official Notice No. 25476

Date MAY 11, 1959
To MR & MRS. M. ARECHIGA AND CHILDREN
Address 1801 MALVINA AVE. Re Premises at SAME
Section or Dist. No. Y
You are hereby directed to COMPLY WITH THE FOLLOWING:
DISCONTINUE THE USE AND OCCUPANCY OF TENTS FOR LIVING AND SLEEPING PURPOSES.

This notice shall be complied with in accordance with the laws, ordinances and rules applicable thereto
This Date MAY 14, 1959
Served Mrs. Arechiga
BOARD OF HEALTH COMMISSIONERS
George M. Uhl, M.D., Health Officer
Form 65-40 Rev.3—600 Blks.—6-58 F M CC

Sheriff's deputies kicked down the door of the Arechiga family's home. Movers hauled out the family's furniture. The residents were forcibly escorted out. Aurora Vargas, 36, was carried, kicking and screaming, from her home at 1771 Malvina Ave. by four deputies. Minutes later, her home was bulldozed.

Crews eventually knocked down the ridge separating the Sulfur and Cemetery ravines and filled them in, burying Palo Verde Elementary School in the process.

May 14, 1959: "Mrs. Abrana Arechiga (left) and her daughter, Mrs. Vicki Augustain, look at the ruins of one of their Chavez Ravine homes, which were destroyed by bulldozers during the controversial eviction last Friday, an action which now has erupted into a sensational city-wide furor. After eviction day, the Arechiga family lived in a tent and, later, in a loaned trailer. Now it is revealed they own 11 homes in the Los Angeles area."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

The Arechiga family, led by 66-year-old matriarch Avrana Arechiga, camped amid the rubble for the next week before

finally giving up.

May 16, 1959: "All was quiet on the Chavez Ravine battlefront. Avrana and Manuel Arechiga are the only remaining eviction warriors there. He's sweeping the dirt off the 'front porch' of their tent. Protest signs are posted nearby."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

Crews broke ground for Dodger Stadium four months later, on September 17, 1959. While it was being built, the Dodgers played games at the Los Angeles Memorial Coliseum.

February 16, 1961: Ramparts rise at top speed as work is ahead of schedule at Dodger Stadium, built on the site of Chavez Ravine.

(Herald-Examiner Collection/Los Angeles Public Library Collection)

The 56,000-seat Dodger Stadium opened on April 10, 1962, on a site that thousands of people had once called home.

"Balloons are released at possibly opening ceremonies at Dodger Stadium."

(Herald-Examiner Collection/Los Angeles Public Library Collection)

It is currently the third oldest major league ballpark still in use, after Fenway Park and Wrigley Field.

March 11, 1962: Dodgers owner Walter O'Malley stands in Dodger Stadium. "Built for $23 million, it is the first privately financed Major League Baseball stadium since Yankee Stadium was built in the 1920s."

BOOKS

'Stealing Home' revisits Dodger Stadium's nefarious origins

A family is evicted from its Chavez Ravine home on May 8, 1959. (Regional History Center)

BY NATE ROGERS

MARCH 31, 2020 6:45 AM PT

In Chavez Ravine, this would normally be a time for baseball. Barring the 1995 MLB season, which was shortened due to a strike, this is the first time since 1961, the year before Dodger Stadium opened, that the arrival of spring in Los Angeles hasn't been heralded by the roar of 56,000 fans, some of them gleefully playing hooky. For now, the stadium remains gated and eerily quiet. It's as if it's not even there.

The author Eric Nusbaum has been imagining a world with no Dodger Stadium since he was a junior at Culver City High School in 2002. That was when an older man named Frank Wilkinson showed up to give a guest lecture to Nusbaum's history class and said, "Dodger Stadium should not exist."

"I remember at the time being blown away," says Nusbaum. He is taking a video call in a closet, his "little sanctuary of book promotion," as he waits out the COVID-19 pandemic at home with his wife and children in Tacoma, Wash. "I was the kind of kid who read the sports page every day. Maybe because I was such a big Dodger fan, I had willfully ignored it." What he means is the dark history of the land where the stadium sits, the subject of his new book, "Stealing Home: Los Angeles, the Dodgers, and the Lives Caught in Between."

ADVERTISING

DODGERS

Book excerpt: The grassroots war over Dodger Stadium that captivated a nation

March 29, 2020

The story has roots in Wilkinson's tenure as a public-housing official in the early 1950s. He was one of the central players in the bureaucratic nightmare that was Elysian Park Heights, a failed housing project initiated in Chavez Ravine.

Eminent domain was used to serve evictions, offering measly compensation, across three largely Mexican American neighborhoods in the hills above Echo Park — Palo Verde, La Loma and Bishop. After Wilkinson was fired for Communist associations during the Red Scare, the project went down with him. The mostly cleared-out land sat in limbo for years before an all-American solution was found: Walter O'Malley and his Dodgers needed a new home.

A bulldozer razes the Aréchigas' family home on May 8, 1959. (Los Angeles Times Archive / UCLA)

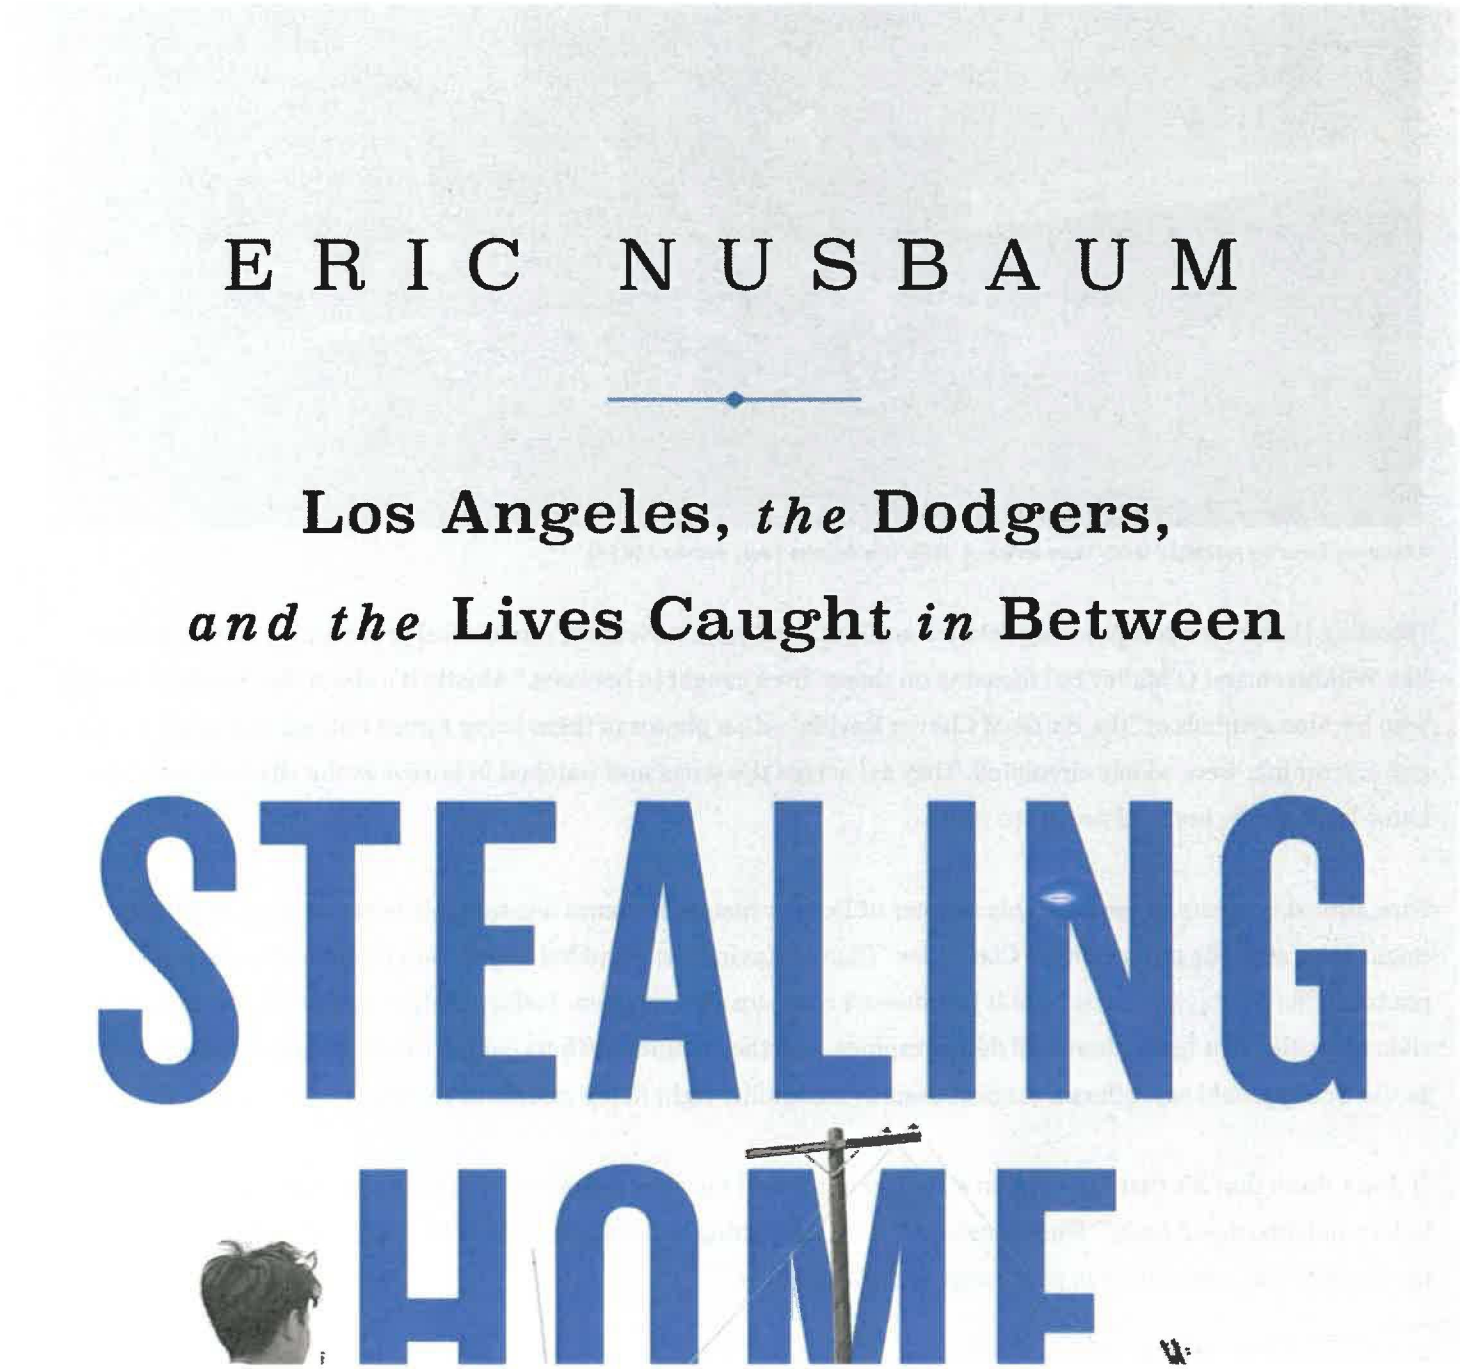
"Stealing Home" is a scrupulously detailed account, written in novelistic, economical prose and featuring people like Wilkinson and O'Malley but focusing on those "lives caught in between." Mostly it's about the Aréchiga family, who became symbols of "the Battle of Chavez Ravine" when photos of them being forced out, some literally kicking and screaming, were widely circulated. They sat across the street and watched in horror as the city bulldozed their hand-built family home of nearly 40 years.

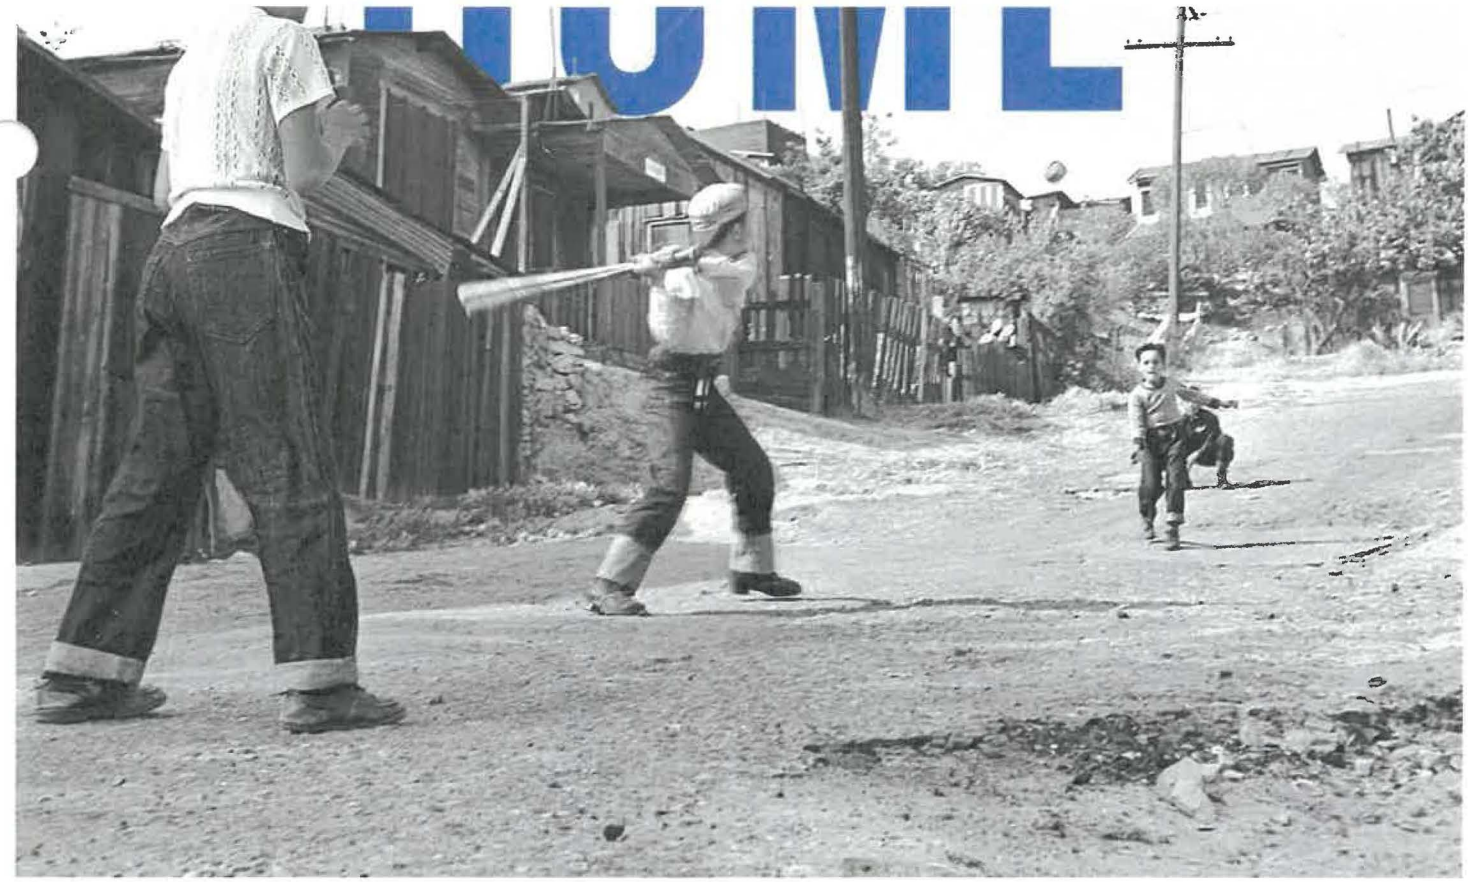
Now almost 60 years in the past, this chapter of Dodger history becomes less tangible every season. Angelenos might have seen the 2003 Culture Clash play "Chavez Ravine" or stumbled across Don Normark's 1999 book of photos, "Chavez Ravine: 1949," but it just doesn't come up all that often. Today, Dodger fandom is one of the few civic identities that unify almost all demographics, and the stadium, with its cotton-candy sky good enough to eat, as Vin Scully would say, offers a magical oasis of tranquility right in the middle of the city.

"I don't think that it's that fun to go to a Dodger game and tap your neighbor on the shoulder and say, 'There used to be a neighborhood here,'" Nusbaum says. "It's a hard thing to be able to hold both the joy of Dodger baseball and the tragedy that preceded it in your heart at the same time."

Nusbaum and I had planned to tour points of interest related to the book. But after his press trip to L.A. was canceled he provided an annotated driving tour instead: a stretch of homes on North Boylston Street, by the stadium's Scott Avenue entrance; the Police Academy; the Elysian Park Recreation Center; the Historic Mission San Conrado.

On Boylston sits a tiny residential patch that was spared from development, which makes it possible to imagine what the other communities might look like today. Winding up away from the stadium toward Academy Road, these few holdouts vary from modest starter homes to upscale bohemian playgrounds, not too different from contemporary Echo Park. By the Police Academy is a vestigial half-block of Malvina Avenue, the Aréchigas' old street. (Their home would've been somewhere near the northern edge of the stadium parking lot.) Envisioning sprawling, vibrant neighborhoods in these spots is an almost brutal what-if exercise.





(PublicAffairs)

But Nusbaum's history is more than just a nostalgic paean or a jeremiad; the history of public housing and so-called "slum clearance" is too tangled for that. Nusbaum is mindful of the fact that it was the city, not the team, that kicked the families out. And the city's initial intentions were ostensibly noble.

"It is the conundrum," says Jan Breidenbach, a professor at Occidental College who teaches the episode of Chavez Ravine and knew Wilkinson before his death in 2006. "Do we leave people to live in slums? Or do we do something to build housing for people who need it? I fall on the side that shelter is a public good, and it's a public responsibility. ... But I cannot tell you how upset I would be if they took my house."

Some have taken issue with the idea that these neighborhoods *were* slums. It is true that the neighborhoods weren't well equipped with proper plumbing and paved roads, but that was largely a result of the city's own neglect. And the legacy of housing projects initiated back then is mixed at best; by most accounts, more units were torn down than built.

In any event, Nusbaum keeps the book's focus personal. "Ultimately, [the Aréchigas] were real people who did a lot of really difficult and amazing things to make a life for themselves and for their family," Nusbaum says. "What happened is that the government took their home, sold it to a private enterprise, and then kicked them out of it. ... And the fact that they were immigrants is probably a big part of why that happened to them."

In 2000 Bob Graziano, then-president of the Dodgers, extended literal olive branches to members of the three neighborhoods and their descendants, whom he praised for "not forgetting the past, but forgiving the past." Since

that time, however, the team hasn't made continuing efforts to acknowledge that past. On the "stadium history" section of the Dodgers' website, history simply begins with the park being "carved as it is into the hillside of Chavez Ravine." (The Dodgers did not respond to several requests for comment regarding this story.)

The Dodger Stadium groundbreaking at Chavez Ravine. (Vinnell Constructors)

"I think the Dodgers should apologize," says Nusbaum. "I think the city should apologize. I think the county should apologize. I think all three entities should work with members of those communities and their descendants on some sort of formal way to make amends."

One such descendant, Edward Santillan, has found a way to move on. His father, Lou, was born in Chavez Ravine (Lou claimed that his umbilical cord was buried beneath third base), and never forgave the team. But Edward didn't let that stop him from becoming a fan. He's also worked for the city for decades, supervising a parking garage at City Hall. (Nusbaum included City Hall in his driving tour.)

"I can't see myself rooting for the San Francisco Giants or whatever," Santillan says. "It's gonna be my home team."

Before his death in 2014, Lou Santillan organized an annual reunion for Los Desterrados — "The Uprooted" — at the Elysian Park Recreation Center. Edward has since taken an active role in maintaining the event.

"It's the newer generations that have sparked an interest in Chavez Ravine," Santillan points out. He says younger people have started attending the reunions, interested in learning more about what Palo Verde, La Loma and Bishop were like. "But at the same time the Dodger blue tradition continues. It's a mixed feeling."

Santillan has two young daughters and he takes them to games, where he tells them the story about his father and grandparents and the umbilical cord beneath third base. "You get older," Santillan says. "Things start coming into perspective. It all makes a full circle."

Re: Chinatown Cornfield Administrative Complaint

Dear Secretary Cuomo, Secretary Minetta, and Assistant Attorney General Lee:

We submit the attached administrative complaint on behalf of Friends of the Los Angeles River, the Chinese Consolidated Benevolent Association of Los Angeles, Concerned Citizens of South Central Los Angeles, Environmental Defense, Latino Urban Forum, Natural Resources Defense Council and Northeast Renaissance Corporation, and on behalf of their members and other similarly situated persons in the City of Los Angeles, challenging the decision by the City of Los Angeles (the "City"), Majestic Realty, and Union Pacific (collectively, "Respondents") to build 32 acres of warehouses and industrial development in the Chinatown Cornfield using federal funds from the United States Department Housing and Urban Development ("HUD") and the United States Department of Commerce

("Commerce"). The warehouse project violates civil rights, environmental justice, environmental quality and historic preservation laws.

Very truly yours,

I. Introduction

We file this administrative charge on behalf of Friends of the Los Angeles River, the Chinese Consolidated Benevolent Association of Los Angeles, Concerned Citizens of South Central Los Angeles, Environmental Defense, Latino Urban Forum, Natural Resources Defense Council and Northeast Renaissance Corporation, and on behalf of their members and other similarly situated persons in the City of Los Angeles, challenging the decision by the City of Los Angeles (the "City"), Majestic Realty, and Union Pacific to build 32 acres of warehouses and industrial development in the Chinatown Cornfield using federal funds from the United States Department Housing and Urban Development ("HUD") and the United States Department of Commerce ("Commerce"). The Cornfield, a vacant, 47 acre rail yard between Chinatown and the Los Angeles River, is the last vast open space in downtown Los Angeles. The Cornfield offers a once-in-a-century opportunity to create a compatible mixed used project including a world-class park, playground, open space, school, affordable housing, jobs and other mixed use alternatives. The Cornfield is surrounded by working class communities: Chinatown to the west, the William Mead Homes--L.A.'s oldest and largest housing project--to the east, and disproportionately Hispanic Lincoln Heights and Solano Canyon to the north. The children of the Cornfield communities are deprived of the simple joys of playing in the park as a result of the discriminatory policies and practices of the City, Majestic and Union Pacific. No one would build the Warehouse Project in disproportionately White, relatively wealthy parts of Los Angeles, and certainly would not go forward without full environmental review and without full and fair public participation in the decisionmaking process. The Warehouse Project should not go forward in the Cornfield communities.

The Warehouse Project is intentionally discriminatory and has an unjustified adverse disparate impact against communities of color and low income communities, has not been the subject of full environmental review to analyze impacts and alternatives, has not been developed with full and fair public participation to decide the future of the Cornfield, and would cause further environmental degradation and the destruction of cultural and historical resources. These actions violate the environmental justice and environmental quality laws of the United States, including the Equal Protection Clause of the Fourteenth Amendment to the Constitution of the United States; 42 U.S.C. § 1983; Title VI of the Civil Rights Act of 1964, 42 U.S.C § 2000d; the implementing Title VI regulations codified by HUD, 24 CFR § 1.7, and Commerce, 15 C.F.R. § 8.4; section 109 of Title I of the Housing and Community Development Act of 1974, 42 U.S.C. § 5309 and its regulations, 24 C.F.R. § 6.2; HUD's Consolidated Plan regulations, 24 C.F.R. § 91.105; the National Environmental Policy Act and its regulations; the National Historic Preservation Act, 16 U.S.C. § 470-470w-6 and its regulations; the President's Executive Order on Environmental Justice, Executive Order 12,898; HUD's Hope VI Project, and other laws.

The relief we seek is to stop federal funding for the Warehouse Project unless respondents demonstrate that the challenged action is justified by business necessity and that no less discriminatory exists; to require full environmental review of the Warehouse Project through an environmental impact statement to assess impacts and alternatives; to insure a participatory public process to determine the future of the Cornfield consistent with the needs and desires of the surrounding communities; and to develop the Cornfield as compatible mixed parkland. We also seek an expedited investigation.

The complainants seek to stop the Warehouse Project to secure equal justice, democracy and livability in the following respects at a minimum:

(1) create a park, playground, school, affordable housing and compatible mixed uses in a City and neighborhood that are park poor;

(2) create quality jobs, promote tourism, increase property values, and promote economic vitality through the parkland proposal;

(3) clean up contamination in the Cornfield;

(4) mitigate the negative air quality impacts of hundreds of diesel truck trips per day in the vicinity of the Ann Street School from the Warehouses Project;

(5) mitigate the traffic safety and congestion impacts of increased traffic from the Warehouse Project;

(6) preserve the Zanja Madre, or "Mother Ditch," that was built in 1781 to bring water from the Los Angeles River to Olvera Street, the birthplace of El Pueblo de Los Angeles; develop the Juan de Batista Millenium Trail; and preserve the historical and cultural interests of Native American, Spanish, Mexican and Chinese communities in the Cornfield;

(7) eliminate the negative aesthetic impacts associated with the construction and operation of a nearly 1 million square foot, 40-foot high industrial and warehouse facility;

(8) promote affordable housing and other sustainable land use and development in and around Chinatown, Solano Canyon, Lincoln Heights, William Mead Homes, and surrounding areas, including the Los Angeles River Parkway, in a manner consistent

with various proposed community and regional plans, including the General Plan, the Downtown Strategic Plan, the Greater Downtown Plan, and the Central City North Community Plan;

(9) mitigate flood hazards for the area, which lies within a flood hazard zone;

(10) eliminate negative water quality and storm water runoff impacts – the single largest source of water pollution in Southern California -- that would result from the impermeable surfaces of the Warehouse Project;

(11) provide a central place for people to congregate in the event of a disaster or emergency;

(12) require an environmental impact statement or report to assess the impacts of the Warehouse Project, and to assess alternatives to the Warehouse Project.

(13) require the City to gather, analyze and publish information about the impact of the Warehouse Project on all communities;

(14) insure full and fair public participation in deciding the future of the Cornfield; and

(15) promote equal access to parks and recreation by eliminating intentional discrimination and adverse disparate impacts for which there are less discriminatory alternatives.

II. The Parties

A. Complainants

The complainants advocate park and compatible mixed uses in the Cornfield and

oppose the Warehouse Project on environmental quality and environmental justice grounds. The activities of each of the complainants will be adversely affected by the Warehouse Project. The claims of the complainants are representative of the claims of the members of the Chinatown Yard Alliance which opposes the Warehouse Project in favor of compatible mixed parkland uses. The Alliance Members are listed in Tab 11 and below.1

Friends of the Los Angeles River ("FOLAR") is a California non-profit, tax-exempt, public benefit corporation. FOLAR was organized in 1986 to protect and restore the natural and historic heritage of the Los Angeles River ("River") and its riparian communities. FOLAR's goals include: improving flood control with detention basins and groundwater recharge; increasing conservation and clean-up of storm water; restoring the natural riparian habitat along the river and its tributaries; and creating recreational and educational opportunities for all the residents of the Basin along and near the River. FOLAR's purposes and activities include (1) working to create a park in the Cornfield, (2) working to create a 51-mile Los Angeles River Parkway, and (3) obtaining equity in access to parks and recreation in

---

[1] The Chinatown Yards Alliance includes Chinatown-Alpine Hill Neighborhood Association, Chinese-American Citizen's Alliance, Chinese Consolidated Benevolent Association, Citizens Committee To Save Elysian Park, Coalition L.A. 1st District Organizing Committee, Coalition of Essential Schools, Coalition For Clean Air, Concerned Citizens of South Central Los Angeles, Constance L. Rice and The Advancement Project, Echo Park Community Coordinating Council, Elysian Heights Residents Association, Environmental Defense, Friends of Castelar School, Friends of the Los Angeles River, Heal The Bay, Latino Urban Forum, Lincoln Heights Neighborhood Preservation Association, Los Angeles Alliance For A New Economy, Los Angeles County Bicycle Coalition, William Mead Homes Residents Association, Maria Elena Durazo, Mothers of East Los Angeles Santa Isabel, Natural Resources Defense Council, Northeast Renaissance Corp, Northeast Trees, People For Parks, Sierra Club, Southern California Council on Environment and Development, The Ad Hoc Committee for Safe Children, and Treepeople.

Los Angeles without respect to race, color, national origin, disability, gender or income. FOLAR helped obtain over $83 million to create the Parkway in the state budget. Members of FOLAR who live in the Cornfield vicinity will be adversely affected by the challenged actions.

The Chinese Consolidated Benevolent Association of Los Angeles represents the Chinese American community in seeking to improve the quality of life for Chinese Americans throughout Southern California whose purposes and activities include (1) working to create a park in the Cornfield, and (2) obtaining equity in access to parks and recreation without respect to race, color, national origin, disability, gender or income. Chinese, low income and other members of the Association who live in the Cornfield vicinity will be adversely affected by the challenged actions.

Concerned Citizens of South Central Los Angeles ("CCSCLA") is a non-profit public benefit community based organization whose mission is to work for social justice and economic and environmental change within the South Central community. CCSCLA works on issues impacting its community such as parks, recreation and open space, planning and land use, affordable housing, and recycling. CCSCLA's purposes and activities include (1) working to create a park in the Cornfield, and (2) obtaining equity in access to parks and recreation in Los Angeles without respect to race, color, national origin, disability, gender or income. CCSCLA is one of the first African American environmental organizations in the country. Low income, minority and other members of CCSCLA who live in the Cornfield vicinity will be adversely affected by the challenged actions.

Environmental Defense (formerly Environmental Defense Fund) is dedicated to

protecting the environmental rights of all people, including the right to clean air, clean water, healthy food and flourishing ecosystems. Guided by thorough scientific evaluation of environmental problems, Environmental Defense works to create practical solutions that win lasting political, economic and social support because they are non-partisan, cost-effective and fair. Environmental Defense is a national not for profit environmental organization with headquarters in New York and a project office in Los Angeles. Environmental Defense's purposes and activities include (1) working to create a park in the Cornfield, (2) working to create a 51-mile Los Angeles River Parkway, and (3) obtaining equity in access to parks and recreation in Los Angeles without respect to race, color, national origin, disability, gender or income. Environmental Defense helped obtain over $83 million to create the Parkway in the state budget. Members of Environmental Defense who live in the Cornfield vicinity will be adversely affected by the challenged actions.

Latino Urban Forum is a grassroots organization dedicated to improving the quality of life through the built environment in Latino communities. Latino Urban Forum's purposes and activities include (1) working to create a park in the Chinatown Cornfield, and (2) obtaining equity in access to parks and recreation without respect to race, color, national origin, disability, gender or income. Low income, minority and other members of Latino Urban Forum who live in the Cornfield vicinity will be adversely affected by the challenged actions.

Natural Resources Defense Council ("NRDC") is a national non-profit organization of scientists, lawyers and environmental specialists dedicated to protecting public health and the environment. NRDC's Los Angeles office focuses on the unique environmental challenges

facing the greater Los Angeles area, including environmental justice and the preservation of open space. NRDC's purposes and activities include (1) working to create a park in the Chinatown Cornfield, (2) working to create a 51-mile Los Angeles River Parkway, and (3) obtaining equity in access to parks and recreation in Los Angeles without respect to race, color, national origin, disability, gender or income. NRDC helped obtain over $83 million to create the Parkway in the state budget. Members of NRDC who live in the Cornfield vicinity will be adversely affected by the challenged actions.

Northeast Renaissance Corporation is a Community Development Corporation organized in 1999 to improve the quality of life in Lincoln Heights whose purposes and activities include working to create a park in the Cornfield, and (2) obtaining equity in access to parks and recreation without respect to race, color, national origin, disability, gender or income. Low income, minority and other constituents of Northeast Renaissance Corporation who live in the Cornfield vicinity will be adversely affected by the challenged actions.

B. Respondents

Respondent City of Los Angeles ("City") is a duly incorporated charter City and a political subdivision of the State of California. The City approved the Warehouse Project on the basis of a mitigated negative declaration instead of a full environmental impact report ("EIR"), submitted the application for federal funding to HUD and Commerce, and provides limited parks, recreation facilitates, affordable housing, and other basic needs of life to the people of Los Angeles. The City receives significant federal financial assistance on an annual basis.

Repondent Majestic Realty Company ("Majestic") is a closely held California

corporation with its headquarters in the City of Industry. It is in escrow to buy 32 of the 47 acres of the Cornfield site from Union Pacific Corporation, where Majestic proposes to build the Warehouse Project. Defendant Majestic Reality Corporation is one of the largest real estate developers in Southern California and is owned by Ed Roski, one of the wealthiest men in the United States. Majestic seeks to develop the Warehouse Project with significant financial assistance from federal taxpayers, HUD and Commerce.

Respondent Union Pacific Corporation is a Utah Corporation doing business in California. For many years its predecessor company operated a railroad at the site. It asserts that it owns the Cornfield property. Union Pacific seeks to receive significant financial benefits from federal taxpayers, HUD and Commerce through the Warehouse Project. Union Pacific's largest shareholder is Phil Anschutz, one of the wealthiest men in the world. Roski and Anschutz developed the Staples Center in downtown Los Angeles.

III. The Cornfield Community and the Warehouse Project

A. The Cornfield And The Surrounding Communities

The Cornfield is a 47-acre former rail yard that has been vacant for approximately ten years in the northern portion of downtown Los Angeles. The surrounding communities are among the most culturally and ethnically diverse and historical communities in Los Angeles, with extensive residential, tourist, and retail development, as well as churches, schools, and community buildings.

Immediately to the west of the Cornfield is Chinatown, which is the heart of the Chinese community in Los Angeles. Chinatown has a variety of residential, restaurant and retail uses on the west side of Broadway, and some restaurants and retail uses contiguous to the

the Warehouse Project on the east side of Broadway. Chinatown has no park and no middle or high school. Within walking distance of the Cornfield is Union Station. The City and the railroads forcibly relocated the Chinatown community to its present location to build Union Station in the 1930's.

To the northwest of the Cornfield is Solano Canyon, a historic residential area in the hills between Broadway and the 110 Freeway, and to the north is Lincoln Heights, an ethnically diverse neighborhood.

The William Mead Homes, the first and largest public housing project in Los Angeles, is located directly to the east of the Cornfield. If the Warehouse Project goes forward, the William Mead Homes will be isolated between the Men's Central Jail and the 32 acre Warehouse Project.

Serving the William Mead Homes and the surrounding community is the Ann Street Elementary School, which is located to the east of the Cornfield. This school has 240 children attending in grades K through 5. Ann Street is one of the two entrances to the Project site for all diesel trucks and other traffic associated with the Project.

To the southeast of the Cornfield is Olvera Street. Olvera Street is the oldest part of the City of Los Angeles, otherwise known as El Pueblo Historic Monument and the site of the 18th century El Pueblo de Los Angeles. Several historic buildings line the street including the Avila Adobe, built around 1818 by a former mayor, Francisco Alveoli; the Pelanconi House, the oldest brick house in Los Angeles, dating from 1855; and the Sepulveda House, built in 1887. Converted to a colorful Mexican style market place in 1930, it is also the setting for holiday celebrations and Mexican culture, dancing and music.

Recently discovered on and around the Cornfield are remnants of the historic Zanja Madre that first brought water from the Los Angeles River to the birthplace of Los Angeles in 1781.

The restoration of the Juan Bautista de Anza National Historic Trail, now designated a National Millennium Trail, is proposed through or near the Project site. As a September 30, 1999, letter from the National Park Service to the City urging preparation of an EIR stated: "This nationally significant trail is particularly influential in the history of Los Angeles since materials, livestock, and settlers to found the *El Pueblo de la Reina de Los Angeles* in 1781 used the trail established by Anza."

The Cornfield site is located close to, and in view of, the Los Angeles River ("River"). The 51-mile River has recently been designated by the State to become the Los Angeles River Parkway, with over $83 million already designated for River park projects. For approximately the last eight years, the River has been the focus of significant planning efforts by the National Park Service and various local governments. The County and the City of Los Angeles both have plans calling for construction of a bikeway along the length of the River. Many jurisdictions and public leaders, as well as environmental groups, see revitalization of the River corridor as a key to the economic and environmental enhancement of Los Angeles, and a thread that could provide Los Angeles with a greater sense of community. The Cornfield site is a critical part of those planning efforts.

The City has recognized the significance of the Cornfield to the surrounding area. In 1989, the City undertook a community planning process involving a series of workshops and extensive public participation. During this process the Design Action Planning Team, an

advisory council, recommended that the site be used for a park and school. In 1996, the Los Angeles Planning Commission approved an amendment to the Central City North Community Plan, recognizing the potential of the site to accommodate significant commercial and residential development. The Plan stated:

> The site, although currently planned and zoned for industrial uses, has the potential to accommodate significant commercial development or the blending of commercial and residential uses. Another potential scenario would be a combination of lower density office, retail, and residential uses. Any future use for the site should be carefully studied and shared with the adjacent Chinatown community to the west of the site. *Due to the size of this property and its location adjacent to Downtown Los Angeles and Union Station, the development of this property could have a significant impact on land development within the broader Central City North community.*

Proposed Central City North Community Plan, p. III-9 (emphasis added.)

The potential impact of the Cornfield on the surrounding community and the whole of Los Angeles is even greater today than in 1996. The City's General Plan states that "recreational use should be considered for available open space and unused or underused land" and "High priority will be given to areas of the city which have the fewest recreational services and the greatest numbers of potential users." *Public Recreation Plan, Section 1, p. 3.* Additionally, a Blue Line rail station is scheduled to be completed at College Street and Spring Street, just south of the site, thereby helping to link the Cornfield to the greater Los Angeles community.

B. The Warehouse Project

The Warehouse Project calls for the construction of 909,200 square feet of industrial

space in four buildings containing *at least 50% warehouses*, with no more than 50% manufacturing (and possibly substantially less). Each building would be as high as 40 feet tall and approximately 600 feet long, within 15 feet of the property line. In addition to the buildings, there will be 1,090 parking spaces on site. The warehouses would operate 24 hours a day, seven days a week. The Project would generate nearly four thousand vehicle trips per day, including approximately 550 truck trips per day, or 200,000 truck trips per year in and around the Project site. Construction of the Warehouse Project will result in almost 32 acres of impervious surface, with water that is not retained on site flowing to the Los Angeles River.

IV. Respondents Have Tried to Railroad the Warehouse Project through the Planning Process

On July 12, 1999, Majestic Realty filed an application for the Warehouse Project, with a request for a variance from the City's setback requirement.

After the MND was issued for the Majestic Warehouse Project, on August 8, 1999, FOLAR, Chinese Consolidated Benevolent Association, and others submitted extensive comments on the MND, and called for preparation of an EIR.

Numerous public agencies and public officials also called for preparation of an EIR, including the National Park Service, State Senator Richard Polanco, Senate Resource Committee Chair Tom Hayden, Assembly Speaker Emeritus Antonio Villaraigosa, and Los Angeles County Supervisor Gloria Molina.

On or about November 15, 1999, complainants Friends of the Los Angeles River and Environmental Defense submitted a letter to HUD Secretary Andrew Cuomo challenging the

Warehouse Project under Title VI and its regulations, NEPA, and the National Historic Preservation Act. To date, Respondents have not responded to that complaint, despite two directives from HUD that they do so on or about December 9, 1999, and July 13, 2000. Friends of the Los Angeles River and Environmental Defense submitted additional challenges to letters to HUD challenging the Warehouse Project on or about February 1, 2000, April 4, 2000, and May 8, 2000. *Tabs 1, 2, 3, 7, 30, 46..*

On February 10, 2000, the City denied the variance application.

On March 14, 2000, Majestic Realty submitted a new application for Site Plan Review. The revised Project application was based on the same MND, but with the Project redesigned to include a setback.

On or about March 16, 2000, without any notification that a new application had been submitted, the City circulated a document entitled "Responses to Comments," dated February 2000.

On or about March 28, 2000, the City sent notice that a site plan review hearing was set for April 12, 2000. FOLAR, Chinese Consolidated Benevolent Association, Chinese American Citizens Alliance, Friends of Castelar Elementary School, Environmental Defense, Greater Los Angeles AARP, Latino Urban Forum, Los Angeles County Bicycle Coalition, Montecito Heights Community, Northeast Renaissance Corporation, Northeast Trees, Sierra Club, William Mead Homes Residents Association, Worldwide Vietnamese Cambodian Association, and others appeared at this hearing, objected to the Warehouse Project, detailed the deficiencies in the MND, and requested preparation of an EIR.

The City released a fifteen-page revised MND ("Revised MND") on April 25, 2000,

approximately two weeks after the site plan review hearing. There were no further hearings conducted on the Revised MND.

Over the numerous public objections to the failure to prepare an EIR, the City Planning Department approved the Site Plan for the Warehouse Project and the MND on May 23, 2000.

On July 7, 2000, members of the Chinatown Yard Alliance briefed HUD officials on their opposition to the Warehouse Project in Los Angeles. On or about July 13, 2000, HUD for the second time directed the City to respond to the November 15, 2000, complaint by Friends of the Los Angeles River and Environmental Defense. To date, the City has failed and refused to do so. On August 4, 2000, HUD officials met with Respondents regarding the Warehouse Project.

The Chinatown Yards Alliance appealed the approval of the site plan to the Central Area Planning Commission ("Commission"), arguing among other things that the original MND and the Revised MND did not adequately discuss a number of environmental quality and environmental justice impacts, including but not limited to air pollution impacts, traffic impacts, impacts on historic resources, land use conflicts, noise, socioeconomic impacts, flood hazards, aesthetic impacts and impacts on water quality. Furthermore, because an MND rather than an EIR was prepared, there was no consideration of alternatives. Nor was there any detailed analysis of mitigation measures other than those submitted by the applicant or recommended by City staff.

A hearing was held before the Commission on July 25, 2000. The hearing was attended by over 100 persons, most in opposition to the Majestic Warehouse Project. Many speakers

speakers wished to, but were not allowed to speak on the issue, because the total time for the hearing on the appeal was limited to 1.5 hours. The Commission voted to deny the appeal, with one "No" vote from a commissioner who expressed a desire to have additional time to be able to review the submitted documentation.

A request for reconsideration by the Central Area Planning Commission was filed but the request was effectively denied on August 8, 2000, because no action was taken on it.

Petitioners filed an appeal with the Los Angeles City Council ("City Council") on August 14, 2000. However, a hearing on the Project already had been scheduled before the City Council at the request of one councilmember. After a ten minute hearing on August 15, 2000, the City Council approved the Project with additional minor mitigation on a vote of 9 to 2. A Notice of Determination was filed with the County Clerk on August 7, 2000.

Complainants here filed a petition under the California Environmental Quality Act to require an environmental impact report on or about September 6, 2000.

VI. The Warehouse Project Violates Title VI and its Regulations

Communities of color and low-income communities bear a disproportionate share of environmental degradation in the Cornfield area, their health and environment would further be adversely impacted by the Warehouse Project, they would not receive an equitable share of the benefits of the Project, and they have been excluded from the decision making processes that affect their lives and the future of the Cornfield.

A. Title VI and its Regulations Prohibit Discrimination

Title VI of the Civil Rights of 1964 and its implementing regulations prohibit both intentional discrimination based on race, color or national origin, and unjustified adverse

disparate impacts for which there are less discriminatory alternatives by applicants for or recipients of federal funds such as Respondents.

Title VI provides: "No person in the United States shall on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance." 42 U.S.C. § 2000d. The Fourteenth Amendment and 42 U.S.C. § 1983 also prohibit discrimination.

An important purpose of the Title VI remedial scheme is to assure that recipients of federal funds not maintain policies or practices that result in racial discrimination. President Kennedy's June 19, 1963, message to Congress, proposing Title VI, declared: "Simple justice requires that public funds, to which all taxpayers of all races contribute, not be spent in any fashion which encourages, entrenches, subsidizes, or results in racial discrimination." *Lau v. Nichols, 414 U.S. 563, 569 (1974).*

The regulations enacted pursuant to Title VI bar criteria or methods of administration by applicants or recipients of federal funds which have the effect of subjecting persons to discrimination because of their race, color, or national origin, or have the effect of defeating or substantially impairing accomplishment of the objectives of the program with respect to individuals of a particular race, color, or national origin. *See generally 24 C.F.R. § 1.4(b)(2)(i), §§ 1.1-.10 (HUD), 15 C.F.R. §8.4(b)(2), §§ 8.4.1-.15 (Commerce).*

In determining the site or location of facilities, an applicant or recipient may not make selections with the purpose or effect of subjecting individuals to discrimination. *24 C.F.R. §1.4(b)(3) (HUD); 15 C.F.R. § 8.4(b)(3) (Commerce).*

In administering a program regarding which the recipient has previously discriminated against persons on the ground of race, color or national origin, the recipient must take affirmative action to overcome the effects of prior discrimination. *24 C.F.R. §1.4(b)(6)(i) (HUD); 15 C.F.R. § 8.4(b)(6)(i) (Commerce).* The applicant or recipient has an obligation to take reasonable action to remove or overcome the consequences of the prior discriminatory practice or usage. *24 C.F.R. §1.4(b)(6)(HUD).*

Recipients must keep records and submit timely, complete, and accurate compliance reports, and should provide racial and ethnic data showing the extent to which members of minority groups are beneficiaries of federally assisted programs. *24 C.F.R. §1.6(b) (HUD); 15 C.F.R. § 8.7(b) (Commerce).*

On July 14, 1994, the 30th anniversary of the passage of Title VI, Attorney General Janet Reno issued a memorandum to the heads of departments and agencies that provide federal financial assistance to local government agencies reiterating that "administrative regulations implementing Title VI apply not only to intentional discrimination but also to policies and practices that have a discriminatory effect." According to the Attorney General:

> Individuals continue to be denied, on the basis of their race, color, or national origin, the full and equal opportunity to participate in or receive the benefits of programs from policies and practices that are neutral on their face but have the effect of discriminating. Those policies and practices must be eliminated unless they are shown to be necessary to the program's operation and there is no less discriminatory alternative.

Memorandum from Attorney General Janet Reno to Heads of Departments and Agencies that Provide Federal Financial Assistance, Use of the Disparate Impact Standard in Administrative Regulations Under Title VI of the Civil Rights Act of 1964 (July 14, 1994). The Attorney

The Attorney General leads and coordinates the federal government's Title VI enforcement efforts. The Attorney General's interpretation of the Title VI disparate impact standard is binding on federal agencies. *Executive Order 12250, 45 Fed. Reg. 72995 (Nov. 2, 1980).*

Title VI and its regulations apply to block grant programs such as HUD's community development block grant and HUD's section 108 loan guarantee program.[2] *Memorandum from Bill Lann Lee, Acting Assistant Attorney General, Civil Rights Division, to Executive Agency Civil Rights Directors (Jan. 28, 1999). See also HUD's July 13 Letter at 2 n.1.*

Every application for federal financial assistance must, "as a condition to its approval and the extension of any Federal financial assistance," contain assurances that the program will comply with Title VI and with all requirements imposed pursuant to the executive regulations issued under Title VI. *Guardians Ass'n v. Civil Service Commission, 463 U.S. 582, 629 (1983) (Justice Marshall, concurring in part and dissenting in part).* The HUD and Commerce regulations include this requirement. *24 C.F.R. § 1.5 (HUD); 15 C.F.R. § 8.4(b)(5) (Commerce).* The City here has failed and refused to disclose adequate assurances or certification of compliance with Title VI and its regulations for the Warehouse Project, despite formal document requests. *See Tab 17, requests 1, 65-68.*

B. The Warehouse Project Causes Unjustified Adverse Disparate Impacts for which There Are Less Discriminatory Alternatives

---

[2] "Section 108 is the loan guarantee provision of the Community Development Block Grant (CDBG) program. Section 108 provides communities with a source of financing for economic development, housing rehabilitation, public facilities and large scale physical development projects." *Economic Development: Brownfields Economic Development Initiative (BEDI), HUD website, www.hud.gov:80/cpd/econdev/bedihome.html.* "Brownfields Economic Development Initiative (BEDI) grants enhance the security or improve the viability of a project financed with new Section 108 guaranteed loan authority." *Id.*

A valid disparate impact claim under the Title VI regulations has three components. (1) An action by an applicant or recipient of federal funding has a disparate adverse impact based on race, ethnicity or national origin. (2) The applicant or recipient bears the burden of proving that any action that has such an adverse disparate impact is justified by business necessity. (3) Even if the action would otherwise be justified by business necessity, the action is prohibited if there are less discriminatory alternatives to accomplish the same objective. *Larry P. v. Riles, 793 F.2d 969, 983 (9th Cir. 1984).* "Proof of discriminatory motive . . . is not required under a disparate impact theory." *International Brotherhood of Teamsters v. United States, 431 U.S. 324, 335 n.15 (1977).* A valid civil rights complaint exists here.

1. The Adverse Disparate Impacts

a. The Cornfield Communities Are Disproportionately Low Income People of Color

The following chart shows that the census tract and zip code closest to the Cornfield are disproportionately people of color compared to city-wide demographics.[3]

Race or Ethnicity	**Census Tract 2071**	**Zip Code 90012**	**City Wide**
Asian/Pacific Islander	81%	40%	15%
Hispanic	15%	28%	44%
Black	2%	18%	10%
White	3%	14%	31%

Source: Cornfield of Dreams: A Resource Guide of Facts, Issues & Principles 79 (2000), 1990 census data, census updates and projections.

The Cornfield communities have disproportionately lower education levels, income and

[3] Some rounding errors.

and wealth, and access to cars compared to the City as a whole. *Cornfield of Dreams, supra, at 82-84.* The following chart shows the educational attainment for persons over 25 in the Cornfield communities (1990 data).

	Tract 2071	**Zip Code 90012**
Less than 9th Grade	54%	27%
9th to 12th Grade, No Diploma	15%	20%
High School Graduate	14%	20%
Some College, No Degree	8%	15%
Associates Degree	4%	5%
Bachelors Degree	3%	7%
Graduate or Professional Degree	2%	5%

Source: Cornfield of Dreams, supra, at 82-84

b. Disparate Access to Parks, Playgrounds and Schools

The siting of the Warehouse Project causes an adverse disparate impact by perpetuating the history and pattern of unequal access by people of color and low-income communities to parks and recreation programs, playgrounds, and schools in the Cornfield area, in City Council District 1, and throughout Los Angeles.

Los Angeles is park poor, with fewer acres of parks per thousand residents compared to any major city in the country. Los Angeles does not come close to its goal of four acres of parkland per 1,000 people, or to the national standard of 10 acres. The City Council District where the Cornfield is located has .9 acres per thousand residents, compared to 1.7 acres in wealthier white areas in Los Angeles. *Jocelyn Stewart, Officials Resort to Creativity to Meet Need for Parks, L.A. Times, June 15, 1998, attached as Tab 42; graph showing relationship between parks, city council districts, and race or ethnicity, attached as Tab 33.*

There are no parks in Chinatown, and no middle school or high school. The children of Chinatown are bused 45 minutes to school each way every day. This disrupts their lives, takes them away from their families, and tears apart the fabric of the community. The William Mead Homes, the first and largest housing project in Los Angeles, would be sandwiched between the men's jail and the proposed warehouses. The playground in the William Mead Homes has been closed because of contamination. The children in these neighborhoods do not have adequate access to cars or to a decent transit system that would enable them to reach parks in other neighborhoods.

The continuing disparities in access to parks and recreation programs are a result of the City's funding formulas which were adopted in the wake of Prop 13, which cut off local funds for parks and schools in 1978, coupled with the ongoing pattern and history of discrimination in urban planning in Los Angeles as discussed below. According to Mayor Richard Riordan, poorer communities in the inner city have been historically short changed by City funding formulas for parks and recreation programs. Money is not invested throughout the City based on need but is distributed equally among the 15 City Council Districts regardless of need, according to the Mayor. *Shirley Leung, Riordan Seeks More Funds for Urban Core, Wall Street Journal, April 28, 1999, Tab 22.*

The City's Recreation and Parks Department has long recognized the inequities in park funding. "It's a pattern we all understand," according to Dallan Zamrzla, director of planning and development for the Recreation and Parks Department. "The urban areas of Los Angeles have less park facilities than the new areas or outer lying areas, where ordinances require that parks be developed when housing developments go in." *Jocelyn Stewart, Officials Resort to*

Creativity to Meet Need for Parks, L.A. Times, June 15, 1998, attached as Tab 42. Because there has been little new construction in poorer neighborhoods, those areas benefit little from the state Quimby Act, which requires developers to put money into parks near their projects. Many of the urban parks are more heavily used and require more staff. These criteria and methods of administration have an adverse disparate impact because they fail to take into account for the needs of the poorest neighborhoods, which are disproportionately communities of color. *Id.*

The poverty of parks is aggravated by the disappearance of schoolyards at alarming rates, due to the epic overcrowding at public schools in Los Angeles and the concomitant use of portable classrooms. Almost 4,500 of LAUSD's classrooms – housing over 100,000 students – are portables that deprive children of playground space. Children are forced to share cramped play areas that significantly curtail physical education activity. Many campuses are literally covered with portable classrooms. On many campuses, over one in four classrooms are temporary portables. Portables devour playground space. Even at schools that still have playgrounds, children are locked out of the school yards after school and on weekends. Climbing the fence for a place to play can be met with a police escort off campus. Inner city children are disproportionately relegated to second-class schools without playgrounds. These disparities are the result of inequitable funding formulas for allocating public school construction funds which distribute funds on the basis of speed not need, to the detriment of Los Angeles. *Doug Smith, Judge Orders Revision of School Bond Distribution, L.A. Times (Aug. 25, 2000).*

Parks, playgrounds and schools that provide green space and a healthy environment can

help alleviate the worst conditions of the urban core. For instance, local law enforcement in Los Angeles has long recognized the role that park and recreation programs play in preventing gang violence. A 1992 study by the Los Angeles County District Attorney concluded that young people join gangs for obvious reasons, including the fact that they "have been excluded by distance and discrimination from adult-supervised park programs." *Gangs, Crime and Violence in Los Angeles: Findings and Proposals from the District Attorney's Office (1992).* The study recommends that "alternative activities like recreation" should be part of every gang prevention strategy. Organized sports like youth soccer leagues "fill those idle hours that seduce adolescent boys into trouble . . . . At the least, they can keep older gang members busy during prime-time-crime hours . . . . At the most, they can keep marginal boys too busy for gangs, or give them an excuse not to join." *Id.* A recent survey of more than 14,000 teenagers has found that those who took part in team sport were less likely to use drugs, smoke, have sex, carry weapons or have unhealthy eating habits. *N.Y. Times, Study Links Team Sports and Healthful Behavior, Sept. 15, 2000, citing Archives of Pediatrics and Adolescent Medicine, published by the American Medical Association.*

The joint use of parks, playgrounds and schools as community learning centers is one way to use scarce open space in ways that are equitable, enhance human health and the environment, and promote economic vitality to benefit all the people of Los Angeles. The classic Olmsted Report emphasized the need for the joint use of parks, playgrounds and schools. "[P]ractically the identical considerations . . . should control the placing of local recreation centers [as control the placing of schools] for children of elementary school age. And the considerations controlling location of high schools and junior high schools are

substantially those that might control the placing of recreation facilities for adults. This practical identity of policy strongly counsels associating school playgrounds . . . with other local recreation grounds in combined neighborhood units." *Id. at 47.* The vision of the joint use of schools and parks is echoed more recently by New Schools/Better Neighborhoods. *See What If? New Schools/Better Neighborhoods/More Livable Communities (1999).*

c. Air Pollution and Human Health Impacts

The Warehouse Project will adversely impact air quality and human health from an estimated increase in 1.4 million vehicle trips per year to and from the Warehouse Project, including an additional 200,000 truck trips per year. Virtually all of the truck trips are likely to run on diesel fuel. Diesel exhaust has been listed since 1990 as a "chemical known to the state [of California] to cause cancer" under Proposition 65 and contains over 40 chemicals--including diesel particulates--that individually are listed by the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment as "toxic air contaminants." *Health & Saf. Code § 39655.* The Project will generate emissions from diesel trucks on and around the site and will cause the regional emissions of nitrous oxides to exceed the South Coast Air Quality Management District's ("SCAQMD") emission thresholds. In fact, SCAQMD's CEQA *Air Quality Handbook* provides that light industrial land use projects over 276,000 square feet have a potentially "significant" impact on air quality. *SCAQMD, CEQA Air Quality Handbook, Table 6-2 (April 1993).* The Warehouse Project, which will cover almost one million square feet, far surpasses that threshold. Impacts on students at the Ann Street

students at the Ann Street School are particularly significant because children are more sensitive to exposure to airborne toxics than adults because of their respiratory systems.

d. Traffic Safety and Congestion Impacts

The siting of the Warehouse Project will cause adverse disparate impacts on public safety from increased traffic congestion in and around the site. The children at the Ann Street Elementary School adjacent to the William Mead Homes in particular would face additional traffic safety risks associated with hundreds of truck trips to and from the Warehouse Project during the day at the site entrance adjacent to the school. As the City's Zoning Administrator stated in denying a variance for the Warehouse Project on February 10, 2000: "Large trucks exiting the property, even at signalized intersections, and the volume of truck and car activity attendant to site of this size is potentially detrimental to the public welfare." *Zoning Administrator Decision, February 10, 2000, at 9, emphasis added.* The Warehouse Project will also adversely affect the students of the Ann Street School and the residents of the William Mead Homes, including by cutting off access by those residents to the neighboring Chinatown community and vice versa.

e. Impact on Historic and Cultural Values

The City's Cultural Heritage Department decided that the Cornfield historically has been used as a railyard and there is no historical or cultural value worth preserving on the Site. This decision reflects dominant Anglo industrial values and marginalizes

the history and culture of the Native American, Spanish, Mexican and Chinese communities that have been centered in the Cornfield vicinity.

The Warehouse Project would destroy not only the last physical vestiges but also the cultural, historical and religious space and value of the Zanja Madre, originally constructed in 1781 by the Spaniards, the Catholic missionaries and the Gabrielino Indians to bring water from the Los Angeles River to El Pueblo de Los Angeles. The National Park Service has also called for a full environmental impact report because of the significant threat to the siting of the Juan Bautista de Anza National Historic Trail, which the Spaniards and the Catholic missionaries blazed to explore California. The main Gabrielino population center lay near the Cornfield at the confluence of several trials. The Trail was designated as a historic trail by Congress and was recently recognized as a National Millennium Trail. The Warehouse Project would destroy these historic, cultural and religious values for the surrounding communities of Chinatown, Solano Canyon, and Lincoln Heights -- some of the most historic and culturally diverse communities in the City – as well as for all the people of Los Angeles, for California, and for the nation.

f. Impacts on Aesthetic Values

The Warehouse Project is an eyesore to say the least. The construction and operation of nearly 1 million square feet of warehouses with 40-foot high tilt up walls would adversely impact the aesthetic experience of the residents of and visitors to

Chinatown, Solano Canyon, Lincoln Heights and William Mead. They will have to view 32 acres of warehouses, trucks, cars and parking lots. The warehouses will also be a visible to all passengers that use the Blue Line station planned for Spring Street.

g. Housing Impacts

There is a desperate need for affordable housing in the Central City North Community Planning Area which includes the Cornfield communities, but space is limited and new housing development stagnant. Although the lack of housing has repeatedly been identified as a pressing issue over the last decade in City planning documents, the housing growth in the area is less than half that recommended by the Community Redevelopment Agency. *Cornfield of Dreams, supra, at 113- 32.* The Warehouse Project would exacerbate rather than relieve the need for housing.

h. Land Use Impacts

The Warehouse Project would have adverse land uses and development impacts on Chinatown, Solano Canyon, Lincoln Heights, the William Mead Homes, and surrounding areas, including the Los Angeles River Parkway, in light of inconsistencies between the Project and various community and regional plans, including the Downtown Strategic Plan, the Greater Downtown Plan, and the Central City North Community Plan. The latter specifically addresses the significance of the Cornfield site relative to development of the surrounding area, stating: "Due to the size of this property and its location adjacent to Downtown Los Angeles and Union Station, the

the development of this property *could have a significant impact on land development* within the broader Central City North community." *1996 proposed Central City North Community Plan, p. III-9, emphasis added.* These impacts will further degrade the physical environment of already disparately impacted communities that have been the victims of a continuing history and pattern of discrimination.

i. Flood Risks

The Warehouse Project would exacerbate and not relieve flood hazards as shown by flood maps prepared by the Army Corps of Engineers (ACOE) for the area, which shows the Project site within a flood hazard zone.

j. Storm Water and Pollution Impacts

The siting and design of the Warehouse Project, which will cover virtually all of the Cornfield with impermeable asphalt or roofing surfaces, will increase the amount of storm water runoff, and send run-off directly into the Los Angeles River. Although research has repeatedly demonstrated that storm water run-off is the largest single source of water pollution in Southern California, these concerns have not been appropriately addressed through full environmental review or otherwise. *Tab 45.*

k. Toxic Exposure During Construction

Toxic exposure to the public from the removal of surface contamination during decontamination and construction of the Project has not been adequately assessed through full environmental review. Construction may cause materials to become

airborne and adversely impact, in particular, students at the Ann Street School, residents at the William Mead Homes, and nearby workers. Impacts on the residents at the William Mead Homes are particularly significant because the soil around the William Mead Homes is already contaminated. Construction activities and potential industrial activities and materials on site will also adversely impact human health and the environment. *Tab 45.*

I. Adverse Impacts on Cleaning Up the Cornfield

Majestic Realty Vice President John Hunter testified in a materially false and misleading manner at the site plan review in this matter on April 12, 2000, when he claimed that the Cornfield "can become clean to industrial standards, but cannot be cleaned to residential or school standards, or park standards." According to the California Department of Toxics and Substance Control ("DTSC"), based on Majestic's own Phase I and Phase II studies, *"it does appear that the site could be utilized as a park, once remediation activities were performed."* *Letter from Edwin F. Lowry, Director, DTSC, to Chatten-Brown & Associates (June 6, 2000) (emphasis added), attached as Tab 29.*

Respondents seek to pave over the contamination on the site and leave it for future generations to clean up when the warehouses come down. Contaminated brownfields are disproportionately located in communities of color and low income communities. These communities have the right to have the Cornfield cleaned up now to the highest standards. The public has the right to know the truth about any claimed contamination, how much it will cost to clean up and how long it will take. In addition,

addition, Union Pacific should clean up the site instead of relying on federal taxpayers' dollars. The Cornfield was a rail yard for 100 years before Union Pacific abandoned it to disrepair about ten years ago. Before that the site was a cornfield. The railroad spilled the milk. Let them clean it up.[4]

2. No Business Necessity Justifies the Warehouse Project

The burden is on Respondents to prove the Warehouse Project is justified by business necessity. Respondents have failed to do so. The City has failed even to respond to the complaints and comments of the Chinatown Yards Alliance, as the July 13 HUD Letter makes clear. There is no business necessity for railroading the Warehouse Project through the approval process without full environmental quality and environmental justice review, and without full and fair pubic participation.

Respondents attempt to justify the Warehouse Project on the grounds of job creation.

---

[4] Significant questions about the ownership of the property involved in this proposal have not been addressed. Although the Warehouse Project will require a property exchange between the City and Majestic, the details of this exchange have not been made clear despite requests for clarification. It is unclear whether or not the City owns a large portion of the land underlying the proposed Warehouse Project. The 1876 deed by which the City received the land states that it would be held in fee by the City is attached with a typed version added for clarity. *Tab 43.*

It is our understanding that Union Pacific and Southern Pacific Railroad acquired a franchise to portions of the property, but that this franchise was effective only as long as the land was used for railroad purposes. Additionally, a vacation of Baker Street is apparently required for the Warehouse Project, but this vacation has not been analyzed in the environmental review documents for this project. Before any approval is granted, these issues must be investigated and the results of that investigation shared with the public. We have requested information from the City about this issue but have received no adequate response. *Tab 44.*

Respondents are drawing a false dichotomy between economic development and protection of human health and the environment. There are other locations besides the last vast open space in downtown Los Angeles to create warehouse jobs. There is no alternative 47-acre mixed-use park site in Los Angeles.

Respondents make a speculative and exagerated proposal for a few low wage dead end jobs – only between 189 and 1,000 jobs at an average salary of $20,000 year per job, according to the City's testimony before the City Planning Department. This is well below the basic family budget for Los Angeles of $30,624 with one parent working or $44,700 with two parents working.5 The average wage is particularly inadequate when one considers that some high level, high pay jobs would distort the average upwards. If the Project is at least 50% warehouses, then the Project would create *"up to"* 1,000 jobs. If there is no federal funding and the Project is all warehouses, as respondents threatened at the August 4, 2000, meeting with HUD officials, then the Project would create only 189 jobs. Mayor Riordan has explicitly and repeatedly told the Alliance that his administration does not support warehouses because they do not create quality jobs -- but this message has not penetrated the backers of the Warehouse Project. The Cornfield communities need not sacrifice green and clean parks, playgrounds and schools; clean air; clean water; their historical, cultural and national heritage; affordable housing; livable communities and their quality of life for the sake of 189 to 1,000

---

[5] *Los Angeles Alliance for a New Economy, The Other Los Angeles: The Working Poor in the City of the 21st Century at 7 (2000).* A basic family budget uses actual consumption costs for a broad variety of categories – such as housing, food, transportation and childcare -- to determine an adequate income level for different types of families using local data to provide a more accurate picture of the actual cost of living than the federal poverty level. *Id.*

low wage jobs.

In any event, the claims of job creation are speculative and exaggerated. The City has not backed up its claim of job creation with hard facts. The City has failed and refused to provide the information necessary to evaluate the claims of job creation. *See Tabs 7, 17.* There is every reason for the public to doubt the claims of new job creation. According to a recent UCLA report, for example, the Los Angeles Business Team in the Mayor's Office for Economic Development – which is behind the Warehouse Project -- has not targeted the most disadvantaged areas of Los Angeles, and the quality of jobs has not been a criterion in selecting businesses to assist. The Business Team has assisted a significant number of low-wage firms and provided assistance to retail firms that provide mainly low-wage, part-time jobs. The Business Team has vastly overstated its effectiveness in their public reports. The process of land use decision-making lacks public accountability, input from the City Council, and participation by community groups. The Business Teams' economic development efforts have failed to properly target specific industries, instead functioning in a largely ad hoc fashion that is unlikely to bring robust economic benefits to City residents. Respondents must demonstrate how their strategies create good jobs. *See generally Los Angeles Alliance for a New Economy, Taking Care of Business? An Evaluation of the Los Angeles Business Team, UCLA Center for Labor Research and Education, School of Public Policy and Social Research (Oct. 1999).*

Similarly, despite a long-standing promise to train and hire low-income people, officials of the City's $2.4-billion Alameda Corridor project have disclosed that they are far short of their goals to recruit workers from the cities along the route of the new rail link. The

shortfalls prompted members of the Alameda Corridor Transportation Authority board to criticize the effectiveness of the project's hiring efforts and its claimed $10-million program to provide job training to 1,000 underprivileged people over the next two years. *Dan Weikel, Alameda Rail Project Lags On Hiring Goals; Jobs: Officials Say They Are Falling Short In Recruiting Low-Income Workers For The $2.4-Billion Transportation Corridor, Los Angeles Times, Feb. 11, 2000. Accord, Dan Weikel, Board Orders Review Of Alameda Project's Hiring Of Blacks; Jobs: Activists Complain That Few Workers Are African American. Officials Say The Issue Will Be Resolved Before Major Work Begins, Los Angeles Times, Nov. 19, 1999.*

The mixed use parkland alternative would raise property values, increase tourism to what used to be the second largest Chinatown in the United States, promote the economic revitalization of neighboring communities and create more and better jobs compared to the Warehouse Project. When cities create greenways in or near downtown areas, property values rise and the number of businesses and jobs grows. The following examples illustrate a nation trend on the beneficial economic impacts of parks on communities:

- After Chattanooga, Tennessee, replaced abandoned warehouses with an eight-mile greenway, the number of full-time jobs and businesses more than doubled, and property values increased by 127%.
- After Oakland, California, created a three-mile greenbelt surrounding Lake Merritt near the city center, surrounding property values increased by $41 million.
- After the revitalization of Meridian Hill Park in Washington, D.C., visits to the park

tripled, and many park visitors use local businesses. Occupancy rates in surrounding apartment buildings dramatically increased.

- After expansion and restoration of the Martin Luther King, Jr. National Historic Site, Atlanta, Georgia's African-American "Sweet Auburn" neighborhood experienced a revitalization, with dozens of new homes, 500,000 annual visitors boosting local business, and a decrease in crime.
- After citizens prevented San Antonio, Texas, from burying the San Antonio River, the resulting river park has become the most popular attraction in the city's $3.5 billion tourist industry.
- After the Pinellas Trail was built through Dunedin, Florida, store vacancy rates went from 35% to 0%.

See, e.g., Steve Lerner & William Poole, The Economic Benefits of Parks and Open Spaces 12, 13, 17, 20, 26 (1999).

Although the City focuses exclusively on job creation in the Warehouse Project, local economic development is not only about job creation; it is about improving the quality of life for local residents. Effective economic development must build on local resources and satisfy community needs in order to be sustainable. A development project should be evaluated based on its contribution to achieving a local economic strategy formulated on *the locality's comparative advantage* and the *desires of the local community.*

The locality's comparative advantage takes into account the business base of the locality. The business base of Chinatown consists of retail, restaurants, medical/dental offices and service businesses. The major business districts near the site include entertainment and

tourist designations, professional services, and companies specializing in wholesale and retail trade. Food production, retail and wholesale trade, and manufacturing are all growing sectors in the area.

Both Chinatown businesses and the City have identified tourism as a prime industry cluster to target for economic development efforts, but the proposed warehouses are unlikely to bring in tourists to the area. A 1995 economic survey of Chinatown business owners found that they overwhelmingly saw tourism as an important sector of the local economy and expressed that Chinatown would again become a popular tourist destination. Moreover, tourism and entertainment was identified as one of three key regional industrial clusters for the City of Los Angeles. *UCLA Industry Cluster Initiative Project, Cluster Specific Presentation Series, UCLA School of Public Policy and Social Research/Advanced Policy Institute (1998).* Unlike the proposed warehouses, the alternative of developing a world-class park and mixed-use development on the site would attract tourists and regional visitors to the area.

3. The Park Proposal Is a Liveable and Less Discriminatory Alternative

Even if there were a business necessity that would justify developing the last vast open space in downtown Los Angeles as a warehouse/industrial site – and Respondents have demonstrated none – the park proposal is a less discriminatory alternatives that would promote economic vitality, enhance human health and the environment, and promote equitable land use planning. The park project promotes job creation and economic vitality while mitigating or eliminating park, school and housing disparities, air and water pollution, historical, cultural and aesthetic destruction, and the other environmental degradation discussed above.

discussed above.

Majestic Realty vice-president John Hunter attempted to dismiss the need for clean air, clean water, national and cultural heritage, green and clean parks, playgrounds and schools, and livable communities as an "elitist environmental agenda" at the April 12, 2000, site plan review hearing in this case: "We feel the real travesty, or the real prejudice, or the real detriment to the community is by having the opponents of this project stand up and oppose us and oppose the City of Los Angeles in the creation of genesis sites, empowerment zone and enterprise zones for their own selfish, elitist, environmental agendas when in fact Chinatown is the one that's suffering from the lack of economic development."

The unprecedented multicultural coalition in the Alliance includes community-based organizations, grass roots groups, environmental justice advocates who are anything but "elitist." In addition, the surrounding communities of the William Mead Homes, Solano Canyon, Lincoln Heights and the inner city are disproportionately Latino. Los Angeles County Latino voters in a recent survey view the environment as a key issue, with more than four out of five rating it as a very important concern. They express a strong preference that brownfields be cleaned up to the highest possible standards, rather than to the minimum standard for safe use. The most popular reuse of brownfields is to build schools (68% strongly support) and parks (53% support). Only 43% strongly support industrial development to creates jobs. Fifty percent say air pollution is the most important problem facing the community, while an additional 17 percent name water related concerns. Two out of three Latino voters surveyed call themselves environmentalists. *California League of Conservation Voters Education Fund, Environmental Attitudes Among Latino Voters in Los Angeles County, Report of Survey Results*

Angeles County, Report of Survey Results (May 2000).

C. The Warehouse Project Perpetuates the Continuing Pattern and History of Intentional Discrimination

To evaluate an intentional discrimination claim under Title VI, courts consider the following kinds of evidence: (1) the impact of the action, whether it bears more heavily on one race than another; (2) the historical background of the action, particularly if a series of official actions was taken for invidious purposes; (3) any departures from procedural norms; (4) any departures from substantive norms, particularly if the factors usually considered important by the decision maker strongly favor a decision contrary to the one reached; (5) the decision maker's knowledge of the harm its decision caused and would continue to cause; (6) a pattern or practice of discrimination. *See Village of Arlington Heights v. Metropolitan Housing Dev. Corp., 429 U.S. 252, 265 (1977); United States Department of Justice, Civil Rights Division, Title VI Legal Manual (Sept. 1998) at 49-53 and authorities cited.*

1. The Warehouse Project Adversely Impacts Communities of Color and Low Income Communities

The Warehouse Project would perpetuate the history and pattern of unequal access by people of color and low-income communities to parks and recreation programs in the Cornfield area, in City Council District 1, and throughout Los Angeles, as discussed above.

2. Respondents Have Engaged in a Continuing Pattern and History of Discrimination Against Communities of Color and Low Income Communities

There is a history and a pattern of discriminatory treatment against communities of color by the City and by Union Pacific in the Cornfield area, and by joining in the Warehouse Project Majestic Realty perpetuates this history and pattern. It is necessary to connect the

historical dots to understand how and why the people in the community came to live in the urban blight of the Cornfield area without adequate parks, playgrounds, schools housing. By the 1920's most of Los Angeles housing stock was off limits to blacks, Asians and Mexicans as a result of the actions of homeowners' associations and restrictive covenants enforceable in state courts, which were later declared unconstitutional by the United States Supreme Court. In the 1930's and '40's segregated housing was institutionalized in the real estate business and in federal housing policies that restricted mortgages to racially and ethnically homogenous neighborhoods. The segregated housing and urban planning patterns in Los Angeles are a direct result of state action by local, state and federal authorities acting in collusion with private developers.

a. Discrimination Against the Chinatown Community

The Chinese first came to California driven by dreams of opportunity during the 1849 Gold Rush. Barred from the most lucrative gold mining work, they turned to the Union Pacific and other railroads for a livelihood. They were dehumanized, discriminated against, and denied a decent livelihood. They were not allowed to go to public school, they were denied citizenship, they could not vote, and they could not testify in court. Chinese men were treated like another subordinate group, women. They could find work as domestics laundrymen, housekeepers, cooks, gardeners, errand boys and so on. *Stephen E. Ambrose, Nothing Like It in the World: The Men Who Built the Transcontinental Railroad 1863-1869 at 150-51 (2000).* The Chinese were subjected to prejudice, economic discrimination, political disenfranchisement, physical violence, immigration exclusion, social segregation and incarceration. *Sucheng Chan, Asian Americans: An Interpretive History at 45 (1991), cited in*

Michelle Armond, Legal Dimensions of the Chinese Experience in Los Angeles, 1860-1880 (2000). Anti-miscegenation attitudes and laws prohibited sexual relations and marriage between Chinese and others. *Armond at 68.*

Dominant attitudes towards the Chinese is illustrated by phrase books on file at the Bancroft Library of the University of California. An English to Chinese phrase book from 1867 taught English speakers how to say "Can you get me a good boy? He wants $8.00 per month? He ought to be satisfied with $6.00. I think he is very stupid. Come at seven every morning. Go home at eight every night. Light the fire. Sweep the rooms. Wash the clothes. Wash the windows. Wash the floor. Sweep the stairs. Trim the lamps. I want to cut his wages." Two phrases that never appear in the English to Chinese book are "How are you?" and "Thank you." The Chinese could learn to say in English to employers "You must not strike me." To authorities: "He does not intend to pay my wages. He claimed my mine. He tries to extort money from me. He took it from me by violence. He assaulted me. The man struck the Chinese boy on the head. He came to his death by homicide. . . . He was flogged publicly in the streets." *Ambrose, supra, at 151.*

Los Angeles first came to national and international attention with the Chinatown Massacre of 1871, which took place within walking distance of the Cornfield and the present Union Station. A mob including police officers committed the generally random lynching murders of nineteen or twenty Chinese residents, including a 14 year old boy, out of a total Chinese population of 200. Five of the victims had multiple types of violence or extensive bullet wounds throughout their bodies. The Mayor of Los Angeles, a City Council member, the Chief of Police, and a railroad employee were directly implicated in the Massacre. *Armond*

Armond at 16, 20, 88, 90.. In its earliest years, the Los Angeles Police Department was known for extreme aggression toward the Chinese population, the largest non-White group in the City. *Allen J. Scott & Edward W. Soja, The City at 4, 323-24 (1996)*

Racial discrimination and fears that Chinese would lower property values sequestered the Chinese in a small geographic area. The Chinese were allowed to settle only in questionable areas away from Anglo settlements on the far side of the Plaza towards the Los Angeles River. *Armond, supra, at 12.* By the end of the nineteenth century, the Chinese population had been systematically squeezed into a small Chinatown through discriminatory enforcement of health regulations, arson, violence and the destruction of buildings by the Board of Public Works. *The City, supra, at 4; Armond, supra, at 57, 59.*

In the 1920's and 1930's, Union Pacific, Southern Pacific, and the Atchison, Topeka & Santa Fe railroads planned to construct a terminal downtown. Chinatown was relocated to its present location to make room for Union Station. Some residents refused to move out even when the utilities ceased to exist and when the pavement was uprooted. Demolition commenced on December 22, 1933. The first building razed was a children's school. Soon the remnants of the vegetable market were destroyed. Chinese residents plucked the last vegetables from their disappearing gardens while others slowly plodded away from their quickly wrecked homes with their cooking utensils and their few other belongings in shopping bags. In 1934, a dove fluttered skyway from a child's hands in a ceremony marking the demise of Los Angeles's ancient Chinatown, once the second largest Chinatown in the United States. Some residents scattered to other enclaves while others lingered for years watching their community crumble around them. The City Municipal Housing Commission did not even

even approve a plan to relocate Chinatown until weeks after the demolition started.

The current Chinatown was built on vacant Santa Fe railroad land west of Broadway. The new Chinatown did not open for nearly two full years after the ancient Chinatown was destroyed for the sake of the Union Pacific and the other railroads. Union Station opened in 1939 to service Union Pacific, Southern Pacific and Atchison, Topeka & Santa Fe trains. More than 500,000 cubic yards of fill were brought in to bury the old Chinatown as much as 17 feet below ground. Ironically, the remains of old Chinatown were disinterred briefly when MTA construction crews recently built tunnels for the Metro rail transit system.

In the post-war era, the Chinese are on the one hand held up as a "model minority" while on the other hand they continue to confront a legacy of discrimination. For example, the December 1966 U.S. News and World Report reported: "Visit 'Chinatown U.S.A.' and you find an important racial minority pulling itself up from hardship and discrimination to become a model of self-respect and achievement in today's America." Yet in 1967 the Kerner Commission concluded that White society was deeply implicated in the causes of the riots and rebellions across the country. "Although the investigation was chiefly directed into the situation of the blacks, its conclusions can be equally applied to that of the Chinese and other minorities." *William L. Tung, The Chinese in America, 1820-1973 at 42 (1974).* Other recent evidence of continuing anti-Chinese sentiment in the dominant society includes the suspected racial profiling of Dr. Wen Ho Lee at the Los Alamos Laboratories. "There is opportunity here, but justice? Equality before the law? No, not for the model minority, it appears. We are sick and tired of being seen as not quite American, of being viewed, generation after generation, as guests to be welcomed--or not." *Gish Jen, For Wen Ho Lee, a Tarnished*

Freedom, N.Y. Times, Sept. 15, 2000.

The dominant society today remains deeply implicated in the environmental degradation that adversely impacts Chinatown, and in the systematic exclusion of the Chinatown community from determining the future of the Cornfield, as demonstrated by the Warehouse Project. According to Chinatown activist Chi Mui, "We don't need more warehouses in that area. The warehouse proposal will be the death knell for Chinatown." *L.A. Times, Oct. 2, 1999, p. B1.* "Chinatown should not become 32 acres of industrial wasteland," according to Collin Lai, president of the Los Angeles chapter of the Chinese American Citizen's Alliance. *Id.* Many Chinatown businesses oppose the warehouse site and have previously expressed interest in developing parks, schools, and other community needs. Indeed, over 70 Chinatown businesses have signed a petition in opposition to the Warehouse Project. *Chinatown Economic Survey, Asian American Economic Development Enterprises, Inc. 1995.*

b. Discrimination Against the Latino Community in Chavez Ravine

The Olmsted Report recommended that Elysian Park be extended by acquiring all of Chavez Ravine so that "the entire ravine can be devoted to recreation and made a part of the park." *Olmsted Report at 128-29.* The Report also appears to recommend that space in the vicinity of the Cornfield be made into a park: "The bottom of Chavez Ravine near the easterly end is easily accessible from the city and would make an ideal place for athletic fields of large size to serve large crowds." *Id.*

Instead, the Latino community in Chavez Ravine was forcibly relocated in the 1940's and 1950's. The City forcibly relocated the disproportionately Mexican-American community

living there over the 1940s and 1950s. They were promised they would have priority to return to move into a new federally financed housing project to be built there. After they were moved out, the City broke its promises and sold the land to the Dodgers who buried the community and major portions of Elysian Park in a sea of asphalt parking lots. *See generally Don Normark, Chavez Ravine, 1949: A Los Angeles Story 18-21 (1999).*

In 1946, the City of Los Angeles Planning Commission began work on a housing plan for the City's "blighted areas." Eleven areas, including Chavez Ravine, were designated as blighted. Chavez Ravine was cited for improper use of land, poor street patterns, a high proportion of substandard housing, poor sanitation, juvenile delinquency, and the presence of tuberculosis.

A letter dated July 24, 1950, from the Housing Authority of the City of Los Angeles was addressed "To the families of Chavez Ravine areas." The letter read in part: "This letter is to inform you that a public housing development will be built on this location for families of low-income. . . . The house you are living in is included... You will be visited by representatives of the Housing Authority who will . . . inspect your house in order to estimate its value. . . . . Later you will have the first chance to move back into the new Elysian Park Heights development."

Elysian Park Heights was considered a special plum. Near the City center, with only 40 percent of its land occupied, Chavez Ravine seemed to offer planners and designers an ideal opportunity to improve the lives of low-income residents. The area was charming, and the residents seemed happy and well adjusted, with an intense feeling of pride in and identity with their communities.

In 1951, foes of public housing began to attack this "creeping Socialism." In December, the City Council canceled the City's contract for redevelopment. The City Council ordered a referendum election for June 1952, on whether to continue with or abandon the public housing projects. In April 1952 the California Supreme Court ruled that the City Council could not cancel its contract with the housing authority, and that the referendum would have no legal effect on the contract. Despite this ruling, the City held the referendum election. People voted three to two against public housing. The United States Supreme Court affirmed the California Supreme Court's ruling that cancellation of the housing contract was illegal.

By this time most of the people living in Chavez Ravine had simply done as they were told they must, and had sold their homes to the City and moved out. Some of the empty dwellings were set ablaze by the fire department. Others were auctioned off to be stripped of their valuable components: doors, windows, hardware, bricks. The few individuals who defied the eviction notices were compelled in part by a determination to get what they considered a fair price for their property, and in part by a deep reluctance to abandon the neighborhoods that had so long been theirs.

In June 1953, Norris Poulson became mayor of Los Angeles running an anti-housing election campaign. Once in office he renegotiated the contract with the weakened Housing Authority so that the two largest projects, including Chavez Ravine, were abandoned. In early 1957, Mayor Poulson and other City and county officials met with Brooklyn Dodger owner Walter O'Malley to offer him a stadium site. In late 1957, the City Council approved a resolution to transfer Chavez Ravine to the Dodgers. In December 1958, a referendum to block

block this private takeover of public land was put to the vote. The Dodgers won by a margin of less than 2 percent.

In May of 1959, using the power of eminent domain, the police force, and finally, bulldozers, the City evicted those few families that had still refused to leave their homes. On September 11, 1961, construction began on Dodger Stadium. Today Los Desenterrados – those who lost their land, their homes and their community – still lament the destruction of Chavez ravine at the hands of City officials.

c. Respondents Must Take Necessary Steps To Overcome Past Discrimination

In light of the history and pattern of discrimination in parks and housing directly caused by the City, Union Pacific, and federal housing policy, Respondents must take any necessary steps to use federal funds to overcome the effects of the prior discrimination. *See 24 C.F.R. §1.4(b)(6)(i) (HUD Title VI regulations); 15 C.F.R. § 8.4(b)(6)(i) (Commerce Title VI regulations); 24 C.F.R. §6.4(a)(3)(i) (HUD § 109 regulations).* The Warehouse Project perpetuates rather than overcomes the effects of over a century of discrimination against communities of color and low income communities in the Cornfield vicinity.

3. Respondents Have Not Allowed Full and Fair Public Participation Required by Procedural and Substantive Norms

The July 13 HUD Letter demonstrates that Respondents have attempted to railroad the Warehouse Project through the planning and approval process without full and fair public participation as required by controlling procedural and substantive norms. *See Tab 46, discussed below.* The City has failed properly to assess the environmental impacts of the Warehouse Project and to consider alternatives through an environmental impact report or

statement. The City has failed to disclose the information that is necessary for the public to understand the impact of the Warehouse Project on all communities. The City has failed and refused even to respond to the repeated requests for full environmental review, full disclosure of information, and full and fair public participation by the Chinatown Yards Alliance, elected officials, the Los Angeles Times, the National Park Service, and other members of the community. The City has failed to consider air quality impacts, water quality impacts, historical and cultural impacts, land use impacts, contamination issues, and economic and social justice impacts, or a park alternative, as discussed above. *See Tabs 1, 3, 4, 5, 6, 7, 8, 10, 11, 14, 17, 18, 19, 25, 27, 30, 31, 32, 41, 45, 46, 47.*

Despite repeated requests for notice of any site plan review, the City failed and refused to provide adequate notice of meetings. *Tabs 4, 5, 6, 14.* On February 10, 2000, the City denied a variance application filed by Majestic. On March 14, 2000, Majestic submitted a new application for Site Plan Review. Despite the fact that attorneys for members of the Alliance had requested in writing on February 23, 2000 to be notified of any new application for site plan review, the City failed to notify them.

The revised Project application was based on the same Mitigated Negative Declaration ("MND") as was initially prepared, but with the Project redesigned to include a setback. On or about March 16, 2000, without any notification that a new application had been submitted, the City circulated a document entitled "Responses to Comments," dated February 2000. These responses were addressed to comments made about the first project application, which had been denied on February 10, 2000. On or about March 28, 2000, the City sent notice that a site plan review hearing was set for April 12, 2000.

Approximately two weeks after the April 12, 2000 site plan review hearing, the City released a fifteen-page revised MND ("Revised MND") on April 25, 2000. There were no further hearings conducted on the Revised MND. Instead, the City approved site plan review on May 23, 2000. The Alliance appealed this decision to the Central Area Planning Commission.

The Alliance received notice of the July 25, 2000 Central Area Planning Commission hearing on July 6, but the notice stated written materials were to be submitted 10 working days before the hearing (by July 11), and the City did not make the files available until July 13, two days after our submissions were due.

The Alliance raised a continuing objection to the timing of hearings on the appeal from the approval of the site plan for the Majestic project to the City's Area Planning Commission because of serious issues concerning due process, adequate notice, the opportunity to be heard, the right to obtain and present evidence, and fundamental fairness. Tab 41, 45. The City Attorney agreed to seek a two week extension of time on the day of the hearing for the area planning commission to review the appeal, but then failed to do so without cause or justification. When the Area Planning Commission heard Alliance's appeal, a total of 40 minutes was set aside for public testimony, despite the fact over 100 people appeared in opposition to the project, and most were not allowed to speak. Similarly, when the matter was heard before the Los Angeles City Council, the time for hearing from the public and the applicant was limited to ten minutes, thus frustrating public participation.

Finally, the City has been less than candid or forthcoming with the Department of Commerce. In its application to Commerce for funding for the Warehouse Project, the City

claimed their were no environmental justice concerns. Even though it was subsequently made abundantly clear that there were major objections to the project on environmental justice grounds, the information provided to the Department of Commerce has never been corrected.

The Alliance requested information regarding property issues pursuant to the Public Records Act in a letter dated June 26, 2000. *Tab 44*. There has been no response to this letter, although one was legally required. *Gov. Code section 6250 et seq.*

4. The Warehouse Project Violates Substantive Norms

The Warehouse Project violates substantive norms under the National Environmental Policy Act, the National Historic Preservation Act, section 109 of the Community Housing and Development Act, HUD's Consolidated Plan regulations, and California environmental quality laws and related laws, as detailed below.

Despite the City-wide shortage of parks and the availability of hundreds of millions of dollars for urban parks in Los Angeles, the City has made no sustained effort to secure park bond funds from Propositions 12 and 13 in the Cornfield or otherwise.

5. The City Knows the Discriminatory Impact on Communities of Color and Low-income Communities

The City knows that its actions perpetuate the pattern and history of unequal access to parks and recreation programs. For example, Mayor Riordan and the director of planning and development at the City Recreation and Parks Department have explicitly acknowledged the adverse impact of City funding formulas on communities of color and low-income communities in the Wall Street Journal and in the Los Angeles Times. *Tabs 22, 42.*

6. The Warehouse Project Perpetuates A Pattern and Practice of Discrimination

All of the preceding evidence demonstrates a pattern and practice of discrimination by the City against communities of color and low-income communities in the Cornfield area.

VII. The Warehouse Project Violates Section 109 of the Housing and Community Development Act of 1974 and Its Regulations Prohibiting Discrimination

The Warehouse Project violates the Housing and Community Development Act of 1974 for the reasons stated above. Section 109 of the Act provides that no person shall on the ground of race, color, national origin, religion or sex be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity funded in whole or in part with funds under Title I of the Act, including the Community Development Block Grants and Section 108 loan guarantees at stake here. *42 U.S.C. § 5309; 24 C.F.R. § 6.2(a).*

The regulations implementing section 109 contain disparate impact provisions that parallel the regulations implementing Title VI discussed above. The section 109 regulations bar criteria or methods of administration that have the effect of subjecting persons to discrimination, or have the effect of defeating or substantially impairing accomplishment of the objectives of the program with respect to persons of a particular race, color, national origin, religion or sex. *24 C.F.R. § 6.4(a)(1)(ix).* In determining the site or location of facilities, a recipient may not make selections that have the effect of subjecting persons to discrimination. *24 C.F.R. §6.4(a)(2).* In administering a program in which, as here, the recipient has discriminated on the ground of race, color, national origin, religion or sex, the recipient must take any necessary steps to overcome the effects of prior discrimination. *24 C.F.R. §6.4(a)(3)(i).* Recipients must keep appropriate records to demonstrate compliance. *See, e.g.,*

See, e.g., 24 C.F.R. §6.6.

VIII. The Warehouse Project Violates HUD's Consolidated Plan Regulations

The Warehouse Project violates public participation requirements under HUD's Consolidated Plan regulations, as HUD ruled in its July 13 Letter. *Tab 46.* Friends of the Los Angeles River and Environmental Defense submitted a letter to HUD complaining of the environmental justice and environmental quality violations caused by the Warehouse Project under the federal civil rights laws, historic preservation and environmental laws on or about November 15, 1999. HUD officials directed the City to respond to these allegations by December 24, 1999. To date, the City has failed and refused to do so.

On or about July 13, 2000, HUD explicitly chastised the City for its failure to comply with HUD's Consolidated Plan regulations: "The City provided a response to HUD on January 24, 2000, indicating that it was premature to address FOLAR's concerns because the NEPA process was still pending. Unfortunately, this response did not comply with HUD regulations. . . . Please provide your substantive response to the complainants as quickly as possible." *Tab 46.* To date, City has failed and refused to do so.

Respondents' utter defiance and failure to comply with two HUD directives ordering them to respond to our complaints violates the public participation requirements of the Consolidated Plan regulations. The Consolidated Plan regulations require that a CDBG and/or section 108 applicant or recipient have a citizen participation plan which at a minimum must provide for a substantive written response to every written citizen complaint within 15 days. *HUD's July 13 Letter at 2 n.1, 24 C.F.R. § 91.105(j).* Respondents have failed to comply.

Moreover, the regulations require Respondents to "provide for and encourage citizens to participate in the development of the consolidated plan, *any substantial amendments to the consolidated plan*, and the performance report." *24 CRF § 91.105(a)(2)(i) (emphasis added).* Respondents violated this provision by amending the 1998/99 Consolidated Plan to include the funding for the Warehouse Project without adequate notice or public participation. *See City General Manager Parker Anderson to William Barth, Director, HUD Community Planning and Development (Oct. 27, 1999).* The City held a single Citizens Unit Participation (CUP) hearing and a City Council meeting noticed in an obscure newspaper of limited circulation. The notice was in English and there is no indication of notice given in Chinese (for the Chinatown community) or Spanish (for Solano Canyon, Lincoln Heights and William Mean residents). Nor did the City engage in any specific outreach to those communities or any other area residents for input. The two paragraph of minutes from the CUP hearing show there was a brief presentation in support of the Warehouse Project, but no one in opposition was present, having not received notice of the meeting. Subsequent discussions with members of the CUP reveal that they were totally unaware of the impacts of the project, community opposition, or the alternatives to the project. The City "is expected to take whatever actions are appropriate to encourage the participation of all its citizens, including minorities and non-English speaking persons, as well as persons with disabilities." *24 CRF § 91.105(a)(2)(ii).* Given that the public participation "requirements are designed especially to encourage participation by low- and moderate-income persons, particularly those living in slum and blighted areas and in areas" *24 CRF § 91.105(a)(2)(ii),* the city's apparent failure to seek input from the nearby Chinatown neighborhood is glaring. The City has also failed to seek the input of "residents of public and

seek the input of "residents of public and assisted housing developments" *24 CRF § 91.105(a)(2)(iii),* such as those at William Mead Homes, when it amended its consolidated plan. Respondents have failed to provide the public participation required by HUD.

VIII. Funding The Warehouse Project Without An Environmental Impact Statement Would Violate The National Environmental Policy Act

An environmental assessment must be prepared for the Warehouse Project to determine if the Project may have a significant adverse impact on the environment. We understand that an environmental assessment is now being prepared. An Environmental Impact Statement rather than a Finding of No Significant Impact will be necessary because of the significant land use, historic, air quality, water quality, human health and environmental justice impacts. We urge federal authorities to require preparation of an Environmental Impact Statement at the earliest possible time. We fully incorporate our prior letters by reference here.

IX. The Warehouse Project Violates The Historic Preservation Act

As a result of the historical significance of the Zanja Madre and the Millenium Trail, approval of funding for the Cornfields Project without an examination of the impact of the Project on this important historical resource would result in a violation of the National Historic Preservation Act ("NHPA") (16 U.S.C. §§ 470 to 470w-6). Further detail about the application of the National Historic Preservation Act is also set forth in our letter of November 15, 1999, and incorporated here by reference. *Tab 1.*

X. The Warehouse Project Violates the Executive Order on Environmental Justice

The Warehouse Project violates the Executive Order on Environmental Justice for each

each of the reasons discussed above and in this complaint. On February 11, 1994, the President issued Executive Order 12,898, the Executive Order on Environmental Justice. The Executive Order requires federal agencies to ensure that their actions do not have an adverse disparate impact on communities of color and low-income communities:

> Each Federal agency shall conduct its programs, policies and activities that substantially affect human health or the environment, in a manner that ensures that such programs, policies, and activities do not have the effect of excluding persons (including populations) from participation in, denying persons (including populations) the benefits of, or subjecting persons (including populations) to discrimination under, such programs, policies and activities, because of their race, color or national origin.

Executive Order 12,898, § 2-2. "To the greatest extent practicable and permitted by law . . . each Federal agency shall make achieving environmental justice part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority populations and low-income populations." *Id. at § 1-101.*

The environmental review procedures for the Community Development Block Grant program requires applicants and recipients such as Respondents to comply with the President's Order on Environmental Justice as well as historic and cultural preservation laws. *See 24 C.F.R. § 58.1(b)(1) (environmental justice); 24 C.F.R. §§ 58.5(a)(1) (historic preservation); 58.5(a)(2) (cultural environment); 58.5(j) (environmental justice).* The environmental assessment must identify, analyze and evaluate all impacts of a proposal such as the Warehouse Project to determine the impacts on the human environment and whether the project will require further compliance under related laws and authorities including the President's Order on Environmental Justice as well as historic and cultural preservation laws and alternatives to

and alternatives to the project itself. *See 24 C.F.R. § 58.40(c) (citing 58.5) & (e).* Failure to comply is a permissible basis for objection. *24 C.F.R. § 58.75(b) (citing 58.40).* HUD and its applicants must comply with all environmental requirements, guidelines and obligations including those under the President's Order on Environmental Justice. *24 C.F.R. §50.4(l).* "[T]he Executive Order requires federal agencies to: collect, maintain and analyze data; expand opportunities for public participation [and] improve access to information." *HUD Secretary Henry Cisneros, Achieving Environmental Justice at 25, attached to letter to Carol M. Browner, Administrator, U.S. Environmental Protection Agency (March 24, 1995).*

Commerce established the Economic Development Administration (EDA) to ensure that economic growth reaches all communities, including those outside the mainstream, in compliance with the Executive Order on Environmental Justice. The philosophy and mandate of the EDA is to fund "only projects which are developed at the local level and supported by the entire community," so as to "avoid imposing environmental burdens on an unknowing community."[6] To ensure this end, "EDA should and will continue its policy of requiring the community development of proposals and full community support of the project and its consequences at the preliminary stages of project development and funding decisions." The EDA is to perform its own environmental reviews, pursuant to NEPA, to "evaluate the full environmental impact of an EDA-funded project, to ensure that the EDA-funded project complies with all applicable environmental laws and regulations, and to identify any potential disproportionate and adverse environmental or health affects on low-income and minority populations." *Id.* The EDA specifically takes into account whether a project complies with

civil rights laws, including Title VI. *Id.*

XII. The Warehouse Project Violates HUD's Hope VI Project

The Warehouse Project violates the purpose, goals and spirit of HUD's Hope VI Project. In 1992, HUD began the HOPE VI Urban Demonstration Program to reduce isolation in the most severely distressed public housing projects in the nation. Its approach is twofold: (1) to rebuild physical plants of the housing developments, and (2) to link residents of public housing to support services and the wider community. *See HOPE VI: Community Building Makes A Difference.* "The spirit of HOPE VI is one of consultation and collaboration among the housing authority, affected residents, social service providers, and the broader community." *Id.* In identifying the most severely distressed public housing facilities in the nation, the HOPE VI Project focused on public housing facilities that were "physically isolated (behind freeways, on leftover parcels near industrial developments, or simply at great distances from other residential neighborhoods." *Id., chapter 1, page 3.* On April 18, 2000, HUD and the United States Department of Agriculture ("USDA") announced a partnership stemming from the HOPE VI Project "to promote urban greening and revitalization." *Press release, April 18, 2000, HUD website.* The alliance between HUD and USDA "will focus on enhancing and maintaining green and open spaces at public housing developments and other sites in selected cities and towns across the country." According to HUD Secretary Andrew Cuomo, "HUD is transforming public housing developments around the country . . . . Trees are an important part of this transformation, because they help make communities more attractive." According to USDA Secretary Dan Glickman, "improving and increasing green space and open space in our

---

[6] www.ecs.noaa.gov./documents/implementing12898.html.

space and open space in our urban areas is one of USDA's highest priorities. This agreement will help strengthen our cities' green infrastructure and make communities more liveable through sound natural resources stewardship."

William Mead Homes, the first and largest public housing project in Los Angeles, would be sandwiched between the men's prison and the Warehouse Project. To comply with the purpose, goals and spirit of HOPE VI and the urban greening project, federal funding for the Warehouse Project should be withdrawn in favor of the park proposal.

XII. Public Officials Have Emphasized the Need for Federal Review

Public officials in Los Angeles have publicly called for a stop to the Warehouse Project, for the creation of a park in the Cornfield, and for full enviromental quality and environmental justice review by the federal government.

At the City Council meeting to review the Warehouse Project, Councilmember Rita Walters voted against the Warehouse Project and called for full environmental review:

> I am going to oppose the whole project, because I think that approving this project, even with the amendments . . . will waste an opportunity to use an invaluable resource for a better and higher purpose. . . . [T]hat is about the opposite of what a bunch of big warehouses are going to do at the other end where perhaps we could create something equally as useful and equally as desirable and equally as beneficial, . . . if we gave it the kind of attention that the people here who are here today have asked us to give it and that is an EIR. . . . I will vote against the whole thing because I really think that this would be a terrible wasted opportunity to do something far better for the people in the city of Los Angeles.

Councilmember Joel Wachs voted to stop the Warehouse Project and called for full environmental review:

> I think that the need for a full EIR is apparent . . . . I just feel, very strongly, that the operation would benefit from a full EIR and I am concerned about the development itself. Warehouses don't create a lot of jobs; not in this day and age with automation

> and what have you. The river there is something that can be reclaimed and we would hope to do that. And build on that a vital community that has more than warehouses on it.

Councilmember Mark Ridley Thomas emphasized the need for full review by the federal government:

> I wish to indicate that the chapter is not closed pursuant to HUD resources that the developer is inclined to pursue and if granted they will be required, pursuant to the National Environmental Protection Act, to do comprehensive evaluation of alternatives as well as environmental impacts. And so I believe that at the appropriate time those things can and should be accomplished.

Councilmember Mike Feur emphasized the need for full environmental quality and environmental justice review by the federal government, but the hands of councilmembers were tied by the new City Charter which required a super majority for the City Council to demand an environmental impact report under local law:

> I will say, that I think an EIR should have been done here. I don't see eight votes to compel an EIR, now. But I think it's true, I think that the combination of all the factors involved militates in favor of an EIR. And I think that the Majestic people should have done that in the first place. Secondly, I think that the environmental justice issues are in fact legitimate issues. [Attorney for Environmental Defense] Mr. García's recitation of events that have lead to, to put it in the most general way, a lack of amenities that any other community would find fundamentally necessary in this area, is right. Closer, [Councilmember] Hernandez is first and most responsible for creating, in underserved areas in our city, the opportunity for more park space. And Mike has been working to try to create parks here. This hasn't been a successful effort yet. . . . [B]ased of our conversations, it is not as though Mike has said, we should reject parks in favor of jobs. Mike's been trying to find what other alternatives might exist, and so far there aren't a lot of choices that are practically on the table, I think, from what I can gather. So it makes it very tough. Because, this is an area, in summary, which, I think, most of us would agree, needs both more jobs and more open space. Mr. Wachs, I think, is correct that there are many opportunities yet to be explored here. But to explore those opportunities requires a council mandate that would take at least eight votes here for an EIR. And I don't see that EIR happening here. There may be something that happens at the federal level. I'm not sure the implications of our action here for what the feds may or may not do because there's been this kind of tepid response so far from HUD on the

> been this kind of tepid response so far from HUD on the EIR issue. So I'm pretty torn, although I must say, in the end, if there aren't enough votes to compel an EIR in this process, which is what would open the door to all kinds of things, including the potential for a willing seller where there currently is none, then I think Mr. Hernandez's efforts really deserve to be honored.

It is necessary to emphasize that the full environmental justice and environmental quality review mandated by federal law has not been conducted to date. At the site plan review appeal, Commissioner James M. Harris specifically asked whether it was appropriate for the Central Area Planning Commission to consider the federal civil rights laws and the United States Constitution in light of the Alliances's claims of intentional and adverse disparate impact discrimination. City Planning Department staffer Gary Booher informed the Commission that it was not required to consider the federal issues because "that is not listed as one of the findings for consideration for approval of site plan review." Commissioner Harris stressed the need for the federal government to conduct this review, and the Commission voted without considering the federal claims.

At the mayoral candidates debate on September 14, 2000, every candidate there called for a stop to the Warehouse Project in favor of the parkland proposal: Congressman Xavier Becerra, Assembly Speaker Emeritus Antonio Villaraigosa, Councilmember Joel Wachs and Steve Soboroff, who is the Chair of the City's Recreation and Parks Commission and senior counsel to Mayor Richard Riordan.

XIII. Full Information And Full And Fair Participation Are Required To Decide The Future Of The Cornfield

The following framework is good policy and good law to achieve equal justice, democratic decision making, and a sustainable Los Angeles to decide the future of the

Cornfield under federal and state environmental justice, environmental quality and civil rights laws.

- *Results*. The City must invest public funds to achieve results that enhance human health and the environment, promote economic vitality and equitably serve all communities.
- *Information*. The City must gather, analyze and publish the information necessary to understand the impact of the Cornfield decision on all communities.
- *Participation*. The City must insure the full and fair participation in the Cornfield planning process by all communities.
- *Equal Justice*. There can be no intentional discrimination and no unjustified adverse disparate impacts for which there are less discriminatory alternatives.

The Warehouse Project satisfies none of these requirements.

XIV. Relief Sought

The relief we seek is to stop federal funding for the Warehouse Project unless respondents demonstrate that the challenged action is justified by business necessity and that no less discriminatory alternative exists; to require full environmental review of the Warehouse Project through an environmental impact statement; to insure a participatory public process to determine the future of the Cornfield consistent with the needs and desires of the surrounding communities; and to develop the Cornfield as compatible mixed parkland. We also seek an expedited investigation because of the substantial public interest involved, and the irreparable damage petitioners and to the City of Los Angeles if the Warehouse Project goes forward.

ENCLOSURE 5

Tom Brohard and Associates

January 11, 2023

Mr. Doug Carstens
Chatten-Brown, Carstens & Minteer, LLP
2200 Pacific Coast Highway, Ste. 318
Hermosa Beach, CA 90254

SUBJECT: Los Angeles Aerial Rapid Transit (LAART) Project – Unaddressed Transportation Issues and Deficiencies

Dear Mr. Carstens:

Tom Brohard, P.E., has reviewed the transportation portions of the October 2022 Draft Environmental Impact Report (Draft EIR) for the Los Angeles Aerial Rapid Transit (LAART) Project in the City of Los Angeles prepared by AECOM for the Los Angeles County Metropolitan Transportation Authority (Metro). The Proposed Project includes a 1.2-mile aerial gondola system connecting Los Angeles Union Station (LAUS) and Dodger Stadium, with an intermediate station at the Los Angeles State Historic Park and Elysian Park. Sections of the Draft EIR which I have reviewed include:

- ES - Executive Summary
- Chapter 1 - Introduction
- Chapter 2 - Project Description
- Chapter 3.17 – Transportation
- Appendix A – NOP Scoping Report and Attachments
- Appendix N – Transportation Appendices

GO17-154

Various reports and documents relating to transportation improvements for Dodger Stadium as well as quantification of available parking in the area listed below have been reviewed and are enclosed as noted:

- August 1990 Dodger Stadium Access Study prepared by Gruen Associates for the Los Angeles County Transportation Commission
- September 15, 2022 Metro Executive Management Committee Report for Agenda Number 21 regarding the LAART Project
- October 24, 2022 UCLA Study Regarding the Proposed Project

Education and Experience

Since receiving a Bachelor of Science in Engineering from Duke University in Durham, North Carolina in 1969, I have gained over 50 years of professional traffic engineering and transportation planning experience. I am licensed as a Professional Civil Engineer both in California and Hawaii and as a

81905 Mountain View Lane, La Quinta, California 92253-7611
Phone (760) 398-8885
Email tbrohard0@gmail.com

Professional Traffic Engineer in California. I formed Tom Brohard and Associates in 2000 and have served many diverse communities as the City Traffic Engineer and/or the Transportation Planner. During my career in both the public and private sectors, I have reviewed numerous environmental documents and traffic studies for various projects as shown in a brief summary of my experience in the enclosed resume.

Cont. GO17-154

Traffic and Transportation Issues

Based on the information in the October 2022 Draft Environmental Impact Report (Draft EIR) for the Los Angeles Aerial Rapid Transit (LAART) Project, and with consideration for the other various reports and documents related to access to and from Dodger Stadium, each of the following traffic and transportation issues must be fully addressed and evaluated further before Metro takes additional action on the Proposed Project:

1) Dodger Stadium Access Study

Over 30 years ago in August 1990, the Los Angeles County Transportation Commission, the County transportation agency that preceded Metro, retained Gruen Associates with Gannett Fleming to evaluate alternative connections to move people efficiently to and from Dodger Stadium. The enclosed "Dodger Stadium Access Study" evaluated various technologies including shuttle buses, automated guideway transit, light rail transit, gondola tramways, and walkways and escalators.

GO17-155

Six different characteristics were evaluated and compared for the five different technologies as shown in Table 1 of the Study. Table 3 compared boarding and travel time for the different alternatives, with the gondola tram taking an average of 92 minutes and 60-person shuttle buses taking about 43 minutes per passenger, less than half of the time required per passenger for the Gondola trams. The capacity of the shuttle bus system was estimated at 7,200 passengers per hour, over 2.5 times greater than what the gondola system could provide. The aerial gondola system was found to take more than twice as long as the shuttle buses, and shuttle buses were found to move more than double the number of people.

Of the different alternatives evaluated, the gondola was found to have the lowest capacity of any of the systems considered and would have the least positive impact on traffic and congestion. The gondola system then and now is more for sightseeing and entertainment and is not an effective way to move people between places that are 1.2 miles apart.

2) **Metro Board Executive Management Committee Report**

The September 15, 2022 Metro Board Executive Management Committee Informational Report, Los Angeles Aerial Rapid Transit Project Update, discussed various topics including the traffic studies to be prepared for the Proposed Project. Page 4 states "A separate Project Access, Circulation and Construction Transportation Study will be prepared in accordance with the non-CEQA analysis required by the City of Los Angeles Transportation Assessment Guidelines. This separate technical report will evaluate the Project's potential effects on the intersection level of service."

GO17-156

This study was to be prepared as required and in accordance with the LADOT Transportation Assessment Guidelines issued in August 2022, including potential impacts on intersection level of service. The contents of the analysis are found in Section 3.3, Project Access Safety and Circulation Evaluation. This report was not included in the Draft EIR or Appendix N. Furthermore, this analysis has not been shared with the public or otherwise been made available for review and comment.

3) **Draft Environmental Impact Report - Executive Summary**

a) The Project Purpose on Page ES-1 states "The proposed project would improve mobility and accessibility for the region by providing a daily, high-capacity aerial rapid transit service connecting the regional transit system at LAUS, Dodger Stadium, the Los Angeles State Historic Park, Elysian Park, and the surrounding communities via three new transit stations... The Proposed Project is needed to alleviate existing congestion and associated air pollution... as a result of reduced vehicular congestion in and around Dodger Stadium and on neighborhood streets, arterial roadways, and freeways..."

GO17-157

Both of these statements, as well as many others throughout the Draft EIR, are made without foundation and/or documentation to support them in the Draft EIR or in the technical Appendices. They exaggerate even a best-case scenario that could most optimistically occur.

b) Page ES-16 provides a listing of comments from various public agencies. Interestingly enough, no comments are listed as being from the City of Los Angeles Department of Transportation. This lack of response from LADOT is unique in my extensive experience in my peer reviews of transportation aspects of various projects in the City of Los Angeles over the last several decades.

GO17-158

With direction from LADOT and as outlined in the LADOT Transportation Assessment Guidelines, a detailed Memorandum of Understanding

outlining the methodology and approach to the transportation analysis is typically developed by the Draft EIR transportation consultant. This document is then reviewed, approved, and signed off by both LADOT and the Draft EIR transportation consultant before the transportation analysis begins. There is no evidence that such a Memorandum of Understanding was ever developed, reviewed and approved by both LADOT and by the Draft EIR transportation consultant.

Cont. GO17-158

c) Transportation Mitigation Measure TRA-A on Page ES-72 recommends "visibility enhancements for the Alameda Tower and Chinatown/State Park Station" but then states "visibility enhancement features could include high visibility crosswalk treatments, advance crossing warning signs, flashing beacons, upgraded lighting, and new or upgraded traffic controls such as traffic signals and all-way stops and right turn on red restrictions and channelization of pedestrians to marked crosswalks via fencing. The mitigation measure would be implemented during the construction phase and would be completed prior to proposed Project operations."

GO17-159

The laundry list provided gives many different possible mitigation measures, but no study or analysis has been conducted to determine which may be appropriate or inappropriate. For example, it is not possible to install traffic signals and all-way stops at the same intersection. The possible mitigation measures must be analyzed now to determine what is needed and warranted. Waiting until some future time to decide what will or will not be done constitutes deferred mitigation, and any such mitigation will not be timely or effective. Deferred mitigation is contrary to professional traffic engineering and transportation planning principles as well as CEQA, the California Environmental Quality Act.

d) Transportation Mitigation Measure TRA-B on Pages ES-73 to Page ES-76 provides more of the same deferred analyses in its discussion. The Construction Traffic Management Plan offers several possible measures but then defers to City of Los Angeles approvals before implementation. The City of Los Angeles always requires a Construction Traffic Management Plan and there is nothing special or unique here.

As one of several examples, "Existing yellow crossings... shall be evaluated in coordination with LADOT to determine if crossing guards should be assigned on days/times when detours are active, the proposed Project shall fund crossing guards during morning school arrival and afternoon school departure periods... If school crossings along detour routes are unsignalized, temporary traffic signals will be evaluated in coordination with LADOT and would be implemented by the proposed Project if deemed necessary." Once again, possible mitigation measures are proposed but no measures are actually studied or planned.

GO17-160

The Draft EIR must analyze potential mitigation measures now and determine which are needed and warranted rather than publish yet another laundry list of possible measures which have not been studied or evaluated. Cont. GO17-160

4) **Draft Environmental Impact Report - Chapter 2 – Project Description**

a) The Purpose and Need Section beginning on Page 2-10 states the Dodger Stadium Express buses carry approximately 1,850 riders on average per game. Page 2-12 states "Within two hours prior to the start and after a game or event at Dodger Stadium, more than 10,000 people could be transported to the stadium by the Proposed Project. The average attendance at a Dodger game was approximately 49,000 for the 2019 season. Given the capacity of the system, approximately 20 percent of the fans could take aerial transit connected to Metro's reginal transit system." GO17-161

This statement is theoretical at best for conditions after a game since very few fans will be willing to wait more than one hour with other transportation options available including Dodger Express Bus as well as Uber/Lyft/Taxi. The UCLA Mobility Lab Study discussed further below found that the Proposed Gondola Project would carry only about 2,200 passengers at most and would transport only 1,380 people after a baseball game.

b) The loading and unloading of gondola cars are briefly discussed on Page 2-17. However, there is no description or illustration of how passengers would access the gondola cars from the Metro L Line (Gold), how passengers would access the gondolas from ground level, or how passengers would cross Spring Street. Each of these omissions raises significant traffic safety concerns for pedestrians trying to reach and use the proposed gondola system. GO17-162

c) Figure 2-27 on Page 2-54 illustrates the location of the proposed gondola support tower within the Alameda Triangle just south of Alhambra Avenue. From that illustration, it does not appear to be possible to provide adequate stopping sight distance through the tower supports for the westbound dedicated left turn lane and the westbound left turn/right turn lane. The Draft EIR must describe how potentially conflicting motorists will be able to see each other through the solid tower support framework. GO17-163

d) Page 2-61 does not indicate the requirements to coordinate with and obtain approval from LADOT during construction as well as during operation of the proposed project. The City of Los Angeles has jurisdiction over the roadways that will be impacted, and the Proposed Project must work closely with the City's Department of Transportation by obtaining all required permits and following each of the permit requirements. GO17-164

5) Draft Environmental Impact Report - Chapter 3.17 – Transportation

a) Page 7 repeats that the City of Los Angeles Transportation Assessment Guidelines as noted in the Board memo would be followed. The current edition of the LADOT TAG was issued in August 2022. However, the required level of service analysis and comparisons were not included in either the Draft EIR or Appendix N, and this study has not been made available for public review and comment. GO17-165

b) The estimates of neighborhood riders and walkers on Page 26 do not appear to consider the topography vertical rise of 200 to 300 feet up to Dodger Stadium in the walkable and bikeable forecasts. The steep slopes of the streets and pathways discourage walking and biking. The estimates of neighborhood riders of the gondola are significantly overstated and must be reduced to account for the steep topography. GO17-166

c) Page 27 states that the vehicle miles traveled (VMT) calculations are based on data collected in Year 2019, but there is no evidence or cross-checking to support that these values are "current" or correct. GO17-167

d) Page 32 indicates the Proposed Project will result in only one change to intersection geometrics by shortening the northbound left turn lane from Alameda Street to Cesar Chavez Avenue by 150'. Shortening of this left turn lane from 320 feet to 170 feet will result in traffic waiting to turn left backing out of the shorter left turn lane, stopping in the through lane, and significantly increasing the potential for rear end collisions. This left turn lane is also signed as a primary route to reach Dodger Stadium. The capacity of this left turn lane will be cut in half, creating the need for other mitigation to accommodate the high northbound left turn demand. GO17-168

e) Page 40 incorrectly states that the 35 MPH posted speed limit on Alameda Street equates to 250 feet of stopping sight distance at the marked crosswalk at Alameda Station.

The 7th Edition of "A Policy on Geometric Design of Highways and Streets 2018 The Green Book" published by the American Association of State Highway and Transportation Officials (AASHTO) is the definitive resource of stopping sight distance. This publication is used by Caltrans as well as all local jurisdictions in California. Traffic engineers and transportation planners understand that stopping sight distance is based upon the design speed of the roadway under review, a speed which is typically 10 MPH higher than the posted speed limit. Stopping sight distance for a 45 MPH design speed is 360 feet, not 250 feet, as shown in Table 3-1 on Page 3-4. Stopping Sight Distance on Level Roadways. Other measures to provide 360 feet of stopping sight distance are required. GO17-169

All other discussions of stopping sight distance must be modified to reflect the use of the design speed which is typically 10 MPH higher than the posted speed limit and that requires additional stopping sight distance accordingly. — Cont. GO17-169

f) Page 41 recommends prohibiting right turns on red at the Alameda Tower as a mitigation measure. "No Right Turn On Red" is not an effective mitigation measure as it does not guarantee safety for pedestrian crossings as vehicles may violate the posted right turn on red prohibition and they are then faced with a condition involving inadequate stopping sight distance. — GO17-170

g) Page 67 states that Mitigation Measures TRA-A will provide visibility enhancements at Alameda Tower and Chinatown Station but does not discuss what mitigation measures are recommended at these locations. The discussion should be expanded to describe the mitigation measure as has been done for Mitigation Measure TRA-B immediately following. — GO17-171

h) Other mitigation measures are deferred and may not be timely as required. To be effective and complete, potential mitigation measures identified on the various laundry lists must be studied and evaluated in the Draft EIR, with specific mitigation measures identified. — GO17-172

6) **Fehr & Peers Ridership Modeling (Appendix N of Draft EIR)**

Table 5 on Page 21 of Ridership Modeling in Appendix N of the Draft EIR estimates 6,000 game attendees would ride the gondola in 2026. Daily tourist riders on the gondola are estimated to be 1,270 per day on game days and 2,575 per day on non-game days. These forecasts are significantly higher than those presented in the other reports such as the Dodger Stadium Access Study discussed earlier in this letter and in the UCLA Mobility Lab Study discussed later in this letter. — GO17-173

7) **Fehr & Peers Draft Parking Study September 2022**

a) Page 1 states "Detailed analysis of traffic associated with the proposed project are separately being evaluated in a non-CEQA transportation assessment in accordance with the City of Los Angeles Transportation Assessment Guidelines. This would involve calculation of level of service and delay at intersections (pre VMT), but these calculations and results are not found in the Draft EIR or in Appendix N. — GO17-174

b) Pages 2 and 3 indicate that the Chinatown/State Park Station "could" include pedestrian improvements between Metro's L Line (Gold) Station and the Chinatown/State Park Station as well as support for the future Los — GO17-175

Angeles State Historic Park bike and pedestrian bridge." Specific improvements need to be identified now (see Page 42 of Chapter 3.17) and included within the mitigation measures proposed in the Draft EIR. — Cont. GO17-175

c) Page 10 states that a parking management plan will be developed before operation of the Proposed Project. Doing this at some future time rather than during the Draft EIR constitutes deferred mitigation by stating "Parking management strategies and specific implementation steps will be further detailed in a parking management plan prepared in the future in collaboration with the City of Los Angeles, who would be the implementor of any on-street parking management strategies... However, because the detailed parking management implementation plan will be reliant on completion of construction documents and the final operating plan, it will follow the completion of the environmental process for the proposed project." — GO17-174

8) **<u>UCLA Mobility Lab – October 24, 2022 Study</u>**

A study using current modeling techniques recently completed by two UCLA researchers found that the gondola system could slightly reduce traffic on major roads around Dodger Stadium on the night of a sold-out baseball game, but that impact would likely be very limited. The study found that the gondola would likely take only around 608 cars off the road and that minor change would be unlikely to significantly reduce greenhouse gas emissions and traffic overall. — GO17-177

Other findings of the UCLA Mobility Lab Study are as follows: — GO17-178

a) Contrary to the Draft EIR, the gondola system would not significantly reduce traffic or greenhouse gas emissions around Dodger Stadium.

b) The gondola system would carry fewer passengers than the Draft EIR claims. About 4,690 passengers would take public transportation on game days. Of these, the model predicted 2,500 would use the Dodger Stadium Express buses, meaning that only 2,190 new passengers would take the gondola system. Doubling the number of buses would more than accommodate passengers that could be expected to ride the gondola. — GO17-179

c) Fewer people would take the gondola after the game resulting in more traffic and emissions. The model disclosed about 2,500 passengers switching from the free Dodger Stadium Express buses to the gondola to the stadium, and about 1,000 fans switched back to the shuttle buses after the game. Only about 1,380 fans were forecast to use the gondola after the game as they would have to wait in long lines to use the gondola. — GO17-180

d) Very few people were predicted to use the gondola for transportation other than getting to or from the games. Only 60 people, about one gondola carload, were forecast to travel to Dodger Stadium during the day, and only about 140 passengers would travel from Dodger Stadium to Chinatown or Union Station during the day. GO17-181

Shuttle Busses and the Coachella Festival

As City Transportation Engineer for the City of Indio for 15 years, I was deeply involved in getting patrons to and from the Coachella Festival over two weekends in April each year. Shuttle buses from across California and adjoining states were contracted to travel various pre-planned routes throughout the Coachella Valley to and from the festival grounds each of the three days.

The successful transportation program developed by the festival promoter, Goldenvoice, split the attendees into three separate but approximately equal groups. These included those who arrived the day before and camped at the site until the day after the festival ended, those who commuted daily to and from the site using Uber/Lyft/taxi, and those who rode Festival provided shuttle buses from hotels to and from the venue each day. GO17-182

About one-third of the 250,000 daily festival attendees used the shuttle buses, with separated priority lanes on City streets for the shuttle buses near the festival site leading to a designated area within the festival site for shuttle bus loading and unloading. This system involved rapid turnover within the Festival shuttle bus lot with buses quickly filling empty bus parking stalls, loading/unloading passengers, and departing.

Summary and Conclusion

When it was evaluated over 30 years ago, the gondola finished last in comparison with five other transportation alternatives to serve Dodger Stadium. Such a comparison today ends up with similar results. GO17-183

The proposed Gondola is better suited for sightseeing rather than being an effective transportation measure to move large volumes of people in short periods of time. Shuttle buses together with Uber/Lyft/taxi services now serve Dodger Stadium well at a fraction of the cost. An expansion of the shuttle bus operation between Dodger Stadium Express in lieu of the proposed gondola system would efficiently meet the demand to transport people in a cost-effective manner on game days and on special event days. GO17-184

The omissions and errors summarized and detailed throughout this letter require that each of these issues and items be reanalyzed and reevaluated through additional study before the Proposed Project is considered further by Metro.

If you have questions regarding these comments, please contact me at your convenience.

Licenses:	1975 / Professional Engineer / California – Civil, No. 24577 1977 / Professional Engineer / California – Traffic, No. 724 2006 / Professional Engineer / Hawaii – Civil, No. 12321
Education:	1969 / BSE / Civil Engineering / Duke University
Experience:	50+ Years
Memberships:	1977 / Institute of Transportation Engineers – Fellow, Life 1978 / Orange County Traffic Engineers Council - Chair 1982-1983 1981 / American Public Works Association – Life Member

Tom is a recognized expert in the field of traffic engineering and transportation planning. His background also includes responsibility for leading and managing the delivery of various contract services to numerous cities in Southern California.

Tom has extensive experience in providing transportation planning and traffic engineering services to public agencies. In addition to conducting traffic engineering investigations for Los Angeles County from 1972 to 1978, he has previously served as City Traffic Engineer in the following communities:

- Bellflower ..... 1997 - 1998
- Bell Gardens ..... 1982 - 1995
- Big Bear Lake ..... 2006 - 2015
- Indio ..... 2005 - 2019
- Huntington Beach ..... 1998 - 2004
- Lawndale ..... 1973 - 1978
- Los Alamitos ..... 1981 - 1982
- Oceanside ..... 1981 - 1982
- Paramount ..... 1982 - 1988
- Rancho Palos Verdes ..... 1973 - 1978
- Rolling Hills ..... 1973 - 1978, 1985 - 1993
- Rolling Hills Estates ..... 1973 - 1978, 1984 - 1991
- San Fernando ..... 2004 - Present
- San Marcos 1981
- Santa Ana ..... 1978 - 1981
- Westlake Village ..... 1983 - 1994

During these assignments, Tom has supervised City staff and directed other consultants including traffic engineers and transportation planners, traffic signal and street lighting personnel, and signing, striping, and marking crews. He has secured over $10 million in grant funding for various improvements. He has managed and directed many traffic and transportation studies and projects. While serving these communities, he has personally conducted investigations of hundreds of citizen requests for various traffic control devices. Tom has also successfully presented numerous engineering reports at City Council, Planning Commission, and Traffic Commission meetings in these and other municipalities.

In his 14 years of service to the City of Indio, Tom accomplished the following:

- Oversaw preparation and adoption of the 2008 Circulation Element Update of the General Plan including development of Year 2035 buildout traffic volumes, revised and simplified arterial roadway cross sections, and reduction in acceptable Level of Service criteria under certain conditions.

- Oversaw preparation of fact sheets/design exceptions to reduce shoulder widths on Jackson Street and on Monroe Street over I-10 as well as justifications for protected-permissive left turn phasing at I-10 on-ramps, the first such installations in Caltrans District 8 in Riverside County; reviewed plans and provided assistance during construction of both $2 million projects to install traffic signals and widen three of four ramps at these two interchanges under Caltrans encroachment permits.

- Reviewed traffic signal, signing, striping, and work area traffic control plans for the County's $45 million I-10 Interchange Improvement Project at Jefferson Street.

- Reviewed traffic impact analyses for Project Study Reports evaluating different alternatives for buildout improvements of the I-10 Interchanges at Jefferson Street, Monroe Street, Jackson Street and Golf Center Parkway.

- Oversaw preparation of plans, specifications, and contract documents and provided construction assistance for over 70 traffic signal installations and modifications.

- Reviewed and approved over 2,000 work area traffic control plans as well as signing and striping plans for all City and developer funded roadway improvement projects.

- Oversaw preparation of a City-wide traffic safety study of conditions at all schools.

- Obtained $47,000 grant from the California Office of Traffic Safety and implemented the City's Traffic Collision Database System. Annually reviews "Top 25" collision locations and provides traffic engineering recommendations to reduce collisions.

- Prepared over 1,500 work orders directing City forces to install, modify, and/or remove traffic signs, pavement and curb markings, and roadway striping.

- Oversaw preparation of engineering and traffic surveys to establish enforceable speed limits on over 500 street segments.

- Reviewed and approved traffic impact studies for more than 35 major projects and special events including the annual Coachella and Stagecoach Music Festivals.

- Developed and implemented the City's Golf Cart Transportation Program.

Since forming Tom Brohard and Associates in 2000, Tom has reviewed many traffic impact reports and environmental documents for various development projects. He has provided expert witness services and also prepared traffic studies for public agencies and private sector clients.

SUMMARY

This report focuses on alternative connections that directly link Dodger Stadium and the planned Pasadena Line Rail Transit Station near the intersection of College and Spring Streets in Chinatown. Two key factors in the consideration of any such connection are: 1) steep grades surrounding the bluff top parking areas of Dodger Stadium and 2) the infrequent but high crowd peaking that occurs at major events.

Dodger Stadium is located on a bluff top that is elevated more than 200 feet above the Pasadena Rail Transit Line. Any connector option would need to be able to handle this steep grade. Secondly, before and after events at Dodger Stadium, large numbers of people entering and exiting the parking facilities cause congestion and delay for attendees. Any transit technology must accomodate a peak loading phenomenon where up to 56,000 persons enter or leave the Stadium within a brief period of time before or after events.

Because of these factors, the access study identified a selected group of representative route and technology alternatives that could function over a short (approximately one mile) route in which elevation changes of 225-275 feet are encountered. The technologies examined include shuttle buses, automated guideway transit, light rail transit, gondola tramways, walkways and escalators. Furthermore, each of the connector alternatives was developed with the goal of supporting economic development potential in and around the future Chinatown Rail Transit Station.

As shown on Table 1, the connector alternatives with the greatest system capacities are the automated guideway transit (AGT) and light rail alternatives. These alternatives could provide a maximum capacity of 18,000 passengers per hour for an AGT system such as a six-car monorail train or 14,000 passengers/hour for a 3-car LRT train. This represents approximately 25-30% of a sold out event exiting Dodger Stadium. Total travel time to College Street Station would be 3 minutes for AGT and 7 minutes for LRT. Waiting time following events at Dodger Stadium could add up to 18 minutes to these travel times. Costs for a light AGT system are estimated at $20-25 million. Costs for grade separated LRT are estimated at $50-55 million.

A gondola tramway alternative offered the lowest capacity of the technologies considered. Systems similar to the Palm

Supplemental AR 2466

Springs Aerial Tranmway could carry up to 2,800 passengers/hour over the Dodger Stadium route. Travel time from Dodger Stadium to College Street Station would necessarily involve long waiting times during peak events due to the lower system capacities of gondola tramways. An average travel time following a Dodger game, including waiting time, would be well over one hour. Costs for a gondola tram system would be $12-15 million.

Shuttle buses, running as an extension of RTD and DASH systems, could provide a peak event capacity of 7,200 passengers/hour, assuming 30 second headways. Travel time to College Street Station would be 10 minutes, although waiting time following events at Dodger Stadium could add up to 33 minutes to trip time. Capital costs would be minimal, as existing RTD buses could be dispatched from the Downtown Central Bus Facility for Dodger Stadium events which generally occur outside of rush hour periods.

Pedestrian improvements, including escalators from the blufftop parking lots of Dodger Stadium to an existing pedestrian overcrossing of the Pasadena Freeway, could be linked to the College Street Station via pedestrian walkways. Capacities for a double-escalator, double-walkway configuration would be 16,000 persons/hour, or 29% of a sold out event at Dodger Stadium. The major advantage of this system is that there would be very little waiting for an escalator before or after an event, and walking time compares favorably with other technologies when waiting times are accounted for. Costs for this alternative would be $2 to 5 million.

A more detailed description of the alternatives is provided beginning on page 7 of this document. A more detailed comparison of the alternatives is provided beginning on page 25.

Supplemental A[illegible]467

Route	Dodger Stadium Mode/Assumptions	Peak Exiting Capacity persons/hour* (% of Dodger Stadium capacity)	Exiting, Boarding, & Travel Time to Pasadena Line**	Route Length* (1-way: Stadium Mid-Station to Pasadena Line)	Order of Magnitude Costs	Notes
A	**Shuttle Bus** • DASH or RTD extension • 60 persons / bus • 30-second headway	7,200 / hour (13% of capacity)	43 minutes	A1 = 7,500' (1.4 miles) A2 = 8,500' (1.6 miles) A3 = 9,500' (1.8 miles)	minimal capital costs	Assumes use of RTD & DASH buses, personnel and maintenance facilities.
B	**AGT Shuttle** • grade separated • double guideway • 90-second headway • 6-car trains	18,000 / hour (32% of capacity)	17 minutes	B1 = 4,400' (.83 miles) B2 = 4,300' (.81 miles)	$20-25*** million	B1 requires guideway construction to flatten grades at freeway crossing.
C	**LRT Spur** • grade separated • double guideway • 3-minute headway • 3-car trains	14,000 / hour (25% of capacity)	25 minutes	7,500' (1.4 miles)	$50-55*** million	Some grading required to flatten grades along Stadium Way South.
D	**Gondola Tram** • 2 125-passenger cars	2,800 / hour (5% of capacity)	92 minutes	2,800' (.53 miles)	$12-15 million	Roosevelt Island Aerial Tramway costs escalated from 1975 costs of $6.25 million. The length of the Roosevelt Island tramway is 3,100 feet.
E	**Escalator/Walkway**	Escalator: 16,000 / hour (29% of capacity) Escalator + Stairway: 24,000 / hour (43% of capacity)	23 minutes	600' (escalator) 4,500' (.85 miles) (stadium to station)	$2-5 million	Length of escalator is 600 feet with 200 feet of elevation gain.

* See Chapter 2.0 for discussion of technology, capacity, and route length assumptions.

** Total time to move more than 4,000 riders from Dodger Stadium to Pasadena Line following an event. (See Table 3, Section 3.2 for discussion of exiting, boarding and travel times.)

*** Costs are typical per mile costs for aerial guideway systems. Costs are not included for stations, rail maintenance and storage. Such capital costs should be considered order-of-magnitude costs for initial comparison of alternatives only. Further engineering and route refinement study is required for more detailed cost estimates.

1.0 *PURPOSE AND NEED FOR THE PROJECT*

1.1 PROJECT BACKGROUND

Dodger Stadium is a nationally known 56,000 seat baseball and multi-function sports, concert and outdoor exhibition facility located in Chavez Ravine north of Downtown Los Angeles. The Stadium was opened in 1962, to provide a new home for the Los Angeles Dodgers baseball franchise, which had recently relocated to Los Angeles from New York and had been temporarily playing in the Los Angeles Memorial Coliseum at Exposition Park. Dodger Stadium plays host to at least 81 major league baseball games per year between April and October as well as numerous concerts and exposition events. Recent events, in addition to baseball, have included a rock concert by David Bowie, religious gatherings, and a Recreational Vehicle & Boat Show. Annual attendance for baseball is greater than 2 million spectators.

As shown in Figure 1, Dodger Stadium is located on a blufftop overlooking Downtown Los Angeles and is well served by highways (Pasadena, Hollywood and Golden State Freeways) and arterial roadways (Stadium Way, Academy Road). During events at the Stadium, the public is directed into parking lots at five different access points. Parking is provided for upwards of 20,000 vehicles in parking lots surrounding the Stadium.[1] Additionally, charter bus parking is provided at a central location within the parking lot area.

[1] Estimate is based upon ±175 acres of surface parking at 350 sq. ft./ vehicle.

Supplemental A[illegible]471

Transit service in the vicinity of Dodger Stadium is provided by SCRTD via surface bus routes in Chinatown and Elysian Park. As shown in Figure 2, this service is supplemented by DASH service (Downtown Area Shuttle) and three new rail transit projects scheduled for completion between 1990 and 1998.

Dodger Stadium is located one mile west of the adopted route of the Pasadena Light Rail Line. This project is scheduled for completion in 1998 with a station to be located in Chinatown, near the intersection of Spring Street and College Street. Since a Dodger Stadium Station was not possible along the Pasadena Line route, alternative means of connecting Dodger Stadium to the future Pasadena Line rail transit station have been analyzed in this report. In addition, the Metro Red Line, serving LA Union Passenger Terminal (LAUPT), Civic Center, 5th & Hill, 7th & Flower, and Wilshire & Alvarado is scheduled to open in 1993. Metro Blue Line service between Downtown Los Angeles and Downtown Long Beach opened for service in July 1990. RTD has recently commenced service on Line #635, which provides service between the Metro Blue Line Pico Station and Dodger Stadium. Direct connection by RTD buses is provided starting 2 1/2 hours prior to each game and 15 minutes following the end of a game.

DASH service has been expanded in the downtown area with two routes. Route B presently runs along Hill Street and North Broadway in the vicinity of Dodger Stadium.

Providing transit access to persons attending events at Dodger Stadium will be the primary purpose of the Dodger Stadium Connector. The connector would ease traffic congestion before and after events at the Stadium and could attract additional attendance to these events by providing convenient access from Chinatown, downtown and the rest of the metropolitan region for those who cannot or do not wish to drive to the ballpark.

Supplemental A[illegible]473

1.2 PROJECT ALTERNATIVES

A major constraint to the provision of transit service to Dodger Stadium is the hilly terrain surrounding the Stadium blufftop location. Dodger Stadium is located between 200-300 feet above the surrounding urbanized areas, and any connector route would need to negotiate the steep slopes on the south and east faces of the blufftop parking area. Several alternative routes and technologies were examined to determine their ability to serve as transit connectors between the Dodger Stadium and the Pasadena Line. As shown in Figure 3, five generic profile and technology options were identified for study:

Route A
Shuttle Bus Service: An at-grade bus shuttle that would provide service between the College & Spring Station and the loop road of the Dodger Stadium parking lots. Service would either be direct from downtown via DASH, or via the College & Spring Station where transit riders would change from LRT to shuttle buses.

Route B
AGT Shuttle: An automated guideway transit shuttle that would provide service between the College & Spring Station and Dodger Stadium via either Bernard Street or Cottage Home Street and Stadium Way East.

Route C
LRT Spur: An elevated spur track from the Pasadena Line that would allow LRT trains to be diverted from the Pasadena line in the vicinity of the College & Spring Station to provide service to a Dodger Stadium Station via an elevated guideway along Bernard Street and Stadium Way South.

Route D
Gondola Tramway: Similar to the Palm Springs Aerial Tramway, this alternative would utilize an aerial cablecar system that would travel from the future Central City North Area, via Radio Tower Hill in Elysian Park, to Dodger Stadium. Such a transit mode would tend to serve as a visitor attraction in itself because of views of downtown Los Angeles, Dodger Stadium and Elysian Park.

Route E
Escalator: A pedestrian connection from the College & Spring Station through Chinatown and above the Pasadena Freeway to an escalator and/or stairway that would provide vertical connection to the Dodger Stadium blufftop parking lots.

GANNETT FLEMING

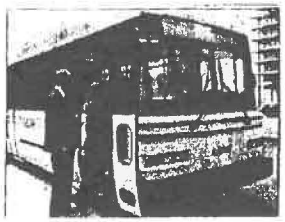
2.0 ROUTE AND TECHNOLOGY ALTERNATIVES

2.1 ALTERNATIVE A SHUTTLE BUS CONNECTORS

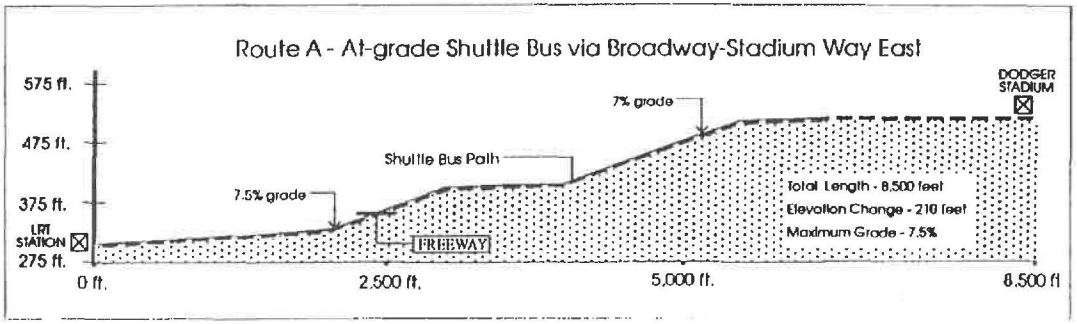
Shuttle bus service is currently provided from downtown Los Angeles to North Broadway and Hill Streets near Dodger Stadium via LA Department of Transportation DASH buses. These buses run approximately every ten minutes (more frequently in the midday hours) from 6:30am to 6:30pm Monday-Friday, and every 15 minutes from 10:00am to 5:00pm on Saturdays. The DASH shuttle fare is 25 cents. These buses run north bound on North Broadway, turn west on College Street to Hill, travel north on Hill to Bernard Street which is the end of the line. After layover along Bernard Street, DASH buses return to downtown via North Broadway.

As shown in Figure 4, extension of DASH shuttle service to include Dodger Stadium would be possible via a loop that would proceed up College Street to Stadium Way South, along the ring road of the Dodger Stadium parking area and back down Stadium Way East to North Broadway. Such a loop could provide service from the proposed College Street LRT Station on the Pasadena Line as well as direct service from downtown. During peak traffic periods at Dodger Stadium an alternate route down the hill could be utilized along Solano Avenue that would avoid heavy traffic congestion at Stadium Way East.

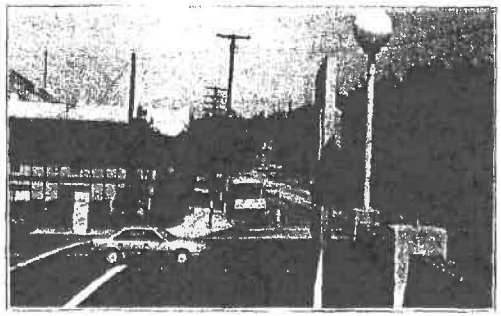
The one-way route length to the mid-point of the loop roadway is 7,500 feet via Stadium Way South, 8,500 feet via Stadium Way East and 9,500 feet via Solano Avenue. The steepest grades occur along the Stadium Way East segment where maximum grades of 7%-8% exist.



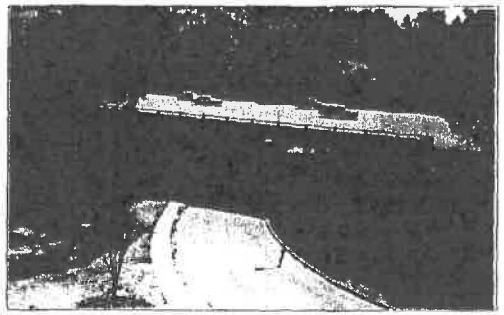
DASH Shuttle: *City Department of Transportation shuttles have been very successful in providing service to Downtown Los Angeles and other areas of the City.*



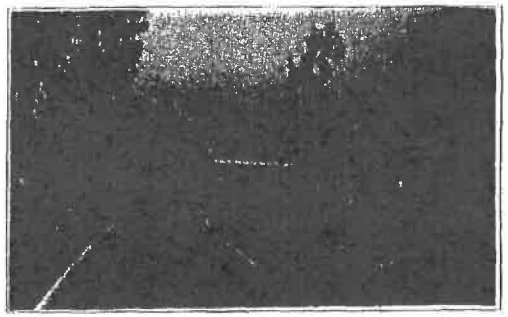
Supplemental AR 2476



North Broadway at Bernard Street:
DASH Shuttles currently layover on Bernard Street between North Broadway and Hill Streets.

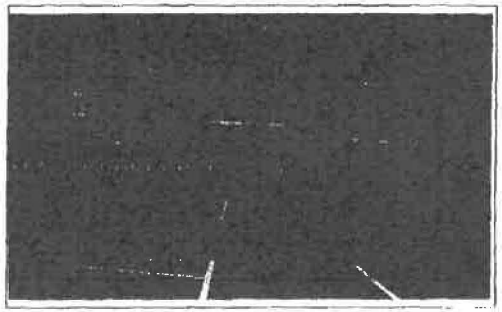


Stadium Way East crossing of Pasadena Freeway:
Access to Dodger Stadium is currently provided via Stadium Way East. This view shows the undercrossing of the Pasadena Freeway.



Dodger Stadium principal entrance on Stadium Way East:
The principal entrance to Dodger Stadium is from the east at the Pasadena Freeway. Direct freeway ramps converge on this entry which is heavily used during the periods immediately before and after stadium events. The high-rise structures of downtown Los Angeles are seen at the upper center of this photo.

Supplemental AR 2477



Dodger Stadium from parking lot #32:
Terraced parking is provided along a circular ring road surrounding Dodger Stadium. Transit buses could pick up/discharge passengers along this ring road, or conversely, a single transit stop could be provided at a central location in the parking area.

•

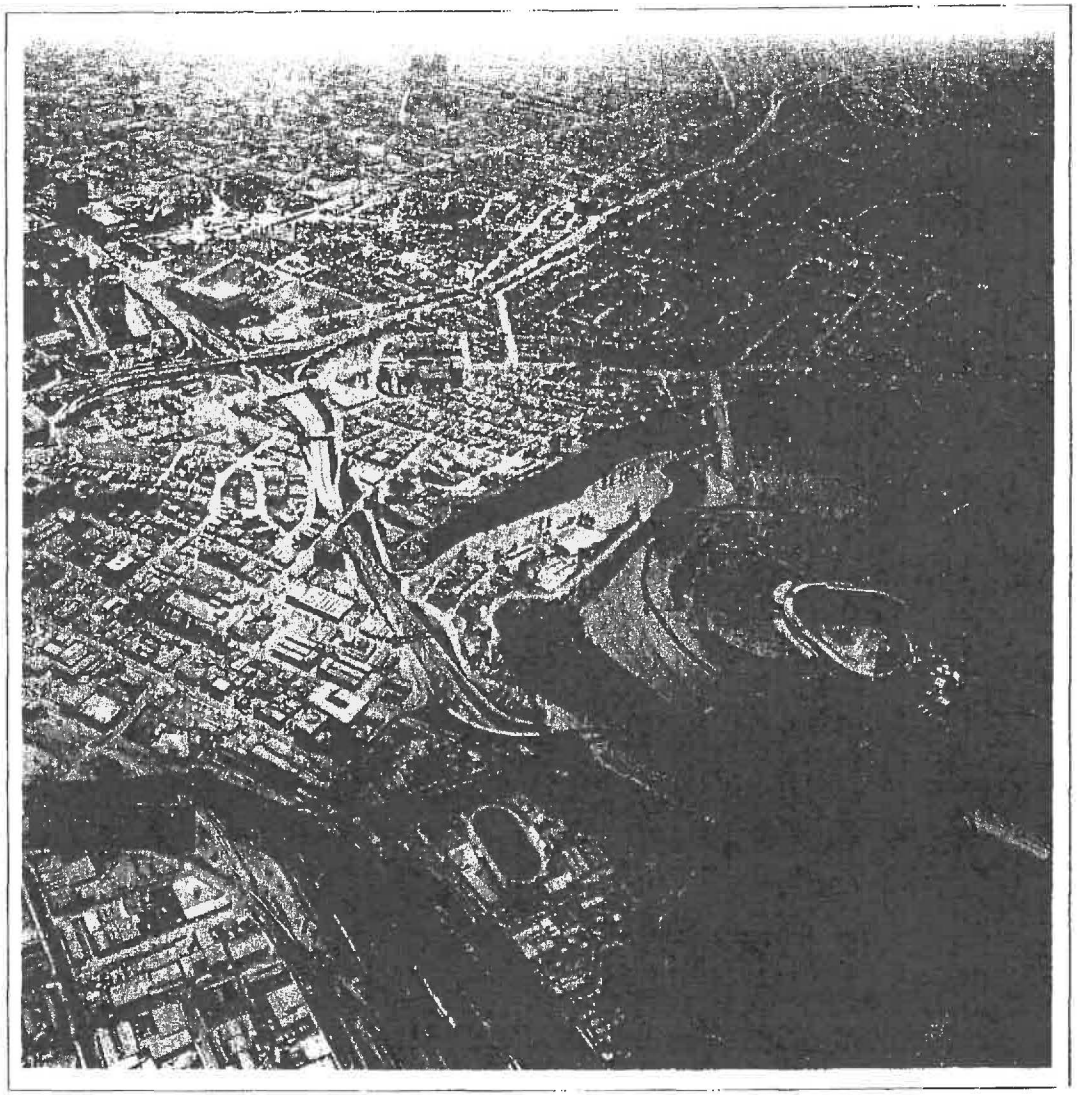
GANNETT FLEMING



Supplemental A[illegible]479

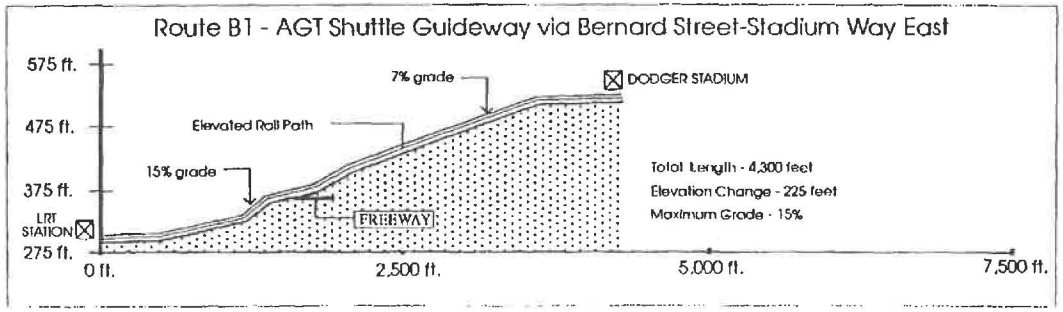
2.2 ALTERNATIVE B
AGT SHUTTLE

The most direct connector alternative between the Pasadena Line and Dodger Stadium would be via an Automated Guideway Shuttle that would run back and forth along Stadium Way East from the future College Street Rail Transit Station to Dodger Stadium.

Various types of AGT technologies are possible for this route including monorail systems, rubber tired people mover, and steel-wheel systems. A discussion of the various AGT technologies is included in Chapter 3 of this report. As shown in Figure 5, two alternative routes are possible; B1) from the College & Spring Street Station along Bernard Street to cross above the Pasadena Freeway, along the edge of Stadium Way East to Dodger Stadium; or B2) from the College Street Station along College Home Street to cross above the Pasadena Freeway, along the edge of Stadium Way East to Dodger Stadium. Once inside the Dodger Stadium parking area, the AGT line would run along the loop roadway with several station stops to allow pick-up and drop-off.

Because of steep slopes along Stadium Way East, light rail transit technology, which is being used on the Pasadena Rail Line, could not be used for this route. Maximum grades for light rail are approximately 6% and grades below Dodger Stadium on this route exceed 7%. Other technologies however, such as certain types of monorail can accommodate steeper grades than light rail technology and would therefore be more appropriate if this route were selected. Light

AGT Shuttle:
The Disneyworld monorail in Orlando, Florida is a type of AGT technology that provides shuttle service between hotels and activity centers within the amusement park.

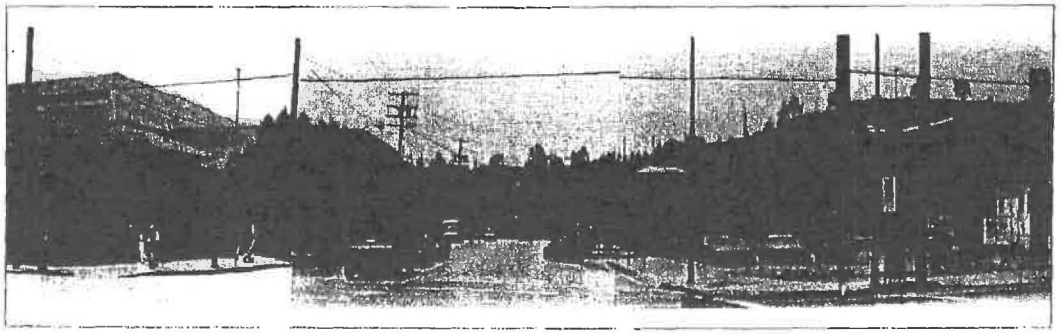


Note:
Smoothing of grades to reduce slopes for alternative B1 to less than 15% would result in a relatively high guideway structure on Bernard Street.

Supplemental AR 2480

monorail and other AGT technologies can generally handle grades of up to 8%-10%, which would make it possible to climb the 225 feet from the College & Spring Street Station to Dodger Stadium over the 4,300 foot length of this route. Mag-lev technology, such as the M-Bahn, Magnetic Transit of America prototype vehicle, can handle slopes of up to 10%, although practical applications of this technology have not been made to date.

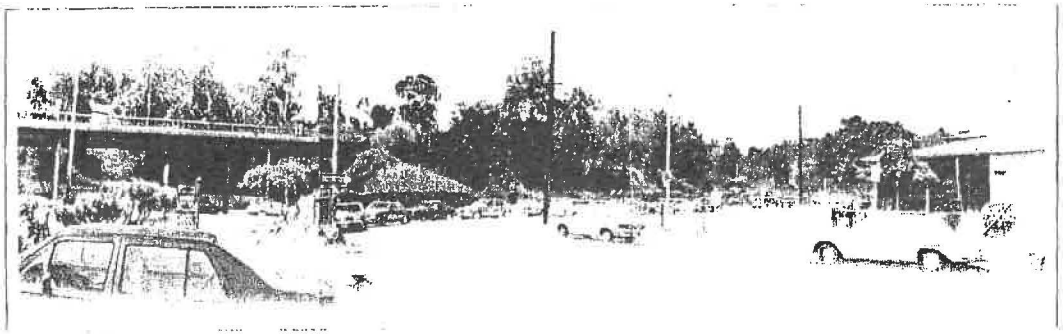
Under this alternative, the guideway would be totally grade-separated. The columns could be placed either in the middle or on the side of the street and would displace at least one traffic or parking lane from the street. Conversely, straddle bents would be utilized as the guideway support with no traffic lanes taken, but property displacements would occur on both sides of the street. The crossing of the Pasadena Freeway would require that columns be strategically placed resulting in a relatively high structure above the Chinatown segment of the route. Route B2 is slightly shorter and more direct than Route B1, however Route B2 is adjacent to Cathedral High School and numerous residential structures. Route B1 is slightly longer, however adjacent properties along Bernard Street are generally vacant or used for commercial purposes.



Route B1: This view looks west from North Broadway along Bernard Street. An elevated guideway would run along the center or side of Bernard Street where it would turn to the right to cross above the Pasadena Freeway. The bluff top parking lots of Dodger Stadium can be seen in the upper right of the photo.

Route B1:
At the intersection of Bernard Street and the Pasadena Freeway, the elevated guideway would turn to follow the northbound Dodger Stadium off-ramp, seen at the right of the photo. The guideway would climb at a 6% to 10% grade in order to gain 225 feet of elevation between North Broadway and Dodger Stadium.

Route B2:
This view looks toward Dodger Stadium from North Broadway along Cottage Home Street. The northbound Dodger Stadium off-ramp from the Pasadena Freeway can be seen against the bluff backdrop. An elevated guideway would run along the center or side of Cottage Home Street and would turn to the right to follow the freeway off-ramp up to Dodger Stadium.



At the intersection of Cottage Home Street and the Pasadena Freeway the elevated guideway would cross over the Pasadena Freeway (seen in the center of this photo) and join the northbound off-ramp, at the left of the photo.

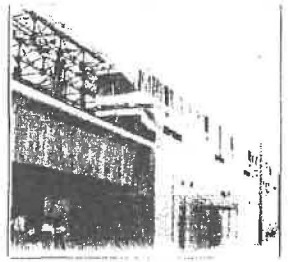
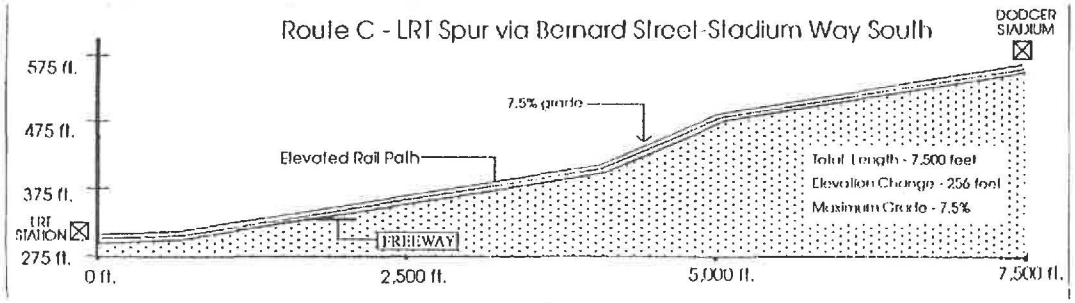
2.3 ALTERNATIVE C
LRT SPUR

A spur track from the Pasadena Line would be possible to serve Dodger Stadium. As shown in Figure 6, such a spur track would branch north of College Street to cross above North Broadway and run along Bernard Street. At the Pasadena Freeway, a long-span structure would be required. The aerial guideway would climb along the south side of Stadium Way South. Near the Sunset Boulevard entrance to Dodger Stadium, the structure would curve along the backside of the south parking lot and cross over Stadium Way obliquely, crossing into the Dodger Stadium parking area. Once inside the Dodger Stadium parking area, the LRT spur line would run along the loop roadway with several station stops to allow pick-up and drop-off.

At 7,500 feet in length, this alternative is among the longest of the alternatives considered in this report. The greater length is necessary to accommodate the climbing characteristics of light rail technology. While this greater length adds to costs for this alternative, the use of the same technology as is being used on the Pasadena Rail Transit Project provides efficiencies in the service and maintenance of vehicles. Additionally, operational flexibility is afforded whereby extra trains could be added to serve special events at Dodger Stadium. It would even be possible for special "express" trains to run directly to Dodger Stadium from various parts of the rail network.



LRT Spur:
The Metro Blue Line which currently runs between Downtown Los Angeles and Long Beach has several grade separated stations and street crossings. Such grade-separation would be necessary along a spur track serving Dodger Stadium.



Note:
LRT technology can handle maximum slopes up to 6%. Therefore, some slope modifications would be required to maintain a constant grade of less than 6%.

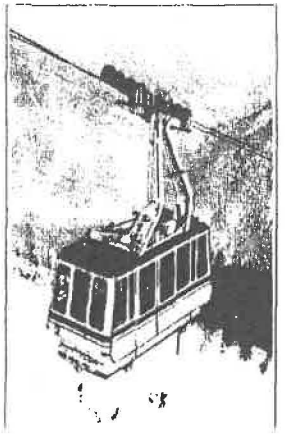
Supplemental AR 2487

2.4 ALTERNATIVE D
GONDOLA TRAM

The City of Los Angeles Planning Department has identified major re-use potential in the "Cornfield" railroad storage yards adjacent to North Broadway, along the route of the planned Pasadena Rail Transit Project. As a part of initial planning for redevelopment of this area, conceptual sketches illustrating possible future scenarios for the area show a gondola tramway connecting the heart of this redeveloped area to Dodger Stadium.

As shown in Figure 7, such a tramway could run from a central location in the planned Central City North Development Area to the top of Radio Tower Hill in Elysian Park, and then across the valley formed between Radio Tower Hill and the bluffs of the Dodger Stadium Parking area. A mid-station stop at Radio Tower Hill would open up this little used portion of Elysian Park to greater public use and at the same time, provide a scenic view point, picnic and recreation area. The closest application of a technology such as this in Southern California is the Palm Springs Aerial Tramway at Mt. San Jacinto. This system utilizes cable cars accommodating up to 80 persons and move up to 400 persons per hour to the top of a 6,000 foot incline. A more urban application of this technology is the Roosevelt Island Aerial Tramway in New York City. This system was constructed in 1976 and moves 1,500 persons per hour between midtown Manhattan and Roosevelt Island in the middle of the East River. Many ski resorts utilize smaller, 4-8 person gondola cars than run in a continuous series. Systems such as the 8 person gondola at Steamboat Springs, Colorado can accommodate up to 2,800 persons per hour.

Two obvious problems are: 1) accessibil-



Gondola Tramway: Ski resort technology has been adopted to amusement park and urban applications such as the Palm Springs Aerial Tramway and the Roosevelt Island Aerial Tramway in New York City.

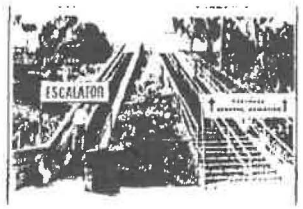
Supplemental A[illegible]489

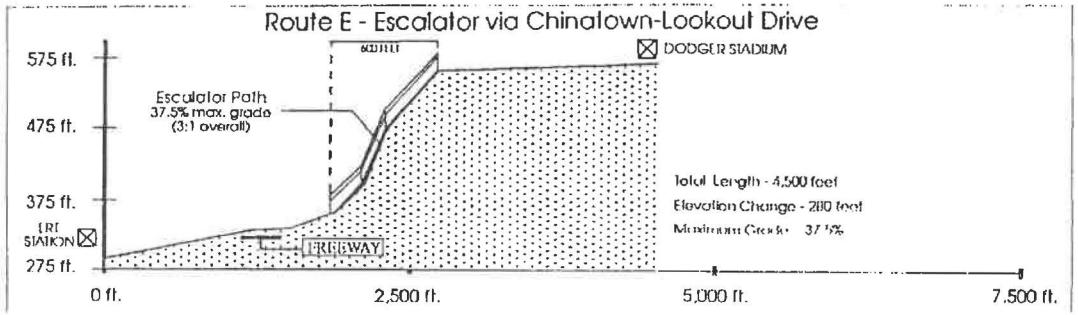
lly to the individual tower support locations, and 2) whether the soil bearing capacity and friction resistance will be great enough to support the tower foundations. Several towers and foundations will be required. Also, the structure at the beginning of the aerial tramway located in the existing rail yard will have to be a sizeable structure in itself to keep the maximum climbing grades to a minimum and provide adequate clearance over North Broadway. In order for this technology alternative to connect directly to the Pasadena-Los Angeles Rail Transit Project, a new station would need to be provided in the vicinity of North Broadway and the foot of Radio Tower Hill.

2.5 ALTERNATIVE E ESCALATOR /WALKWAY

Before and after events at Dodger Stadium, large numbers of people entering and exiting the parking facilities cause congestion and delay for attendees. A drawback with any transit technology is this peak loading phenomenon whereby up to 56,000 persons seek to enter or leave Dodger Stadium within a brief period of time before or after events. Any technology used will develop queues with people waiting to board trains, buses, or simply exit the parking lot in their cars. Because of this waiting time, many attendees would prefer to walk some distance rather than wait in lines. Because it is less than one mile from Dodger Stadium to the College Street Rail Transit Station, many people could reach the station on foot following major events faster than they could be conveyed by transit. For these reasons, this alternative provides high-capacity vertical circulation to assist pedestrians with the 280 foot grade change between Dodger Stadium and the Pasadena Line Station.



Dodger Stadium Escalator:
Escalators are presently used at Dodger Stadium to transport fans from different levels of the terraced parking lots. Additional use of such escalators would provide a high-capacity pedestrian route between the Pasadena Rail Line and Dodger Stadium.



Supplemental AR 2490

but allows them to walk or be conveyed on elevated moving walkways for the remainder of the route.

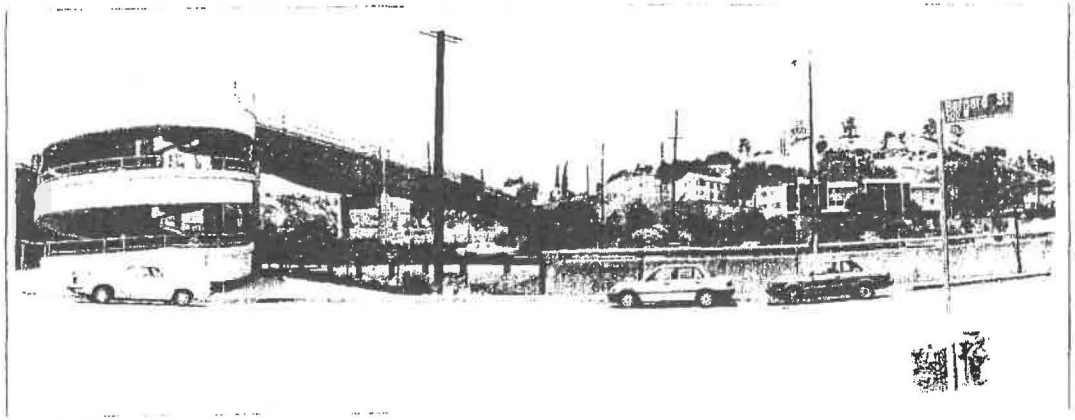
As shown in Figure 8, an existing pedestrian overpass above the Pasadena Freeway is provided at Bernard Street. It is less than 800 feet from this pedestrian bridge to the blufftop edge of Dodger Stadium parking lot #32, however there is a 200' rise in elevation over this same distance. Similar to the historic Angel's Flight inclined railway, an inclined escalator could provide automated pedestrian transport over this distance. Two 48" wide escalators would have a peak capacity of over 16,000 persons per hour. There is also very little waiting with this technology, thus allowing crowds to disperse quickly following events. At the foot of the Dodger Stadium hill, pedestrians would have a choice of routes between the pedestrian overcrossing and the College Street Rail Transit Station. An elevated walkway above Bernard Street could provide a automated walkway connecting directly to the rail transit station. Conversely, pedestrians could be directed through Chinatown where numerous restaurants, shops and pedestrian ammenities are provided. A further option would be to take a DASH shuttle from this point directly to downtown.

The total length from Dodger Stadium to the College Street Station would be 4,500 feet under this alternative, with an average walking time of 13 minutes. This is comparable to other alternatives such as LRT and AGT where waiting times during peak periods increase travel time. Also, passenger waiting following a game is

Perhaps the best views of downtown Los Angeles are to be had from Dodger Stadium. This view looks south from the edge of the blufftop parking lots, across the Pasadena Freeway and the existing pedestrian overcrossing, toward Chinatown and the Civic Center area. Alternative Route E would provide access up this hillside from the pedestrian overcrossing to allow pedestrian access from DASH shuttles and the Pasadena Line.

Supplemental A[illegible]491

psychologically perceived as being three to four times longer than actual waiting time.



The existing Bernard Street pedestrian overcrossing of the Pasadena Freeway is seen in this view. The overcrossing could be improved to provide a better, more interesting walking environment that would connect to an escalator/parkway connection to Dodger Stadium on the opposite side of the Pasadena Freeway. The blufftop Dodger Stadium parking lots are seen at the upper right of the photo.

Supplemental AR 2492

Route E:
From the pedestrian overcrossing of the Pasadena Freeway, an escalator similar to Angel's Flight on Bunker Hill could provide pedestrian access to the Dodger Stadium bluff top parking lots. A park-like landscaping theme would provide a walkway up the hill. Such a walkway could be designed with rest areas at viewpoints and picnic areas that could be used prior to stadium events. The walkway shown has been designed to maintain handicapped-accessible slopes.

Escalators / Stairways

Supplemental AR 493

3.0 *DEVELOPMENT AND INITIAL SCREENING OF ALTERNATIVES*

The previous chapter described a selected group of technologies that can provide automated transit connection between Dodger Stadium and the planned Pasadena Rail Line. The alternatives presented were chosen to represent a range of possible solutions. This chapter broadens the discussion to discuss a family of transit technologies that would be possible to evaluate in future route refinement, environmental and engineering studies. The chapter also provides additional discussion of the key factors affecting the selection of a technology to serve Dodger Stadium.

3.1 TOPOGRAPHIC CONSTRAINTS & DOWNTOWN CONNECTION COMPATIBILITY

Perhaps the key factor in the selection of a technology to serve Dodger Stadium are the steep slopes surrounding the Dodger Stadium parking lots that would eliminate many types of transit technology from consideration at the outset. Any technology to be considered for further evaluation would need to be able to climb grades in excess of 8% over the shortest and most direct route to Dodger Stadium on Stadium Way East, or over 6% for the longer, more gradual grade along Stadium Way South.

A second important consideration in the selection of any technology for further evaluation is the ability of that technology to interface with other transit systems that are existing or are being planned for the downtown area. The ability to connect Dodger Stadium to downtown Los Angeles directly has been mentioned in several planning studies dating from the Downtown People Mover in the early 1980's through current planning for the Bunker Hill Transit Tunnel/Downtown Circulator transit system. Technologies currently being evaluated for Downtown range from simple sidewalk improvements and moving sidewalk facilities, through cable driven technologies, rubber-tired automated systems (as have been used in many airports), steel-wheeled systems and advanced technology such as monorail and mag-lev systems. The following table provides a summary of the key characteristics of these systems and their general suitability to the topographic requirements of the Dodger Stadium connection.

Supplemental AR 2494

* Capacities based on 3-minute headways for applicable technologies.

Table adapted from *Bunker Hill Transit Study; Phase 2*, LADOT, LACRA, Schimpeler-Corradino Associates/Delon Hampton & Associates, June 1990.

GANNETT FLEMING

Technology	Typical Capacity* (Passengers / Hour)	Maximum Speed (mph)	Maximum Grades
Moving Sidewalk / Escalator	3,000 - 10,000	2	15% (Sidewalk) 50% (Escalator)
Rubber-Tired	3,000 - 15,000	30 - 50	10%
Steel Wheel / Light Rail	20,000	50	6 - 8%
Monorail: Top-Riding Understung	7,000 - 50,000 3,000	20 - 70 20	12%
Magnetic Levitation	9,000	50	8%
Cable-Driven	100 - 20,000	15 - 20	50% +

Supplemental A[illegible]2495

Moving Sidewalks/Escalators: Moving sidewalks are used at major airports to convey passengers between the terminal and boarding gates. They are also used at the Hollywood Bowl and at shopping centers such as the Beverly Connection in West Hollywood to convey passengers from parking areas to shopping and activity areas. Escalators are used outdoors in Downtown Los Angeles along the skybridges and plazas near Arco Plaza, the Bonaventure Hotel and the new First Interstate Tower. They are also used at many transit systems throughout the world including the future Metro Red Line stations in Downtown Los Angeles. Outside escalators are also used at Dodger Stadium to convey fans from different levels of the terraced parking facilities. Such systems operate continuously at about 2 miles per hour and because of their continuous operation, can carry large numbers of people. The actual capacity depends on the width of the walkway installed but ranges between 3,000 and 10,000 people per hour for each walkway provided. Moving sidewalks have limited applications for climbing grades with a maximum slope of about 15%. Escalators routinely handle 2:1 slopes exceeding 50%. Such a system has been identified as Route Alternative E in this study.

Rubber-Tired: Typical rubber-tired systems run on a dedicated right-of-way that is usually elevated in urban areas. Vehicles range in size from small minibus size to streetcar size and can usually be linked into trains of several cars to increase carrying capacity. The most common application to date has been at airports to serve remote terminal and boarding areas. Capacities range from 3,000 to 15,000 passengers per hour at speeds of between 30-50 mph. Such a technology could be used under the Automated Guideway Transit Alternative B in this report.

Steel Wheel Rail: Both the Metro Blue Line and Metro Red Line are steel wheel systems. The Metro Red Line is defined as a heavy-rail system utilizing large, heavy vehicles running on full weight rails. Heavy rail systems would not be appropriate to serve Dodger Stadium because of slope limitations associated with this technology. Light rail systems, such as the Metro Blue Line currently running between Downtown Los Angeles and Long Beach, have lighter vehicles and lighter weight tracks. They run at slower speeds, and are capable of negotiating tighter turns than heavy rail systems. The future Pasadena Rail Line will be such a light rail systems. Maximum climbing grades for light and heavy rail systems are about 6% for practical applications. This would preclude the use of this technology along Stadium Way East at Dodger Stadium and would necessitate the longer route along Stadium Way South described as the Route C alternative in this report.

Monorail: Southern Californians are familiar with monorail technology as one of the earliest applications was at Disneyland

Supplemental AR 2496

in the late 1950's. Since that time, monorail technology has progressed, and although only the Seattle World Fair and DisneyWorld monorail have been built in the United States, over 40 miles of urban route service is currently in operation in Japan. This technology requires approximately 1/3 of the structure of comparable LRT and rubber-tired elevated systems because of its relative light weight. Monorails can be configured as either top-riding or underslung. Top-riding monorails usually utilize a concrete or steel box beam, with a rubber-tired vehicle riding on top and guide wheels at the sides. Underslung monorail systems are similar in appearance to ski resort cable cars, with vehicles suspended below a single slender steel track. Vehicle size can range from small "personal" vehicles through heavy rail size cars. Train capacity ranges from 7,000 to 50,000 passengers per hour at speeds ranging from 20 to 70 mph. Medium capacity monorail systems can generally climb grades of 10-12% which would make them appropriate for use at Dodger Stadium along the shortest, most direct route along Stadium Way East. Such a system would be suitable as an Automated Guideway Transit (AGT) Alternative B in this report.

Magnetic Levitation: The "M-bahn" system in Germany is currently the only application of this technology although prototype systems have been demonstrated for several years. Mag-lev technology utilizes electromagnetic resistance to hold vehicles above the guideway, thereby providing smooth, frictionless travel. Mag-levs have high speed intercity application at speeds exceeding 300 mph, but have also been demonstrated to have lower speed downtown applications, such as the Japanese HSST urban maglev system. This system can handle grades of 8% which would be marginally acceptable for the route to Dodger Stadium.

Cable Driven: Two types of cable-driven systems exist for downtown urban applications. The first type can run on steel rails, rubber tires or other support mechanism and be pulled by cable. The second type is supported by an overhead cable and also driven by cable. These systems operate at relatively low speeds of 15-20 mph and have capacities that are generally limited to between 1,000 and 4,000 passengers per hour. Very few applications of this technology exist in the United States in urban areas, although the technology has been used extensively in ski resorts and amusement parks. Applications in downtown Los Angeles are generally being considered for the Bunker Hill Transit Tunnel over a distance of less than one mile. Because of the low speed, it would be difficult to achieve any effective linkage between Dodger Stadium and downtown Los Angeles using this technology. The Gondola Tram alternative D has been included in this study to provide a comparison with the other alternatives and because of its potential application

Supplemental A[illegible]497

In providing an attraction in its own right for the City North Development Area, Elysian Park and Dodger Stadium.

3.2 STADIUM EXITING, BOARDING & TRAVEL TIME

A unique feature of transit service at Dodger Stadium that would not occur to the same degree at other locations in the Downtown area, is the peak loading of any transit system that would occur following baseball games and other major events. Any technology used will develop queues with people waiting to board trains, buses or simply exit the parking lots in their cars. Table 3 presents a comparison of the technologies to determine waiting and travel times for the alternatives. In order to develop the analysis, the following assumptions were made:

• Average waiting times and travel times were developed based on the assumption that approximately 10% of an average crowd (40,000 attendees) would use transit to exit the stadium in the peak period following an event at the Stadium. This would mean that 4,000 persons would arrive and queue up at approximately the same time to board whatever mode of transit was provided. Waiting times were then calcuated based on the time that it would take each different transit mode to move 4,000 riders to the Pasadena Line Station at College and Spring Street.

• Typical transit technologies were selected to estimate system loading capacities. The following typical technologies were used:

Route A- Shuttle Bus: Standard RTD buses were assumed that can handle up to 60 persons per bus. Maximum headways of 30 seconds were assumed yielding a peak hour exiting capacity of 7,200 passengers per hour.

Route B- AGT Shuttle: A medium-capacity monorail technology was assumed. Such technologies could theoretically accommodate 90 second headways during peak periods configured in standard 6-car trains. Up to ten car trains would be possible, although such a configuration would require larger station platforms over 400 feet in length. 6-car train configurations would more closely match station platform lengths used on the Pasadena Rail Line and would accommodate up to 450 passengers per train. Boarding of 4,000 passengers would therefore require 10 trains, or 15 minutes.

Route C- LRT Spur: The light rail transit vehicle being planned for use on the Pasa-

DODGER STADIUM TRANSIT ACCESS STUDY

LOS ANGELES COUNTY TRANSPORTATION COMMISSION

•

GRUEN ASSOCIATES

•

G[illegible]NETT FLEMING

Supplemental A[illegible]499

deno Rail Line was assumed. Such vehicles can accommodate up to 237 riders per car configured in three-car consists. At 3-minute headways, boarding of 4,000 passengers would require 6 trains, or 18 minutes.

Route D - Gondola Tram: The Roosevelt Island Aerial Tramway in New York City was used as a comparable model for the Dodger Stadium system. Roosevelt Island utilizes two cablecars that travel over a distance of 3,100 feet. The Dodger Stadium route would cover a distance of 2,800 feet under similar conditions. Capacity of the New York system is about 1,500 passengers/hour. By increasing the size of the cablecars and increasing speeds, a peak hour capacity of 2,800 persons per hour could be achieved. At this rate of boarding, it would take 86 minutes to board 4,000 passengers following an event at Dodger Stadium.

Route E - Escalator Walkway: Two 48" wide escalators would accommodate up to 8,000 passengers/hour each, or 16,000 passengers/hour total. A stairway would also be necessary that would accommodate a similar number of walkers going down the slope following an event at Dodger Stadium would increase the total capacity to 24,000 persons/hour. At this rate, 4,000 persons arriving at the top of the escalator/walkway could be accommodated in 10 minutes.

From this analysis, it can be seen that the waiting time and boarding time is more critical in the evaluation of a connector system to Dodger Stadium than the actual travel time required to cover the one mile to the College & Spring Station. The AGT shuttle is both the shortest transit route, and the one requiring the shortest wait. The Escalator/Walkway Alternative however, compares favorably with other alternatives in total travel time due to the short route length and the short waiting time involved.

3.3 ENVIRONMENTAL ISSUES

Each of the alternatives considered would have environmental impacts associated with the construction and operation of these systems. A summary of potential environmental impacts associated with each alternative includes the following:

Route A - Shuttle Bus: The provision of an increased number of shuttle buses serving Dodger Stadium would add to congestion in Downtown and Chinatown during PM peak hour periods when evening rush hour traffic overlaps with pre-game arrivals at the Stadium.

Route B - AGT Shuttle: The construction of an aerial guideway structure along either Bernard Street or Cottage Home Street would require the reconstruction and re-

Supplemental AR 2500

configuration of a two-story parking structure located on the east side of North Broadway. The guideway structure would also require the displacement of one lane of traffic (probably a parking lane) on Bernard Street with Option B1 or Cottage Home Street with Option 2. Visual and noise impacts would be greater with Option B2 than with Option B1 due to the proximity of Cathedral High School and more residential structures along Cottage Home Street than along Bernard Street. Construction of the aerial guideway above the Pasadena Freeway could require some temporary lane closures during the construction period to allow for the placement of guideway beams. Depending upon the technology selected, and the type of grades that are possible, the height of the aerial guideway could potentially reach 30 to 40 feet in height due to clearance and grade requirements associated with the freeway crossing creating visual impacts for adjacent land uses in Chinatown.

Route C - LRT Spur: Environmental impacts of this alternative would be similar to Route B with regard to potential impacts along Bernard Street and at the crossing of the Pasadena Freeway. Additionally, this alternative would require some grading at the edge of the bluffs along Stadium Way South to allow for flattening of the grades of the LRT aerial guideway structure as it enters the Dodger Stadium parking lots.

Route D - Gondola Tram: This alternative would require the displacement of at least one home along North Broadway to allow for the cablecar right-of-way between the Central City North Development Area and Radio Tower Hill. The visual impact of the cablecars and their support towers would need to be evaluated for possible impacts to Elysian Park and adjacent residential properties on North Broadway.

Route E - Escalator Walkway: This alternative would require the displacement of one home on Lookout Drive to allow for the escalator/walkway right-of-way connection between the Dodger Stadium parking lot #32 and the pedestrian bridge crossing of the Pasadena Freeway.

3.4 NEXT STEPS

This initial feasibility study has presented several possible connector options between Dodger Stadium and the planned Pasadena Line Rail Transit Station at College and Spring Streets. Basic data involving technology, slopes, costs, and environmental factors have been reviewed.

Before further technical work can be undertaken, a review of the ideas presented herein should be undertaken between the Dodgers and affected local agencies. This would include the Los Angeles City Coun-

Supplemental A[illegible]501

cil, the Department of Transportation, the Los Angeles City Planning Department, the Los Angeles Community Redevelopment Agency, and Caltrans.

The provision of a transit connection would benefit the Dodgers by providing increased access to Dodger Stadium. Additionally, the connector could benefit others and other sources of funding may be available. Peripheral parking for Downtown Los Angeles is one potential benefit of the connector that could occur on weekdays when no events are scheduled at the Stadium.

Figures 9 and 10 on the following pages illustrate two of the potential connector concepts that have particular merit following initial screening. In the short term, the escalator walkway would permit pedestrian access to Dodger Stadium coupled with park enhancements in Elysian Park. In the longer term, the AGT Shuttle connector would provide high capacity direct transit that would link Dodger Stadium to Downtown Los Angeles and the entire 150 mile rail transit system under construction by the LACTC.. In tandem, these two alternatives could function together and provide an important urban link that would serve the Dodgers, the City, and the greater Los Angeles Region.

1. **Downtown Connector Proposal**

Tommy Hawkins met with Antonovich's staff recently regarding the Downtown Connector proposal. The proposal was originally prepared by Gruen Associates back in August, 1990. In the past, Mr. Hawkins has submitted the attached proposal to CRA, LADOT and MTA.

Mr. Hawkins, via Antonovich's office is requesting assistance from MTA to provide modeling/ridership numbers and to waive the service fee.

Per Jim de la Loza, providing modeling assistance at this time would not be feasible for the following reasons:

- current focus is on the Regional Transit Alternative Analysis modeling through October; and maybe through December.
- modeling is labor intensive and can take anywhere from two-four weeks to complete one scenario, depending on the number of variables involved.
- the lead modeler (Deng-Bang Lee) for the MTA left the organization via the last layoff. Planning has not replaced him with another individual. Keith Killough is now having to feel in while they go through a recruitment.

UCLA Mobility Lab

Study Finds Proposed Aerial Gondola to Dodger Stadium Will Do Little to Reduce Traffic and Emissions

October 24, 2022
University of California Los Angeles

Executive Summary

Los Angeles Aerial Rapid Transit (LA ART), a subsidiary of former Dodgers owner Frank McCourt's company McCourt Global, wants to build an aerial gondola to take people from Union Station to Dodger Stadium. Promoters of the gondola claim that it will take 3,000 polluting cars off neighborhood streets and the 110 freeway before and after Dodger games, leading to a net reduction in greenhouse gas emissions.

Transportation researchers from the University of California, Los Angeles (UCLA) examined these claims using a state-of-the-art transportation simulation model and found that the gondola could reduce traffic on major roads around Dodger Stadium on the night of a sold-out game, but the impact would likely be very limited. They found that the gondola likely would take only around 608 cars off the road. The gondola is thus unlikely to significantly reduce greenhouse gas emissions and traffic overall.

Methodology

The UCLA researchers — led by Dr. Brian Yueshuai He and Dr. Jiaqi Ma in the UCLA Mobility Lab at the UCLA Samueli School of Engineering — used the "LA Sim" model they created based on activity-based travel demand and agent-based simulation

models. The model is grounded in the theory of "discrete choice," for which Daniel F. McFadden won a Nobel Prize in economics in 2000. Based on real data about road network, traffic, public transportation, and other modes of moving around the city, including walking and bicycling, LA Sim simulates the individual choices that millions of travelers will make when something changes, such as adding another form of transportation, like a gondola to the Los Angeles transportation network.

The researchers caution that this simulation only models the probable use of the gondola for a sold-out night game and further research could reveal different scenarios for a day game or double-header, for example. But the research does model the most likely scenario for fans to choose the gondola — when traffic around the stadium is likely to be most heavy. Around 85% of baseball games played at Dodger Stadium are night games, starting at 7:10pm.

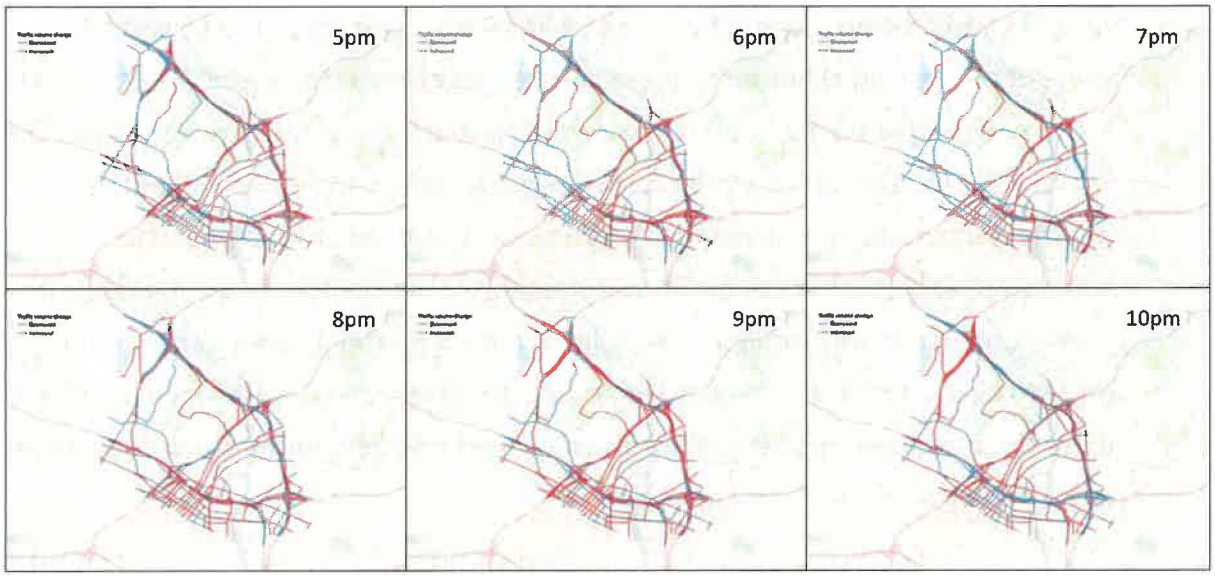

Figure 1: Traffic simulation results by the hour

Findings

- **Contrary to claims from LA ART, researchers found that the gondola would not significantly reduce traffic around Dodger Stadium.** Results showed the gondola would likely slightly reduce traffic on some roads around the stadium for a sold-out night game and increase traffic on others, leading to little

reduction in greenhouse gas emissions. The red lines in Figure 1 above indicate road segments that have a higher traffic volume after the proposed gondola is added to the traffic simulation. The blue lines indicate a decrease in traffic volume. According to the simulation, the total traffic volume would likely be reduced by around 0.9% (less than 1%) on the roads surrounding the stadium if the proposed gondola is built.

- **It's unlikely the gondola would contribute to a significant net decrease in greenhouse gas emissions.** Approximately 608 cars would be taken off the road, not nearly close to the 3,000 LA ART claims. Most of the people who choose the gondola in the simulation — 4,470 —board the gondola at Union Station, with another 220 passengers boarding at a station proposed to be located at Los Angeles State Historic Park near Chinatown. With only 4,690 people taking the gondola in total and of those 2,500 estimated to be regular users of the Dodger Stadium Express clean energy buses there would only be 2,190 new people taking public transportation to the game using the gondola. The average car parking at the stadium carries 3.6 people, which means that the approximate number of cars taken off the road would be around 608. The simulation only models the number of passengers connecting to the gondola via public transportation, on foot or by bike. It does not model people who would drive to Union Station or Chinatown to take the gondola. However, people who drive to those stations to take the gondola would not contribute to a net reduction in traffic or greenhouse gas emissions.

- **The gondola would carry fewer passengers than LA ART has claimed.** LA ART originally claimed that the gondola could carry up to 5,000 passengers per hour on game days. Researchers found that the gondola is likely to carry fewer than a total of 5,000 passengers to Dodger Stadium — 4,690 according to the simulation — even when the service is provided free with a game ticket for a sold-out night game like the playoffs. In a recent parking study, LA ART revised their claim, estimating that 6,000 would ride the gondola to games by 2026, with

4,350 arriving to the gondola via public transportation. The project's Draft Environmental Impact Report contains the same estimate, which corroborates the UCLA estimate of ridership if the gondola were in operation today.

- **Fewer people would take the gondola after the game – resulting in more traffic and emissions.** In the simulation, some fans — around 2,500 — seem to switch from the free Dodger Stadium Express buses to the gondola on the way from Union Station to a sold-out game, reducing the use of that service by close to half of the passengers it has carried to playoff games in the past. But about half of those passengers — more than 1,000 — seem to switch back to the Dodger Stadium Express on the way home, perhaps to avoid having to wait for a gondola car. Only 1,380 fans take the gondola on the way home in the simulation. This suggests that fans are unlikely to wait in line for the gondola after the game, instead taking the Dodger Stadium Express or perhaps opting for a ride-share, which would increase traffic and greenhouse gas emissions after the game.

- **Few people would use the gondola as a form of transportation other than to get to or from games.** The simulated use of the gondola during the daytime before the game suggests that very few people would use it as a form of transportation outside of getting to and from games: in the simulation, only 60 people — around one gondola carload — traveled to Dodger Stadium during the day, and only 140 passengers traveled from the stadium to Chinatown or Union Station during the day.

- **The model produced very similar results at different costs for a gondola trip.** LA ART previously announced that a gondola trip would cost $15. Later, they announced that game ticket holders could ride the gondola for free. They have also said that local rides could be purchased for a standard Metro fare. The researchers modeled two scenarios: 1) $10 for residents and free for game ticket holders, and 2) free to the public, and found very little difference in the results, indicating that residents are more likely sensitive to travel time rather

than cost. One key factor is that the service area of the gondola is limited and may not attract residents to choose it for daily travel.

About the Researchers

Dr. He is an Assistant Research Scientist at the UCLA Mobility Lab. He has extensive experience in big data analytics, transportation system analysis, and transportation policy evaluations. In the scope of cyber-physical systems, his research enables interactions between the physical infrastructure and virtual cyber systems by adopting data-driven techniques to support long-term urban system planning, management, and decision-making.

Dr. Ma is an Associate Professor in the UCLA Samueli School of Engineering and Associate Director of UCLA Institute of Transportation Studies. He has led and managed many research projects funded by U.S. DOT, NSF, state DOTs, and other federal/state/local programs covering areas of smart transportation systems, such as vehicle-highway automation, Intelligent Transportation Systems (ITS), connected vehicles, shared mobility, and large-scale smart system modeling and simulation, and artificial intelligence and advanced computing applications in transportation. He is an Associate Editor of the IEEE Transactions on Intelligent Vehicles and IEEE Open Journal of Intelligent Transportation Systems and Journal of Intelligent Transportation Systems. He is Member of the Transportation Research Board (TRB) Standing Committee on Vehicle-Highway Automation, Member of TRB Standing Committee on Artificial Intelligence and Advanced Computing Applications, Member of American Society of Civil Engineers (ASCE) Connected & Autonomous Vehicles Impacts Committee, Co-Chair of the IEEE ITS Society Technical Committee on Smart Mobility and Transportation 5.0.

Mr. Doug Carstens
Chatten-Brown, Carstens & Minteer, LLP
2200 Pacific Coast Highway, Ste. 318
Hermosa Beach, CA 90254

SUBJECT: Review of Draft EIR for the Los Angeles Aerial Rapid Transit Project

Dear Mr. Carstens:

Environmental Audit, Inc. (EAI) has reviewed portions of the October 2022 Draft Environmental Impact Report (Draft EIR) for the Los Angeles Aerial Rapid Transit (LA ART) Project in the City of Los Angeles prepared by AECOM for the Los Angeles County Metropolitan Transportation Authority (Metro).

Sections of the Draft EIR that we have reviewed include:

- Executive Summary
- Chapter 2 – Project Description
- Chapter 3.3 – Air Quality
- Chapter 3.6 – Energy
- Chapter 3.8 – Greenhouse Gas Emissions
- Chapter 3.11 – Land use and Planning
- Chapter 3.17 – Transportation
- Appendix A – Scoping Report
- Appendix B – Construction Assumptions
- Appendix D – Air Quality and Health Risk Assessment Technical Report
- Appendix H – Energy Technical Report
- Appendix J – GHG Technical Report
- Appendix N – Transportation

GO17-186

The following are our comments.

1. GENERAL COMMENT

The Draft EIR indicates that the tramway will move 5,000 people per hour, with 30-40 people per gondola. If that is correct, a total of approximately 143 gondolas per hour would be needed (35 people

GO17-187

x 143 gondolas = 5,005 people). To transport that many gondolas, a gondola would need to arrive, load and leave every 20 to 30 seconds. Each time a gondola arrived at Dodger Stadium, it would also have to empty every 20 to 30 seconds. This timing does not allow for the additional time required for children, the elderly or handicap people and would be difficult, if not impossible to achieve. These assumptions are overly aggressive and lead to an overestimate of the number of people that would use the LA ART as an alternative to driving vehicles or using other forms of transportation.

cont'd GO17-187

2. AIR QUALITY

- The air quality and GHG emission benefits of the project have been overstated. The mobile emissions take credit for non-Project (regulatory) related emissions reductions for future years. This misrepresents the actual impacts of the proposed Project. The actual analysis should only receive reductions for changes created by the proposed Project. For example, the proposed Project claims a reduction in vehicle miles travelled, therefore, emissions reductions were directly attributed to the proposed Project. This would be a correct application of reductions from the proposed Project. However, the proposed Project also compares 2019 mobile emission factors to 2026/2042 emissions factors. The latter emission factors get the benefit of regulatory/technology changes not related to the proposed Project. This mistakenly credits the proposed Project with emissions reductions that are not created by the proposed Project. Instead, the analysis should have used the same basis (emissions factors) to show the real impacts from the proposed Project, without influence from external sources (e.g., unrelated regulations).

GO17-188

- The haul trips to move soil during construction activities were based on 20 miles per trip. If any hazardous soil is encountered during the excavation, the mileage could be grossly inadequate since contaminated soil needs to be hauled to a hazardous waste facility, the closest of which is Clean Harbors in Buttonwillow, California approximately 140 miles from Union Station. Further, it is likely that the project construction team would know the distances to the landfills that will be used for clean soil. The likely landfills for clean soil in the area are the Azusa (21.7 miles from Union Station), Chiquita Canyon (40 miles from Union Station), and Simi Valley Landfills (42 miles from Union Station). The air quality impacts associated with these construction activities must be revised and updated with accurate assumptions.

GO17-189

- Emissions for the gondola operations are shown as a negative number (Table 4-8 of Appendix J), which is disingenuous. It would be understandable to calculate the potential emissions from the electricity use then apply GHG credits for a mitigation measure, but showing the value as a negative number implies the proposed Project is generating the GHG credits, which is false.

GO17-190

- Emissions for the backup battery system are shown as a negative number (Table 4-10 of Appendix J). The same logic applies. The proposed Project is not generating GHG credits for using backup batteries. Using battery power instead of diesel should be a mitigation measure.

- The DEIR relies on the 2016 AQMP, which is outdated. The 2022 AQMP has been drafted and is scheduled to be approved by the SCAQMD Governing Board on December 2, 2022. (Appendix D). GO17-191

3. ENERGY

- Appendix H Energy Technical Report (page 22). The Draft EIR indicates that electricity will be supplied using the LADWP's Green Power Program, indicating that the primary electricity for the project would come from renewable energy sources. As this is one of the primary ways the project is minimizing increases in GHG emissions, an enforceable mitigation measure must be provided to ensure this project assumption is enforced. GO17-192
- Section 3.0 of the Draft EIR indicates that the environmental setting is the physical conditions in the vicinity of the proposed project at the time of publication of the Notice of Preparation (NOP), which was October 1, 2020. However, data used to calculate baseline conditions varies. For example, 2019 was considered to be the baseline conditions for the energy analysis (see page 3.6-13). The Draft EIR must explain the appropriate environmental setting and why the impact analysis for different resources used different years. Further data regarding the existing fuel consumption was based on 2016 data, which is at least 8 years old (see page 3.6-13) and not consistent with the release of the NOP. GO17-193
- Page 3.6-15: The DEIR indicates that construction would result in a demand of approximately 864,544 kWh of electricity. Please provide the assumptions used to calculate the electricity use during construction. GO17-194
- DEIR page 3.6-15 and Appendix H: The DEIR states that the Project's construction electricity use represents a small percentage of regional estimates for the LADWP. It further states that: "The CEC estimates that energy demand in the LADWP planning area will increase to approximately 27,000 to 28,000 GWh in the 2024 to 2026 timeframe, meaning the proposed "project's demand contribution in that period would be approximately 0.002 percent of the projected demand." (see DEIR page 3.6-15). According to the footnote, the peak demand for LADWP is based on a CEC reference from 2016 and used data from 2015. With the move toward renewables and the problems that the electricity grid had maintaining electricity during peak demand periods in 2022, more recent data should be used. Further, for the same reason, the DEIR should explain whether the LADWP has excess RENEWABLE electricity available for the proposed project. Per the DEIR assumptions, it is assumed that all electricity use associated with the operation on the project will be renewable. A mitigation measure should be developed to enforce this assumption. GO17-195

  Further, the DEIR indicates that the peak demand in the LADWP planning area is expected to reach 6,400 to 6,500 MW in the 2024 to 2026 timeframe. Please note that the LADWP reports that the record peak demand was 6,502 MW on August 31, 2017.[1] Therefore this peak demand has already been reached and the data provided in the DEIR is not valid, likely because the GO17-196

FN GO17-194 [1] LADWP Facts and Figures. https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-power/a-p-factandfigures?_adf.ctrl-state=10n9mool8q_4&_afrLoop=494270252036354

information used for the baseline is outdated. The potential energy impacts are significant as LADWP does not currently have the excess electrical supply capacity to provide electricity to the proposed project.

cont'd GO17-196

Further evidence of the use of an inappropriate baseline is the Proclamation of a State of Emergency signed by Governor Gavin Newsom on August 31, 2022. The Proclamation declared that immediate action was required to reduce the strain on the energy infrastructure and increase energy capacity during the Extreme Heat Event (late August through early September, 2022). The California Independent System Operator (CASIO) forecasted high electric demand due to the extreme heat event with peak load projected to exceed 48,000 MW and which would exceed the available electricity.[2] Further, this event was classified as an "emergency event" which allowed existing portable generators (including diesel generators) to operate under emergency conditions, regardless of any permit conditions.

GO17-197

- Page 3.6-16. The DEIR indicates that the proposed project would result in electricity demand of approximately 6.9 GWh/year and dismisses the impact because the electricity increase would be 0.002 percent of the projected statewide demand in 2026. However, currently the electricity demand is not sufficient to meet current demands during peak electricity use periods (e.g., hot summer months). The DEIR should compare the proposed project's electricity use with the current electricity generation by LADWP, since LADWP will supply electricity to the project beginning in 2026 first. There is currently not sufficient electricity to power the grid during high or extreme heat periods. The impacts on the electricity system should not only be compared to the projected electricity production in 2042 (which may or may not actually occur).

GO17-198

- Assumption regarding the use of transit service. The DEIR assumes that ridership for transit will increase (need page no.). Since 1990, the SCAG region added over 100 miles of light and heavy rail in Los Angeles County and over 530 miles of commuter rail region-wide. These investments have not been matched by increases in transit ridership. Transit ridership in the southern California area reached its peak in 1985 and has been mostly declining since 2007, and has fallen consistently since 2013.[3]

  Further, about two percent of the population rides transit very frequently (averaging 45 trips/month), another 20 percent of the population rides transit occasionally (averaging 12 trips/month), and more than three-quarters of SCAG-region residents ride transit very little or not at all (less than 1 trip/month).

GO17-199

A defining attribute of regular transit riders is their relative lack of private vehicle access. Between 200 and 2015, households in the SCAG region, and especially lower-income households, dramatically increased their levels of vehicle ownership. Census data show that

GO17-200

FN GO17-195 [2] https://www.gov.ca.gov/wp-content/uploads/2022/08/8.31.22-Heat-Proclamation.pdf?emrc=78e3fc

FN GO17-197 [3] UCLA Institute of Transportation Studies, prepared for the Southern California Association of Governments, January 2018. Available at: https://scag.ca.gov/sites/main/files/file-attachments/its_scag_transit_ridership.pdf.

from 1990 to 2000, the region added 1.8 million people but only 456,00 vehicles (or 0.25 vehicles per new resident). From 2000 to 2015, the SCAG region added 2.3 million people and 2.1 million vehicles (or 0.95 vehicles per new resident). The results strongly indicated that increasing private vehicle access helped depress transit ridership. Further car ownership gas grown fastest among the most frequent transit riders.

From 2012 to 2016 the SCAG lost 72 million annual rides on public transportation. In addition, while fares on LA Metro's trains and bus have decreased, ridership has also decreased.[4]

cont'd GO17-200

The Green Power for Green LA program gives LADWP customers the opportunity to replace electricity from polluting power plants with energy generated from renewable resources like sun, wind and water. For a slightly higher price than power generated from conventional sources such as coal and oil, the program allows residential customers to choose 100 percent renewable energy with 20 percent coming from new sources. The Green Power for a Green LA Program has been offered since May 1999.

GO17-201

Please call Debbie Bright Stevens at 714/632-8521, extension 241, if you have any questions or need additional information.

Respectfully submitted,

DECLARATION OF COVENANTS, CONDITIONS, RESTRICTIONS AND EASEMENTS FOR CHAVEZ RAVINE

THIS DECLARATION OF COVENANTS, CONDITIONS, RESTRICTIONS AND EASEMENTS FOR CHAVEZ RAVINE ("**Declaration**") is made this 30th day of April, 2012 ("**Effective Date**"), by and among BLUE LANDCO LLC, a Delaware limited liability company ("**Landco**") and LA REAL ESTATE LLC, a Delaware limited liability company ("**Stadium Owner**"). Landco and Stadium Owner may be referred to herein individually as a "**Party**" and collectively as the "**Parties**".

RECITALS:

A. As of the date hereof, Landco owns that certain real property located in the City of Los Angeles, County of Los Angeles, as more particularly described in **Exhibit A** attached hereto (collectively, the "**Landco Parcels**"). The Landco Parcels consists of (i) two (2) parcels, which parcels are referred to herein individually as "**Parcel 2**" (as more particularly described in **Exhibit A-1** attached hereto) and "**Parcel 3**" (as more particularly described in **Exhibit A-2** attached hereto), plus (ii) certain additional parcels (as more particularly described in **Exhibit A-3** attached hereto) ("**Outlying Parcels**") which are within the vicinity of Parcel 2 and Parcel 3. As of the date hereof, Parcel 2, Parcel 3 and certain of the Outlying Parcels are primarily used for surface parking lots and related improvements to support the Stadium. Parcel 2 also contains a portion of that certain loge terrace bar, which is an integral part of the "Stadium," as that term is defined in Recital B, below, and depicted on **Exhibit A-4** attached hereto (the "**Loge Terrace Bar**"); provided that, notwithstanding the location of a portion of the Loge Terrace Bar onto Parcel 2, for so long as the Loge Terrace Bar remains in existence, the same shall be treated hereunder as part of the Stadium and as if it were entirely situated on the "Stadium Parcel," as that term is defined in Recital B, below, including, without limitation, that all revenues generated from the Loge Terrace Bar belong solely to the Stadium Owner and/or the "Team," as defined in **Article I**, below, as applicable (and in no event shall Landco have any right, title or interest in such revenues notwithstanding that a portion of the Loge Terrace Bar is actually located on Parcel 2). Any terms used in these Recitals A, B, C and D but not otherwise defined in these Recitals A, B, C and D, shall have the meanings as set forth in this Declaration.

B. As of the date hereof, LA Real Estate LLC, a Delaware limited liability company, owns that certain real property located in the City of Los Angeles, County of Los Angeles, as more particularly described in **Exhibit B** attached hereto (the "**Stadium Parcel**"). The Stadium Parcel consists of one (1) parcel referred to herein as "**Parcel 1**," on which presently exists certain improvements consisting primarily of the baseball stadium commonly known as "Dodger Stadium" (the "**Stadium**"). The term "**Project**" shall refer collectively to the Landco Parcels and the Stadium Parcel. A site plan of the entire Project (i.e., the Landco Parcels and the Stadium Parcel) is attached hereto as **Exhibit C** ("**Site Plan**").

C. The Parties acknowledge that the Landco Parcels and the Stadium Parcel are separately owned, and accordingly, the Parties desire to (i) provide the Stadium Parcel with certain rights to park vehicles on the Landco Parcels, (ii) facilitate the orderly development of the

Landco Parcels, and (iii) agree to other terms and conditions regarding the Parties' rights and obligations with respect to the Parcels.

D. The Parties further acknowledge that Stadium Owner shall initially be responsible to operate and maintain the entire Project, as more particularly set forth herein, and that responsibility to operate and maintain the portion of the Project consisting of the Landco Parcels (subject to Stadium Owner's rights set forth herein) shall be partially transferred to Landco upon the completion of construction of the first "Parking Structure" containing any of the "Required Parking Spaces," as each of those terms is defined in Article I, below, and entirely transferred to Landco once all or substantially all of the Required Parking Spaces are located in Parking Structures, all as more particularly set forth herein.

ARTICLE I

DEFINITIONS

The terms defined in this Article I shall, for all purposes of this Declaration, have the meanings herein specified (and any capitalized terms set forth in the following definitions shall have the meaning set forth in this Declaration).

1.1 "2012 Charge" shall have the meaning set forth in Section 5.4.1, below.

1.2 "AAA" shall have the meaning set forth in Section 13.2.2, below.

1.3 "Added Owner" shall have the meaning set forth in Section 11.1, below.

1.4 "Additional Parking Spaces" shall have the meaning set forth in Section 5.1.1, below.

1.5 "Annexation" shall have the meaning set forth in Section 11.1, below.

1.6 "Anniversary Date" shall have the meaning set forth in Section 5.2.4.1, below.

1.7 "Arbitrator" shall have the meaning set forth in Section 13.2.2, below.

1.8 "Base Index" shall have the meaning set forth in Section 5.2.4.1, below.

1.9 "Base Month" shall have the meaning set forth in Section 5.2.4.1, below.

1.10 "Building" shall mean and refer to any structure constructed on any Parcel which structure is or may be occupied, including, as of the date hereof, the Stadium.

1.11 "Bus/Shuttle/Taxi Zone" shall have the meaning set forth in Section 2.4.3, below.

1.12 "City" shall mean and refer to the City of Los Angeles, located in the State of California.

1.13 "Clean-Up" shall have the meaning set forth in Section 2.6.3, below.

1.14 "Common Easements" shall have the meaning set forth in Section 6.4, below.

1.15 "Condemnation" shall have the meaning set forth in Section 7.2, below.

1.16 "Construction Staging" shall have the meaning set forth in Section 3.4.1, below.

1.17 "CUP" shall mean and refer to that certain Conditional Use Permit issued by the City Re: Z.A. Case No. 15430, Dodger Baseball Stadium Site – Chavez Ravine Area dated August 4, 1960, together with all subsequent plan approvals issued by the City.

1.18 "Damaged Area" shall have the meaning set forth in Section 7.1.1, below.

1.19 "Declaration" shall mean and refer to this Declaration of Covenants, Conditions, Restrictions and Easements and Grant of Parking License for the Project as it may from time to time be amended, modified or supplemented. Such amendments, modifications and supplements are hereby incorporated herein and made a part hereof.

1.20 "Development" shall have the meaning set forth in Section 4.1, below.

1.21 Development Principles" shall have the meaning set forth in Section 2.1.1, below.

1.22 "Development Standards" shall have the meaning set forth in Section 4.1, below.

1.23 "Effective Date" shall have the meaning set forth in the introductory paragraph.

1.24 "Entitlements" shall mean and refer to all governmental, special district and public utility approvals, decisions, resolutions, ordinances, permits, agreements, conditions, requirements, exactions, entitlements, reports, maps, plans and orders, at any time adopted, amended or supplemented, governing, affecting or relating to the organization, zoning, use, development, improvement, operation or ownership of the Project, or any portion thereof. Each Owner and Occupant shall comply with and conform to the Entitlements.

1.25 "Existing Covenants" shall mean and refer to any covenants or restrictions of record or otherwise affecting the Project, as all of such documents may be amended, modified or supplemented from time to time.

1.26 "Existing Easements" shall mean and refer to all of various easements affecting the Project as set forth in the Existing Covenants or otherwise, as the same may be amended, modified or supplemented from time to time.

1.27 "Fiscal Year" shall mean and refer to the calendar year; provided, however, that the Fiscal Year is subject to change from time to time as Landco or Stadium Owner, as applicable, may determine.

1.28 "Flag" shall have the meaning set forth in Section 4.6, below.

1.29 "Flag Easement" shall have the meaning set forth in Section 6.3, below.

1.30 "Game Dates" or "Game Date Schedule" shall mean and refer to the dates of all Home Games.

1.31 "Governmental Requirements" shall mean and refer to all local, state and federal governmental, special district and public utility approvals, agreements, conditions, demands, entitlements, exactions, maps, laws, statutes, rules and regulations, building codes, ordinances (zoning or otherwise), permits, plans, orders and resolutions, which are, or will be, adopted, amended, modified or supplemented, and which govern, affect or relate to the organization, zoning, use, development, improvement, operation or ownership of the Project, or any portion thereof, including, without limitation, the Entitlements.

1.32 "Hazardous Materials" shall mean and refer to any hazardous or toxic substances, materials or wastes which are or become regulated by or subject to any local, state or federal governmental authority, including, without limitation, any materials or substances which are (a) defined as "hazardous wastes," "extremely hazardous wastes," "restricted hazardous wastes," "hazardous substances," "hazardous materials," "atomic materials" or "atomic substances" under any Laws, (b) petroleum and any petroleum by-products, (c) asbestos, (d) urea formaldehyde foam insulation, or (e) polychlorinated byphenals.

1.33 "Home Games" shall mean and refer to all exhibition, pre-season, charity, rescheduled, and/or regular season home games for the Team at the Stadium, including any MLB All-Star Game, and any play-off and World Series games.

1.34 "Improvements" shall mean and refer to all buildings, outbuildings, parking or loading areas, driveways, roadways or walkways, display or storage areas, arcades, stairs, escalators, decks, utility facilities, fences, walls, screening walls, retaining walls, barriers, poles, signs, canopies, supports, loading docks, truck ramps and other outward extensions of a building, and all other structures, installations, systems and landscaping of any kind (whether above or below the ground), including the Stadium, and any replacements, additions, repairs or alterations thereto of any kind whatsoever.

1.35 "Increase Month" shall have the meaning set forth in Section 5.2.4.1, below.

1.36 "Independent Owner Scenario" shall have the meaning set forth in Section 5.5, below.

1.37 "JAMS" shall have the meaning set forth in Section 13.2.2, below.

1.38 "JAMS Notice" shall have the meaning set forth in Section 13.2.2, below.

1.39 "Landco" shall have the meaning set forth in the introductory paragraph.

1.40 "Landco Controlled Parking Areas" shall have the meaning set forth in Section 5.3, below.

1.41 "Landco Full Takeover Date" shall have the meaning set forth in Section 5.4, below.

Supplemental AR 3006

1.42 "Landco Parcels" shall have the meaning set forth in Recital A, above.

1.43 "Landco Parking Area Sole Control Period" shall have the meaning set forth in Section 5.4, below.

1.44 "Loge Terrace Bar" shall have the meaning set forth in Recital A, above.

1.45 "Mail" shall have the meaning set forth in Section 14.4, below.

1.46 "Mass Transportation" shall have the meaning set forth in Section 5.1.2, below.

1.47 "Master Non-Major League Baseball Event Calendar" shall have the meaning set forth in Section 2.2.3, below.

1.48 "Media Connections" shall have the meaning set forth in Section 2.4.2, below.

1.49 "Media Connection Site" shall have the meaning set forth in Section 2.4.2, below.

1.50 "MLB" shall mean and refer to Major League Baseball.

1.51 "Mortgage" shall mean and refer to a fee or leasehold deed of trust or mortgage Recorded against any Parcel or Parcels.

1.52 "Mortgagee" shall mean and refer to a beneficiary or mortgagee under a Mortgage Recorded against any Parcel or Parcels.

1.53 "Non-Major League Baseball Events" shall have the meaning set forth in Section 2.2.2, below.

1.54 "Non-Major League Baseball Event Dates" shall have the meaning set forth in Section 2.2.2, below.

1.55 "Non-Major League Baseball Event Standard" shall have the meaning set forth in Section 2.2.2, below.

1.56 "Non-Parking Stadium Operational Uses" shall have the meaning set forth in Section 2.4, below.

1.57 "Non-Revenue Election Parking Areas" shall have the meaning set forth in Section 5.3.2, below.

1.58 "Notice" shall have the meaning set forth in Section 14.4, below.

1.59 "Objectionable" shall mean and refer to any company that is primarily identified with (i) the sale of tobacco products, (ii) the conduct of gaming operations, and/or (iii) adult entertainment with a sexual content.

1.60 "Occupant" shall mean and refer to any Person or Persons entitled, by leasehold interest, to the exclusive right to occupy all of any Parcel.

1.61 "Ongoing Representatives" shall have the meaning set forth in Section 2.1, below.

1.62 "Outlying Parcels" shall have the meaning set forth in Recital A, above.

1.63 "Owner" shall mean and refer to the Person or Persons holding record fee title to a Parcel (including, as applicable, Landco and Stadium Owner, but excluding any Mortgagee or Person holding such interest merely as security for the performance of an obligation) .

1.64 "Parcel" shall mean and refer to each parcel as designated herein. As of the date hereof, the Project shall consist of Parcels 1 through 3, and separately subdivided parcels that makes up the Outlying Parcels, as depicted on the Site Plan.

1.65 "Parcel 1" shall have the meaning set forth in Recital B, above.

1.66 "Parcel 2" shall have the meaning set forth in Recital A, above.

1.67 "Parcel 3" shall have the meaning set forth in Recital A, above.

1.68 "Parcel Designation" shall have the meaning set forth in Section 11.1, below.

1.69 "Parking Anniversary Date" shall have the meaning set forth in Section 5.4.1, below.

1.70 "Parking Areas" shall have the meaning set forth in Section 5.1.1, below.

1.71 "Parking Area Shared Control Period" shall have the meaning set forth in Section 5.3, below.

1.72 "Parking Base Month" shall have the meaning set forth in Section 5.4.1, below.

1.73 "Parking Base Index" shall have the meaning set forth in Section 5.4.1, below.

1.74 "Parking Costs" means all expenses, costs and amounts, of every kind and nature which are incurred by, or on behalf of Stadium Owner or Landco, because of or in connection with such party's management, maintenance, improvement, repair, replacement, restoration or operation of the Parking Areas or any portion thereof. Without limiting the generality of the foregoing, Parking Costs shall specifically include any and all of the following:

1.74.1 The cost of maintenance, management, operation, improvement, repair and replacement of the Parking Areas, including, but not limited to, the cost of parts and supplies, utilities, landscaping, cleaning, pest control, and hiring of any outside contractor services;

1.74.2 The cost of management and administration of the Parking Areas, including, but not limited to, compensation paid to managers, accountants, outside auditors, attorneys, consultants and employees, including employer's Social Security taxes, unemployment taxes or insurance, and any other taxes which may be levied on such compensation;

1.74.3 The cost of casualty, liability, workers' compensation, fidelity and directors' and officers' liability insurance and any other insurance (including deductibles) obtained and maintained in accordance with the terms and conditions of this Declaration;

1.74.4 Reasonable reserves as deemed appropriate by Stadium Owner and/or Landco, as applicable;

1.74.5 The cost of bonding of any professional managing agent;

1.74.6 All federal, state, county or local governmental or municipal taxes, fees, charges or other impositions of every kind and nature, whether general, special, ordinary or extraordinary (including, without limitation, real estate taxes, general and special assessments, transit taxes, personal property taxes imposed upon the fixtures, machinery, equipment, apparatus, systems and equipment, appurtenances, furniture and other personal property used in connection with the Parking Areas, or any portion thereof), which shall be paid during any Fiscal Year (without regard to any different Fiscal Year use by such governmental or municipal authority) because of or in connection with the Parking Areas or any portion thereof;

1.74.7 Any costs and expenses incurred in reasonably attempting to contest, protest, reduce or minimizes such real property taxes and/or assessments;

1.74.8 Amounts paid for discharging a lien or encumbrance levied against the Parking Areas or any portion thereof;

1.74.9 The cost of licenses, certificates, permits and inspections and the cost of contesting the validity or applicability of any governmental enactment which may affect Parking Costs;

1.74.10 Costs incurred in contracting with an outside agency or organization for the provision of a security force to patrol and protect the Parking Areas;

1.74.11 Payments under any equipment rental agreements;

1.74.12 Amortization (including interest on the unamortized cost) of the cost of acquiring or the rental expense of personal property used in the maintenance, operation and repair of the Parking Areas, or any portion thereof;

1.74.13 Costs, payments, fees or charges incurred by or assessed against Stadium Owner and/or Landco, as applicable, in preserving its rights or satisfying its obligations under any easement, license, operating agreement, declaration, covenant, condition or restriction or other instrument pertaining to all or any portion of the Parking Areas;

1.74.14 The cost of janitorial services, alarm and security service, trash removal, maintenance and replacement of curbs and walkways, incurred in connection with the Parking Areas;

1.74.15 The cost of capital improvements, or repairs to the Parking Areas;

1.74.16 Costs, fees, charges or assessments imposed by any federal, state or local government for fire and police protection, trash removal, community services, or other services which do not constitute taxes; and

1.74.17 Any other expenses incurred in connection with the Parking Areas.

1.75 "Parking Fee" shall have the meaning set forth in Section 5.2.3, below.

1.76 "Parking Increase Month" shall have the meaning set forth in Section 5.4.1, below.

1.77 "Parking Operator" shall have the meaning set forth in Section 5.2.1, below.

1.78 "Parking Passes" shall have the meaning set forth in Section 5.4.5.1, below.

1.79 "Parking Percentage Increase" shall have the meaning set forth in Section 5.4.1, below.

1.80 "Parking Spaces" shall have the meaning set forth in Section 5.1.1, below.

1.81 "Parking Structures" shall have the meaning set forth in Section 5.1.4, below.

1.82 "Party" or "Parties" shall have the meaning set forth in the introductory paragraph.

1.83 "Percentage Increase" shall have the meaning set forth in Section 5.2.4.1, below.

1.84 "Permittees" shall mean and refer to all Occupants and all customers, patrons, employees (including Team baseball players), concessionaires and other guests, licensees and invitees of the Occupants.

1.85 "Person" shall mean and refer to any individual, partnership, corporation, trust, estate or other legal entity.

1.86 "Price Index" shall have the meaning set forth in Section 5.2.4.1, below.

1.87 "Project" shall have the meaning set forth in Recital B, above.

1.88 "Record", "Recorded" or "Recordation" shall mean, with respect to any document, the recordation thereof, and with respect to any map, the filing thereof, in the Official Records of the office of the County Recorder of Los Angeles County, California.

1.89 ""Released Parking Areas" shall have the meaning set forth in Section 5.1.4, below.

1.90 "Relocation" shall have the meaning set forth in Section 5.1.4, below.

1.91 "Retail Tents" shall have the meaning set forth in Section 2.4.5, below.

1.92 "Retail Tent Permits" shall have the meaning set forth in Section 2.4.5, below.

1.93 "Required Parking Spaces" shall have the meaning set forth in Section 5.1.1, below.

1.94 "Revenue Election" shall have the meaning set forth in Section 5.5, below.

1.95 "Revenue Election Parking Areas" shall have the meaning set forth in Section 5.3.2, below.

1.96 "Scheduling Representative" shall have the meaning set forth in Section 2.2.3, below.

1.97 "Scoreboard Lights" shall have the meaning set forth in Section 3.2, below.

1.98 "Season" shall mean and refer to the period from the first regularly scheduled MLB home game of the Team in the Stadium in a calendar year to the last scheduled MLB home game (including MLB playoff games and World Series games) in the Stadium in such year.

1.99 "Shed" shall have the meaning set forth in Section 2.4.1, below.

1.100 "Site Plan" shall mean and refer to the Project Site Plan attached to this Declaration as **Exhibit C**.

1.101 "Sponsor(s)" shall have the meaning set forth in Section 3.1.1, below.

1.102 "Stadium Directional Signage" shall have the meaning set forth in Section 3.1.1, below.

1.103 "Stadium Name" shall have the meaning set forth in Section 3.1.1, below.

1.104 "Stadium Owner" shall have the meaning set forth in the introductory paragraph.

1.105 "Stadium Owner Controlled Parking Areas" shall have the meaning set forth in Section 5.4, below.

1.106 "Stadium Owner Maintenance Standard" shall have the meaning set forth in Section 3.5, below.

1.107 "Stadium Owner Parking Area Sole Control Period" shall have the meaning set forth in Section 5.3, below.

1.108 "Stadium Owner's Share" shall have the meaning set forth in Section 5.4.5.2, below.

1.109 "Stadium Parcel" shall have the meaning set forth in Recital B, above.

1.110 "State" shall mean and refer to the State of California.

1.111 "Suite" shall have the meaning set forth in Section 2.8.1, below.

1.112 "Surveillance Structure" shall have the meaning set forth in Section 2.4.4, below.

1.113 "Team" shall mean and refer to the MLB team known as the Los Angeles Dodgers.

1.114 "Work" shall have the meaning set forth in Section 3.4.1, below.

ARTICLE II

REGULATION OF USES AND OWNER COOPERATION

2.1 Owner Cooperation, Generally.

2.1.1 Development. The Parties hereby acknowledge and agree that it is contemplated that portions of the Landco Parcels will be developed for other purposes, including potentially in connection with other sports-related development opportunities. Such contemplated development is referred to herein as the "Development," as that term is further defined in Section 4.1, below. In connection with any such Development, the Parties shall work together in good faith to ensure that (i) the number of Required Parking Spaces shall not be materially reduced (except to the extent otherwise expressly permitted below), (ii) the sightlines enjoyed by the patrons of the Stadium shall not be materially adversely affected, (iii) such patrons' access to, and egress from, the Parking Areas (including any Parking Structures), and the proximity of such Parking Areas to the Stadium shall not be materially adversely affected, (iv) the contemplated uses of the Development shall be consistent with a first-class urban multi-use development, including one or more sports venues, and (v) the operation of the Parking Areas (including the quality of the Parking Spaces) as the same relate to the service of the Stadium Parcel on Game Dates shall otherwise be provided in a manner consistent with the parking areas that are controlled by MLB teams at other first-class urban MLB stadiums (collectively, the "**Development Principles**"). Further, the Development (or any portion thereof) shall in no event cause the Stadium Parcel to be in material violation (or cause additional material violations) of any legal requirement, including, without limitation, any ordinance, zoning requirement, setback or use permit. Notwithstanding any provision of this Declaration, whenever the term "Required Parking Spaces" is used herein, it shall initially mean 19,000 parking spaces, provided that (i) the Parties shall use commercially reasonable efforts, on an ongoing basis, to create additional methods for Stadium patrons to attend events at the Stadium which do not require such patrons' use of parking spaces, including various forms of mass transportation, which efforts shall be aimed at reducing the Required Parking Spaces hereunder from 19,000 to a lesser amount which will not be less than 16,500, subject to such reduction being in conformity with the Development Principles, (ii) solely for Mass Transportation as contemplated in Section 5.1.2, below, or other green initiatives the Parties shall extend such commercially reasonable efforts to reducing the Required Parking Spaces below 16,500, provided that any such further reduction below 16,500 shall require City approval and the reasonable approval of Stadium Owner, and (iii) to the extent such efforts referenced in sub-clauses (i) and/or (ii) are successful, then the term "Required Parking Spaces" hereunder shall thereafter mean such lesser amount of parking spaces benefitting the Stadium and located on the Landco Parcels. Any disputes among the Parties with respect to the foregoing shall be subject to binding arbitration as set forth in Section 13.2, below.

2.1.2 Representatives. In furtherance of the mutual intent of the Parties to satisfy their respective rights and obligations hereunder and to otherwise coordinate and harmonize the operation and use of their respective Parcels on a going-forward basis, the Parties hereby agree to reasonably cooperate and coordinate with each other, which shall include, promptly following the Effective Date, the designation by each Party of an Owner representative (collectively, the "**Ongoing Representatives**") (which designation may be changed by Notice to the other Party from time to time). Such Ongoing Representatives shall schedule regular

Supplemental AR 3013

meetings or conference calls, not less than quarterly (or on such other basis as the Ongoing Representatives otherwise agree), to discuss any and all matters relating to each Owner's Parcel and the rights and obligations of the Parties under this Declaration, with the goal of ensuring clear and effective communications between the Parties hereto.

2.2 Permitted Uses of the Stadium and Parking Areas by Stadium Owner.

2.2.1 Baseball Use. Subject to the terms of this Article 2, Stadium Owner (and its Permittees) shall use (i) the Stadium Parcel solely for a baseball stadium, with a maximum seating capacity of 56,000, for the Team on Game Dates (together with lawful uses incidental thereto, including, but not limited to, maintaining corporate offices within the Stadium for daily use in order to operate the Team, training, practices, maintenance and preparation of the Stadium and Parking Areas to suit such purposes, advertising and marketing of games, sale of concessions, tickets sales and the admissions of patrons), and (ii) the Parking Areas solely for parking Stadium attendees on Game Dates and on Non-Baseball Event Dates and to otherwise support permitted Stadium operations (such as daily parking for the Permittees and, as to any Parking Areas controlled by Stadium Owner under this Declaration, operation of advertising, merchandise and food concessions which are materially consistent with the concessions operations of MLB stadiums, generally). Landco shall have the right, from time to time, in its sole discretion, to designate a reasonable portion of the Parking Areas to be available for use (and in such event, Stadium Owner shall, and shall cause its Permittees to, comply with any such designation) in connection with the Stadium on non-Game and Non-Baseball Event Dates. Notwithstanding that changes to the Game Date Schedule may arise from a variety of causes (including, without limitation, rescheduling of regular season Games due to rain or other reasons, and the addition of playoff and World Series Games) and that such changes may occur with extremely short notice, the use of the Parking Areas pursuant to this Declaration by Stadium Owner on Game Dates shall always take precedence over any other use of the Parking Areas, without regard to when such other use was scheduled, the cost to reschedule or cancel such other use, or any other factor.

2.2.2 Non-Major League Baseball Use. Subject to Section 2.3, below, and in accordance with the "Non-Baseball Major League Event Standard," as that term is defined below, Stadium Owner shall also have the right to utilize the Stadium for non-MLB uses such as sports or athletic events (amateur or professional, including, without limitation, Los Angeles area high school baseball championship games), contests, concerts, exhibitions, entertainment, performances and other events, together with reasonable parking in the Parking Areas in connection with such events (provided that Landco shall have the right to reasonably designate, in advance, reasonable portions of the Parking Areas available for such incidental use (and in such event, Stadium Owner shall, and shall cause its Permittees to, comply with any such designation), if attendance is anticipated to be significantly less than maximum capacity), to the extent permitted by the CUP from time to time (collectively, the "**Non-Major League Baseball Events**" and the date of each such Non-Major League Baseball Event, a "**Non-Major League Baseball Event Date**"). Stadium Owner acknowledges that the CUP presently limits the occurrence of Non-Major League Baseball Events with an attendance of three thousand (3,000) or more persons to no more than four (4) per month and no more than two (2) per week without approval from the City's chief zoning administrator. Stadium Owner shall not submit any request to the City to increase the permitted number of Non-Major League Baseball Events

without the approval of Landco, which may be given or withheld in Landco's reasonable discretion. Any and all Non-Major League Baseball Events shall be materially consistent with the types of Non-Major League Baseball Events that have historically been held in the Stadium or are otherwise commensurate with the types of events held at first-class, professional baseball stadiums ("**Non-Major League Baseball Event Standard**").

2.2.3 Schedule – Game Dates and Non-Major League Baseball Events. Promptly following the date of adoption of the Game Date Schedule by the MLB, Stadium Owner shall provide to Landco a copy of the most current Game Date Schedule for the ensuing Season to facilitate planning and scheduling of development of the Landco Parcels. Stadium Owner shall advise Landco as soon as possible of any modification, or additional dates (including the dates for playoff and World Series games), to the Game Date Schedule. In addition, Stadium Owner shall also deliver to Landco, on a monthly basis, a copy of the most recently updated "Master Non-Major League Baseball Event Calendar," as that term is defined below. Stadium Owner shall designate a representative ("**Scheduling Representative**") to maintain a master calendar ("**Master Non-Major League Baseball Event Calendar**") which tracks all scheduled Non-Major League Baseball Events and corresponding anticipated attendance. In addition to sending such monthly update notices to Landco, as set forth above, the duties of the Scheduling Representative shall also include responding to any inquiry from the City pertaining to such Master Non-Major League Baseball Event Calendar, including providing a copy of the then current Master Non-Major League Baseball Event Calendar to the City promptly following City's request therefor.

2.3 Los Angeles Marathon Use. Notwithstanding anything to the contrary set forth in this Article 2, Landco is hereby granted the right to host the Los Angeles Marathon (together with uses incidental thereto) (the "**Marathon**") at the Stadium on an annual basis. The Marathon shall be considered a Non-Major League Baseball Event for purposes of the CUP, and shall have scheduling priority over all other Non-Major League Baseball Events held at the Stadium. The Marathon shall be held on the third (3rd) Sunday in March each calendar year, unless Landco otherwise notifies Stadium Owner in writing, at least one hundred twenty (120) days in advance. Stadium Owner shall, at no cost to Stadium Owner, reasonably cooperate and coordinate with Landco regarding the organization and services required to be supplied by Stadium Owner in connection with the Marathon. Landco shall pay (i) directly to the Parking Operator, the fee and reimbursable expenses of the Parking Operator which the Parking Operator charges for its services in connection the Marathon, and (ii) a flat fee of $40,000 to Stadium Owner in consideration for such use of the Project for the Marathon, and, except as provided in the immediately following sentence, Landco shall have no other obligation to pay or reimburse Stadium Owner for costs or expenses relating to such use of the Project. Notwithstanding anything in this Section 2.3 to the contrary, Landco shall, at Landco's sole cost and expense, repair any damage to the Project to the extent resulting from the Marathon, ordinary wear and tear excepted, and further shall indemnify and hold Stadium Owner and the Project harmless from any and all costs, loss, damages or expenses of any kind or nature to the extent arising out of or resulting from the Marathon activities upon the Project by Landco.

2.4 Permitted Uses of the Landco Parcels. Subject to the terms of this Section 2.4, Stadium Owner shall be permitted to utilize the designated portions of the Landco Parcels (which may or may not be part of the Parking Areas at any given time) for certain Stadium-support

operational purposes (collectively, the "**Non-Parking Stadium Operational Uses**") as set forth below. Notwithstanding anything herein to the contrary, other than the easement and other rights to use the Parking Areas and Parking Spaces granted hereunder and the Non-Parking Stadium Operational Uses (which include the Retail Tents as set forth in Section 2.4.5, below) and the Loge Terrace Bar as set forth in Recital A, Landco shall have no obligation to provide, and Stadium Owner shall not be entitled to use, any physical item or improvements or areas presently located outside the Stadium Parcel whether or not such items or improvements or areas have been used in connection with the Stadium operations.

2.4.1 Landscape Shed Use. Subject to the terms of this Section 2.4.1, Stadium Owner shall have the right to utilize, at Stadium Owner's sole cost and expense, the existing landscape and parking maintenance shed (the "**Shed**") in its current "as is" condition and in its current location on the Landco Parcels, as depicted on **Exhibit D** attached hereto. Landco shall have the right from time to time, in Landco's sole discretion and at Landco's sole cost and expense, to relocate the Shed elsewhere on the Landco Parcels (including, without limitation, into one or more future Parking Structures), in a location determined by Landco, in its sole discretion, provided that, in any event, Landco shall ensure that Stadium Owner has reasonable access to the Shed, as reasonably designated by Landco, unless or until such time as adequate public access thereto exists. Stadium Owner shall, at its sole cost and expense, maintain the Shed in a good, sanitary and sightly condition. Upon Landco's request, including, without limitation, during the Parking Area Shared Control Period, Stadium Owner shall reasonably share its use of the Shed with Landco, and the costs of maintaining and repairing the Shed shall be equitably shared between the Parties for so long as such shared use continues. Immediately following expiration of the Stadium Owner Parking Area Sole Control Period or the Parking Area Shared Control Period, whichever is later, Stadium Owner shall have no further right to utilize the Shed and shall promptly turn over to Landco the Shed and all materials relating thereto and contained therein.

2.4.2 Media Station Connections. Notwithstanding that the existing media connections ("**Media Connections**") are located within the Stadium Parcel, as a practical matter, the media vehicles and their related equipment that connect to such Media Connections on Game Dates and certain Non-Baseball Events by necessity must park on and access the Media Connections by means of the surrounding portions of the Landco Parcels, as depicted on **Exhibit E** attached hereto (the media connections and related parking, collectively, the "**Media Connection Site**"). Accordingly, to the extent that all or a portion of the Media Connection Site is not already then included within the Parking Areas, then Stadium Owner shall have the right to utilize, at Stadium Owner's sole cost and expense, the portion of the Media Connection Site located outside of the Stadium Parcel. Landco shall have the right, in Landco's sole discretion and at Landco's sole cost and expense, to relocate the Media Connection Site in whole or in part (including the purchase and installation of new connections, as necessary) from time to time elsewhere on the Landco Parcels (including, without limitation, on the top, unobstructed level of the Parking Structures) and/or the Stadium Parcel, in a location determined by Landco, in its sole discretion (except that, if such desired relocation shall be wholly or partially located within the Stadium Parcel, then the Parties shall mutually and reasonably identify an appropriate relocation site within the Stadium Parcel), provided that, in any event, Landco shall ensure that Stadium Owner has reasonable access to the Media Connection Site, as reasonably designated by Landco, unless or until such time as adequate public access thereto exists; provided, further, however, any

Supplemental AR 3016

relocation of the Media Connection Site shall not unreasonably interfere or interrupt with the telecast or performance of a game or other permitted event in the Stadium, including without limitation, pre- and post-telecast or performance in terms of setup or removal of equipment. Stadium Owner shall, at its sole cost, maintain, repair and replace, as the case may be, all connections located within the Media Connection Site (excepting Landco's responsibility to install new connections in connection with a relocation of the Media Connection Site). Notwithstanding anything to the contrary in this Section 2.4.2, the new location of the Media Connection Site shall be comparable to the existing Media Connection Site in terms of size, ability to accommodate media vehicles, and functionality (including number and type of available connections).

2.4.3 Bus/Shuttle/Taxi Use. Stadium Owner shall have the right to utilize, at Stadium Owner's sole cost and expense, the existing area for bus, shuttle and taxi stops and loading and waiting areas on Game Dates and Non-Baseball Event Dates (the "**Bus/Shuttle/Taxi Zone**"), located in the portion of the Landco Parcels as depicted on **Exhibit F** attached hereto. Landco shall have the right, in Landco's sole discretion and at Landco's sole cost and expense, to relocate the Bus/Shuttle/Taxi Zone from time to time elsewhere on the Landco Parcels, in a location determined by Landco, in its sole discretion. Notwithstanding anything to the contrary in this Section 2.4.3, the new location of the Bus/Shuttle/Taxi Zone shall be comparable to the existing Bus/Shuttle/Taxi Zone in terms of walking distance to the Stadium, and size and ability to accommodate bus, shuttle and taxi vehicles based on historical usage. Further notwithstanding anything to the contrary in this Section 2.4.3, Landco shall have no further obligation to provide Stadium Owner with a Bus/Shuttle/Taxi Zone once public transportation operators are able to access the area in the general vicinity of the Stadium by means of public streets and corresponding public transportation stops.

2.4.4 Surveillance Structure Use. Subject to the terms of this Section 2.4.4, Stadium Owner shall have the right to utilize, at Stadium Owner's sole cost and expense, the existing electronic surveillance monitoring equipment and structure ("**Surveillance Structure**") on the Landco Parcels and in and around the Stadium. Landco shall have the right, in Landco's sole discretion and at Landco's sole cost and expense, to relocate all or any portion of the Surveillance Structure contained on the Landco Parcels (including the purchase and installation of new surveillance equipment, as necessary), to another location determined by Landco (to the extent such relocation is to another portion of the Landco Parcels), in its sole discretion, provided that any such relocation shall provide Stadium Owner with materially similar surveillance control over the Parking Areas. Stadium Owner shall, at its sole cost and expense, maintain the Surveillance Structure in good working order and repair (excepting Landco's responsibility to install new surveillance equipment in connection with a relocation of the Surveillance Structure). Upon Landco's request during the Parking Area Shared Control Period, Stadium Owner and Landco shall reasonably cooperate to transfer the portion of the then existing Surveillance Structure, if any, which services the Landco Controlled Parking Areas to Landco, and Landco shall be responsible for all costs of maintaining such portion of the Surveillance Structure. Immediately following the expiration of the Stadium Owner Parking Area Sole Control Period or the Parking Area Shared Control Period, whichever is later, Landco shall have sole control over the portion of the Surveillance Structure relating to the Parking Areas, and the Parties shall reasonably cooperate, each at their own cost, to effectuate the same.

2.4.5 Retail Tents Use. Stadium Owner shall have the exclusive right to utilize, at Stadium Owner's sole cost and expense, the two (2) retail merchandising tents located on the Landco Parcels as depicted on **Exhibit G** attached hereto (collectively, the "**Retail Tents**") for so long as Stadium Owner maintains permits issued by the City which allow the continued use of the same (the "**Retail Tent Permits**"). Notwithstanding the location of the Retail Tents on Parcel 2, for so long as the Retail Tents remain in existence pursuant to the Retail Tent Permits, the Retail Tents shall be treated hereunder as part of the Stadium and as if it were entirely situated on the Stadium Parcel, below, including, without limitation, that the Stadium Owner shall have exclusive control over the Retail Tents and all revenues generated from the Retail Tents belong solely to the Stadium Owner and/or the Team (and in no event shall Landco have any right, title or interest in such revenues notwithstanding that a portion of the Retail Tents is actually located on Parcel 2). Landco shall cooperate with Stadium Owner for any filings or permits required for the continued operation of the Retail Tents. Upon the final expiration of such Retail Tent Permits, Stadium Owner shall remove the Retail Tents and return the area in which the Retail Tents are located to a safe and sightly condition. To the extent that Stadium Owner thereafter desires to install temporary or permanent merchandising structures, the same shall be located entirely within the Stadium Parcel.

2.5 Restrictions and Prohibited Uses, Generally. The Project shall not be used, operated or developed in any way which is inconsistent with, or in violation or breach of, the Governmental Requirements or this Declaration. Further, (i) no nuisance shall be permitted to exist or operate upon any Parcel or any portion thereof so as to be offensive or detrimental to any Person or activity on any other Parcel or on any public street, (ii) no rubbish, trash, waste, residue, brush, weeds or undergrowth (except brush, weeds and undergrowth growing naturally on any Parcel prior to development) or debris of any kind or character shall ever be placed or permitted to accumulate upon any portion of any Parcel, so as to render said premises a fire hazard, unsanitary, unsightly, offensive, or detrimental to any Person or activity on any other Parcel or on any public street, (iii) no Improvement shall be permitted to fall into disrepair and all Improvements shall at all times be kept in good condition and repair (including, without limitation, free of the presence of wood-destroying pests and organisms) and adequately painted or otherwise finished, (iv) no condition shall be permitted to exist upon any Parcel which shall induce, breed or harbor infectious plant diseases, rodents, or noxious insects, (v) subject to Governmental Requirements, no structure of a temporary character trailer, tent (other than the Retail Tents during the time period expressly permitted hereunder), shack, barn or other outbuilding (other than the Shed) shall be used by any Person on any portion of the Project at any time, either temporarily or permanently, unless such structure is being used in connection with the construction of an Improvement, (vi) no tools, equipment, or other structure designed for use in boring for water, oil, gas or other subterranean minerals or other substances, or designed for use in any mining operation or exploration, shall hereafter be erected or placed upon or adjacent to any Parcel, (vii) no new adverse environmental condition shall be permitted to exist on any Parcel, nor shall any Hazardous Materials be permitted to be generated, treated, stored, disposed of, or otherwise deposited in or on or allowed to emanate from any Parcel or any portion of the Project, including, without limitation, the surface waters and subsurface waters thereof; provided, however, that Hazardous Materials may be stored or used, so long as such storage or use is conducted in compliance with Governmental Requirements, (viii) Stadium Owner shall not in any way interfere with Landco's use of the Flag Easement or do any act or thing inconsistent with such use, including, without limitation, by constructing any Improvement

(other than landscaping) thereon, and (ix) no Owner shall permit anything to be done or kept on its Parcel that violates any of the Governmental Requirements.

2.6 Hazardous Materials.

2.6.1 General and Specific Prohibitions. Neither Owner shall: (i) generate, use, release, store, transport or handle any Hazardous Material within any portion of the Project except in accordance with all applicable Governmental Requirements; (ii) dispose of any Hazardous Material within any portion of the Project or operate a Hazardous Materials treatment facility within the Project; or (iii) install, operate or maintain any above, below or at grade tank, sump, pit, pond, lagoon or other storage or treatment vessel or device on or about the Project unless plans therefor have been submitted to and approved by the other Owner.

2.6.2 Duty To Notify. Each Owner shall immediately notify the other Owner of any of the following with respect to the Project: (i) any condition, occurrence or release at, on, under or from the Stadium or the Parking Areas, or beyond the Stadium or the Parking Areas which affects the Stadium or the Parking Areas, whether or not such condition, occurrence or release was pre-existing on the Effective Date, and whether or not it was caused or contributed to by Landco, that could reasonably be expected to result in any material expense relating to, or material noncompliance with, any applicable Governmental Requirements or that could reasonably be expected to result in a material environmental claim, (ii) any notices of violation or potential or alleged violation of any Governmental Requirements which such Owner shall have received from any governmental agency concerning the use, storage, release and/or disposal of Hazardous Materials; (iii) any and all inquiry, investigation, enforcement, cleanup, removal or other governmental or regulatory actions instituted or threatened with respect to Hazardous Materials relating to the Project; and (iv) all claims made or threatened by any third party relating to any Hazardous Materials relating to the Project.

2.6.3 Compliance with Hazardous Materials Laws. Each Owner shall, at such Owner's sole cost and expense: (i) be responsible for the cleanup, removal, remediation and investigation (collectively, the "**Clean-Up**") of any Hazardous Materials contamination of each Owner's Parcels (including any contamination pre-existing as of the Effective Date) which arises in connection with the use, handling, storage, generation, release, disposal or transport of Hazardous Materials; (ii) use its good faith diligent efforts to comply with all orders, directives and requests of applicable governmental agencies with respect to the cleanup, removal, remediation and/or investigation of such contamination; and (iii) comply with all Governmental Requirements governing the use, handling, storage, generation treatment, transport, release or disposal of Hazardous Materials. Notwithstanding anything in this Section 2.6.3 to the contrary, during the Stadium Owner Parking Area Sole Control Period, Stadium Owner shall be responsible for any Clean-Up, and the costs thereof, with respect to the entire Project; provided, however, that Stadium Owner shall not be responsible for any such Clean-Up with respect to (a) any Hazardous Materials contamination arising or resulting from Landco's negligence or willful misconduct, (b) the plume resulting from the gas station located on the Landco Parcels, (c) any other identified environmental condition on the Project as of the Effective Date, (d) any Outlying Parcels and other portions of the Landco Parcels not used for Parking Areas, and (e) any Hazardous Materials or other environmental condition discovered, existing or incurred in, on or

Supplemental AR 3019

under the Landco Parcels in connection with the Development (except to the extent such condition was caused by Stadium Owner).

2.6.4 Landco Self-Help During Stadium Owner Parking Area Sole Control Period. If, during the Stadium Owner Parking Area Sole Control Period, Stadium Owner does not comply with the requirements set forth in this Section 2.6, then, to the extent the Landco Parcels are affected (or would in the future be reasonably expected to be affected), and in addition to any other rights and remedies available to Landco, Landco shall have the right, but not the obligation, upon at least thirty (30) days' prior written notice to Stadium Owner, to take any actions necessary to cure or remediate any such non-compliance, including by undertaking required environmental assessments and by undertaking any actions required to remediate Hazardous Materials that have been released at, on, in, under or from the Stadium or the Parking Areas, in each case at Stadium Owner's sole cost and expense. Stadium Owner hereby unconditionally and irrevocably grants full access to the Stadium and the Parking Areas to Landco and any agents, representative, contractors or consultants of Landco for the purpose of any such actions.

2.7 Insurance and Indemnification Obligations. Notwithstanding anything to the contrary in this Declaration, Stadium Owner's insurance obligations set forth in Section 2.7.1 through 2.7.9, below, shall apply only during (i) the Stadium Owner Parking Area Sole Control Period with respect to the Parking Areas, and (ii) during the Shared Parking Area Control Period with respect to the Stadium Owner Controlled Parking Areas.

2.7.1 Duty to Carry Fire Insurance. Stadium Owner, at its sole cost and expense, shall keep and maintain, or cause to be kept and maintained, valid and enforceable fire and extended coverage insurance on all of the Parking Area (including all Improvements thereon). The insurance required to be carried pursuant to this Section 2.7.1 shall include standard all-risk property insurance with replacement costs coverage in amounts as reasonably required by Landco from time to time.

2.7.2 Duty to Carry Liability Insurance. Stadium Owner, at its sole cost and expense, shall keep and maintain, or cause to be kept and maintained, valid and enforceable commercial general liability insurance against claims of bodily injury, personal injury or property damage arising out of (i) the use of the Parking Areas by Stadium Owner, or (ii) the operations, assumed liabilities or contractual liabilities of Stadium Owner, including Stadium Owner's liability arising under any indemnity set forth in this Declaration. The insurance required to be carried pursuant to this Section 2.7.2 shall be in amounts as required by Landco from time to time, but in no event less than Ten Million Dollars ($10,000,000) for each occurrence and Ten Million Dollars ($10,000,000) for all occurrences each calendar year.

2.7.3 Duty to Carry Workers' Compensation Insurance. Stadium Owner, at its sole cost and expense, shall keep and maintain, or cause to be kept and maintained, valid and enforceable workers' compensation and employer liability insurance of other similar insurance pursuant to the Governmental Requirements covering all Persons employed in connection with the construction, alteration, maintenance, repair or general operation of the Parking Area, and with respect to whom death or bodily injury claims could be asserted against Landco or the Project.

Supplemental AR 3020

2.7.4 Duty to Carry Automobile Insurance. Stadium Owner, at its sole cost and expense, shall keep and maintain, or cause to be kept and maintained, valid and enforceable comprehensive automobile liability insurance having a combined single limit of not less than One Million Dollars ($1,000,000) per occurrence and insuring Stadium Owner against liability for claims arising out of ownership, maintenance, or use of any owned, hired, borrowed or non-owned automobiles.

2.7.5 Duty to Carry Other Insurance. Stadium Owner, at its sole cost and expense, shall keep and maintain, or cause to be kept and maintained, valid and enforceable other forms of insurance that Landco may reasonably require from time to time with respect to the Parking Areas, in form and amounts and for insurance risks against which a prudent tenant of comparable size and in a comparable business would protect itself.

2.7.6 Insurance Coverage During Construction. During such times as Stadium Owner is performing work or having work or services performed in or to the Parking Areas, Stadium Owner shall require its contractors, and their subcontractors of all tiers, to obtain and maintain commercial general liability, automobile, workers compensation, employer's liability, builder's risk, and equipment/property insurance in such amounts and on such terms as are customarily required of such contractors and subcontractors on similar projects. The amounts and terms of all such insurance are subject to Landco's written approval, which approval shall not be unreasonably withheld. The commercial general liability and auto insurance carried by Stadium Owner's contractors and their subcontractors of all tiers pursuant to this section shall name Landco and such other Persons as Landco may reasonably request from time to time as additional insureds with respect to liability arising out of or related to their work or services. Such insurance shall provide primary coverage without contribution from any other insurance carried by or for the benefit of Landco or other additional insureds. Such insurance shall also waive any right of subrogation against each additional insured. Stadium Owner shall obtain and submit to Landco, prior to the earlier of (i) the entry onto the Parking Areas by such contractors or subcontractors or (ii) commencement of the work or services, certificates of insurance evidencing compliance with the requirements of this section.

2.7.7 General Requirements for Insurance Policies. Each policy of insurance carried by Stadium Owner pursuant to this Section 2.7 shall (i) name Landco and any other parties Landco so specifies by written notice to Stadium Owner as additional insureds; (ii) be issued by an insurance company licensed to do business in the State of California and having a rating of not less than A-VII in Best's Insurance Guide or which is otherwise acceptable to Landco; (iii) be primary insurance as to all claims thereunder and provide that any insurance carried by Landco is excess and is non-contributing with any insurance requirement of Stadium Owner; (iv) be in form and content reasonably acceptable to Landco; (v) commence on the Effective Date; (vi) provide that said policy shall not be canceled or coverage changed unless thirty (30) days' prior written notice shall have been given to Landco and any Mortgagee who has requested such notice; and (vii) provide that, to the extent such policy provides for payment of losses, such losses payable to a Mortgagee shall be payable notwithstanding any act or negligence of Landco. Stadium Owner shall, at the request of Landco, promptly furnish Landco a certificate evidencing Stadium Owner's compliance with the insurance requirements set forth in this Section 2.7. Stadium Owner may satisfy its insurance obligations under this Section 2.7, in

whole or in part, by means of a so-called blanket policy which is in conformity with the requirements of this Section 2.7.

2.7.8 Use of Policy Proceeds. Subject to the rights of any Mortgagee to such proceeds, fire and extended coverage insurance proceeds paid to Stadium Owner by reason of damage to or destruction of the Parking Area shall be used by Stadium Owner for the repair or replacement of the same.

2.7.9 Waiver of Subrogation. The Parties each hereby agree to look solely to, and seek recovery only from, their respective insurance carriers in the event of a property loss to the extent that such insurance is required to be carried pursuant to this Section 2.7 or if higher, to the extent such insurance has been obtained. The Parties each hereby waive all rights and claims against each other for such losses, and waive all rights of subrogation of its insurance providers, provided such waiver of subrogation shall not affect the right of such party to recover thereunder from such insurance providers. The Parties each hereby agree that its insurance policies shall be endorsed such that the waiver of subrogation shall not affect the right of such party to recover thereunder. If Stadium Owner fails to carry the amounts and types of insurance required to be carried pursuant to this Section 2.7, in addition to any remedies Landco may have under this Declaration, such failure shall be deemed to be a covenant and agreement by the Stadium Owner failing to carry such insurance to self-insure with respect to the type and amount of insurance such party so failed to carry, with full waiver of subrogation with respect thereto.

2.7.10 Landco's Election to Carry Insurance. Landco may, but shall not be required to, at its own expense, carry insurance with respect to its interest in the Parking Areas and the use, maintenance or operation thereof; provided that such insurance does not interfere with Stadium Owner's ability to insure the Parking Areas and the use, maintenance or operation thereof as required hereunder or adversely affect Stadium Owner's insurance or the cost thereof, it being understood that all primary subrogation rights to the extent not waived hereunder, shall remain with Stadium Owner's insurers, as the case may be, at all times. Any insurance payments received from policies maintained by Landco pursuant to the previous sentence shall be retained by Landco without reducing or otherwise affecting Stadium Owner's rights hereunder. Notwithstanding anything in this Section 2.7.10 to the contrary, Landco shall carry the insurance set forth in Section 5.4.3, below, during (i) the Shared Parking Area Control Period with respect to the Landco Controlled Parking Areas, and (ii) the Landco Parking Area Sole Control Period with respect to all of the Parking Areas.

2.7.11 Indemnification. Stadium Owner shall indemnify, hold harmless and defend Landco against and from any loss, cost or expense of any sort or nature, and from any liability to any person or legal entity, on account of any damage to person or legal entity or property arising out of any failure of Stadium Owner to perform and comply in any respect with any of the provisions of this Declaration or arising from Stadium Owner's use and/or occupancy, to the extent applicable, of the Project, and/or Stadium Owner's acts or omissions otherwise occurring on the Landco Parcels, except to extent of the negligence or willful misconduct of Landco or Landco's Permittees. Landco shall indemnify, hold harmless and defend Stadium Owner against and from any loss, cost or expense of any sort or nature, and from any liability to any person or legal entity, on account of any damage to person or legal entity or property arising from the negligence or willful misconduct of Landco in, on or about the Project, except to the

Supplemental AR 3022

extent caused by the negligence or willful misconduct of Stadium Owner or Stadium Owner's Permittees.

ARTICLE III

REGULATION OF IMPROVEMENTS

3.1 Name and Signage.

3.1.1 Stadium Name and Signage. Stadium Owner shall have the sole, exclusive right to name the Stadium, any component thereof and all other portions of and improvements on the Stadium Parcel (but not the balance of the Project) at all times, including licensing such naming rights to one or more sponsors (the "**Sponsor(s)**") of the Team (the "**Stadium Name**") in accordance with the terms of the CUP existing as of the Effective Date and/or other applicable Governmental Requirements; provided, however, that in no event shall such Stadium Name or Sponsor(s) be Objectionable. In addition, Stadium Owner and/or the Team shall have the right, at their sole cost and expense, to install and/or maintain, as the case may be, an unlimited amount of identification, directional and/or sponsorship signage on the Stadium Parcel in accordance with the terms of the CUP existing as of the Effective Date and/or other applicable Governmental Requirements. In addition, Stadium Owner and/or the Team shall have the right, at their sole cost and expense, to maintain all existing vehicular and pedestrian directional and way finding signage for the Stadium located on the Landco Parcels (including signage designating specific parking lots within the Parking Area, i.e., Lot A, B, etc.) ("**Stadium Directional Signage**"). Landco shall have the right from time to time, at Landco's sole cost and expense, to remove and/or relocate any Stadium Directional Signage in connection with the relocation of the Parking Areas pursuant to Section 5.1.4, below, provided that there shall be reasonable and appropriate Stadium Directional Signage at all times (other than during the temporary removal of the same). During the Stadium Owner Parking Area Sole Control Period, Stadium Owner shall control and maintain all Stadium Directional Signage located on the Landco Parcels. During the Parking Area Shared Control Period, Stadium Owner shall control and maintain all Stadium Directional Signage located in the Stadium Owner Controlled Parking Areas. During the Parking Area Shared Control Period and Landco Parking Area Sole Control Period, Landco shall control and maintain all Stadium Directional Signage located in the Landco Controlled Parking Areas, provided that Landco shall maintain reasonable and appropriate Stadium Directional Signage at all times (other than during the temporary removal of the same).

3.1.2 Development Name and Signage. Landco shall, with the prior consent of Stadium Owner (such consent not to be unreasonably withheld, conditioned or delayed), have the right to name the Development, or any component thereof (provided that, for purposes of clarity, such foregoing right shall under no circumstance include the right to name the Stadium) at all times, including licensing such naming rights to one or more Sponsors, occupants, or developers of the Development in accordance with the terms of applicable Governmental Requirements; provided, however, that in no event shall such Development name or Sponsor(s) be Objectionable. In addition, Landco shall, with the prior consent of Stadium Owner (such consent not to be unreasonably withheld, conditioned or delayed), have the right, at its sole cost and expense, to install and/or maintain, as the case may be, an unlimited amount of exterior signage in connection with the Development or the Occupants thereof (collectively, the "**Development**

Supplemental AR 3023

Exterior Signage") in accordance with applicable Governmental Requirements (provided that, for purposes of clarity, such foregoing right shall under no circumstance include the right to place advertising on the exterior of the Stadium). Without limiting the reasonableness standard for consent set forth in the preceding two sentences, Stadium Owner hereby covenants and agrees that Stadium Owner shall not withhold any request for consent pursuant to this Section 3.1.2 unless the proposed name or signage materially conflicts with existing or proposed stadium advertising or promotional activities; provided, however, that, notwithstanding the foregoing, if a non-baseball professional sports facility is constructed on the Landco Parcels, then the consent rights of Stadium Owner set forth in this Section 3.1.2 with respect to naming (including Sponsors) and signage shall not apply to the naming (including Sponsors) and signage for such non-baseball professional sports facility.

3.2 Exterior Lighting. All exterior lighting, including the location, design, type and size thereof shall conform to all Governmental Requirements. If Stadium Owner desires to install any additional exterior lighting located on the Landco Parcels for Stadium operational and/or safety purposes, the same shall be subject to the written approval of Landco (except to the extent required by Governmental Requirements), which may be given or withheld in Landco's sole discretion. Exterior lighting shall be controlled and maintained in good working condition by the Owner or Occupant of the Parcel where such exterior lighting is located in accordance with this Declaration and Governmental Requirements (provided that, for purposes of clarity, during the Stadium Owner Parking Area Sole Control Period only, Stadium Owner shall control and maintain all such exterior lighting located on the Landco Parcels). In addition, to the extent the parking lights presently located on the back of the Stadium scoreboard ("**Scoreboard Lights**") materially and unreasonably interfere with the use of the Landco Parcels by Landco, as reasonably determined by Landco, Stadium Owner shall reasonably cooperate with Landco, at no cost to Stadium Owner, to re-design the Scoreboard Lights subject to, and in compliance with, Governmental Requirements.

3.3 Storage and Loading Areas and Services Entrances. No materials, supplies or equipment shall be stored in any area on any Parcel except inside a closed building or visual barrier screening such areas from public view. Loading areas shall not encroach into any setback areas (except to the extent of any presently existing encroachment). Loading docks shall be set back and screened and/or recessed to minimize the visual effect from the street and other public areas. Loading docks shall not encroach upon or extend into setback areas (except to the extent of any presently existing encroachment). Loading will not be permitted in the setback area fronting any street. In no event, however, will loading areas, docks or facilities be located or designed so as to necessitate backing maneuvers by vehicles into or on public streets.

3.4 Cooperation on Construction.

3.4.1 Generally. The Parties hereby acknowledge that each Party may, from time to time, perform and construct renovations, improvements, alterations or modifications (collectively, "**Work**") to the Parcel or Parcels owned by such Party, and utilize certain construction staging areas and materials in connection with any such Work on the Parcel or Parcels owned by such Party ("**Construction Staging**"). Each Party shall use commercially reasonable and diligent efforts to have all such Work performed on a continuous basis, and once started, to be completed reasonably expeditiously, with such Work and related Construction

Supplemental AR 3024

Staging being organized and conducted in a manner which will not unreasonably interfere with the other Party's business operations in, or access to, the Parcel or Parcels owned by such Party, including the implementation of industry standard construction procedures utilized in the construction and development of first-class, mixed use projects in Los Angeles County intended to reduce the amount of noise and dust generated by such Work and appropriate safety precautions (as further discussed in Section 4.3.4, below). Each construction site shall be planned in a manner that minimizes the land area needed for Construction Staging.

3.4.2 Incurred Expenses. In the event that, as a result of any Work and/or Construction Staging by a Party, it is reasonably necessary for the other Party to incur additional costs with respect to the Parcel or Parcels owned by such Party, or any portion thereof, including, without limitation, costs for increased security or increased traffic control services, then the Party performing such Work and/or Construction Staging shall pay the other Party, within thirty (30) days after receipt of an invoice thereof, the actual, reasonable out-of-pocket costs incurred by such Party for such additional services and items.

3.4.3 Work Barricades. Each Party agrees to install or construct appropriate barricades, for purposes of safety and screening views of the Work and Construction Staging from the Stadium and Parking Area, in connection with any Work and/or Construction Staging that such Party performs. Such barricades shall be kept in good condition and repair and shall not be removed until the Work and/or Construction Staging is completed or otherwise secure from unauthorized intrusion and not in an unsightly condition.

3.4.4 Workmanship. Each Party agrees that all Work shall be done in a good and workmanlike manner, with commercially appropriate materials and in accordance with all Governmental Requirements. Each Party shall pay all costs, expenses, liabilities and liens arising out of or in any way connected with such Work and any related Construction Staging.

3.4.5 Lien Releases. The Parties shall not cause or permit to be filed, recorded or enforced against the other Party's owned Parcel or Parcels, any mechanics', materialmen's, contractors' or subcontractors' liens arising from the Work, including any Construction Staging related thereto, or any claim or action affecting the title to any such Parcel or Parcels arising from the Work, including any Construction Staging related thereto, and the Parties shall pay or cause to be paid or otherwise removed the full amount of all such liens or claim within ten (10) business days of receiving notice thereof.

3.4.6 Insurance. The Parties shall comply with the applicable insurance provision set forth in this Declaration with respect to any Work and/or Construction Staging hereunder.

3.4.7 Casualty. The terms of this Section 3.4 shall apply in connection with any Work performed or Construction Staging related thereto as a result of an event of casualty.

3.4.8 Restrictions on Construction. Notwithstanding anything to the contrary set forth in this Section 3.4, any Work (i) occurring in the immediate vicinity of the Stadium, or (ii) the continuation of which would (A) materially interfere with parking in the Parking Area, or ingress and egress to and from the Stadium, by Stadium patrons attending a Home Game or other

event occurring at the Stadium, or (B) pose a material health or safety risk to such foregoing Stadium patrons, must cease and be vacated at least four (4) hours before any Home Game or other event occurring at the Stadium is scheduled to occur and may not re-commence until at least three (3) hours after a Home Game or other event occurring at the Stadium has ended.

3.5 Maintenance Standard for Stadium Owner. Stadium Owner, at Stadium Owner's sole cost and expense, shall, and shall exercise all rights, powers, elections and options available to it to, at all times use, maintain, operate, repair, overhaul, inspect, test and service, or cause to be maintained, operated, repaired, overhauled, inspected, tested and serviced, the Stadium and, during the Stadium Owner Parking Area Sole Control Period and the Shared Parking Area Control Period, the Parking Areas, and any part or portion thereof, as applicable, in good condition, repair and working order, in accordance with the terms of any applicable insurance policies required to be maintained under this Declaration, and any applicable warranties (the "**Stadium Owner Maintenance Standard**").

3.6 Utilities. Hookups for water, sewer, gas, electricity and telecommunications, whether to main lines running under the public right of way or otherwise (including, without limitation, to conduits, wires, lines, pipes, mains pump stations, meters or other structures, stations or improvements located in, on or under the Landco Parcels for the benefit of the Project), shall be the sole responsibility of the Owner or other Occupant of each Parcel.

ARTICLE IV

REGULATION OF DEVELOPMENT

4.1 Development of Landco Parcels. The Parties acknowledge that Landco, in the future, may apply for governmental approvals for future development on the Landco Parcels (the "**Development**"), which Development may include, but shall not be limited to, (i) office buildings, (ii) hotel and exhibition facilities, (iii) residential buildings, (iv) medical buildings, (v) academic buildings, (vi) parking structures, and/or (vii) retail, dining and entertainment facilities. The Parties further acknowledge and agree that it is in the Parties' best interest to harmonize the future development of the Landco Parcels with the on-going operation of the Stadium and Parking Areas, and ensure that Stadium Owner's investment in the Stadium and the Team are reasonably protected (including with respect to Home Games attendance) and, to the extent such Development occurs on the Landco Parcels, that such Development shall not unreasonably interfere with the design and operation of the Stadium (other than potential temporary interruptions for construction purposes). Accordingly, the Parties hereby acknowledge and agree that the development on the Landco Parcels shall materially conform to (i) the foregoing and the guidelines and standards set forth in this Article IV (collectively, the "**Development Standards**"), and (ii) the Development Principles. The goals of the Development Standards and the Development Principles are to (A) provide appropriate parking, and ingress and egress for and to the Project, including the Stadium, to enhance the quality of the Project experience (particularly during arrival or departure) for all Project guests, and (B) although the Stadium is a major component of the Project, provide the necessary flexibility to Landco in the design and utilization of the Landco Parcels.

4.2 Design of Improvements. Landco shall ensure that future construction of any portion of the Development shall not unreasonably interfere with operation of the Stadium (other than potential temporary interruptions for construction purposes). No shadows from the Development Improvements shall be permitted to be cast on the Stadium playing field. No non-Stadium lighting shall be allowed which would create glare within the Stadium; in particular, no lighting shall be allowed to project upwards or across the playing field of the Stadium, or which would otherwise adversely affect television broadcasting, during evening or nighttime Stadium events or to directly illuminate the interior of the Stadium. Further, the Development will not interfere with transmission capability (both uplinks and downlinks) from the Stadium.

4.3 Vehicular Circulation and Access. The obligations of Landco set forth in this Section 4.3, below, shall continue until such time as the ownership of a material portion of the entrance, exist, ingress and egress routes to the Parking Areas are transferred to the City or other governmental or public entity, such that the public can reasonably access the Stadium and Parking Areas by means of public roads and access routes.

4.3.1 Access. Landco shall ensure that access to the Stadium and Parking Areas continues to be provided as set forth in Section 5.1.1, below.

4.3.2 Site Entrance Queuing and Ingress/Egress Lanes. Landco shall ensure that the overall vehicular queuing capacity in the Project will be provided for the Development without unreasonable interference to queuing for events at the Stadium. Landco shall ensure that adequate vehicular lanes will be provided for the Development without interference to ingress and egress for events at the Stadium.

4.3.3 Emergency Access. Appropriate emergency access to the Stadium and Parking Areas shall be provided at all times in accordance with Governmental Requirements.

4.4 Parking Areas. The design of the Parking Areas (including any Parking Structures) shall comply with the provisions of Section 5.1.4, below.

4.5 Service and Loading Areas. New service areas (including storage, special equipment, maintenance and loading areas) must be screened with landscaping or architectural elements such as walls to screen these areas from the Stadium and pedestrian areas contiguous to the Stadium to the extent practicable. Use of service and loading areas shall not disrupt the Stadium event traffic flow. Utility equipment and communication devices (antennae, satellite dishes, etc.) must be screened from ground level view to the extent practicable. New refuse collection areas must be screened from the Stadium with a solid fence or wall (maximum of eight (8) feet high) using materials or colors compatible with adjacent Improvements.

4.6 Relocation and/or Removal of "Flag". Subject to the terms of this Section 4.6, Stadium Owner shall reasonably cooperate with Landco if, at any time during the course of the Development, Landco desires to relocate or remove the "flag" portion of the Stadium Parcel (the "**Flag**"), as depicted on **Exhibit H** attached hereto; provided, however, that any such proposal to relocate or remove the Flag shall be subject to (i) reasonably comparable access to the Stadium and Parking Areas being provided from the Sunset Gate, whether by public streets or otherwise, (ii) obtaining all necessary governmental consents, (iii) Mortgagee consent (if required), (iv) the

ability of Stadium Owner to obtain title insurance (at Landco's sole cost) on the reconfigured Stadium Parcel, (v) the consent of Stadium Owner, which shall not be unreasonably withheld, delayed or conditioned, and (vi) conformity with the Development Principles. All costs in connection with such relocation or removal of the Flag shall be borne by Landco.

ARTICLE V

PARKING

5.1 Parking Areas. Subject to all of the terms and provisions of this Declaration, including, but not limited to, Section 2.1.1, Stadium Owner and Landco agree to the following with regard to the Parking Areas.

5.1.1 Required Parking Spaces. Landco hereby grants to Stadium Owner (i) the right to use and a non-exclusive easement to not less than 16,500 parking spaces (subject to reduction in accordance with Section 5.1.2, below) located on the Landco Parcels for the benefit of the Stadium and use by Stadium Owner, its Occupants and their respective Permittees for parking on Game Dates and Non-Major League Baseball Event Dates ("**Required Parking Spaces**") (and regardless of whether Stadium Owner or Landco then has operational control of the Parking Areas pursuant to this Article V, Stadium Owner (and its Permittees and Occupants) shall have exclusive use of the Required Parking Spaces (as may be located as set forth in this Article V) on all such Game Dates and Non-Major League Baseball Event Dates), the exact location of which shall be reasonably designated by Landco from time to time subject to, and in accordance with, the terms of this Declaration, and (ii) the right to use and a non-exclusive easement for accessing the overall area (which area shall include vehicular and pedestrian ingress, egress and other passage, such as driveways and pedestrian walkways, in order to enter and exit the Project and proceed to the Parking Areas and the Stadium as contemplated herein) in which the Required Parking Spaces are located (the "**Parking Areas**"). Notwithstanding the foregoing, Landco and Stadium Owner acknowledge and agree that the initial location of the Parking Areas (depicted on **Exhibit I-1** attached hereto) includes parking spaces in addition to the Required Parking Spaces (such additional parking spaces which are the spaces in excess of the approximately 19,000 spaces referenced in Section 2.1.1 hereof, if any, the "**Additional Parking Spaces**"). Landco hereby grants Stadium Owner the right to utilize and a non-exclusive easement for parking in such Additional Parking Spaces for the uses permitted hereunder so long as the same remain open and available; provided that Landco shall have the right, at any time after giving the Stadium Owner at least six (6) months prior written notice, to remove all or a portion of the Additional Parking Spaces from the Parking Areas in accordance with Section 5.1.4, below. The Required Parking Spaces and the Additional Parking Spaces (if any) shall be collectively referred to herein as the "**Parking Spaces**". The easements granted herein shall be permanent and appurtenant to the Stadium Parcel.

5.1.2 Reduction of Required Parking Spaces. As provided in Section 2.1.1, above, the Parties acknowledge that Landco and/or the City may in the future desire (or be required) to connect the Stadium and Project generally with other areas of Los Angeles by means of mass transportation ("**Mass Transportation**"), including, without limitation, a subway or a lightrail. The Parties shall reasonably cooperate with the City and each other in connection with any such proposal, whether generated by Landco and/or the City, as Mass Transportation would

benefit the Project as a whole by allowing the public to more easily and efficiently access the Project. In connection with the construction of any such Mass Transportation, and only to the extent expressly permitted by the City and approved by Stadium Owner in its reasonable discretion, Landco shall have the right to provide less than the 16,500 Required Parking Spaces, in which event the term **"Required Parking Spaces"** hereunder shall mean such lesser amount of parking spaces benefitting the Stadium and located on the Landco Parcels as then required by the City and approved by Stadium Owner in its reasonable discretion.

5.1.3 As-Is Condition. Landco shall not be obligated to provide or pay for any work upon or otherwise prepare the Parking Areas for Stadium Owner's use commencing as of the Effective Date, and Stadium Owner shall accept the Parking Areas in their presently existing, "as-is" condition. Landco expressly disclaims any warranty or representation with regard to the condition, safety, security or suitability of the Parking Areas for Stadium Owner's intended use. Stadium Owner shall have no right to alter, improve or modify the Parking Areas, except as otherwise expressly set forth herein.

5.1.4 Relocation of Parking Areas and Parking Structures. Landco shall have the right from time to time to relocate, reconfigure, reduce and/or remove portions of the Parking Areas (collectively, the **"Relocation"**) to accommodate the Development, including, without limitation, the complete removal of the Additional Parking Spaces from the Parking Areas and the relocation of the Required Parking Spaces to one or more Parking Structures, so long as the Required Parking Spaces continue to be provided upon the Landco Parcels. Subject to Section 2.1.1, above, the Required Parking Spaces may be Relocated to any portion of the shaded area depicted on **Exhibit I-2** attached hereto. Upon Landco's election to effectuate a Relocation, Landco shall provide written notice thereof to Stadium Owner, which notice shall set forth (i) the portion of the Parking Area subject to such Relocation (such portion, the **"Released Parking Area"**), (ii) details regarding how the Relocation will be effectuated (e.g., 3,000 of the Required Parking Spaces shall be relocated into a Parking Structure to be constructed by Landco on the Landco Parcels, and/or the Additional Parking Spaces shall be removed from the Parking Areas entirely), including reasonable evidence that the requirement to provide the Required Parking Spaces shall continue to be fully satisfied upon the effectuation of such Relocation, and (iii) the anticipated timing of such Relocation. Notwithstanding anything to the contrary set forth herein, in connection with a reconfiguration of any surface Parking Areas, (A) the circulation aisles (that is, an aisle without direct access to parking spaces) and the parking aisles (that is, aisles with direct access to a parking space) within such surface Parking Areas shall be appropriate sizes to maintain at least as efficient vehicle circulation as presently in place, and (B) Landco shall be responsible for any necessary restriping of such surface Parking Areas. Further, as part of a Relocation hereunder, Landco may construct one or more parking structures (**"Parking Structures"**) and designate all or a portion of the parking spaces contained therein toward satisfaction of Landco's obligation to provide the Required Parking Spaces, at no construction cost or expense to Stadium Owner, on the Landco Parcels, in a location designated by Landco; provided that such Parking Structures conform to the Development Principles. Any such Parking Structure shall (i) be materially commensurate with parking structures located within first-class, mixed use projects in Los Angeles County and include speed ramps and speed parking design, (ii) be constructed on a legal parcel which has been separately subdivided from Parcel 2 and/or Parcel 3, as applicable; and (iii) be a Landco Controlled Parking Area. All Parking Structures serving the Stadium shall be designed to permit the public to enter and leave the Parking

Structure quickly and conveniently. Typically, vehicles will be directed to parking spaces and will not be permitted to circulate freely searching for a parking space. Upon such Relocation and corresponding satisfaction of the obligation to provide the Required Parking Spaces, the Parking Areas shall be deemed not to include the Released Parking Area, and the parties shall reasonably cooperate to memorialize such Relocation and Released Parking Area in writing on or about the date of such Relocation and Record an amendment to this Declaration attaching a new exhibit which depicts the then current location of the Parking Areas.

5.2 Stadium Owner Parking Area Sole Control Period. Commencing on the Effective Date, and continuing until the day immediately preceding the commencement of the "Parking Area Shared Control Period," as defined in Section 5.3, below, or, if there is no Parking Area Shared Control Period in accordance with Section 5.3, below, then the day immediately preceding the commencement of the Landco Parking Area Sole Control Period (in either case, the **"Stadium Owner Parking Area Sole Control Period"**), the Parking Areas shall be controlled, operated and maintained by Stadium Owner in accordance with the express terms of this Declaration and as follows.

5.2.1 Control, Operation and Maintenance, Generally. Stadium Owner shall have exclusive control over the use, maintenance, pricing, operation, charges and hours of operation of the Parking Areas (including landscaping, if any), including the right to retain a reputable, properly licensed single third party operator (**"Parking Operator"**) to operate the Parking Areas. Stadium Owner, at Stadium Owner's sole cost and expense, shall conduct all repair, maintenance and improvements necessary or desirable to maintain the Parking Areas in compliance with the Stadium Owner Maintenance Standard and this Declaration, which maintenance, repair and improvements may include, without limitation, resurfacing, patching potholes, restriping, sealing, repairing, painting, lighting, cleaning, sweeping, removing trash, replacing appropriate directive signage, markers and lines and lighting systems, and payment and repair of all utilities, water, sewer and mechanical and electrical equipment in the Parking Areas.

5.2.2 Access, Security & Traffic Control Staffing. Stadium Owner shall, at its sole cost and expense, (i) maintain minimum staffing levels of access personal, private security officers and/or uniformed City of Los Angeles (sworn) police officers as Stadium Owner reasonably determines is necessary for crowd control and arrest purposes, and (ii) maintain minimum staffing levels of City of Los Angeles traffic control and traffic management personnel as Stadium Owner reasonably determines is necessary for public safety and traffic control within the Parking Area and public streets immediately surrounding the Project. For security purposes, subject to the terms of this Section 5.2.2, all entrances to the Project shall remain closed on all dates other than Game Dates and Non-Baseball Event Dates; provided, however, that notwithstanding the foregoing, at least one (1) entrance (which may be reasonably designated by Stadium Owner) shall remain open on all dates other than Game Dates and Non-Baseball Event Dates to the extent necessary to admit Stadium Owner and its Permittees and Stadium Owner shall be responsible to provide appropriate access/security personnel to prevent unauthorized entry by third parties onto the Project. In addition, the Parties acknowledge and agree that during the Stadium Owner Parking Area Sole Control Period and/or the Parking Area Shared Control Period, Landco, as owner of the Landco Parcels, may desire, or require, access to the Landco Parcels from time to time, in which event the Parties shall coordinate the entry by Landco and Landco's Permittees onto the Project in a manner consistent with the entry of Stadium Owner and

Supplemental AR 3030

its Permittees on to the Project, such as card access (and Landco shall pay a reasonable and equitable share of any incremental access/security personnel costs incurred by Stadium Owner which are directly attributable to such entries).

5.2.3 Parking Fee. Commencing retroactively as of January 1, 2010 and for the remainder of the term of this Declaration (subject to Sections 5.3 and 5.4, below), Stadium Owner covenants and agrees to pay without notice or demand, and without set-off, deduction or abatement, an annual parking fee (the "**Parking Fee**") at the rate of $14,000,000 per annum payable in equal monthly installments on the first day of each month during the term of this Declaration. The Parking Fee shall be paid to Landco or Landco's designee, as designated in writing by Landco to Stadium Owner from time to time. The Parking Fee for any partial month will be prorated based on the actual number of days in such month. Notwithstanding the foregoing, the Parties acknowledge and agree that Stadium Owner shall be deemed to have paid the Parking Fee commencing on January 1, 2010 and continuing through and including the date immediately preceding the Effective Date. Notwithstanding anything contained herein to the contrary, in the event the Required Parking Spaces are less than 16,500 pursuant to Section 5.1.2 hereof, there shall be a proportionate reduction in the annual Parking Fee.

5.2.4 Parking Fee Escalation.

5.2.4.1 Definitions. For purposes of this Section 5.2.4.1, the following definitions will apply:

- "**Base Month**" means the month beginning January 1, 2010.
- "**Price Index**" means the "Consumer Price Index – All Urban Consumers" published by the Bureau of Labor Statistics of the United States Department of Labor, for Los Angeles-Riverside-Orange County, CA, All Items, (1982-94 = 100) or any renamed local index covering the Los Angeles metropolitan area or any other successor or substitute index appropriately adjusted.
- "**Base Index**" means the Price Index in effect in the Base Month.
- "**Anniversary Date**" means the first day of the month which is the fifth (5^{th}) anniversary of the Base Month and each five (5)-year anniversary of such date thereafter.
- "**Increase Month**" means the month immediately preceding any Anniversary Date.
- "**Percentage Increase**" means the percentage equal to the fraction, the numerator of which will be the Price Index in the Increase Month less the Base Index, and the denominator of which will be the Base Index.

5.2.4.2 Parking Fee Adjustment. If the Price Index in an Increase Month exceeds the Base Index, the Parking Fee payable beginning on the Anniversary Date

immediately following such Increase Month and through the last day of the next Increase Month, or through any earlier termination date under this Declaration, will increase by the Percentage Increase.

5.2.4.3 Formula and Example. The following illustrates the intentions of the parties as to the computation of the escalation of the Parking Fee:

- Formula. The formula used to calculate the escalation of the Parking Fee pursuant to this Section 5.3.4 will be as follows: (Increase Month Price Index – Base Index/Base Index x Parking Fee) + Parking Fee = Adjusted Parking Fee.

- Example. By way of example only, assume the Parking Fee is $14,000,000; the Base Index (January 2010) is 220.719 and the Price Index for December 2014 is 253.599; 253.599 – 220.719 = 32.88; 32.88 divided by 220.710 = 0.15; 0.15 x $14,000,000 = $2,100,000; and $14,000,000 + $2,100,000 = $16,100,000.

5.2.4.4 Figures Unavailable. In the event that the Price Index is unavailable as of any Anniversary Date, Stadium Owner will continue to make monthly Parking Fee payments based on the rate calculated for the preceding escalation of the Parking Fee until such Price Index is made available; at that time the Parking Fee will escalate in accordance with this Section 5.2.4 and Stadium Owner shall make a retroactive payment to Landco equal to the difference between:

- the Parking Fee due from the date the increase in the Parking Fee became effective until the increase was finally computed; and

- the Parking Fee actually paid by Stadium Owner from the date the increase became effective until the date such increase was finally computed.

5.2.4.5 No Recomputations. No subsequent adjustments or recomputations, retroactive or otherwise, will be made to the Price Index due to any revisions that may later be made to the first published figure of the Price Index for any month.

5.2.4.6 No Parking Fee Decrease. In no event will the Parking Fee in a given five (5)-year period be less than $14,000,000 per annum (except as otherwise expressly provided in Section 5.2.3, above, and Sections 5.3 and 5.4, below).

5.2.5 Parking Costs and Revenues. Stadium Owner shall be responsible, at its sole cost and expense, for all Parking Costs attributable to the Parking Areas, and shall be entitled to retain all revenues and proceeds generated from the Parking Areas.

5.3 Parking Area Shared Control Period. The Parties acknowledge and agree that the Development may occur in several phases, and as a result, there may be a period of time during which the Required Parking Spaces are located both on surface parking lots and in Parking Structures, and further, as set forth in Section 5.1.4, above, and in conformance with the

Supplemental AR 3032

Development Principles, Landco shall have operational control over the portions of the Parking Areas consisting of the Parking Structures ("**Landco Controlled Parking Areas**"). Until such time that all or substantially all of the Required Parking Spaces are located in Parking Structures, Stadium Owner shall continue to control the portions of the Parking Areas consisting of surface parking lots (such portion of the Parking Areas controlled by Stadium Owner, the "**Stadium Owner Controlled Parking Areas**"). The date on which all or substantially all of the Required Parking Spaces are located in Parking Structures shall be referred to as the "**Landco Full Takeover Date.**" The period of time, if any, during which control of the Parking Areas is shared between Landco and Stadium Owner, as contemplated above, shall be referred to herein as the "**Parking Area Shared Control Period,**" and, during any such Parking Area Shared Control Period, the Parties shall control the operations and maintenance of their respective portions of the Parking Areas in accordance with the terms of this Section 5.3.

5.3.1 Operation, Control and Maintenance of the Parking Areas. Stadium Owner shall control the operations and maintenance of the Stadium Owner Controlled Parking Areas in accordance with the terms of Sections 5.2.1 and 5.2.2, above, and all other express provisions of this Declaration, as if the "Stadium Owner Controlled Parking Areas" were the "Parking Areas." Landco shall control the operations and maintenance of the Landco Controlled Parking Areas in accordance with the terms of Sections 5.4.1, 5.4.2, 5.4.3 and 5.4.6, below, as if the "Landco Controlled Parking Areas" were the "Parking Areas."

5.3.2 Parking Fee. If the "Independent Owner Scenario" applies and the "Revenue Election," as those terms are defined in Section 5.5, below, has been made as to all or a portion of the Landco Controlled Parking Areas (the portion of the Landco Controlled Parking Areas to which the Revenue Election applies, the "**Revenue Election Parking Areas,**" and the portion of the Landco Controlled Parking Areas to which the Revenue Election does not apply, if any, the "**Non-Revenue Election Parking Areas**"), then the Parking Fee shall be proportionately reduced pursuant to the following calculation so that the reduced parking fee shall equal (the sum of (A) the number of Required Parking Spaces located in the Stadium Owner Controlled Parking Area plus (B) the number of Required Parking Spaces located in the Non-Revenue Election Parking Areas) divided by (the number of Required Parking Spaces) multiplied by (the Parking Fee). If the Revenue Election has not been made, then all of the Landco Controlled Parking Areas shall be Non-Revenue Election Parking Areas and accordingly, Stadium Owner shall continue to pay the Parking Fee in full in accordance with the terms of Sections 5.2.3 and 5.2.4, above.

5.3.3 Parking Revenues and Parking Costs.

5.3.3.1 Stadium Owner Controlled Parking Areas. Stadium Owner shall be responsible, at its sole cost and expense, for all Parking Costs attributable to the Stadium Owner Controlled Parking Areas, and shall be entitled to retain all revenues and proceeds generated from the Stadium Owner Controlled Parking Areas.

5.3.3.2 Landco Controlled Parking Areas. If the Revenue Election has been made as to all or a portion of the Landco Controlled Parking Areas, then the Parties' respective rights and obligations, as applicable, with respect to the Parking Costs and revenues which pertain to Landco Controlled Parking Areas that are also Revenue Election Parking Areas

shall be as set forth in Section 5.4.5.1, below. With respect to the Landco Controlled Parking Areas as to which the Revenue Election has not been made, the Parties' respective rights and obligations, as applicable, with respect to the Parking Costs and revenues which pertain to such Non-Revenue Election Parking Areas shall be as set forth in Section 5.4.5.2, below.

5.3.4 Cooperation. During the Parking Area Shared Control Period, the Parties shall reasonably cooperate and coordinate their respective operations of the Stadium Owner Controlled Parking Area and the Landco Controlled Parking Area, including, without limitation, with respect to their respective Parking Operators and additional security and traffic personnel. Such cooperation may include, without limitation, meetings between the Ongoing Representatives in accordance with Section 2.1, above.

5.4 Landco Parking Area Sole Control Period. Commencing on the Landco Full Takeover Date, and continuing until the expiration of the term of this Declaration (the "**Landco Parking Area Sole Control Period**"), the Parking Areas shall be managed, operated and maintained by Landco as follows, in accordance with the Development Principles.

5.4.1 Management, Operation and Maintenance, Generally. Subject to Landco's continuing obligation to provide the Required Parking Spaces to Stadium Owner in accordance with this Declaration and Stadium Owner's right to determine pricing for Parking Passes which pertain to the Non-Revenue Election Parking Areas, Landco shall have exclusive management over the use, maintenance, pricing (provided that Landco shall not charge more than the higher of (i) the highest charge for single, premium Parking Passes for Home Games in 2012 ("**2012 Charge**") (provided further that if the Price Index in a "Parking Increase Month" exceeds the "Parking Base Index," as those terms are defined below, then the highest charge for single, premium Parking Passes for Home Games beginning on the "Parking Anniversary Date," as that term is defined below, immediately following such Parking Increase Month and through the last day of the next Parking Increase Month, or through any earlier termination date under this Declaration, will increase by the "Parking Percentage Increase," as that term is defined below, but in no event shall such charge ever be less than the 2012 Charge), and (ii) the highest charge then in effect and established by Stadium Owner for single, premium Parking Passes for Home Games (as applicable, "**Maximum Rate**")), operation, charges and hours of operation of the Parking Areas (including landscaping, if any), including the right to retain a Parking Operator to operate the Parking Areas; provided, however, that (A) Landco shall use commercially reasonable efforts to operate the Parking Structure in a manner to accommodate Stadium attendees and consistent with the Development Principles, and (B) the Parking Operator may either be the Owner of the Parking Structure or a third-party operator, but in either case must be experienced in operating first-class parking structures in urban and suburban markets. Landco shall conduct all repair, maintenance and improvements necessary or desirable to maintain the Parking Areas in good working condition and repair and otherwise in compliance with this Declaration, which maintenance, repair and improvements may include, without limitation, resurfacing, patching potholes, restriping, sealing, repairing, painting, lighting, cleaning, sweeping, removing trash, replacing appropriate directive signage, markers and lines and lighting systems, and payment and repair of all utilities, water, sewer and mechanical and electrical equipment in the Parking Areas. Any costs of temporary relocation suffered by Stadium Owner as a result of the repair or maintenance of the Parking Areas by Landco shall be borne entirely by Stadium Owner. For purposes of this Section 5.4.1, (i) "**Parking Base Month**" shall mean the

Supplemental AR 3034

month beginning January 1, 2012, (ii) **"Parking Base Index"** shall mean the Price Index in effect in the Parking Base Month, (iii) **"Parking Increase Month"** shall mean the month immediately precedent any Parking Anniversary Date, (iv) **"Parking Anniversary Date"** shall mean the first day of the month which is the first (1st) anniversary of the Parking Base Month and each one (1)-year anniversary of such date thereafter, and (v) **"Parking Percentage Increase"** shall mean the percentage equal to the fraction, the numerator of which will be the Price Index in the Parking Increase Month less the Parking Base Index, and the denominator of which will be the Parking Base Index.

5.4.2 Access, Security & Traffic Control Staffing. Landco shall maintain staffing levels of access personal, private security officers and/or uniformed City of Los Angeles (sworn) police officers as Landco reasonably determines is necessary in connection with the operation of the Parking Areas and the Development. Stadium Owner may elect from time to time to supplement such personnel at and around the Stadium, and shall reasonably cooperate with Landco to coordinate each Party's respective access and security forces.

5.4.3 Insurance and Indemnification Obligations.

5.4.3.1 Insurance Policies. Landco shall keep and maintain the following policies of insurance: (i) valid and enforceable commercial general liability insurance against liability for bodily injury, personal injury or property damage arising out of the ownership or use of the Parking Areas or the activities of Landco in connection with this Declaration, in such amounts and with such deductible as reasonably determined by Landco from time to time, but in no event in amounts less than Ten Million Dollars ($10,000,000) for each occurrence and Ten Million Dollars ($10,000,000) for all occurrences each year; (ii) valid and enforceable fire and extended coverage insurance on all of the insurable Improvements (including the Parking Structures), if any, now or hereafter located within the Parking Areas, which insurance shall include standard all-risk property insurance with replacement costs coverage in such amounts as reasonably determined by Landco from time to time; and (iii) such other insurance as Landco shall deem necessary or expedient to carry out the functions of Landco as set forth in this Declaration.

5.4.3.2 General Requirements for Parking Area Insurance Policies. Every policy of insurance obtained by Landco, whether or not required to be obtained pursuant to the provisions of this Declaration, shall expressly waive any and all rights of subrogation against Landco, its representatives and employees, and Stadium Owner if permitted under the terms of such policy. Landco is granted full right and authority to compromise and settle any claim or endorse any claim by legal action or otherwise and to execute releases in favor of any insurer.

5.4.4 Parking Fee. Stadium Owner shall continue to be obligated to pay the Parking Fee in full unless the Revenue Election is made as to all or a portion of the Parking Areas (as more particularly set forth hereinafter). If such Revenue Election is made with respect to the entirety of the Parking Areas, then Stadium Owner shall have no further obligation to pay the Parking Fee. If such Revenue Election is made with respect to only a portion of the Parking Areas, then the Parking Fee shall be proportionately reduced pursuant to the following calculation so that the reduced parking fee shall equal (the number of Required Parking Spaces

located in the Non-Revenue Election Parking Areas) divided by (the number of Required Parking Spaces) multiplied by (the Parking Fee).

5.4.5 Parking Revenues and Parking Costs.

5.4.5.1 Revenue Election Parking Areas. If the Revenue Election has been made as to all or a portion of the Parking Areas, then Landco shall be responsible, at its sole cost and expense, for all Parking Costs attributable to the Revenue Election Parking Areas, and shall be entitled to retain all revenues generated from the Revenue Election Parking Areas (including, without limitation, sales of all general, reserved, special or preferred parking passes). In furtherance of the foregoing, the Parties shall reasonably cooperate to transfer control of the sale of all parking passes for Stadium events (collectively, the "**Parking Passes**") which pertain to the Revenue Election Parking Areas to Landco, if any, but if the same is not reasonably feasible as to all or a portion of such Parking Passes, then Stadium Owner shall continue to sell all or the non-transferable portion of the Parking Passes at rates established by Landco and shall deliver to Landco, on a monthly basis, and together with reasonable accounting detail, all revenues generated from Stadium Owner's sale of such Parking Passes which pertain to the Revenue Election Parking Areas.

5.4.5.2 Non-Revenue Election Parking Areas. The Stadium Owner shall control the sale, and shall be entitled to set the pricing, and retain all revenues generated from the sale by Stadium Owner, of the Parking Passes which pertain to the portions of the Parking Areas which are Non-Revenue Election Parking Areas. All such Parking Passes which pertain to the Non-Revenue Election Parking Areas shall be accepted by Landco for parking by Stadium patrons within the Non-Revenue Election Parking Areas, and Landco shall in no event impose any additional charge for parking with respect to the Stadium patrons who hold such Parking Passes. However, to the extent any Person desires to park within the Non-Revenue Election Parking Areas and such Person does not hold an appropriate Parking Pass, then Landco shall be entitled to charge (subject to the limitations set forth in Section 5.4.1, above) for such parking and retain all revenues generated from the same. In addition, Stadium Owner shall be responsible to pay to Landco (or its designee) "Stadium Owner's Share," as that term is defined below, of all Parking Costs attributable to the Non-Revenue Election Parking Areas. Landco's allocation of as the elements of "Parking Costs" hereunder (including property taxes) to the Landco Controlled Parking Areas, Stadium Owner Controlled Parking Areas, Revenue Election Parking Areas and Non-Revenue Election Parking Areas shall be in accordance with sound real estate management and accounting principles applied by owners of urban, mixed-use projects. Landco shall deliver to Stadium Owner, on a monthly basis, and together with reasonable accounting detail, an invoice setting forth the Parking Costs incurred or accrued by Landco for the Non-Revenue Election Parking Areas for the prior calendar month, and Stadium Owner shall pay the same to Landco (or Landco's designee) within thirty (30) days following Stadium Owner's receipt thereof. For purposes of this Section 5.4.5.2, "**Stadium Owner's Share**" shall mean a percentage, the numerator of which is the number of Required Parking Spaces contained in the Non-Revenue Election Parking Areas, and the denominator of which is the total number of parking spaces contained in the parking area in which the Non-Revenue Election Parking Areas are located, multiplied by 100. For illustration purposes only, if (A) 1,000 parking spaces are contained in a Parking Structure, (B) only 500 of such spaces are designated Required Parking Spaces hereunder, and (C) the portion of the Parking Structure in which such 500 Required

Supplemental AR 3036

Parking Spaces are contained is a Non-Revenue Election Parking Area, then the calculation of Stadium Owner's Share would be as follows: 500/1,000 x 100 = 50%.

5.4.6 Landco Use of Parking Areas. Subject to Landco's continuing obligation to provide the Required Parking Spaces to Stadium Owner on Game Dates and Non-Major League Baseball Event Dates, the Parties acknowledge and agree that, during the Parking Area Shared Control Period and the Landco Parking Area Sole Control Period, Landco shall have the right to enter into use agreements between Landco and other parties which pertain to the Landco Controlled Parking Areas. In addition, promptly following the commencement of any portion of the Development, the Parties shall reasonably agree upon a parking operation system (1) to prevent Stadium attendees from utilizing parking intended for patrons and tenants at other uses in the Development, and (2) to ensure that the parking spaces intended for the use of Stadium attendees are available for their use.

5.5 The Revenue Election. The Revenue Election may only be made by Landco (or its designee) and Stadium Owner (or its designee), acting jointly, if the Independent Owner Scenario applies. If the Independent Owner Scenario does not apply or Landco and Stadium Owner (or their respective designees) do not make the Revenue Election then the Parking Areas shall be considered Non-Revenue Election Parking Areas. If the parties cannot agree on whether or not to make the Revenue Election within a reasonable period of time after the initiating party notifies the other party of its desire to make the Revenue Election, then the parties will be deemed not to have made the Revenue Election. For purposes of this Declaration, (i) the "**Independent Owner Scenario**" shall mean that the subject Parking Areas are not directly or indirectly owned by Frank McCourt, The McCourt Group or an affiliate thereof, and (ii) the "**Revenue Election**" shall mean that Landco (or its designee) and Stadium Owner (or its designee), acting jointly, elect, upon written notice to the Parties, to cancel Stadium Owner's obligation to pay the portion of the Parking Fee (as such reduction is calculated hereunder) and the Parking Costs which pertain to the Revenue Election Parking Areas in exchange for the right of the Owner of the Revenue Election Parking Areas under the Independent Owner Scenario to receive all revenue generated from the Revenue Election Parking Areas (inclusive of any revenue collected by Stadium Owner in connection with the Stadium Owner's sale of Parking Passes which pertain to the Revenue Election Parking Areas).

ARTICLE VI

GRANT OF EASEMENTS

6.1 Easements for the Benefit of Governmental Agencies and Public Utilities. Certain easements (in perpetuity or otherwise) have been, and may in the future be, granted by Landco to private parties in connection with the Development and/or to certain local governmental agencies, including the City and public utilities, which easements may include, without limitation, easements for drainage, sewer and water lines, and which easements may affect some or all of the Parcels. Landco shall be entitled, without the consent of Stadium Owner, to grant any such future easements over the Landco Parcels which Landco determines are in the best interests of the Project. Stadium Owner shall fully and faithfully comply with all requirements of governmental agencies or public utilities in connection with the easements granted pursuant to this Section 6.1.

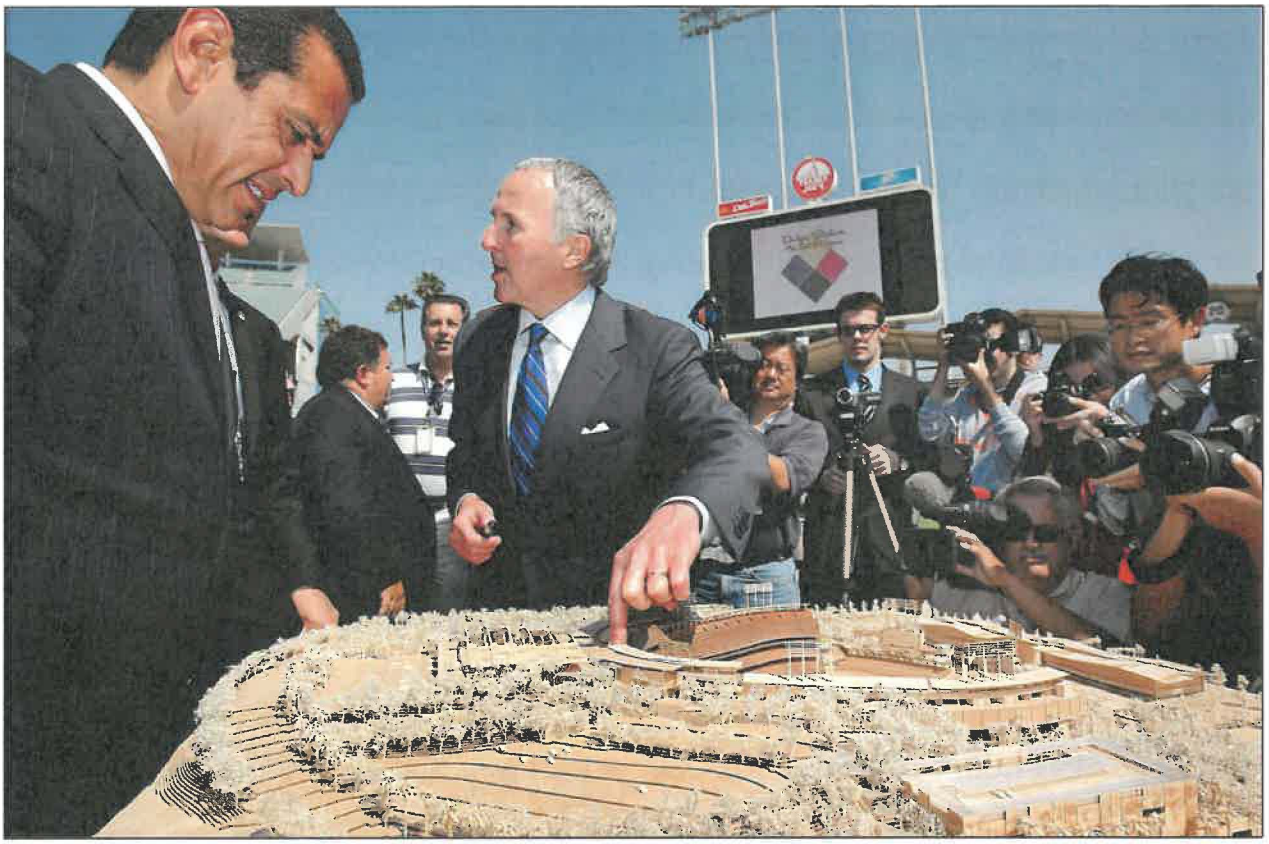
ENCLOSURE 9

Frank McCourt's Past and Future Schemes for Chavez Ravine



Frank McCourt shows then-L.A. Mayor Antonio Villaraigosa a model of proposed developments in the parking lots surrounding Dodger Stadium at a press conference in 2008. Newly uncovered court documents reveal that McCourt still has permission from the current owners of the Dodgers and plans to develop a massive retail, entertainment, and hotel complex at Chavez Ravine. And a gondola he has proposed from Union Station to the stadium would pave the way for the development. Photograph by Brian Vander Brug, *Los Angeles Times*, April 25, 2008, via Getty Images.

By Leo Hecht and Jon Christensen, August 9, 2022[1]

LOS ANGELES — Former Dodgers owner Frank McCourt is proposing to build a gondola from Union Station to Dodger Stadium, where he still owns a 50% share in 260 acres of land surrounding the stadium. That land, known as Chavez Ravine, represents a

[1] Leo Hecht is an independent, investigative researcher and environmental policy analysis and planning student at UC Davis. Jon Christensen is an adjunct assistant professor in the Institute of the Environment and Sustainability at UCLA.

huge financial opportunity for the owners of the property if development ever occurs there.[2] Currently, it is used for surface parking, and the McCourt Global company proposing the gondola — Los Angeles Aerial Rapid Transit — makes no mention of future development plans. But McCourt has long had plans for an ambitious retail and entertainment complex around the stadium. Those plans are evident in McCourt's "Next 50" plan, which was unveiled when he owned the Dodgers, and in court documents that he tried to hide from public scrutiny during the bankruptcy proceedings that forced him to sell the team. McCourt failed to secure funding for "Next 50," but the agreements revealed in the bankruptcy proceeding are still in force and tell a very different story about the relationship between the proposed gondola, McCourt's plans to develop the parking lots around Dodger Stadium, and the future of Chavez Ravine.

This report examines McCourt's history with the Dodgers, the stadium, and his documented intentions to develop the parking lots in light of his current proposal to build a gondola from Union Station to Dodger Stadium. McCourt Global's denial of any current intention to develop the parking lots are belied by McCourt's previous plans, his 50% ownership of the land, and the fact that the gondola makes little or no sense without a major development at Dodger Stadium, which a gondola could facilitate through provisions in the court document that McCourt tried to keep secret. There are only 81 home games in the regular baseball season. And even adding a maximum of 12 post-season games, a couple of exhibition games, a maximum of four special events a month permitted under the Conditional Use Permit issued by the City of Los Angeles for the stadium, and the Los Angeles Marathon, at most the gondola is likely to be used at

[2] Vincent, Roger & Bensinger, Ken. "Developing Chavez Ravine is likely in play for new Dodgers owner" *Los Angeles Times,* 16 Apr. 2012

or near capacity on only 144 days per year.[3] Unless, that is, the Dodger Stadium parking lots are developed as an entertainment, retail, and hospitality district like L.A. Live as Frank McCourt has long envisioned.

In 2004, McCourt bought the Los Angeles Dodgers from Newscorp for $430 million. The purchase was financed primarily with loans, with over a third of the purchase price lent directly from Newscorp.[4] At the time of McCourt's purchase, no specific plans for development of the parking lots surrounding the stadium were made public. However, on April 25, 2008, McCourt unveiled a sprawling development plan for the stadium itself and the surrounding lots. Marketed as the "Next 50" plan, the proposed development was slated to include a Dodger museum, a Dodger retail store, office space, and two new parking structures. In addition, the project was advertised as a green initiative, including the addition of 2,000 trees in the area around the stadium.[5] The development was expected to cost $500 million, more than McCourt's purchase price for the team.

The "Next 50" plan would have turned the stadium into a retail and entertainment venue to attract customers outside of game times, expanding the use of Dodger Stadium beyond baseball.[6] The William Morris Agency, a Los Angeles talent agency, partnered with the Dodgers to obtain branding deals with companies in an attempt to fund the project by naming parts of the new development after corporate

---

[3] The McCourt Global subsidiary proposing the gondola, Los Angeles Aerial Rapid Transit (LA ART), claims that it will transport up to 5,000 passengers per hour in each direction and remove 3,000 car trips from neighborhood streets before and after Dodger games. See: https://www.laart.la/benefits/, accessed on 17 July 2022.

sponsors.[7] Photographs of McCourt presenting a scale model of development plans at a press conference beside then Mayor of Los Angeles Antonio Villaraigosa show the proposed changes, including large, terraced plazas lined with trees and new buildings outside of the stadium. McCourt's planned development was designed to make use of the parking lots surrounding the stadium to increase the economic productivity of the land and turn Chavez Ravine into a year-round destination.

As part of his plans for the "Next 50" development, McCourt discussed a desire to connect Dodger Stadium to public transit, saying he "hoped local leaders would 'tweak and adjust subway lines' to add a Dodger Stadium stop and provide 'bus access in the interim.'" Then city council member Ed Reyes further endorsed connecting the development to new public transit lines, saying that the "renovation 'hopefully can stimulate a whole new transit system that gets us in and out of this great place.'"[8] In developing plans for his additions to Dodger Stadium and the surrounding land, McCourt clearly identified expanded public transit options as increasing potential visitors as well as revenue in new retail and entertainment destinations.

Under McCourt's ownership the Dodgers fell deep into debt, ultimately filing for bankruptcy on June 27, 2011. In addition to bankruptcy court conflicts with Major League Baseball, McCourt was ordered to pay $150 million in a divorce settlement, and defended a suit by a San Francisco Giants fan who was badly beaten in the Dodger Stadium parking lot.[9] The "Next 50" development never materialized, as McCourt failed to secure funding.

[8] Hernandez, Dylan & Shaikin, Bill. "Stadium makeover is unveiled"
[9] Shaikin, Bill. "Frank McCourt appears close to agreeing he'll sell Dodgers" *Los Angeles Times,* 31 Oct. 2011

McCourt was very resistant to selling the Dodgers, and only agreed to a sale in November 2011 after a series of long court battles. After several rounds of negotiations, a group led by Magic Johnson and financed by Guggenheim Partners won the bid to purchase the Dodgers for $2 billion. As part of the deal, Guggenheim Partners entered into a venture with a McCourt entity to jointly own the stadium parking lots.[10]

The terms of the parking lot sale and any potential future development of the land around the stadium was filed under court seal as part of the supplement to the Dodger's chapter 11 bankruptcy plan on April 6, 2012. Of nine sections totaling 139 pages, the exhibit titled the "Declaration of Covenants, Conditions, Restrictions, and Easements for Chavez Ravine," consisting of 93 pages of terms and agreements relating to the current usage and future development of Chavez Ravine, is the only piece of the document not available in public court records.[11] After objecting to the Dodger's attempt to block public viewing of the land use plans, the Los Angeles Times was able to obtain the document in 2012.[12] The exhibit was subsequently recorded by the Los Angeles County Recorder's Office, which is where it was obtained for this report.

The exhibit shows that Guggenheim Partners pays $14 million a year to the McCourt entity Blue Landco LLC to rent the stadium parking lots. The document also details possible future developments that "may include, but are not limited to (i) office buildings, (ii) hotel and exhibition facilities, (iii) residential buildings, (iv) medical buildings, (v) academic buildings, (vi) parking structures, and/or (vii) retail, dining, and

[12] Shaikin, Bill. "L.A. Times objects to Dodgers' bid to seal conditions of land use" *Los Angeles Times*, 11 Apr. 2012

entertainment facilities."[13] The document includes a provision stating that Guggenheim Partners agrees "to cooperate with Landco, and to take all steps reasonably requested by Landco, in connection with the general plan of improvement and development of the Landco Parcels," and "not to oppose, or to interfere in any fashion (including, without limitation, by speaking out at public hearings) with any efforts by Landco to complete development of the Landco Parcels."[14] This provision effectively grants Landco the sole discretion to develop the stadium parking lot lands.

Although McCourt and Guggenheim Partners claimed at the time of the sale that they did not have plans for development in the immediate future, McCourt's attorney said that the document outlining potential plans was created to keep possibilities for development open. The document includes an agreement with Guggenheim Partners for a 99-year lease of the land with the Landco LLC half-owned by McCourt. The agreement states that the parking lots contain 19,000 parking spaces, and that any reduction of the number of parking spaces below 16,500 must be approved by Major League Baseball and the City of Los Angeles.[15]

An additional section of the exhibit, however, provides a workaround for this provision that is especially significant in light of McCourt's proposed gondola. It states that "in connection to any Mass Transportation...Landco shall have the right to provide less than the 16,500 Required Parking Spaces."[16] This would allow for developments in

the parking lots that could significantly reduce the number of parking spaces if the developments were completed after or concurrent with the addition of a mass transit connection to Dodger Stadium. Under this agreement, construction of a gondola to the stadium from Union Station could enable McCourt's vision for additional development in Chavez Ravine to be realized.

McCourt Global's website trumpeted its ownership interest in the 260-acre Chavez Ravine land as a "current real estate project" through at least October 2021, though that statement appears to have been removed from the website once the company began facing significant opposition to its proposed gondola project.[17] McCourt's proposal for a gondola from Union Station to land he co-owns at Dodger Stadium could be a necessary first step to allow development there.

On April 26, 2018, Aerial Rapid Transit Technologies LLC submitted an unsolicited proposal to Los Angeles County Metropolitan Transportation Authority ("Metro") for an aerial gondola from Union Station to Dodger Stadium that it calls Los Angeles Aerial Rapid Transit or "LA ART." LA ART was founded by Drew McCourt, Frank McCourt's son. The company claims that the estimated $125 million project will be privately funded by Frank McCourt's investment firm and others.

According to LA ART, each gondola cabin will hold 30 to 40 people and the system will be able to move up to 5,000 people per hour to or from the stadium. LA ART claims the gondola will take 3,000 cars off of neighborhood streets and reduce traffic on the 110 freeway before and after Dodger games. Current plans show gondola cars suspended from cables 150 to 175 feet above the ground from Union Station to Dodger

---

Stadium with an intermediate station at Los Angeles State Historic Park adjacent to Chinatown.[18]

The Los Angeles Times noted that even though the project director Martha Welborne claimed no future development is planned in 2018, "lenders might be more receptive to finance a gondola that goes to Dodger Stadium 365 days a year — rather than just on 81 home-game dates."[19] At that time McCourt Global still listed the parking lots as a "current real estate project."[20]

Despite LA ART's insistence that the gondola is not a precursor to future development, the gondola project would generate significantly more revenue for McCourt if it could deliver consumers to a commercial development with restaurants, retail, entertainment, and hospitality venues on the approximately 220 days of the year when the stadium does not host home games, exhibition games, post-season games, or special events. And McCourt's share of profit from the real estate development would vastly exceed any profit from a gondola.

The "Declaration of Covenants, Conditions, Restrictions, and Easements for Chavez Ravine" that McCourt secured and tried to hide from the public in the Dodgers' bankruptcy case shows the proposed gondola is not the end game at Dodger Stadium, but a means to yet another end.

Developing Chavez Ravine is likely in play for new Dodgers owner

BY ROGER VINCENT AND KEN BENSINGER, LOS ANGELES TIMES

APRIL 16, 2012 12 AM PT

It's a developer's dream — nearly 300 empty acres above downtown Los Angeles, close to three major freeways and visited by millions each year.

Could Chavez Ravine be the next big real estate play in town?

The new owner of the Dodgers, Guggenheim Baseball Management, is keeping tight-lipped about its plans for the parking lots and hillsides surrounding Dodger Stadium, which it will own jointly with departing team owner Frank McCourt if the sale closes as expected April 30.

INTERACTIVE: Breakdown of Dodger property

The Dodgers disclosed some details of the McCourt-Guggenheim land partnership in the team's

bankruptcy case, but those documents were under seal — and the team quickly withdrew them after The Times asked the bankruptcy judge to release them publicly.

Real estate experts, however, say it's likely the new owner is looking to do more with the land than simply park cars. They point out that the rich price paid by Guggenheim — at $2.15 billion, a record for a sports franchise — suggests it will need to add new revenue streams in addition to what is expected to be a lucrative television contract.

"There is probably a media or a real estate play," said Stan Ross, chairman of the USC Lusk Center for Real Estate, who was quick to add that any development would likely take years to realize.

One doesn't have to scout far for a glimpse of potential development plans. Four years ago, McCourt proposed a $500-million plan to ring the stadium with restaurants, shops and a Dodgers museum. The surface parking spaces lost to new buildings would be replaced by twin nine-story garages.

The plans never went anywhere amid the economic downturn and the team's precarious finances, but it's clear that McCourt wasn't the only one to see new development possibilities.

Among those in the bidding for the Dodgers were real estate entrepreneurs Rick Caruso, Jared Kushner and Tom Barrack. And Magic Johnson, one of the nation's most prominent urban developers, has a minority stake in the Guggenheim partnership.

Developer Ken Lombard, a former business partner of Johnson, said the Dodgers property is ideally situated for an urban development.

"You could create a community up there," said Lombard, who runs the Baldwin Hills Crenshaw Plaza shopping center. "You have the chance to do something very interesting, probably a mixture of residential and retail."

There would be even more potential if the baseball stadium were to be relocated downtown, as many have suggested. AEG Entertainment President Tim Leiweke, who is leading plans to build an NFL football stadium downtown, said a downtown baseball stadium would be among other

possible options if the football stadium were derailed.

Beverly Hills apartment developer Alan Casden, another unsuccessful bidder for the Dodgers, had made relocating the stadium a cornerstone of an earlier proposal to buy the team in 2003.

At that time, Casden criticized Dodger Stadium for convoluted parking lots, a poor seating plan and a location inconvenient for both fans and nearby residents who bear the brunt of traffic, noise and litter in their neighborhood.

Tearing down Dodger Stadium, the third-oldest major league ballpark, would likely draw opposition from preservationists. The Los Angeles Conservancy has not taken a position on the issue, but its executive director, Linda Dishman, has a soft spot for the 50-year-old stadium.

"My favorite thing is looking out from the top deck. It feels like you're so close you can touch the skyline of downtown," Dishman said.

At 50, Dodger Stadium is now eligible to be listed on the National Register of Historic Places. If it achieved such a designation, the owner would find it more difficult to get city approval to destroy it, make substantial changes or sell naming rights.

In 2004, Chicago's Wrigley Field was landmarked, a move the Cubs' ownership opposed. The team was sold in 2009 and the new owners have asserted that the status costs the Cubs $30 million a year in lost sponsorship opportunities.

Even if the stadium doesn't get official landmark designation, earning the backing to raze it or build additions on the parking lots such as condos or a shopping center would not be an easy feat, said Gail Goldberg, former city planning director.

Owners can be expected to look for "higher and better" uses for their property that will produce more financial rewards, she said. Their challenge is to convince local officials that their plans are good for economic development and to convince local stakeholders such as neighbors that the plan will improve their quality of life.

That the publicly unpopular McCourt is still involved is an added hurdle to building support for

real estate development, she said.

"I think nobody wants to help him make more money," Goldberg said. "As long as his name is out there, the public benefit [of development] would have to be extraordinary."

Although the Boston native is giving up half his interest in the parking lots, Bankruptcy Court filings show that McCourt will retain complete control of five parcels comprising nearly 20 acres of land immediately adjoining them.

McCourt also owns an entire city block between College Street and Figueroa Terrace, just down the hill from the stadium. Purchased in 2008 for $9.1 million, the block holds a small house and a commercial building with the offices of the L.A. Marathon, which McCourt also owns.

The price McCourt paid is more than triple what the land sold for in 2004 and 2005; the block borders the 110 Freeway and its Sunset Boulevard exit, which could be an attractive feature should the city ever expand road access to Dodger Stadium.

Major roadwork and other large-scale improvements to ease ingress and egress to the ravine would probably be necessary for meaningful development to take place, architect and real estate advisor Ann Gray said.

"It's not an easy site to get in and out of," Gray said. "The paradox is that the only way to relieve traffic is to build more. It will alleviate the bottleneck at the start and end of games. Even great mass transit will not do that."

With the exception of the Figueroa Terrace properties, almost all of McCourt's holdings are zoned as agricultural or open space, as are the parking lots. To build on them, a potentially difficult rezoning would be required.

City Councilman Ed Reyes, whose district includes Chavez Ravine, is taking a wait-and-see approach to development around the stadium, though he did voice support for McCourt's plan in 2008.

"There is a critical path that we have to cross that speaks to our ability to create jobs while making

it better for everybody, not just the people who come for three hours and then go," he said.

Stadium makeover is unveiled

BY DYLAN HERNANDEZ AND BILL SHAIKIN
APRIL 25, 2008 12 AM PT

TIMES STAFF WRITERS

Dodgers owner Frank McCourt unveiled plans Thursday for a historic makeover of the 275-acre Dodger Stadium site in Chavez Ravine, describing new features designed to transform the ballpark by 2012 into a year-round destination for dining, shopping and recreation that will be fan- and environment-friendly.

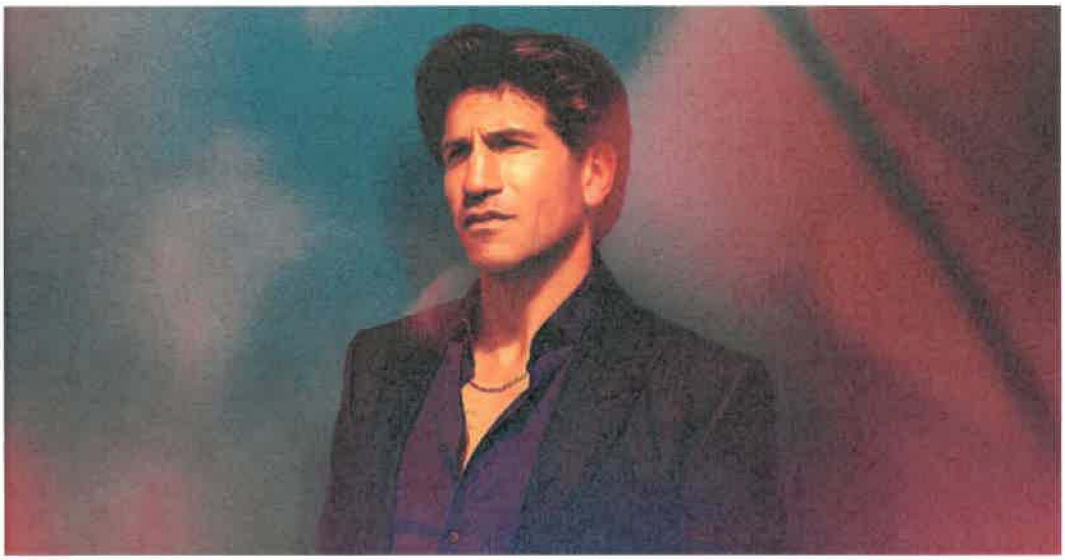
Speaking at a morning news conference in the Dodger Stadium outfield, McCourt outlined a sweeping $500-million project that would include parking structures, a Dodgers history museum and a landscaped plaza behind center field connecting to shops and restaurants.

"It's not just for the fans," he said. "It's for the entire community."

McCourt said the improvements would allow the 46-year-old landmark -- the second-oldest park in the National League after Chicago's Wrigley Field -- to flourish for another 50 years.

The privately financed makeover would cost more than the $430 million McCourt paid for the team and stadium four years ago.

ADVERTISING



SHOWTIME® - Sponsored

American Gigolo

He challenged civic leaders to follow his investment by extending bus and subway lines to the ballpark.

"The ultimate way to improve access to Dodger Stadium is public transit," McCourt said.

Mayor Antonio Villaraigosa said he would be happy to work with the Dodgers on finding ways other than driving to get people to the stadium.

"That clarion call, that challenge, I like that," Villaraigosa said at the news conference. "Isn't it amazing that we built a public transportation system and it never connected to Dodger Stadium? Wouldn't it be great if we said, 'This city is going to also rectify the errors of the past' and do something to change that? I like that idea. Let's get working on it."

McCourt said the loss of about 15 acres of parking, or about 2,000 spaces, would be offset by the construction of two parking garages -- a first for Chavez Ravine -- and additional underground parking. The renovations would include a dedicated bus lane running directly to a transit plaza

next to the stadium.

McCourt said he hoped local leaders would "tweak and adjust subway lines" to add a Dodger Stadium stop and provide "bus access in the interim."

City Councilman Ed Reyes, whose district includes Dodger Stadium, said the ballpark renovation "hopefully can stimulate a whole new transit system that gets us in and out of this great place."

It remains unclear who would pay for such transit. The Los Angeles County Metropolitan Transportation Authority faces a $1-billion deficit over the next 10 years, spokesman Rick Jager said.

There are no plans to redirect a rail line toward Dodger Stadium, he added.

City transportation officials last month said they were exploring ways to reroute a DASH line to the ballpark but that there were two issues: money and the inconvenience to regular riders.

However they arrive at the stadium, fans would find new, environmentally friendly features that drew praise from Joel Reynolds, director of the Natural Resources Defense Council's urban program.

Citing the expanded use of water- and energy-conserving fixtures and the planting of 2,000 trees, Reynolds said Dodger Stadium has the potential to be "the most environmentally sustainable stadium in the country." He also cited the environmental benefits of preserving rather than tearing down the stadium itself.

By creating new public gathering spots such as the outfield promenade, museum and top-of-the-park terrace, the Dodgers are seeking to bring customers out early, keep them there late and even attract visitors on non-game days.

"It's increasingly clear that fans want these types of amenities," said David Carter, a sports marketing consultant and executive director of the USC Sports Business Institute.

Barry Prevorne of Moorpark, who shares season tickets and estimates that he attends 25 games a

season, said he would consider visiting Dodger Stadium in the off-season.

"It depends on what kind of facilities they put there," he said.

"I live 45 minutes away. So if the facilities are worthwhile, I might come out. If it's not worth 45 minutes, there's no way. A game? Of course I'm going to come."

McCourt said the Dodgers filed paperwork Thursday to acquire the necessary permits for the stadium improvements and that he hoped work could begin after the 2009 season.

The Dodgers already plan to renovate the stadium's loge level, as well as the home and visiting clubhouses, during the next off-season. McCourt said the club was also considering installing high-definition scoreboards.

McCourt has spent at least $110 million in stadium improvements in the last four years, including at least $70 million since last season upgrading the field level.

The owner said the economic downturn would not affect his plans.

"Economies go up and down, they're not static," McCourt said.

"We look at this thing in a very, very long-term, also generational fashion. We're not making these decisions based on what the economy is like today. We're making these decisions as huge optimists in the future of the Dodgers."

He declined to comment on whether he would pursue additional projects on the rest of the site, and refused to say whether he would rule out residential development or the addition of an NFL stadium.

ENCLOSURE 10

LA Dodgers Stadium Next 50

Location: Los Angeles, California

Client: The McCourt Company

Johnson Fain designed a multi-faceted stadium improvement plan that will bring the most modern amenities to Dodger fans, while preserving the tradition of the historic venue, first opened in 1962. The improvements will solidify Dodger Stadium's place as the home of Los Angeles baseball for the next 50 years. The new facilities were designed to LEED Silver sustainability standards.

The Dodger Stadium "Next 50" plan features Dodger Way, a ceremonial new "front door" and urban plaza surrounded by an administrative office building for the Dodgers organization; the Dodger Experience an interactive museum showcasing the history

of the Dodgers and baseball in Los Angeles; a 20,000 square foot flagship Dodger Store; and the Dodger Cafe. Connecting all the elements of the project is The Green Necklace – a ring of gardens, open plazas, and amenities around the stadium, which moves the fan experience outside the walls of the stadium so they have activities which can extend their time at the ballpark beyond the game. The Top of Park plaza located at the highest elevation on site will feature breathtaking 360 degree views spanning the

Downtown skyline and Santa Monica Bay, the Santa Monica and San Gabriel Mountains, and the Dodger Stadium diamond. Other features within the Green Necklace are two, 8-level, 900-car parking structures and a series of food service /retail concession clusters.

Project Facts

- Multi-faceted stadium improvement plan would include:
- Urban plaza surrounded by administrative office buildings
- Dodger Experience museum
- 20,000 square foot Dodger Store
- Dodger Café
- The Green Necklace – gardens, open plazas and amenities
- Top of Park plaza with 360 degree views
- Two 8-level, 900-car parking structures
- Designed to LEED Silver sustainability standards

Connecting all the elements of the project is The Green Necklace – a ring of gardens, open plazas, and amenities around the stadium, which moves the fan experience outside the walls of the stadium so they have activities which can extend their time at the ballpark beyond the game. The Top of Park plaza located at the highest elevation on site will feature breathtaking 360 degree views spanning the

Downtown skyline and Santa Monica Bay, the Santa Monica and San Gabriel Mountains, and the Dodger Stadium diamond. Other features within the Green Necklace are two, 8-level, 900-car parking structures and a series of food service /retail concession clusters.

Project Facts

- Multi-faceted stadium improvement plan would include:
- Urban plaza surrounded by administrative office buildings
- Dodger Experience museum
- 20,000 square foot Dodger Store
- Dodger Café
- The Green Necklace – gardens, open plazas and amenities
- Top of Park plaza with 360 degree views
- Two 8-level, 900-car parking structures
- Designed to LEED Silver sustainability standards

Terms of Use (https://johnsonfain.com/about-us/terms-of-use/)

LA Dodgers Stadium Next 50

Location: Los Angeles, California

Client: The McCourt Company

Johnson Fain designed a multi-faceted stadium improvement plan that will bring the most modern amenities to Dodger fans, while preserving the tradition of the historic venue, first opened in 1962. The improvements will solidify Dodger Stadium's place as the home of Los Angeles baseball for the next 50 years. The new facilities were designed to LEED Silver sustainability standards.

The Dodger Stadium "Next 50" plan features Dodger Way, a ceremonial new "front door" and urban plaza surrounded by an administrative office building for the Dodgers organization; the Dodger Experience an interactive museum showcasing the history

of the Dodgers and baseball in Los Angeles; a 20,000 square foot flagship Dodger Store; and the Dodger Cafe. Connecting all the elements of the project is The Green Necklace – a ring of gardens, open plazas, and amenities around the stadium, which moves the fan experience outside the walls of the stadium so they have activities which can extend their time at the ballpark beyond the game. The Top of Park plaza located at the highest elevation on site will feature breathtaking 360 degree views spanning the

Re: Z. A. CASE NO. 15430
Dodger Baseball Stadium
Site - Chavez Ravine Area

Greetings:

In the matter of the joint application of the City of Los Angeles and the Los Angeles Dodgers, Inc., for Conditional Use approval on a site comprising an approximately 275-acre area of land located in the Chavez Ravine area northeasterly of the complicated intersection of Elysian Park Avenue, Chavez Ravine Road, Lilac Terrace, and Boylston Street, and classified in the C2-1, P-1, and P-0-1 Zones, to permit the construction, maintenance and operation on said site of a Major League baseball stadium having a seating capacity of 56,000 persons instead of the maximum 3,000-seat stadium automatically permitted on the C2 zoned portion thereof, together with incidental automobile and transportation vehicle parking facilities and various appurtenant and accessory structures and uses, please be advised that the Chief Zoning Administrator has made the following finding of facts and determination and has conditionally granted the request.

FINDING OF FACTS AND DETERMINATION

After thorough consideration of the statements contained in the application and the various exhibits, maps and plans accompanying the same, the report of the City Planning Engineer thereon, the statements made at the public hearing before the Chief Zoning Administrator on July 5, 1960, correspondence with the applicants with respect to the tentative determination and suggested terms and conditions and the proceedings and reports and documents attached to the files in the following matters:

Supplemental AR 3096

Ordinance No. 110,204 authorizing and approving the contract between the City of Los Angeles and the Los Angeles Dodgers which was sustained by referendum election and adjudicated by the Courts;

City Plan Case No. 9908, Council File No. 78067, and Ordinance No. 114,949 which resulted in the reclassification of the subject property to the present C2 and P Zones;

Tentative Tract No. 25130 and Council File No. 96293 which on appeal affirmed the Director of Planning and Planning Commission's conditional approval of the tentative tract map for the involved property;

Vacation File Nos. 807 and 1277 involving vacation of numerous former streets within the Stadium area;

Council File Nos. 91802, 91908, and 96194, all of which include various reports of the City Administrative Officer, the General Manager of the Department of Traffic and the City Engineer analyzing various traffic and access road problems incidental to the proposed Stadium development including map Exhibit "A" accompanying the City Engineer's report showing proposed access roads to the site to be financed from funds allocated by the County Board of Supervisors and private roadways within the site area to be financed and operated by the Los Angeles Dodgers organization;

The Stanford Research Institute's report to the Friends of the Zoo regarding the proposed World Zoo in Elysian Park; and

The "Definitive Statement" issued by Walter O'Malley, President of the Dodgers, when the zone change matter was before the City Council;

all of which are by reference made a part hereof, as well as conferences with the Director of Planning, City Planning Engineer, the City Engineer, the President of the Board of Public Works, the General Manager of the Departments of Traffic and Recreation and Parks, the City Attorney, several high-level technical staff members of the various involved City departments, and representatives of the Los Angeles Dodgers organization, and personal inspection of all portions of the Stadium site area and the immediately adjacent and surrounding areas, I find that the requirements for authorizing a Conditional Use under the provisions of Section 12.24-C of the Municipal Code for the proposed Stadium project have been established by the following facts:

1. The legislative bodies of both the City of Los Angeles and the County of Los Angeles through encouragement, appropriation of funds, and by contract have caused the former Brooklyn National Baseball Club (now known as the Los Angeles Dodgers) to move its franchise to and make Los Angeles its home. This move was premised upon the opportunity of constructing in the City of Los

Angeles and near the central business district of a modern baseball stadium to seat a minimum of 50,000 persons with ample offstreet automobile parking facilities for patrons. The area here in question located in Chavez Ravine has for several years been considered and discussed as the site for such a stadium and was the subject of a contract between the City of Los Angeles and the Los Angeles Dodgers, which contract upon referendum was approved by a considerable majority of the citizens of Los Angeles. The City Planning Commission, by official action, and the City Council, through enactment of ordinances, have both given official endorsement to this particular area as the most desirable site considering all circumstances for the construction of the proposed modern baseball stadium. The area has been rezoned from former residential classifications to commercial and parking classifications so that there would be authority for the consideration of a Conditional Use permit for this development as herein contemplated. The record is clear that the area was purposely not reclassified to an M1 Zone which would have automatically permitted construction of the Stadium so that various conditions, controls and limitations could be placed upon the development of the Stadium area and the operation of the Stadium and its various appurtenant facilities, and furthermore, so that other commercial or industrial uses would not be permitted to occupy the area under consideration.

2. The Comprehensive Zoning Ordinance under Section 12.24 recognizes that there are certain special types of land uses which are necessary to provide a well-rounded community plan but sites for which cannot be contemplated in advance and set forth on the Comprehensive Zoning Plan but which because of their unusual characteristics or the large parcels of land needed for their operation require special consideration under the procedure set up by said sections. Stadiums, arenas, auditoriums and the like having seating capacities of more than 3,000 persons, due to the traffic generated and other considerations which are readily understood, are among these special uses and are permitted in the commercial and CM Zones only if the location is first approved and conditions devised under the Conditional Use procedure. Considering the dominant position of the City of Los Angeles within the rapidly developing metropolitan area and the interest evidenced by a majority of the citizens in clean, wholesome sports which has given this area the title of "The Sports Capital of the World", it is inevitable that a modern Major League baseball stadium must be constructed in the community. The subject site is unique in that it is the only large undeveloped parcel of land close to the central section of the City and in essentially a common ownership which has sufficient area to provide a site for the Stadium and the extensive and essential automobile parking facilities incidental thereto.

It is near the confluence of the freeway network serving the metropolitan area. Engineering and Traffic Department studies have shown that access roads can be constructed under the appropriation made by the Board of Supervisors for this purpose so that it will be accessible to the existing Pasadena and Hollywood Freeways, Sunset Boulevard, North Broadway, Glendale Boulevard, and Riverside Drive and also to the Golden State and Glendale Freeways now under construction. The State Highway Department is also studying means of improving off-ramp facilities from the Pasadena Freeway to the Stadium access roads. The topography of the general area is such that the site is well-buffered and screened from all but a few of the surrounding residential properties. The planned access roads are such that only short stretches of a few local residential streets will be directly utilized and hence fewer residential property owners will be inconvenienced by traffic during events at such a stadium on this site than on any other conceivable and conveniently located site in the community. Considering all of the above factors and previous negotiations with respect to the Stadium site, the granting of the requested Conditional Use under proper conditions and limitations would be in harmony with the general purpose and intent of the Comprehensive Zoning Plan and permit a community center landmark and economic asset on this presently dormant close-in section of the City.
